In the field of fiscal measures the new fund law provides for extension of all fiscal reductions and exemptions favoring the fund to all agencies acting on its behalf; for exemption of all materials used in the execution of the fund's programs from payment of the consumption tax (imposta di consumo); for partial or total exemption from industry and other taxes, including consumption taxes, of firms establishing or improving their plants in communes of less than 75,000 population; for limited exemption from income tax (class b imposta di richezza mobile) of profits reinvested in agricultural or industrial improvements; for the extension of the reduced 200 lire registry and mortgage fees to cover also instruments of incorporation of industrial companies and mortgages contracted in connection with transfer of real estate for the purpose of industrialization as well as industrialization capital increases, relative bond issues, and instruments connected therewith, reorganization of companies and normalization of irregular firms.

The new law contains a large number of provisions facilitating the financing of pre-industrialization and mostly industrialization projects. Thus, up to 40 percent of expenditures for the purchase and improvement of boats and fishing gear, for the establishment of oyster and mussel beds, and for the processing, refrigeration and transportation of fish and fish products, may be covered by the fund. The fund is authorized to pay in full for the construction of water and sewerage systems in small communes of under 10,000 population, or to assume part of such costs for larger communes. In addition, the Cassa depositi e prestiti (Postal Savings System) is obliged to grant credits necessary for the financing of these public works projects whenever they are carried out by the fund. The fund is further authorized to make grants for the construction of electric powerplants and distribution systems in land improvement areas, and may also undertake the restoration of tourist sites of particular historic, artistic, or archeological interest.

In small communes of under 75,000 population, lacking industrial facilities, the fund is authorized to make direct grants covering up to 20 percent of cost of establishment of small and medium industry, including construction of buildings, installation of machinery, and connections to existing roads, railroads, and water and power systems. Furthermore, up to 30 percent of expenditures for transformation, modernization and mechanization of small industries may be covered by contributions granted by the fund.

The law also provides for the covering by grants of up to one-half of expenditures incurred by local consortia, the organization of which for the purpose of creating industrial zones is also authorized by the new fund law, in carrying out their preindustrialization and industrialization projects. Such consortia are also given access to credits granted by the various semipublic insurance and credit institutions. In addition the Cassa depositi e prestiti is authorized to grant to southern communes loans for the purchase of real estate for purposes of industrialization or employment increase.

In order to make it possible for the southern regional medium-term credit institutions, created by an earlier law, to expand their operations, the new fund law authorizes the fund to grant to these institutions subsidies to alleviate the cost of their bond

issues which exceeds the interest charges on their loans. The law also authorizes the industrial credit sections of the Banks of Naples and Sicily to utilize the repayment on their earlier loans for granting certain additional credits. Such credits may be used to supplement loans granted earlier by these section, as medium-term development financing, not to exceed 50 million lire, of small and medium industries, and to enable medium and small industries to acquire stocks of raw materials and finished products.

In addition to making direct grants, expanding the availability of industrial credit, and extending fiscal exemptions, the new fund law includes some provisions for the direct public investment in the south. It stipulates that for the duration of the fund law the expenditures of the individual ministries for public works in the south must be in proportion with the population strength of the south. In addition, the agencies under the supervision of the Minister of Government Holdings (Ministro per le partecipazioni statali) are required to allocate to the south at least 60 percent of investment intended for the creation of new plants and at least 40 percent of their total investment.

Some general measures tending to regulate the economic progress of the south conclude the series of provisions for the south. Great emphasis is placed in the role of industrialization consortia, and many of the provisions applicable to the fund itself have been extended to apply to these associations, including the power of expropriation. For better efficiency, the development programs for the south of the fund and of the various Ministries are coordinated through the Committee of Ministers for the South; those applicable to the islands of Sicily and Sardinia must, in addition, be drawn up in agreement with the administrations of these islands. A final provision, a rider attached because of the pressure exerted by organized labor, requires all beneficiaries of provisions of the new fund law to grant their employees conditions not less favorable than those stipulated in collective bargaining agreements for identical types of work in the same area.

MEASURES TAKEN BY PRIVATE BUSINESS

Although the task of developing the economy of the Mezzogiorno is of such proportions that it cannot be solved without the direct and vigorous intervention of the Government, the private sector of the economy has not stood by idly expecting the solution of the problem to come solely through public action. As a matter of fact, it was the private business that undertook the first major program—even before any direct Government measures were taken on behalf of the south—designed to foster the economic development of the area.

On December 2, 1946, a group of 45 Italian enterprises established the Associazione per lo sviluppo dell'industria nel Mezzogiorno-Svimez (Association for the Industrial Development of the South). The purpose of the association is to promote and conduct specialized studies of the economic conditions in the south and thereby provide the background for concrete programs and projects designed to create and develop industrial activities which would, in view of ascertained needs, provide the best remedy for the economic ills of the Mezzogiorno.

The membership in the association is open to all domestic and foreign firms and individuals interested in the economic development of the south. Each member contributes an annual quota varying according to its business capital. Originally, the quotas ranged from 250,000 lire for members with capital under 50 million lire to 3 million lire for those with over 1 billion lire of capital. In order to make the membership in the association possible for smaller firms and thereby increase the overall revenue, the annual quotas were successively reduced, and, since 1953, have ranged from 100,000 lire for individuals and firms with capital under 100 million lire to 1 million lire for those with capital over 5 billion. In addition to this regular membership, supporting membership with annual contributions of 3 million lire was established.

By the end of 1955 the membership of the Svimez had increased from 45 to 99 members, representing every sector of the national economy, and its revenue from annual contributions from 48,250,000 lire to 88,800,000 lire. Almost one-half of these funds was contributed by enterprises with national scope, slightly over one-fourth by those operating primarily in the north, and slightly under one-fourth by firms active predominantly in the south.

The association is strictly a research organization and is enjoined by its constitution from engaging in industrial or commercial activities. Its research and studies, the results of which have been widely drawn upon also by the public agencies, especially the fund for the south, follow two main directions. One is concerned with the general economic, and especially industrial, development of the south as a whole, the other with activation or reactivation of those individual economic sectors which appear to be best suited for the economy of the Mezzogiorno. While the studies of the former type take into account and, indeed, count upon outside aid, the studies of and expansion plans of the latter type are based primarily on locally available resources.

In practical terms, regional studies comprise essentially pre-industrialization projects, such as organic planning of public works (railroads, highways, transportation and communication lines, power and fuel distribution systems, water supply and sewerage systems, reclamation, regulation of streams, irrigation, reforestation, and many others), vocational training, enhancement of the position of the southern entrepreneur in relation to his northern counterpart through public subsidies, and similar. These studies involve not only the economic and social justification of the projects, but also the expenditures involved, the problems of investment and financing and their possible solutions.

The studies of economic sectors have been concentrated primarily in the field of agriculture, the traditional source of southern livelihood; they have, however, included also other sectors such as mining, manufacturing, commerce and tourism. Specifically, detailed analyses have been made of wine industry, production of olive and essential oils, fruit and vegetable growing and canning, and production of cork, wood, cellulose, and raw silk. The association also conducted extensive studies in regard to handicrafts and small industry as well as mineral prospecting and manufacturing of machinery.

In these studies the association utilized its own field research facilities as well as locally and nationally available sources of information, such as census data, chambers of commerce, associations of industrial firms, agencies of provincial administrations, and similar. The wealth and variety of collected information has prompted the association to publish not only voluminous reports on its industrialization studies, but also works about the south containing statistical and general information, such as statistical yearbooks and selected industrial statistics, and several editions of commentaries on legislative provisions in favor of the south. Monographic or annually published material is being kept up to date by weekly bulletins with monthly supplements dealing with problems of underdevelopment.

In addition to industrialization studies, the association has investigated other economic aspects of the south, such as regional and family incomes, required level of investment and its multiplier effect, and socioeconomic factors and effects of the industrialization program.

The association also acts as a clearing house for information on the south, runs a technical counseling and general information service, and participates in regional, national, and international conferences on the development of underdeveloped areas.

Although the Svimez is prohibited from engaging directly in industrial and commercial activities, it may organize and own stock in subsidiary corporations established for the promotion of industrial, technical, or experimental activities. Such a subsidiary, the Società per l'industrializzazione delle regioni meridionali—Sudindustria (Society for the Industrialization of Southern Regions), was established on July 22, 1947, with capital stock of 10 million lire, over half of which is owned by the parent organization. The field of activities of Sudindustria includes establishing experiment centers and industrial plants, preparing plant projects and submitting them to private enterprises for eventual materialization, fostering international agreements for the development of technical and commercial activities of the southern industry, assisting third parties engaged in activities falling within the scope of the society; in short, approaching the task of industrialization from the standpoint of action rather than study. After the launching of the governmental program for the industrialization of the south through the fund for the south, which coincided with and greatly expanded that of the Sudindustria, the society was liquidated in 1953.

During the years of its operation, the Sudindustria was instrumental primarily in setting up a network of fruit and vegetable growing and processing stations, in modernizing the olive oil industry, in establishing the mining company of Calabria for the purpose of mineral prospecting and exploitation, and in organizing the Southern Fishing Co., a fishermen's consortium.

Another subsidiary organized by the Svimez is the Unione Aziende Meccaniche Meridionali—UNAM (Union of Southern Machinery Enterprises). The purpose of this consortium is to increase production and sales of its members through technical and commercial measures designed to widen the markets, to strengthen technical cadres of the industry, and coordinate the activities within the industry.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. I regret that I was not in the Chamber to hear the Senator's comments on the section of the bill

which relates to rural development areas, as I believe they are called.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. Does this section of the bill tie in with the current program of the Department of Agriculture, which is known as the rural development program?

Mr. DOUGLAS. It does, but it makes a big improvement in that program, because the present program of the Department of Agriculture is based on the theory that there shall be no outside aid given to hard-pressed localities; that they must sink or swim themselves.

As the Senator from Minnesota well knows, the National Planning Association has said the Department of Agriculture program is grossly inadequate on this very point. Our bill aims to provide outside capital and outside technical assistance to help the hard-pressed areas to keep going and to help them provide for farm employment.

Mr. HUMPHREY. The situation with respect to rural development has been discussed in the Committee on Agriculture and Forestry, of which I am a member, and I have had considerable interest in it. As the Senator from Illinois knows, this program has been limited primarily, under the present administration, to a few pilot plants or pilot projects in selected counties. Actually, it has been, at best, a sort of "noble experiment" in the coordination of existing facilities.

Mr. DOUGLAS. I would say it is really a timid experiment.

Mr. HUMPHREY. Yes, it is. I used the words "noble experiment" in quotation marks. Certainly, the words "timid experiment" are better.

However, the program under this bill will tie in with the limited efforts which are being undertaken.

Mr. DOUGLAS. The bill will provide a revolving loan fund of $100 million with which to start new industries in underdeveloped rural areas.

Mr. HUMPHREY. Mr. President, will the Senator from Illinois yield further to me?

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). Does the Senator from Illinois yield to the Senator from Minnesota?

Mr. DOUGLAS. I am glad to yield.

Mr. HUMPHREY. I am wondering whether the Senator from Illinois noticed, in last evening's Washington Star, an article entitled "Warning—Get Your Loan Now." The article was written by Miss Sylvia Porter.

Mr. DOUGLAS. No; I regret that I did not notice it.

Mr. HUMPHREY. I hold the article in my hand. In the article, Miss Porter states that the cost of borrowing money has once again risen, and no easing of credit is expected. She also makes some very interesting comments on the inflation in the money market, as a result of the administration's monetary policy. For example, the yields of Government bonds have risen, since 1952, by 44 percent; and the yields of top-grade corporate bonds have increased by 40 percent; and the yields of prime commercial paper, for 4 to 6 months, have increased by 43 percent; and the yields of 91-day Government bills have increased by 55 percent.

The general theme of Miss Porter's article is that in the case of a "fair-sized loan extending over a period of years, a rise of even a small fraction of a percent can run into real cash."

I read further from her article:

> On June 30, 1958, on August 21, and again on January 6, 1959, I reported that the cost of borrowing money was on the rise. And this has been the trend through all these months.

In the article, Miss Porter points out that a high borrowing charge is "in the cards" for the remainder of this year. She also writes that:

> If you're going to need a loan in the near future—to buy or improve your house, to expand or modernize your business, to finance a variety of personal activities—get that loan now.

Let me ask this question: With these rising interest costs, is it not true that in the case of the areas which are suffering from chronic unemployment or underemployment or in which industries have suffered because of trade practices or technological changes or advances, the rising interest rates, with no easing of credit, literally make it very difficult, if not impossible, for labor in those areas to be employed adequately?

Mr. DOUGLAS. That is correct; and also in those areas the interest rate is higher than in the rest of the country.

Mr. HUMPHREY. So there is a double effect.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. On the one hand, there is restriction of credit, because of the high interest rates. On the other hand, because in these areas risk is involved, chronic unemployment exists, and there are difficult economic problems, the private lending agencies expect to receive much higher interest rates on greatly reduced terms—all of which, in turn, makes it literally impossible for investments to be made and for job opportunities to be created.

Mr. DOUGLAS. Yes, Mr. President; the Senator from Minnesota, with his usual prescience, goes directly to the heart of the matter.

Our aim is to provide revolving loan funds, so as to enable the loans to be made at cost to the Government, plus a loading charge for administration and for risk, so that more credit will be available on terms which will enable new industry to start and to go forward.

Mr. HUMPHREY. Let me add that although it is possibly true that such a program as this one will result in some cost to the taxpayers, on the other hand the loss in property values, inventory values, and commercial values in the so-called depressed areas will be far in excess of any cost of such a rehabilitation or redevelopment program in these areas.

Mr. DOUGLAS. Furthermore, we believe that by giving this assistance to the people of these areas, we shall reduce relief costs, unemployment compensation costs, and crime costs; and we shall really put economic health into the communities, raise the tax revenues of the communities, and permit the communities to move forward.

Mr. HUMPHREY. As the Senator from Illinois knows, one of the areas listed in the committee report as being among the areas of substantial labor surplus is the Duluth-Superior area, in Minnesota.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. Presently, considerably more than 14 percent of the total work force in that area is unemployed. In fact, I think the figure for the month of February is somewhat greater, according to the Minnesota Division of Employment and Security.

If one wishes to see what happens to property values and to municipal costs, which in turn have to be met by those who can pay taxes, one needs only visit one of these areas.

I have served in local government, as has the Senator from Illinois; and we know that the minute there is chronic unemployment in an area, the value of the real estate in the area falls sharply, and the value of tools and equipment falls sharply; and the whole area is depressed, not only economically, but also psychologically.

Mr. DOUGLAS. That is correct.

Mr. HUMPHREY. And the cost of such depression is really very, very great—far beyond what rehabilitation generally costs.

So I am very happy to be associated with the Senator from Illinois [Mr. DOUGLAS], the Senator from Kentucky [Mr. COOPER], and all other Senators who have joined in sponsoring this bill, because it represents very thoughtful planning for economic rehabilitation. The bill does not call for a WPA, a PWA, or a giveaway. The program under the bill amounts to a supplementation of the private sources of credit and coordination of the technical facilities of government and of private agencies; and the bill offers a ray of hope to industrious people and to communities and to individuals who are willing to take a little extra risk in order to rehabilitate their areas.

On that basis, I associate myself with the Senator from Illinois.

It would be interesting to hear what the opposition has to say. I gather that, following reasonably short sorties, based on both verbal response and the response of conscience, the opposition will fade away.

I should like to ask unanimous consent to have printed at this point in the RECORD the article by Miss Sylvia Porter, if that will meet with the pleasure of the Senator from Illinois.

Mr. DOUGLAS. Certainly.

The PRESIDING OFFICER. Is there objection?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Mar. 19, 1959]

WARNING—GET YOUR LOAN NOW

(By Sylvia Porter)

If you're going to need a loan in the near future—to buy or improve your house, to expand or modernize your business, to finance a variety of personal activities—get that loan now.

Arrange for the details as soon as feasible for you. Do your shopping without delay for the most favorable terms to you among the various financial institutions.

For the cost of borrowing money is rising again on a broad front and borrowers, from the biggest and most established to the small and new, are going to feel the change. But the pressures of demand for money are still not so strong that they bar concessions to a credit-worthy and alert applicant.

The pressures could become quite formidable, though, as the year goes on. Then, there'll be no doubt that you'll be required to pay a higher rate to get money. On a fair-sized loan extending over a period of years a rise of even a small fraction of a percent can run into real cash.

On June 30, on August 21, 1958, and again on January 6, 1959, I reported that the cost of borrowing money was on the rise. And this has been the trend through all these months.

CREDIT TIGHTENING

Now once more, a move toward tighter credit is clearly underway. While against the interest rate level of last June loan costs are comparatively expensive today, they're likely to become more so.

What is happening is this:

A new burst of inflation remains the key fear of the Federal Reserve System. To combat the psychology and the inflationary forces, it is therefore using the one great anti-inflation weapon it has—its control over credit. By a series of maneuvers in the money markets it has been cutting the availability of money in the banking system. It also has just raised the discount rate and has thus given the signal to banks to raise their rates on loans to us. The theory is that as credit tightens and loans become more costly, inflation-breeding borrowing and spending programs will be postponed and pressures on prices will be curtailed.

MONEY DEMAND RISING

Simultaneously, the demand for money is slated to rise—from the Treasury, States, cities, businessmen, individual consumers. There are new indications that corporations will be increasing their spending on plant expansion later this year and if so, they'll be increasing their demands for credit. If buying of the new compact cars is heavy this fall, the demand for installment loans certainly will rise.

In short, the supply of credit in the banking system is being restricted; the demand for loans is heading upward; the Federal Reserve System is encouraging caution among lenders. It's a traditional combination for higher borrowing costs.

A higher borrowing charge is obvious when a lender simply asks you to pay an interest rate above what you would have had to pay on a loan a year ago. It is not so obvious when the lender offers the loan at no higher rate but asks you to keep some of the loan on deposit or takes out the interest due in advance. Either way, though, the cost is up.

For the fourth time since June 1958, I repeat—arrange now for that loan you know you'll need or want soon.

Mr. DOUGLAS. Mr. President, I wish to thank the Senator from Minnesota for his comments.

I, too, have waited for the opposition to come into the Chamber and offer its objections to the bill. But, aside from one shot which was fired here, the opposition has been silent. I shall await with keen expectation the presentation of the views of the opposition. I hope I may have a chance today to answer the opponents face to face, and not merely have to deal with their arguments when they are away.

Mr. President, I yield the floor.

Mr. COOPER. Mr. President, I speak in support of Senate bill 722, the area redevelopment bill, reported by the Senate Committee on Banking and Currency. The bill will provide assistance and will give hope and encouragement to the thousands of people living in the areas of our Nation which are suffering from chronic unemployment and underemployment. In 1958, I supported the area redevelopment bill sponsored by Senators DOUGLAS and PAYNE; and I am glad to be a cosponsor of Senate bill 722.

At the beginning of my remarks I must pay tribute to the distinguished senior Senator from Illinois [Mr. DOUGLAS] whose untiring efforts have been largely responsible for the proposed legislation we are discussing today. His name is identified in the public mind with the concept of assisting the people of the country's depressed areas in their efforts to achieve economic recovery and stability. He has done superb work, and he deserves our gratitude for his perseverance and his humane spirit.

I am proud to be associated with him in this endeavor. I pay tribute also to many others in this body, members of both parties, who have labored in this cause.

The committee report presents clearly the objectives of the bill, and its provisions.

Other speakers have explained its details, notably the Senator from West Virginia [Mr. BYRD] in an outstanding speech made yesterday, and just now we have heard the Senator from Illinois [Mr. DOUGLAS], who is the moving spirit behind this bill, give compelling arguments for its passage by the Senate.

Little can be added to these statements, but I have selected some points for discussion which hold significance to me.

It may appear unusual that as a member of the minority party, I am cosponsoring and supporting the committee bill, S. 722, rather than S. 1064, proposed by the administration. In my remarks I intend to develop the reasons which lead me to believe that S. 722 will meet more realistically and adequately the problems of the Nation's depressed areas.

To those who may oppose S. 722 and cry out against its expenditures, I will say that the need for a national legislative program of assistance to economically depressed areas has been recognized and admitted by the Congress and the President of the United States. In 1958 the Congress passed the Douglas-Payne bill, which was similar to S. 722, but which was later vetoed by the President.

The President of the United States on several occasions in the past few years has stated his agreement that Federal assistance is required. In his "Economic Report" to the Congress, submitted on January 20, 1959 the President stated:

> Despite the forward economic strides of the Nation since the war, some communities have suffered substantial and persistent unemployment, when measured against national experience. Federal assistance to these communities is required not only to mitigate the hardships of individuals and families but also to provide for the use of underutilized resources, to the enhancement of the national welfare.

The issue before the Senate, therefore, is not whether there is need for a program of Federal assistance to these areas. It is whether the program we enact will work, whether it will actually provide assistance to hundreds of needy industrial communities and needy rural areas throughout the Nation.

I digress for a moment to say that the minority views on the bill did not even mention the principle that the President of the United States has stated, which is that there is a need for Federal assistance if this problem is to be met.

I support S. 722, rather than S. 1064, because I believe it will more likely give assistance to these depressed areas than will the administration bill. I support S. 722 because I want my vote to help our needy fellow countrymen.

The first reason for my support of S. 722 is that the $379½ million it would authorize for loans, grants, and technical assistance is a reasonable amount, even the minimum amount required to stimulate new economic activity in depressed areas.

The Department of Labor has declared that 76 major and 183 minor labor surplus areas existed on January 1, 1959. All of these would not qualify for assistance under S. 722 as areas of persistent underemployment, but these figures show the gravity of the problem with which we deal. Again, the Department of Agriculture has submitted a list of 500 counties in the United States with the lowest level of living standards for farm families, and of the 500 counties with the highest proportion of farms whose gross sales do not exceed $2,500 annually. Three hundred and thirty-six counties appear on both lists. It has been determined also that persistent, continued unemployment and underemployment is the rule in these areas. The level of unemployment in these areas is twice the average in other parts of the country.

These facts—documented and supported by the Departments of our Government, the Department of Labor, the Department of Agriculture, and I assume we have information from the Department of Commerce—lead me to believe that $379½ million, chiefly loans, is not an exorbitant undertaking by the U.S. Government to help these areas to help themselves.

Conversely, it is apparent to me that the $53 million authorized by the administration bill is wholly inadequate.

I give the second reason for my support of S. 722 in preference to S. 1064: In my judgment it is necessary, as provided in the Douglas bill to permit Federal participation to a maximum of 65 percent in loans for local economic undertakings. The limit of 35 percent imposed by S. 1064 would, in my judgment, make the bill ineffective.

I agree wholeheartedly with the principle that no Federal program is likely to be successful if it does not have the support and the active participation of

the local community. But I do not believe it can work, or that it will even get off the ground, if Federal participation is limited to 35 percent, and 65 percent participation is required of local communities. I say this because I know there are many communities in my State, Kentucky, and I am sure in other States, that simply do not have the local capital, public or private, to supply 65 percent of the necessary funds. The very deterioration of these communities has diminished local private capital, and local tax revenues which might otherwise be available. Furthermore, conditions in these areas have become so unattractive that risk capital from outside sources is unavailable. It follows that no new industries are likely to come to these depressed areas, and no new economic activities will be undertaken, if Federal participation in loans is limited to 35 percent.

It is unreasonable to expect a community whose tax revenues are steadily diminishing because of unemployment, whose people are out of work, whose businesses are suffering, to provide such a large proportion of the necessary capital. If the Congress passes this bill—and it will—it must be in a form that will enable the program to go into operation; otherwise, what we do will be a nullity.

A third reason why I support S. 722 is that it authorizes $75 million in grants to local communities for public facilities necessary for their industrial development. The administration bill has no provision for grants for public facilities. It has been pointed out to the Banking and Currency Committee that many communities seeking industrial development have been severely handicapped by their lack of adequate public facilities, such as water supplies, sewage disposal, and access to roads and railroads.

The arguments I have adduced in support of a maximum 65-percent loan participation by the Federal Government in local efforts are equally applicable to the necessity of including a provision for grants.

If a community is so poor and so beset by continuous unemployment that it is unable to provide any capital for public facilities essential to its development, shall the Congress, by refusing to make grants, deny it any possibility of advancement? Will we help the more fortunate communities and deny aid and hope to those in greatest need? It would be unconscionable to have a program which would leave out of its scope the neediest of all areas in the United States.

These are reasons which demand that grants be available. The grant provision of S. 722 will give the agency responsible for administering the redevelopment program sufficient authority and means to provide workable and successful programs. I have no doubt that the Administrator and his advisers will establish sound rules and criteria for the administration of such a program of grants for public facilities.

Mr. President, I believe even the legislation we consider today, if enacted, will not meet fully the problems of the areas of persistent unemployment. These regions can be called, appropriately, the underdeveloped areas of the United States. Their needs are for fundamental road systems, adequate water supplies, protection from floods, better housing, and vastly improved educational facilities. Federal-State programs for roads, river, airport, and housing development are now available, but large geographical areas, many of which are the same as the distressed areas with which S. 722 is concerned, are lagging far behind in the Nation's progress.

We should enact longer range comprehensive plans for these underdeveloped areas. Such an approach can be undertaken by joint Federal-State action, or by State compacts. If plans can be developed to define the basic minimum needs of the underdeveloped areas of the United States, perhaps the Congress will see fit to set aside a larger fraction of the total funds it appropriates for highway improvements, river development, airports, and the like, to bring these backward areas toward the level of other parts of our country.

I digress to say that although the Federal-State programs are valuable in dealing with problems of highways, river development, and airports, inevitably the greater portion of the funds is channeled into the more highly developed areas. The areas we are considering today are generally bypassed, and are left behind.

I point out as an example of Federal aid programs the great Interstate Highway System. There are certain criteria to be met, which inevitably lead those great roads into the better developed sections of our country.

Our programs for river development must meet standards such as the well-known cost-to-benefit ratios, which presuppose a higher industrial development or higher agricultural development than we find in many of the areas with which the bill presently under consideration would deal.

That is also true with respect to the airport program, and with respect to many other programs.

I therefore point out that the bill which the Senator from Illinois has developed so skillfully and with such perseverance is the only program before the Congress, or which is likely to be before the Congress, which will begin to assist areas of persistent unemployment and underemployment.

What I have been saying about the underdeveloped areas of Kentucky was clearly presented to the committee during the hearings by Mr. B. F. Reed and Mr. John Whisman, representing the Eastern Kentucky Regional Planning Commission. Their testimony should be read by everyone. It impressed the committee so much that there is embodied in the report a section entitled, "Proposal for Development of Underdeveloped Regions."

Mr. President, I ask unanimous consent to have the section printed in the RECORD.

There being no objection, the section was ordered to be printed in the RECORD, as follows:

During the hearings, the committee received testimony from the Eastern Kentucky Regional Planning Commission favoring the designation of "underdeveloped regions" for assistance as well as depressed areas. It was pointed out that in some instances, basic developmental needs are regional and multistate in character, including such regional facilities as highways, water transportation, flood control, and water supply.

While the committee feels that the principles embodied in the proposed amendments are too broad and far reaching to permit inclusion in the bill, it is also felt that the suggestions deserve careful consideration and study in relation to future treatment of the national economy.

Mr. COOPER. Mr. President, we hear at times criticism to the effect that there should be a greater self-effort in the depressed areas. I should like to point out that in my own State—and I am sure this is true in many other States—the local communities and their citizens are devoting almost their full energies and resources to economic recovery.

The State of Kentucky has a department of economic development, with an industrial development division, concerned with and vigorously attacking these problems.

In eastern Kentucky, a regional commission, composed of some of our State's leading citizens, has been created and is doing an excellent job in charting the needs of the region, and a program of action.

The pending bill would authorize two $100 million revolving funds: one for industrial projects in industrial redevelopment areas, the other for such projects in rural development areas. It would also provide a revolving fund of $100 million for loans, for public facilities needed for the location of industry. As I have pointed out, it would authorize appropriations of $75 million for grants for public facilities, and $4½ million for technical assistance.

I know the passage of this bill will increase budget expenditures for fiscal year 1960—even though $300 million of the total authorized are revolving loan funds, a great part of which will eventually be repaid with interest.

I support the President in his objective that we exercise discipline and not make unnecessary expenditures. I do not include in the term "indispensable need" every desire of the Congress, or the people of the Nation. But I know the Congress will not permit the budget to restrict funds for national defense if we deem additional funds are needed.

The funds authorized by S. 722 would not in my opinion place an unbearable burden on our total economy. But I will go even further, Mr. President. Even if the program should place an additional burden on some segment of the national economy and even if it should unbalance our budget, I believe it is justified.

During the last 6 years the country on the whole has enjoyed unusual prosperity. Gross national product, individual income, wages and profits, have risen to new heights. Yet the very nature of our economy, its vitality and expansion, the rapid changes in technology, the shift of industry from one area of our country to another, international trade policies and other factors beyond the control of the people of the depressed areas, have left them behind, unem-

ployed, without money, without proper housing—and thousands are without sufficient food. Perhaps the most disturbing fact of all is that a general resurgence or growth in our national economy will not help these areas quickly, if at all.

I have great faith in our Nation's system of private enterprise, but when it is demonstrated in a time of great prosperity that whole areas of our Nation are excluded even from minimum living standards, there is need to examine the causes and to attack the problem with all the resources of private industry, local resources, State resources, and certainly with the reasonable Federal assistance which this bill would offer.

Our country is rich and its economy will continue to surge ahead. For myself, I do not want to admit that our economy must leave unsolved the problems of the depressed and underdeveloped areas.

A few minutes ago I heard the distinguished Senator from Illinois ask the question, "Are these areas to be left to the operations of our private enterprise system?" It is that system which has made our country rich and great. I know that we never contemplate an equal distribution of wealth in this country. It is not possible. On the other hand, there may come a time when we begin to question the nature of an economy which, in a period of high prosperity, leaves hundreds of thousands of people without money, without jobs, cold, hungry, and in need.

So I believe that this reasonable effort on the part of the Federal Government, participating with local communities and private enterprise in an attempt to redress some of the imbalance, is certainly justified. And I believe the modest expenditure contemplated is also justified.

Mr. President, the continued unemployment, the underdevelopment with which this bill deals, are not restricted to any single State. I am glad that the committee has approached the problem from a national basis. Naturally, however, I am concerned by the situation existing in my own State of Kentucky. It is as desperate in the coal mining areas of eastern Kentucky, and even in other sections of my State, as during the depression of the 1930's.

Yesterday, I heard the graphic and moving speech of the Senator from West Virginia [Mr. BYRD] describing conditions in the mining areas of his State. I am familiar with these conditions—with the hunger, the want, the hopelessness of the people, which he so eloquently portrayed.

I live in the eastern section of Kentucky, near the coal mining sections of that part of my State. I have been in those sections again and again, and I know that the conditions which the Senator from West Virginia portrayed are the conditions which exist in my own State.

I make this personal comment from my own experience.

During the years from 1930 to 1937 I served as county judge of Pulaski County in Kentucky. It is my home county and is located in the southeastern section of the State. It was the time of the depression. For 8 years I talked and dealt daily with hundreds of people—heard their pleas—knew their needs—needs which thousands of people, perhaps millions of our countrymen, have never experienced and would hardly understand.

Last fall, and in the months that followed I visited again and again counties in Kentucky, particularly in eastern Kentucky, where the need for work, for housing, for clothing, and for food is as great as during the depression. The State, the county governments, charitable agencies, people from other States, have given them help—but it is not enough.

As the Senator from West Virginia said yesterday, those who live in this part of the country are fine, patriotic people. They are always the first to respond in time of war. I remember that in World War I, Breathitt County, in eastern Kentucky was the only county in the Union from which no soldier was drafted. Everyone was a volunteer; and the tradition continues.

Mr. President, Senate bill 722 offers honorable assistance to the people of Kentucky and other States. Many of us are fortunate. We can work, and at least we do not have to worry about food and clothing.

In closing, all I can say is that the spirit of humanity and common justice demands that our country make the effort which Senate bill 722 would make possible.

We must begin the work of developing the backward areas of our own country, and of lifting the living standards and hopes of the people who live in such areas—for they are our countrymen.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. DOUGLAS. I congratulate the Senator from Kentucky for the very excellent speech he has delivered, and for the magnificent cooperation he has accorded in the drafting of the bill and getting it to the floor of the Senate. The Senator from Kentucky dignifies, makes lucid, and ennobles everything he touches. He has done the same in connection with the pending measure.

Those of us on this side of the aisle who are interested in the pending bill have sought the cooperation of all men of good will, regardless of party. We are delighted that the Senator from Kentucky has become the second cosponsor of this measure. His name should appear in connection with the bill as high as that of the name of any other Senator. His concern is real. His help has been great; and I think it is really a fine experience when men of different political parties, believing in a common cause, can work together across party lines.

One of the main problems we have now is to be able to unite on all issues with respect to which we believe in a common cause, and dividing, in good spirit, on the issues with respect to which we differ.

The Senator from Kentucky has rendered exceedingly great help to us, and we are grateful to him. The country is very grateful to him. I thank him from the bottom of my heart.

Mr. COOPER. I thank the Senator for his very generous remarks. It is a great privilege to be associated with him in this common cause. I hope the bill will pass substantially in its present form.

One of the reasons why I wished to speak briefly on the bill was to distinguish, if I could, between the provisions of this bill and those of the bill which has been proposed by the administration. I speak also in the hope that after the passage of the bill it will be signed and become law.

Mr. DOUGLAS. I join the Senator in that hope.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll,

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE SOVIET SYSTEM OF POWER

Mr. HUMPHREY. Mr. President, one of the leading students of communism Bertram D. Wolfe, has written an excellent article on the Soviet system of power entitled "The Deadly Enemy We Face," which appeared in the January 26 issue of the New Leader magazine. This is the finest article I have ever read on Soviet strategy, activities and tactics.

I ask unanimous consent that this analysis of the nature of the Soviet system be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DEADLY ENEMY WE FACE

(By Bertram D. Wolfe)

The Soviet system of power, which is the enemy we face, can only be understood properly with the help of certain theoretical criteria of a socio-historical nature. Very briefly, we may say that the Soviet system is a closed, single-centered, modern totalitarian society, as distinguished from an open, multicentered society. A closed society is one with built-in staying powers which enable it to endure for a very long period of time; it is a self-conserving society, in that any changes that occur are within-system changes that leave the basic structure of power untouched. A single-centered society is one in which there is only one focus of power, the state, which does not tolerate the diffusion of power among any other relatively independent social institutions or groups. Finally, a modern totalitarian society, as distinguished even from an old-fashioned despotism, is one in which the state seeks to be coextensive with the whole of society and the whole of life, a society that is perpetually at war with its own people and with the rest of the world, and which uses modern technology and widespread literacy as weapons in that war.

Now, the Soviet Union is truly a great power—great in population, great in resources, great in technology, and great in military strength. Secondly, it has a great state machine which is in a condition of permanent semi-mobilization, and which attempts to keep its people mobilized. Finally, it is an enemy which is resourceful enough, wealthy enough, and determined enough to do what we have not had the determination to do (although we have had the resources

in the West in much greater abundance): namely, to keep simultaneously an atomic striking power and a massive conventional striking power in being. It has a definite advantage over us at this moment because it is geared to both types of warfare. It believes that both types are necessary and that they must be integrated into a single plan.

At the beginning of the 19th century, one European in seven was a Russian, or under Moscow rule. At the beginning of the 20th century, one European in four was under Moscow rule. At the middle of the 20th century, approximately one European in two is under Russian rule. This in itself is enough to give us pause—especially if we remember that there are 125 divisions in being in Russia, while we have approximately 15 and are engaged in cutting our forces further.

It is a deadly enemy. It is a deadly enemy because never for a moment does it abandon its two basic aims: To remake man, and to conquer the world. It is particularly our enemy—not because we so choose, but because it has chosen. It regards the strength and the way of life of the United States as the chief obstacle to its plan to remake its own people and to remake the world in the image of its blueprint. We have been picked as enemy No. 1.

No matter what Eisenhower says or does, no matter whether Dulles conducts himself with tact or tactlessness, no matter how well the tourist behaves when he goes to the Soviet Union for his 3 weeks—we will still be enemy No. 1. Whether our working class is prosperous, or hungry and jobless, or jobless and not hungry, we will still be enemy No. 1. Whether we treat American Negroes decently, or indecently—or somewhere in between, as we are doing at present—we will still be enemy No. 1. Whether we pull out of Berlin or Quemoy or do not pull out of Berlin or Quemoy, we cannot disengage ourselves from this enemy.

Let us not listen to the siren song of those who tell us that we can get a release of tensions and a little peace in our time if we only disengage ourselves. If we disengage ourselves, we leave another strip to be occupied, a new place from which battle will begin.

They know, to be sure, that they cannot conquer us. They know something about our strength. They do not covet for a moment the risks of all-out war with us. There are two things that they are determined with all of their might to avoid: One is all-out war, the other is all-out peace. They will keep us in between as long as they have the power to do so. They do not wish all-out war because they believe that time and history are on their side. When they consider how their system has been expanding, I must say it seems to them that they have some empirical confirmation for their belief that time is on their side.

Of course, they do not want all-out peace, for their two fundamental aims do not permit them to be at peace either with their own people or with the rest of the world. If our statesmen and experts wish to make a test of any fresh proposal of theirs to see whether it really intends peace, there is a simple test. When they are ready to make peace with their own people, then we will know—and only then—that they are ready for real peace with their neighbors and with us. Otherwise, when they use the word "peace" it is just one of the gimmicks in their waging of war. It is well to remember that Soviet Premier Nikita Khrushchev is said to have two sets of teeth, one to smile with and one to bite with. And the more dangerous of the two is the set with which he smiles.

My next point is that by the enemy we face, I do not mean the Russian people. The Russian people are not and have never been our enemies. They have not chosen and they do not choose their Government. They do not control its policies—except by their mute and silent pressure. And those who tell us that when the Russian people mature they will be able to control their Government and its policies, are deceiving themselves and us. No mere maturing of the Russian people will change their system, nor does their system allow them the organizational scope and independent activity, the genuine information and the right to judge which alone permit of maturing.

The Russian people are not unfriendly to us, only ill-informed, deeply curious, well-disposed toward us, and a little envious. If the gates were opened, they would vote with their feet by the millions in favor of our system. In fact, wherever they have had a chance to cross the line, they have crossed by the millions. Two-thirds of all the Chinese volunteers whom we took as prisoners during the Korean war refused to return to their native scenes, families, and lands, preferring the half-world of barbed-wire camps to returning to a country where their government makes unending war upon them.

The real reason for the Kremlin's endless hostility toward the United States, regardless of what we do, is that they regard us, and rightly, as the main obstacle to their underlying plan. This will not be changed if Khrushchev should come to New York and see our skyscrapers, or if he should then go to Detroit and see how many automobiles our workingmen have. The Russian leaders are ruthlessly friendly. They talk of easing of tensions. In our society, "tension" is a bad word. We can thank the Freudians for that, I suppose, for they talk of the age of anxiety and the age of tension. To anybody who comes with a panacea for easing tensions, we open our arms and our hearts. However, if every time they speak of easing of tensions you would substitute for the word "tension" the word "concern" (which is a more neutrally or differently colored word), you would see that what they are asking us to do is to stop concerning ourselves with the freedom of the world and with our own freedom. Then you would realize that we must hug our tensions to our breasts as long as the dangers exist which have caused the concern.

When I say that nothing we can do will change this, I do not mean to say that it makes no difference whether our workingmen are prosperous and employed or not, or that it makes no difference how we treat our colored population, for it does make a difference. But the difference is in the winning of allies, not alienating them; in winning the secret support of the Russian people; in strengthening our prestige with neutrals. However, we will not disarm or change the philosophy or the goals of a mortal enemy. Nor do I believe with those who think that if we but disarmed everything would be easy (of course that sentence is not complete: It would be easy for the men in the Kremlin). I have never believed that the best way to get thieves to reform is to remove the locks from our doors.

The world is in serious and even mortal danger now, as it was in Hitler's day. Every country in the East is in mortal danger from China, with its huge population. Every country in Western Europe, the cradle of modern thought and liberty, is in mortal danger. Every country on the Mediterranean, which was the cradle of western civilization and culture, is in mortal danger. The Near East, which was the cradle of our faiths, is in mortal danger at the present moment.

We have tried the gesture of "Let's be friends and see if that won't work"—we have tried it more often than our historical memories permit us to recall. I remember when Franklin Roosevelt said to Frances Perkins: "I really believe that I can get Uncle Joe to go along with me." Well, we tried it. So, at the end of the war, it turned out that there were three kinds of occupation zones. There were countries which Russia occupied (liberated) exclusively—they lost their freedom and were sucked behind the Iron Curtain. There were the countries which were jointly occupied—all of those except one have been partitioned, and the Soviet-occupied half of each is behind the Iron Curtain (North Korea, East Germany, and so on). One country was occupied exclusively by us, Japan, and there the occupied country is free to criticize and disagree with its occupiers and liberators. If the experience of those three types of occupation does not teach us not to play this costly game of seeing if we cannot hypnotize the men in the Kremlin into abandoning their blueprint or into just being nice, then nothing will ever teach us. In the end we will perish, and deserve to perish, for being fools incapable of learning.

They are now proposing (and have been proposing for some time) a unification of Germany. Unification consists, as they have made abundantly clear, in having the two Germanys linked together and then in seeing how Communist Germany can gradually take possession of West Germany as well. We tried that before, too. We tried it with the two Chinas during World War II, and we see how it turned out. We tried it with the two Koreas, and we also see how that worked out. Some poor fellows tried earnestly to cooperate with them in Eastern Europe. But the Communists took the key posts in the cabinets and popular-front governments; they took the Ministry of War, the Ministry of Interior and the Ministry of Propaganda (Education); and, in the end, they took the country, by what former Hungarian Communist boss Mathias Rakosi called "salami tactics," in which you slice off one slice, then another slice, and then another slice, until you have the whole salami sliced up.

If we are still tempted by poisoned semantics (one of their deadliest weapons) to believe that the word "peaceful" means "peace," and that "coexistence" means "mutual tolerance" and "live and let live," I don't know at this late date what I can say, except perhaps that I might offer a homely metaphor: The farmer is perfectly willing for the turkey to coexist with him until Thanksgiving Day. If we keep that in mind, we will have a general notion of what they mean by peaceful existence.

The mistakes which our public figures have made, our statesmen, experts, journalists, diplomats—and our military men as well when we were in a joint military effort with Russia—have all sprung from the same thing: the virtual incapacity of a people brought up in an open society to understand the nature of the system we have been examining, and the aims and plans of its rulers. I could illustrate that with errors made throughout the last 41 years, since 1917. But let us start with World War II and the "Grand Alliance." Not understanding that our ally of the moment had been, was then, and at the war's end would be also our enemy, we did not plan the peace during the war. We did not make it a self-enforcing peace, which we could only have done by planning our military conduct of the war to insure a decent peace by the position of our armies at the war's end. Therefore there has been no peace.

We have failed to understand that agreements with such an unrelenting and continuing foe are carried out only if there are deliberate provisions to make them self-enforcing. Such provisions involve the proper disposition of our military forces to insure enforcement.

Thus, when we say free elections for Germany, and they say free elections, it behooves us to remember that the elections they have in the Soviet Union are what they call free elections. We must spell out any agreement on free elections so as to include multiple

parties, a press owned by individuals, associations and parties not controlled by the government, empty prisons and closed concentration camps, and the like, and joint occupying troops in quantity in all sectors, to enforce the rights and liberties we mean by the thus-defined free elections.

When they say peaceful unification arranged between the East and West German Governments, we must remember that that is what they said of Korea, of Vietnam, of wartime China. Agreements that are not spelled out and self-enforcing are merely semantic poison to prepare and justify conquest.

Above all, we are not giving our own people a clear vision of this opponent, and the nature of our struggle. How often have I sat down in taxicab or train and been asked: "What is your racket?" I answer, "Russia." Invariably the taxi driver or traveling companion follows up with: "Tell me, is Russia really as bad as our newspapers say it is?" Always I must answer, "Much worse, man. Our newspapers are not doing a good job." That depressing and forever recurring question shows how our leaders have failed to make our people understand—because they do not really understand themselves—the nature of our self-appointed opponent. Since both our political parties must appeal and do appeal recklessly and demagogically to a people to whom they have not given decent leadership and proper political education, each party poses as the party of peace, while the enemy chooses to continue to make war on us. This is the most dangerous feature in our political life.

At the war's end, we demobilized our troops too soon, because we had not prepared our own minds or our people to remain mobilized until a decent peace was assured. We failed to make effective use of our then monopoly of atomic weapons in ways which would have furthered a decent peace and effective and controlled disarmament, not because this could not have been done—it probably could—but because we were not sufficiently aware of the need to do so, and too frightened by our awful preponderance of power to make wise and restrained use of it for bringing about genuine peace and genuine liberation of the liberated countries.

We left Korea without adequate defenses because we were afraid that the Koreans might use our arms to unify their country, and we did not have the understanding to realize that the puppet Government of North Korea would surely use Russian and Chinese Communist arms and forces for the peaceful unification of Korea, and the liberation of Korea from its independence. We even withdrew our troops and made the fatuous and inviting statement that Korea was not part of our essential defense perimeter. What could be expected from such a foe under such circumstances? When we finally had to fight to save Korea, we did an inspiring job. But under such self-imposed limitations that it was easy for Communist China to reconquer the northern half of the country, and restore the same impossible conditions that had brought us into war.

Our policy of containment has not contained; and our policy of liberation has not liberated; as our acceptance of the poison semantics of peaceful coexistence and the propaganda circus of summit conferences has given us neither genuine conferences for agreement on anything, nor peace, nor coexistence.

All these errors—and, alas, I could enumerate many more like them—come from a failure to understand the difficulties and intricacies of the problems, because of a failure to understand the nature of our enemy, his system, his power, his ruthlessness and unscrupulousness in negotiation and action, his aims, his determination, and the role of his ideology in his efforts to conquer the world and remake man. This failure of vision or understanding is at the root of our failures in action and omission and negotiation.

I have used the word "enemy" and I should like to explain my choice of this word. I recognize that it is not a nice or a pleasant word. But we ought not be afraid of it. We did not pick the men in the Kremlin as enemies; they picked us. We have tried not to believe their statement of their aims. They said "world revolution," but we preferred not to believe they meant it. We have tried many times to show our good will and friendship. We offered to help them with arms in 1918 to reestablish a front against the invading Germans, but all that came of it were the misunderstandings of intervention. During the so-called intervention, we helped them to get back Siberia after they had lost it, and we forced the Japanese by our pressure to give up their occupation of Siberia. When war and civil war and the follies of their socialization of every grain of wheat and every inkpot brought on universal famine, we helped to save millions of Russians from starvation by our generous famine relief. In the period of their forced industrialization, we sent them technicians and engineers, whole factories and machinery, and helped them to build dams and powerhouses.

In World War II, after they had made their pact with Hitler to divide Europe, and Hitler turned on them, our help was generous and unstinting. Instantly, not after Pearl Harbor, but as early as June 1941, Harry Hopkins flew to Stalin to offer planes and tanks and trucks and guns, and wool and meat and fuel and bread. When Stalin asked Harry Hopkins quite naturally: "What do you want in return for all this?" Again came the failure of vision and understanding. Harry Hopkins boasted: "I told him we were not interested in conditions. All we were interested in was getting them the planes, the guns, the tanks, and the other things they needed."

They have picked us as the enemy of the things they are trying to do to their people and to their neighbors. If we forget that for a moment, in any one of their maneuvers, we fail in leadership. Yet always, with each maneuver, we are prone to forget afresh. We have failed to learn from a monotonous multitude of repetitions. We have failed in understanding. We have failed in leadership and enlightenment of our own people and other peoples. We have failed in political courage. Above all, we have failed in vision—and here, truly, where there is no vision the people perish.

I would not have you understand that we have done nothing right in these 40 years, or recently. We have done many fine things. I do not count generosity among our errors, only the generosity which defeats and undoes itself.

A power which wishes to preserve peace and prevent an upsetting of the status quo by force is always at a disadvantage when dealing with a revolutionary power. I recognize that. Moreover, our life in this recent period has had its great moments: The first stage of the Korean war; the Berlin airlift; the Marshall plan—in which we even offered to include Russia if she would use it for genuine healing of the wounds of war. These have been noble moments, and there have been others like them.

But our vision is faltering, our understanding blurred; we are too easily deceived and too ready to deceive ourselves, to the world's detriment. My purpose in this analysis has been only a single one: to give such awareness of the nature of the Soviet system that the hand can be steadier, the vision clearer and more unflinching, so that each new maneuver of a tactical nature which the Soviet Government undertakes can be appraised in the light of a deeper, overall understanding of the nature of the system that torments its own people and is vowed to our destruction.

U.S. NUCLEAR TESTS AT HIGH ALTITUDES

Mr. HUMPHREY. Mr. President, this week the press carried extensive and highly interesting and informative articles regarding the nuclear tests of the United States carried out at altitudes of some 300 miles. These tests have tremendous implications for science both in technology for peaceful exploration of outer space and for military purposes. The tests also have given us valuable information about the detection of nuclear tests at high altitudes, something that must be included in any international agreement on the cessation of nuclear weapons tests.

I am endeavoring to learn more about the results of the tests particularly as they apply to the control system for detection and identification purposes in any test ban agreement. We do know that Explorer IV and rockets sent up by the United States detected the tests and identified their nature. This confirms testimony submitted to the Subcommittee on Disarmament by Dr. Hans Bethe, given in April 1958, and again in more detail on February 2, 1959. Dr. Bethe, on the basis of both theoretical calculations and experiments of Project Argus, testified that earth satellites in various orbits could detect and identify nuclear explosions at very high altitudes—much higher than experiments to date.

It will be necessary for the nuclear powers which are in the process of attempting to negotiate an agreement to end all nuclear weapons tests to agree to incorporate into the treaty methods for the detection and identification of nuclear tests conducted at high altitudes. The subject of high altitude tests was rather thoroughly discussed at the Experts Conference at Geneva and the Soviet scientists suggested and approved using earth satellites for detection purposes. Furthermore, the problems of detection of high altitude tests have been explored and studied by the Senate Disarmament Subcommittee.

Although the Geneva Conference of Experts did not recommend specific methods to be included in the control system for detection of high altitude nuclear tests, it did reach conclusions based on theoretical considerations as well as data gathered from the satellites put into orbit by the United States and the Soviet Union. I ask unanimous consent, Mr. President, to insert into the RECORD, the conclusions of the Geneva Conference on the detection of high altitude tests.

There being no objection, the conclusions were ordered to be printed in the RECORD, as follows:

CONCLUSIONS OF THE GENEVA CONFERENCE OF EXPERTS ON THE METHODS OF DETECTION OF NUCLEAR EXPLOSIONS CARRIED OUT AT HIGH ALTITUDE (MORE THAN 30 TO 50 KILOMETERS) ABOVE THE EARTH, 1958

The Conference of Experts has given theoretical consideration to the gamma radiation and neutrons resulting from a nuclear explosion and the conditions of recording them from earth satellites; and to optical phenomena and ionization of the air in the upper layers of the atmosphere in the case of a high-altitude explosion (altitudes above

30–50 kilometers) and has arrived at the following conclusions:

1. A kiloton nuclear explosion produces at its source delayed gamma rays from fission products, and prompt gamma rays and neutrons. The number of prompt gamma rays and neutrons depends upon the construction of the device and upon the materials surrounding it. The delayed gamma rays are insignificantly affected by these factors. At a distance of 10^4 kilometers in vacuo, typical quantities of radiation from a 1 kiloton fission explosion are: (a) Delayed gamma rays, 10^4 quanta/cm.^{2} during the first second; (b) prompt gamma rays,[1] 10^2 quanta/cm.^{2}, distributed over a time of about 10^{-7} second; (c) neutrons, 10^4 neutrons/cm.^{2}, distributed over a time of a few seconds.

The cosmic background at the height at which earth satellites orbit is under study at the present time, attention being paid to the quantity, nature, and energy of the particles; however, on the basis of preliminary data, it can be considered that the detection of an explosion from an earth satellite is possible, by means of registering the gamma rays accompanying the nuclear reaction, neglecting shielding, and also by means of registering the gamma rays of the fission products and the neutrons. If both prompt gamma rays and neutrons are registered, it is possible to get some idea of the distance to the explosion. The use of gamma rays from a nuclear explosion will make it possible to detect the explosion in cosmic space at a distance of the order of hundreds of thousands of kilometers from the earth. Estimate of the maximum distance for the detection requires data concerning the magnitude of the cosmic radiation at the orbit of the earth satellite. If there is an explosion at a height of 30–50 kilometers and above, and if the height at which the earth satellite orbits is some thousands of kilometers, one can neglect the absorption of gamma quanta in the upper layers of the atmosphere. The Conference of Experts considers that it is possible to use for the detection of nuclear explosions at high altitudes the registration of gamma radiation and neutrons with properly instrumented earth satellites.

2. In the case of an explosion at a great height light will be emitted at the point of the explosion and there will be luminescence in the upper layers of the atmosphere under the action of X-rays and fast atoms from the materials in the device. Light phenomena may be detectable from the surface of the earth in clear weather at night with the help of simple apparatus; in day time with the help of more sensitive apparatus. In cloudy weather the detection of optical phenomena from stations on the earth's surface would probably be extremely difficult.

The radiation from a nuclear explosion creates in the upper layers of the atmosphere a region of increased ionization which is detectable by the absorption of cosmic radio signals or by anomalies in the propagation of radio waves.

Our knowledge of the absorption of cosmic noise by ionospheric phenomena is not sufficient to determine the number of natural events similar to those resulting from a nuclear explosion.

The Conference of Experts considers that it is possible to use the recording of ionospheric phenomena, using appropriate radio techniques, and of optical phenomena for the detection of nuclear explosions at high altitudes.

3. The Conference of Experts has not considered the problem of the detection of nuclear explosions which might be conducted in cosmic space at distances of millions of kilometers from the earth.

F. The Conference has recommended the inclusion of the first four of those methods in the number of basic methods for detecting nuclear explosions by means of a network of control posts, and considers it possible to use several methods for detection of nuclear explosions at high altitudes as stated in IIE1 and IIE2.

Mr. HUMPHREY. Mr. President, I also ask unanimous consent to insert into the RECORD the papers on detection of high altitude tests presented by the scientists from the United States and the Soviet Union.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENTS BY SCIENTISTS ON DETECTION OF NUCLEAR EXPLOSIONS AT HIGH ALTITUDES MADE AT GENEVA CONFERENCE OF EXPERTS ON DETECTION OF VIOLATIONS FOR A POSSIBLE AGREEMENT ON SUSPENSION OF NUCLEAR WEAPONS TESTS, 1958

STATEMENT BY DR. LEIPUNSKI OF THE U.S.S.R., JULY 22, 1958

Mr. LEIPUNSKI (interpretation from Russian). We examined yesterday, and are again examining today, the radiation which occurs following explosions in the troposphere. We have heard a theory and we have heard of experimental results which have enabled us to note that the mechanism of electromagnetic radiation is such that signals may be detected at rather considerable distances. We have also adopted from the reports which have been submitted that this mechanism is such that in explosions at considerable altitudes under conditions of a vacuum, the electromagnetic radiation should not exist on the basis of the physical nature of the various mechanisms to which we have referred. Consequently, when there is no air, currents cannot exist and there can be no electromagnetic radiation. Therefore, in studying altitudes, we should pass from the conditions in which electromagnetic radiation is possible to those conditions in which such radiation is impossible owing to the various mechanisms which we have studied.

Neither Dr. Latter nor I indicated in our reports the altitude at which these mechanisms will no longer function. In the conclusion submitted by the Western delegations, there is a reference to the fact that the expected altitude is approximately 50 kilometers. We do not intend to challenge this figure. We can accept it as given here, but we should like to put the following question: What will occur if the height of the explosion is increased? What will happen in the more rarefied strata of the atmosphere when these mechanisms to which I refer will stop functioning, in other words at heights greater than 50 kilometers or even slightly greater than 50 kilometers?

This question has been studied by us and we have come to the conclusion that even at considerable altitudes electromagnetic radiation is still possible through another mechanism and in another range of waves. I should like to give very rough qualitative indications which might provide the electromagnetic picture at considerable altitudes under vacuum conditions as well as to indicate the evaluation of the basic parameter, the length of the wave and the amplitudes which occur.

I shall now refer to electromagnetic radiation in a vacuum. How is this radiation formed? It requires the appearance of currents which change with time. These currents are formed for the following reasons. Here we have a bomb [indicating], and in the case of a nuclear reaction, which is given exponentially here [indicating], there is a propagation of gamma rays which come out from the center in all directions. These rays will throw out electrons from the external layers of the bomb, and these electrons will continue their main movement together with the gamma rays away from the center. They will fight their way through a very thin layer whose length will be equal to the travel length of the electrons through the external material of the bomb, which might be iron. The law in this connection will be the same: it will increase exponentially with time. If we assume that the appliance which we use is not symmetrical in shape, we shall have a current of the electrons mainly in one direction.

This current will depend exponentially upon time. Consequently, there will occur a radiation, as the expression in time from the current will have a value different from zero. This is the bare physical picture.

Now, we can turn to the evaluation of the order of magnitude which flows from this physical picture. First of all, I should like to simplify the matter, and we should first consider the sum total of the current. We shall consider that the electrons are moving in one direction, a direction of symmetry, and that all electrons are moving with an average velocity equal to $1\frac{1}{2}$ times 10^{10} centimeters per second. This corresponds to the velocity of movement of electrons in the 1 megavolt range.

I should like to refer to another point which might prove to be useful later. As the electrons fly out from the device, there will be a plus effect, and the more electrons that are released, the greater will be the charge of the weapon or device, and the charge will become so big that any further exit of electrons becomes impossible.

The potential which corresponds to the charge will probably be close to the energy of gamma quantum—I do not think it is necessary to say exactly how much, but probably several megavolts. Let us take an arbitrary figure of 3×10^6 electron volts—although I cannot guarantee that that is the figure, it is approximately that. This does not mean that there will be a halt in the movement of electrons; part of the electrons will return. There will be a slower movement, which uses a different law, but there will be an electromagnetic radiation with a considerably longer wave. This is a matter which we shall take up. We are interested in more intensive signals which refer to the length of the nuclear reaction and when there is considerable change in the electrons with time. In order to organize a quantitative evaluation, we should use a simple formula. Tension of the electromagnetic field in the wave is equal to—this is dipolar radiation—$RC^2 \times D2P/DT2$. This is a well-known formula in which it is the dipolar moment which occurs as the result of the picture which we are now discussing. The dipolar moment may be calculated in the following way—I am not going to do any calculations; I only want to give you the scheme as to how it should be done. The electrons which emerge over the positively charging external layer will have different travel lengths beyond the center. The time of the formation of the electrons is important in this connection. The electron which is formed at the very beginning of the reaction when Tau is equal to zero—the moment of the reaction being zero—up to the time this electron will travel the greatest length, and the length of this dipolar field will then be the following. The electron which is formed at the end of the reaction when Tau equals T evidently has just emerged and the length it has traveled is more or less zero. The path which it will have traveled will be equal to the average velocity multiplied by T less

[1] Special shielding of the exploding device can considerably reduce the gamma radiation accompanying the reaction, but cannot reduce the radiation from fission products. However, such shielding involves increasing by several times the weight of the whole device.

Tau. In other words, in order to find the sum total dipolar moment, we should check the elementary dipolar moments at the different stages. As far as the dipolar moment is concerned at time-T, formed by electrons which have emerged between T-time Tau minus D Tau, we obtain the field multiplied by the quantity of electrons which have emerged during the time period of Tau. We have the average velocity multiplied by the time which has elapsed and the index with Tau. The sum total dipolar moment will probably be at time-T and will be equal to the sum of all these elementary basic moments, or equal to an integral, Tau equals zero up to T, and the following, which you see on the blackboard. In order to get this, we should determine the reference to DK to Tau. We should use a coefficient of proportion of BE of Tau by D Tau. The coefficient can be determined if you go beyond the maximum charge possible. I am not referring to the way the B coefficient can be indicated and calculated—all these operations are rather elementary; I only want to refer to the end result. P actually will be found to be function FE at the Tau, and this magnitude will be included in the calculations.

After all these calculations, the second derivative in time from the dipolar situation will become, at a moment of time t, equal to t. The maximum value for the derivative of the second dipolar moment, the amplitude of the signal, will be equal to Q maximum, a maximum charge which the surface layer can receive as a charge. Or this will be equal to the maximum potential for the charge in the layer. The radius will be multiplied by theta and by u.

As to the tension of the electromagnetic field of this radiation, if we say that V is equal to 3 multiplied by 10^6 electron volts, C equals 100 centimeters, eta is equal to 3^{10} seconds—this, I think, is an acceptable magnitude—and u is ½ multiplied by 10^{10} centimeters per second. Then, for a distance R equal to 1,500 kilometers, we find that the amplitude of tension in the electrical field is equal—and the coefficient of asymmetry is important in this connection—if the coefficient of asymmetry is equal to 0.5, then we have 250 millivolts per meter. If the asymmetry coefficient is 0.025—the first asymmetry is a considerable one, and the second is a rather small one; I think that actually the asymmetry should be greater—in this second case, I say, we will have 12 millivolts per meter.

As to the length of the wave of the electromagnetic radiation, it will correspond in its magnitude to the result of the velocity of light multiplied by the time of the development of the reaction. In other words, this will be 100 centimeters.

Thus, from those evaluations and estimates, we can conclude that we can expect a short wage radiation within a range with a frequency of 300 megacycles and an amplitude of tension in the electrical field, at a distance of 1,500 kilometers, no less than 12 millivolts per meter. Twelve millivolts per meter is not a small value; it is a value which fully permits recordings.

As we refer not only to questions of sufficient amplitude for reception and recording, but also to noise and interference, I should like to say that the greatest interference here will probably be the radiation from the sun and the stars. However, estimates have shown that even a considerable radiation of the sun in this range will still produce an energy which is decreased by the order of 4 or 5. The other radiations which are possible in this connection are not substantial at all and cannot become difficult kinds of interference.

That is all that I wish to say as to this particular case. The moral of the story is that a signal at considerable altitude, in those cases where the methods earlier referred to cannot be used, should be based upon a different mechanism, which has been presented to you now, and that the magnitude will be such that reception will be possible at a distance of 1,500 kilometers or even more.

I do not refer to the technical side of this matter, to the equipment which is necessary for recording such a signal. The equipment may be rather complicated: I do not deny it. But that is perhaps a matter of technology. I think that there should be nothing strange or difficult in the recording of such signals so far as modern radio technology is concerned.

That is all I want to say in connection with explosions at high altitudes.

STATEMENT BY DR. HANS BETHE OF THE UNITED STATES, JULY 22, 1958

Mr. BETHE. In the field of high altitude explosions our knowledge is even smaller than in the case of underground explosions. Experimental data are lacking and we have to rely entirely on theoretical calculations.

I shall first discuss the standard methods of detection. Two of the standard methods of observing nuclear explosions are not available to high altitude explosions. The seismic signal from a high altitude explosion will be extremely small and, presumably, not observable. The nuclear debris will be produced in the stratosphere and, therefore, will in general not come down either to the ground or to normal airplane altitudes for a very long time. Therefore, these two methods are not applicable.

The other two standard methods, the acoustic and the electromagnetic, can, in principle, be used. I have not considered the very interesting and original method of obtaining an electromagnetic signal, which Dr. Leipunski has discussed today. Instead, I have considered two more standard methods of producing an electromagnetic signal. As Dr. Leipunski pointed out yesterday, the bomb emits gamma rays which produce Compton electrons, and the current of these Compton electrons produces an electromagnetic signal. In the case of a high altitude explosion, many of the gamma rays go down into the atmosphere and will then produce Compton electrons at some relatively low altitude, let us say, 15–30 kilometers. This [indicating] is the height which I calculated as reasonable from the observation coefficient of the gamma rays. In agreement with Dr. Leipunski, I have found a logarithmic dependence of the signal on the yield in my calculations. An important difference between high and low altitude is that the ionization due to high altitude explosions is distributed over a very large volume. The gamma rays go not only straight down, but also in other directions, and the region where the Compton electrons are important forms some shape like this [indicating] going over distances which are comparable with the altitude of the explosion.

We may then expect that, at moderate distances from the explosion, let us say at 100–300 kilometers—horizontal distance—the dominant wavelength in the electromagnetic signal is of the order of 2 pi times the height of the radiation layer above the ground, that is, 2 pi times 15 to 30 kilometers [indicating]. This means a frequency of 1.5 to 3 kilocycles. These frequencies are considerably lower than those obtained from low altitude explosions. This will make it much more difficult to distinguish these electromagnetic signals from those produced by lightning. Probably the frequencies are now just in the same range as those from lightning strokes. Here again, actual observations would help greatly. Of course, now, after your presentation of today, we might hope to get two signals from high frequency short signal, and then, followed by this longer period signal, and this might make it possible to use that method.

At larger distances, let us say 2,000 kilometers or more, the shape of the electromagnetic signal will again be determined chiefly by the characteristics of the wave guide and will be essentially indistinguishable from that produced by lightning. In summary then, let me say that the electromagnetic signal can be used, but even more for low altitude explosions, it can only be a secondary indication supplementing some other method.

The acoustic method is also applicable but is likely to be even more degraded compared to low altitudes. I expect that a considerable fraction of the energy released by the explosion will still go into acoustic waves. Furthermore, the atmosphere acts as a wave guide for sound waves, as was pointed out by Dr. Brekhovskikh in one of the early sessions.

Under normal conditions, the velocity of sound in the atmosphere depends on altitude about like this.

I have plotted the sound velocity in this direction [indicating], and the altitude vertically. The intermediate maximum of sound velocity is about 50 kilometers, and at great altitudes the sound velocity becomes very great. There are two sound channels separated by a maximum of sound speed at about 50 kilometers, and for this reason I think that it is convenient to choose 50 kilometers as the limit between low and high altitude. That is really the reason why we mentioned this figure earlier, in other drafts. Acoustic waves generated in the upper sound channel, above 50 kilometers, can penetrate into the lower sound channel and thus become observable at sea level, provided they have a sufficient vertical component of velocity to penetrate this layer [indicating]. The fact that the explosion generates originally shock waves which propagate faster than sound waves helps the penetration into the lower sound channel. Therefore, I expect that sound waves will be received from a high-altitude explosion.

However, it is likely that those sound waves will be mostly of very low frequency. One reason for this is that the energy of the explosion spreads over a very large volume when the air has low density. This in itself would favor long waves. Second, the propagation has to take place essentially in both sound channels simultaneously, and this again is easier for long sound waves. I have not made a complete analysis of this problem.

For a large explosion, in the megaton range, we expect long waves also if the explosion is near the ground. Therefore, for large explosions the detection of the acoustic waves should not be very different whether the explosion is set off at high altitude or at low altitude. But for an explosion in the low-kiloton range, the amplitude of the long waves will be rather weak. A one-kiloton explosion at high altitude will then give weak, low-frequency acoustic waves which are probably very difficult to distinguish from natural phenomena and very difficult to observe.

I believe, therefore, that the acoustic method will not be very useful for the detection of high-altitude, low-yield explosions. We, therefore, need an alternative primary method of detection.

Such an alternative method is suggested by the fact that considerable ionization is produced in the air by the radiation from the explosion. For the extremely low air densities you find at high altitudes, the large energies produced by nuclear explosions can be expected to radiate to very great distances. The interaction of this radiated energy with the air produces ionization additional to that normally existing in the ionosphere. This is similar to the sudden ionospheric disturbances which are believed to be of solar origin. These natural ionospheric disturbances are known to affect the dielectric properties of

the air, changing its conductivity and its dielectric constant. A similar effect may be anticipated as a result of the ionization produced by a nuclear high-altitude explosion.

We have attempted to estimate the magnitude of this ionization. We believe that one of the best methods to measure the additional ionization is by observing the absorption of the so-called cosmic noise—that is, the electromagnetic signals arising from the galaxy. Any estimates of the magnitude of the ionization and of the consequent absorption of cosmic noise are, of course, very crude. For one thing, the energy radiated by the explosion depends very much on the design of the bomb. For another point, the absorption of this energy depends sensitively on the altitude of the explosion. Third, the ionization will last for a shorter or longer time according to the mechanism by which electrons disappear from the air. Unfortunately, we do not very well know the cross-sections for the attachment of electrons to oxygen molecules, nor do we know the rate of recombination of positive and negative ions in air with any great accuracy. We believe that the recombination is fast compared with the attachment of electrons—that is, compared with O_2 plus electrons, giving O_2 minus—or the same with oxygen atoms. But on the cross-section of this attachment, various laboratory measurements differ by factors as large as 1,000.

For all those reasons, I can show only very crude estimates of the detection distances. These are the following.

For an explosion altitude of 30 to 50 kilometers and a yield of one megaton, the increased absorption of cosmic noise should be observable at about 200 kilometers from the explosion.

At 70 to 80 kilometers explosion altitude for a yield of 10 kilotons, observation should be possible, again, at 200 kilometers; and for a yield of 1 megaton, at 500 kilometers.

At greater than a 100 kilometer explosion altitude, for a yield of 1 kiloton, observation should be possible at 500 kilometers, and for 50 kilotons, observation should be possible at about 1,000 kilometers. If the distance of observation is 500 kilometers, this means that at 500 kilometers distance from the explosion the ionization is great enough to give an observable additional absorption of the cosmic noise. It does not mean that we need an observation station at 500 kilometers. If the station is, let us say, at 1,000 kilometers distance, we may have a radio telescope pointing to a region in the ionosphere which is 500 kilometers distant from the explosion. Therefore, you may have the explosion here [indicating], and here at 500 kilometers you have ionization, but you look at this ionization from a greater distance, for instance from 1,000 kilometers. Since the ionosphere, and also the ionization produced by the nuclear explosion, are at a height of about 100 kilometers above ground, it is relatively easy to see the ionization at this point [indicating] from a distance of 500 or more kilometers. It means that each observation station would have to be equipped with radio telescopes pointing in various directions.

I may add here that the same type of telescopes would be very useful to observe Dr. Leipunski's signal, because we are working with similar frequencies here in the cosmic noise and in Dr. Leipunski's signals.

The numbers in this table are based on the assumption that a moderate additional absorption of the cosmic noise might be detectable. I think this assumption is correct, but I do not know how often natural events may be confused with an explosion. However, it is clear that additional absorption of the cosmic noise is a useful means of detection. Also, I am sure that radio telescopes can be designed to make such measurements, and therefore should be included in a detection system.

The table shows that the absorption of cosmic noise is especially useful for explosions at altitudes above 100 kilometers and less useful for explosions between 30 and 100 kilometers.

The third point I want to discuss is observation from satellites. If an explosion is set off at high altitude, it seems reasonable to try to observe it also from high altitude. Indeed, above the 50-kilometer level, the total amount of air is only about 1 gr/cm², so that gamma rays and neutrons can easily escape into space. This suggests the use of satellites for the observation of such explosions.

In order to minimize the number of satellites required, I would suggest putting the satellites at a great elevation, let us say at twice the radius of the earth, or 6,000 kilometers above the surface. I realize that this requires considerable energy of launching, but I think that satellites at this altitude, especially if their weight is not too large, should be feasible in the very near future, especially if we can use the great development of satellite launching technique of the Soviet Union.

The best conditions are probably obtained if we observe the gamma rays from fission products emitted after the explosion. According to a well-known formula, the gamma ray intensity is given as: $t^{-1.2}$ Mev/sec fission, where t is measured in seconds. For a one kiloton explosion, this gives: 1.5 multiplied by 10^{23} multiplied by $t^{-1.2}$ Mev/sec.

Let me assume that the observing satellite is at a distance of 10,000 kilometers. Then the gamma rays observable at the satellite will be: 10^{4} $10^{1.2}$ Mev/cm² sec. Since the energy per gamma ray is about 1 Mev, the number of gamma rays between 1 and 2 seconds is about 10,000, which gives us 10,000/cm². This compares with the cosmic ray intensity of about 1/cm². Therefore, these gamma rays should be very easily observable, and the cosmic ray background is essentially negligible. A possible complication may come from the particles which have been observed by Van Allen in counters in satellites. It is not known whether Van Allen's effect is due to X-rays generated by electrons of about 30 kilovolts or whether his effect is due to electrons of several millions of electron volts. Let us say 3 million electron volts, which may be floating around in outer space. In the latter case, somewhat elaborate experimental arrangements may be necessary to distinguish the gamma rays from an explosion from those present anyway.

I believe, despite this, that this is the simplest method to observe high altitude explosions. It has the advantage of being independent of the special structure of the weapon tested, and essentially independent of the altitude of the explosion, as long as the altitude is sufficiently high.

Thus, attention must, of course, be given to the design of the counters, of the batteries, and of the satellites themselves.

I have emphasized the gamma rays emitted after the explosion. There are also gamma rays emitted during the explosion in about equal number. However, at this time there is some material between the fissionable material and the detector, and, therefore, most of the gamma rays are absorbed. This absorption depends upon the structure of the bomb. While it is probably possible to observe these gamma rays in a satellite, this observation depends more on the particular type of weapon tested. However, these prompt gamma rays may be important for the detection of very clean bombs exploded at high altitudes.

Similar considerations apply to the neutrons emitted during the nuclear explosion itself. These also are numerous; they are also partly absorbed by the material surrounding the fissionable material, but they are still useful for detection. In general, the efficiency of detection of neutrons is somewhat lower than for gamma rays, but it can be made a few percent by suitable detectors.

Finally, I come to the light emitted by an atomic weapon. This may be another useful method. If the explosion takes place in the lower part of the high altitude region—that is, between 50 and 100 kilometers—it is expected that the light will be very intense. At higher altitudes the phenomena seem to be very complicated, and we have so far not been able to discuss them with any completeness. In any case, the light seems to depend strongly on the altitude of explosion and on the structure of the bomb. However, we have seen that the method of absorption of cosmic noise is especially good above 100 kilometers. Therefore, the cosmic noise method and the method of observing the light supplement each other in a desirable manner. Either one or the other will be useful.

At altitudes of 50 to 100 kilometers, the amount of light omitted may be of the order of 10 percent of the total energy released. This means that a 1 kiloton explosion would release 4 multiplied by 10^{18} ergs of visible light. At a distance of 1,000 kilometers, which is near the horizon, and for an elevation of the explosion of 50 to 100 kilometers, this gives a radiation intensity of 10^{-5} calories per square centimeter. The radiation from the sun is about 1/30th of a calory per square centimeter per second. This means that the light could be observed if one uses detectors recording the light every millisecond or so, and recording the light from only a fraction of the sky—not the whole sky, but let us say a few percent of the total sky for each detector. I believe that the light can then be observed even if there is cloud cover over the ground. The observation is much easier if the explosion is set off at night.

I have talked about explosions at altitudes of hundreds or thousands of kilometers. At very much higher altitudes, nuclear explosions will give effects reduced by a large factor at either the surface of the earth or at satellites of the kind described above. The propulsion systems necessary to achieve such large distances from the earth are not much more advanced than those now available. At a distance of several million kilometers, the detection of a nuclear explosion will be extremely difficult.

In conclusion, I want to emphasize once more that all the considerations which I have presented are purely theoretical, and that, so far, there is no confirmation by observation.

STATEMENT BY DR. LEIPUNSKI, JULY 23, 1958

Mr. LEIPUNSKI (interpretation from Russian). At the last meeting Dr. Bethe gave an extremely interesting presentation on the possibility of detecting nuclear explosions at very high altitudes in conditions which, as it seems to us, had not been realized so far and have not hitherto been the subject of experimental investigation. However, since our Conference is examining all the aspects of the detection of nuclear explosions it follows that this hypothetical aspect should also be examined, and that as a matter of fact was the subject of a very interesting and erudite report by Dr. Bethe. I had spoken already yesterday and said that we have approximately the same point of view on the subjects that he had broached, and before coming to the Conference we discussed in Moscow the question of the method of the detection of high altitude explosions and had tried to determine those physical phenomena which might be used when the known methods might not work any longer; in other words, methods of the practical vacuum; and our conclusions in most cases are identical with those to which Dr. Bethe referred. This makes it possible for me to make a report to you which will be short, and it would also therefore avoid the need for repeating what has already been stated in the previous presentation.

What are the phenomena which could be used customarily for the gathering of gamma rays and neutrons and then optical phenomena? The most long-range method is the recording of gamma radiations and neutrons, and in a table I shall presently show you the travel distances of gamma rays and neutrons at various altitudes. [The speaker illustrated his remarks with a table.] This is the first table. The second line is the height in kilometers, the top line is the density of the air, and this line [indicating] is the travel distance of gamma quanta and rapid neutrons. They are approximately the same. Therefore we see that close to the ground at a distance of 50 kilometers you have 250 kilometers, at 70 kilometers 2,500 kilometers, and at a height of over 100 kilometers the distance is already an enormous one, approximately 250,000 kilometers, so that there you need no longer take into account exponential absorption, and for this reason. The first place as a means of detecting gamma quanta and neutrons—which were not referred to at all in the case of surface explosions because this exponential absorption and this distance of 50 kilometers and the 250 kilometers—because it is an exponential value it precludes the possibility of using gamma rays under normal conditions. Therefore, at great altitudes these absorptions are not present and conditions become very favorable. Lower we have the travel distance of X-rays, 6 kilovolts, and in the next line we have X-rays of 3 kilovolts. Six and three kilovolts are of course those X-rays which use up the greatest amount of energy at the time closest to the explosion, and we see that under normal conditions this spreads out to 40 or 60 centimeters, when they are immediately absorbed in the vicinity of the explosion. This, as a matter of fact, governs the transfer of energy into the shock wave. At a high altitude of 100 kilometers, however, the travel distance of X-rays, where there is the greatest portion of the energy of the explosion, is very great, in other words 400 kilometers, and they too already can be used as a factor which would be useful for the detection of the explosion. This table, therefore, explains why this factor, which we had not mentioned at all in the case of the discussion of surface explosions, as a result of the small travel distances and exponential absorption becomes substantive and perhaps the only factor at great heights.

[The speaker illustrated his remarks with a diagram.]

This table I am showing you is a very wide one and it is necessary that I show you the left side of it first and then I shall move it to the right.

In order to make the proposition more concrete we have given, in this diagram, quantitative values regarding gamma radiations and neutron radiations which are emitted as a result of the explosion, with an energy of one kiloton at distances of 3,000 kilometers from the center of the explosion. It is not worth your asking me why we chose 3,000 as the figure; we must use some values so we used a value of 3,000. Calculations would be made on the inverse of the square of the distance, and that can be done too.

You see the following graphs: the first line refers to quanta emitted to debris fission.

The second line indicates the quanta emitted at the moment of fission, in other words, those quanta which accompany the chain reaction, and the quanta from the plastic dissemination as neutrons, as a result of the chain reaction.

Next [indicating] you have fast neutrons, then [indicating] X-rays and then [indicating] slow neutrons. In other words, you have all the forms of penetrating radiations.

The purpose of this diagram, of course, is to obtain a number of quanta or neutrons per surface unit at a given distance of 3,000 kilometers from the explosion, and to obtain a comparison of this figure with the cosmic background. Those data will be seen when I move the diagram to the right.

Here [indicating] you have the total amount of energy which is liberated by all these types of debris, that is 10^{23} megavolts, or something equal to the 23d quanta. As regards quanta fission and plastic dissemination, you would have 3×10^{21}; the quanta-of fission, as a matter of fact, will probably not come out. This gamma radiation which follows the chain reaction is mostly radiation from plastic dissemination of neutrons or plastic dissemination of outer particles. That is important; it is important that it follows, simultaneously, the chain reaction.

Here [indicating] you have these neutrons at 10^{21}, then [indicating] you have X-rays in ergs and in megavolts, and slow neutrons. In this column [indicating] you have the intensity, in other words, the number of particles which are emitted per unit of time.

On the right hand side of the diagram [indicating], in these two columns [indicating], we have given the amount of energy or number of particles per square centimeter at a distance of 3 kilometers. In this column [indicating], is the intensity of the corresponding type of emission, in other words the amount of energy, or number of particles per square centimeter per second, and here [indicating] you have the cosmic background. Speaking of gamma radiations of debris, it will be seen that the total amount is 10^5 megavolts or quanta—it depends on the values per square centimeter. The intensity is approximately 10^5 megavolts per square centimeter and the background is approximately 1½ per square centimeter per second. Thus we have an intensity of radiation which is 5 orders of magnitude greater than the background.

Here [indicating] you see the gamma radiations from plastic radiation and fission. The characteristic time is approximately 10^9 seconds and, therefore, the intensity is very great—10^{12} megavolts per square centimeter per second against a background of 1½ particles, or perhaps, 1½ megavolts per square centimeter per second.

Since most of this equipment has a time factor of 10^7, if we compare that, then, we have 3×3^{10} megavolts per square centimeter per second. This is considerably higher than the background. The neutrons have a slower intensity than the gamma radiations which accompany fission; neutrons also accompany fission and their intensity should be higher. Several neutrons have different intensities of gamma radiation for the same velocities and that is why neutrons will spread out and their times of arrival will be such that, per square centimeter per second, you will have a value far smaller than the gamma quanta. This exceeds the quanta of the background.

Here [indicating] you see X-rays and slow neutrons. From this diagram it will be seen that you can arrive at two conclusions, as at distances of 3,000 kilometers, or something of that order, the emissions from a nuclear explosion are several orders of magnitude greater in intensity than the background. This makes it possible to organize observations.

It is natural that those observations I just mentioned can be organized only by means of a satellite. As a result of the first launchings of our sputniks, the question immediately arose of using those for the purpose of control. This diagram shows that with the apparatus installed on the satellite we have a fairly reliable amount of intensity in order to make such a measurement in a realistic way. It will be seen that the intensity margin is of the order of 5 or 4 orders of magnitude. If you have a margin of four magnitudes you can increase the distance by two magnitudes which makes it possible to go farther away from the explosion. That is why we consider that, from observations made from satellites, it could be said that the reliable limit of distance from a nuclear explosion should be of the order of 300,000 kilometers.

In addition to the factor of the intensity which enables signals to be received, we must examine the question of the identification of the signal—in other words, the question of reliably distinguishing the signal from the cosmic background. Here, we must consider the fact that a nuclear explosion will necessarily give rise to several signals of very definite sequence and origin. First, there will be the intense signal from the gamma quanta of fission and the gamma quanta from the inelastic dissemination of the neutrons. This will come in a very small period of time—10^{-8} or 10^{-7} seconds. It can be recorded quite easily with appropriate instruments. After that, the gamma radiation will come from particles and debris from fission. This occurs within a matter of seconds. Immediately after that signal, it will be possible for a few seconds to receive signals from gamma radiation from the debris of fission. Then, after one-tenth or possibly two-tenths of a second—depending upon the distance from the explosion—neutrons will be received. The velocity of neutrons is approximately ten times slower than that of light. This will govern the time interval between the signal from the gamma rays and the signal from the neutrons. The signal from the neutrons will spread over a long period of time because, in addition to the fast neutrons, hot neutrons will arrive and these have an energy of several kilovolts.

Thus, there will be a characteristic sequence: signals from the gamma quanta accompanying fission, signals from the gamma quanta of particles and debris, and signals from neutrons.

Attention should also be drawn to the fact that it will be possible to set up instruments that will not only detect neutrons but also measure the total number of neutrons—particularly slow hot neutrons—that arrive. In the case of an explosion, the neutrons are not absorbed in the periphery; they are simply slowed down. By measuring the total number of neutrons, one can estimate the number of fissions—in other words, the energy of the explosion. Thus, through an examination of gamma rays and neutrons, one can determine the fact that an explosion has taken place, the distance of the explosion and its energy. In other words, from a satellite it is possible in this manner to obtain all the necessary data to confirm the fact that a nuclear explosion has taken place.

I should now like to say a few words about the cosmic background.

Of course, the physicists here will understand that if the signal which is observed is greater, even by one order of magnitude, than the background, it will be possible to set up instruments that will reliably distinguish the signal from the background. I shall therefore not go into the engineering details of such instruments. I shall limit myself to referring to the relationship which I have already mentioned: that of the signal to the background.

In order reliably to distinguish the signal from the background, one can depend not only on the highlighting of the signal above the background, but also on the fact that gamma radiation from an explosion constitutes a parallel stream, whereas in the case of competing gamma radiation from other sources there is a narrowly divergent stream; this is another criterion to be used in making the distinction.

Calculations have shown that through a proper rearrangement of the computers on a satellite it is possible to insure that the possibility of not distinguishing the signals from the background will be very slight—in

other words, this could be brought to one operation every 10 years. It follows that measurements from a satellite are quite capable of detecting a high-altitude explosion.

I should now like to refer to the question of the distance at which this can be done and to the question of the altitudes of the explosions.

If the explosion takes place at an altitude of less than 30 kilometers, one can use all the earlier methods of detection. Such an explosion should not be regarded as a high-altitude explosion. What we are interested in now is an explosion taking place at an altitude of more than 30 kilometers. Here, a simple geometric calculation shows that if one sends satellites up to a distance of 6,000 kilometers from the surface of the earth, the magnitude of observation will be such that five or six satellites will be needed to cover the entire earth. One satellite covers approximately one-fourth of the total surface of the earth.

With satellites at the distance from the earth that I have indicated, the greatest distance between the explosion and a satellite would be 10,000 kilometers. You will recall that the table which I showed was based on a distance of 3,000 kilometers and a margin of intensity of several orders of magnitude. It will therefore be seen that the reception of signals at a distance of 10,000 kilometers will not present any technical difficulties whatsoever, because all the signals will be substantially higher than the background. Dr. Bethe has already mentioned that the background measured by our sputniks and the American satellites was somewhat higher than the background measured at a height of 250 kilometers. But, as I have mentioned on an earlier occasion, all the physical considerations indicate that this background refers to soft electrons and therefore can be entirely screened. Even, however, if we take this literally, the intensity will still be adequate.

Thus it is possible to conceive of a service for the detection of high altitude explosions which would consist of 5 or 6 satellites, at a distance of 6,000 kilometers, which would rotate around the earth and, by means of quite standard telemetric equipment, they would transmit their signals to the earth; and the result would not depend upon whose satellites they were—whether they belonged to the United States or to the Soviet Union—as both would provide an equally good source of observation. At this point, our sputniks have certain advantages. They can rise with 900 kilograms, and 900 kilograms affords, of course, the installation of a rather generous amount of equipment. However, this equipment could be so simple that it could be installed in satellites of smaller size.

This is all that I wish to add to what was said yesterday by Mr. Bethe regarding the use of satellites for the detection of explosions.

Now I should like to say a few words on optical observations. The optical effects will be produced in the case of an explosion in vacuum. They will be weaker than in the case of an explosion occurring at lower altitudes. From the work carried out by our physicists, it has been established that the yield in such cases could be in the magnitude of 10^{-4} or 10^{-5}, and the other figures are correspondingly lower. The illumination which is formed in the case of a distance of, say, 1,000 kilometers will form, during the period illumination, 10^{-3} lux; but, as the time element here is 10^{-4}, the illumination then will be about 100,000 lux. However, I think this is considerably less than the illumination produced by the sun and I think that it is not one which can be used for founding an accurate system of detection—during a cloudy period in a day, this certainly will not be possible, although it might be possible at night. Therefore, perhaps it is not a direct effect of the explosion which should be borne in mind, but indirect optical signals which occur and are due to the products of the explosion.

First of all, we should like to stress two sources of optical events. At explosions at considerable height, the energy of the explosion transforms itself into roentgen radiations, on the one hand, and into a hydrodynamic velocity of propagation of products, on the other hand. Thus, propagation is effected into the less rarefied layers of air, and the necessary absorption is effected. therefore, in the upper reaches of the atmosphere there will be a creation of a disk of this type within which the extra radiation will be absorbed. The absorbed energy will be illuminated as a visible area, so that this illuminated disk can be seen. But this radiation will be of very short duration as the fading of the illumination is very rapid. Thus, the length of the illumination will be of the order of 10^{-7} seconds.

Apart from this source of illumination, there is another, a weaker one, but longer in duration. The products of the explosion which propagate themselves are of very high velocity, which can be established in hundreds of kilometers per second, and when the molecules which have such high volocities enter the less rarefield layers of the atmosphere, this will lead to a drop in the illumination. There is less intensity in the illumination in such cases, but the period of illumination is longer. It depends upon the distribution of the velocities of the moving molecules, which distributions are regular and can stretch over a period of one second. Thus, we can expect, in the case of a high altitude explosion, the appearance of a luminous cloud, but the eye will detect it and its duration will be one-tenth of a second. Then there will be a second appearance, weaker in intensity, but of longer duration, lasting for one second. This illumination, as has been pointed out, if it occurs at night will be 250,000 times clearer in a cloudless sky, and only 100 times weaker than the light of the day. This is a quite visible and concrete phenomena insofar as the night is concerned. During the day, one would not be able to see it with the naked eye, and the luminosity is then lower, but a device with rapid action, such as a photo-element, could certainly observe this fact. These are my observations in connection with the optical methods.

Gamma radiation—that is to say, X-rays and gamma rays—as Mr. Bethe has pointed out, will lead to ionization in the lower regions of the atmosphere—lower than those to which I have just referred. This is due to the fact that the gamma rays travel farther than the X-rays and, as a result, the ionization from the gamma rays will be found at a height of from 30 to 40 kilometers. This ionization can be utilized in a different way. In other words, as Mr. Bethe pointed out, it can be used for the absorption of cosmic noise or in connection with the reflection of the cloud formed in such an event. This cloud is lower in altitude and its appearnace can easily be noted. From what Mr. Bethe pointed out yesterday, and from what I have said today, it can be noted that there are such physical events in the case of high altitude explosions which allow detection of such explosions. At present, these events are recorded generally as a result of calculations, but we should not forget them because, if we utilize available data—for instance, as a result of the use of certain satellites—I think that we can consider this method both useful and secure, and one which would need perhaps only constructive application.

As to optical readings and the use of changes in the electrical properties of the atmosphere, I think that reference should be made here to the possibilities in principle. We are at present still too far from the provision of a technical solution of the problem or of the possibilities of this factor for control purposes. I think that additional work is required in this connection. However, everything that has been said points to the fact that we are far from being without the necessary arms in connection with high altitude explosions and shows, as well, that we have the technical means for carrying out the detection of such explosions and confirming the possibility of violations of an agreement on the cessation of such tests.

Mr. FEDOROV (interpretation from Russian). Are there any questions?

Mr. BETHE. I have a number of questions on this extremely interesting presentation. First, I have been very impressed by the much greater care with which Dr. Leipunski has considered these phenomena than I had yesterday. However, in connection with his observations about satellites, I am still worried about the background of low-energy electrons.

The experiments by Van Allen showed that this background may be a thousand or more times the cosmic ray background. You stated today, as well as yesterday, that you felt sure that these electrons were really low-energy electrons of a few tens of kilovolts. If I could be convinced of this, then I would agree with you that it would be very easy to eliminate those electrons. However, I do not understand how you prove that these are electrons of tens of kilovolts rather than electrons of millions of volts. If they were electrons of millions of volts, then it would be much more difficult to eliminate them in the counters. Could you, therefore, go into some detail on your proof of the low energy of the electrons which are floating in space?

Mr. LEIPUNSKI (interpretation from Russian). The results in this connection are rather recent, and for this reason we lack direct experimental confirmation of the fact that these electrons are of that type. I have not this information in the available research material. However, I do know this. First it is clear that the increase in the background is not one thousandfold, but smaller. Dr. Virnow, for example, who undertook readings on the second sputnik of the magnification in this connection, in a conversation with me estimated that it was approximately 30 times greater. There is no argument as to the fact that there is a magnification; there may be an argument as to whether or not it is a thousandfold. Dr. Virnov obtained information related to the fact that the background forms approximately one particle per square centimeter per second. There is no doubt as to the accuracy of that information. If the background increases with a rise into the altitude by 30 times, this means that the particles which form the background cannot travel this distance—they cannot cross the magnetic barrier which deflects the electrons. Megavolt electrons should be able to reach such heights as 250 kilometers. As the electrons did not pass through but were stopped, their energy must be low.

Basically, that is all that can be said concerning this question.

Mr. BETHE. I still do not understand this point. I am not an expert on thermonuclear power, but I thought that the question whether electrons can come to a low altitude was not very dependent on their energy. If they have greater energy then their orbits will simply be larger in size. Whether they are reflected at one altitude or another seems to me to depend on the orientation of the orbit relative to the magnetic field lines rather than on the size of their orbit. I think that the higher energy electrons will have as their only difference the fact that they can live longer at a given altitude than the lower energy electrons. Since we do not know anything about the manner in which those electrons get to the high altitudes, I do not think that we have any evi-

dence on the time which they spend at high altitudes, going back and forth along the magnetic lines. Therefore, I do not think we have any evidence so far on their energy. If you have some other evidence, I would be very happy.

It seems to me that this is a question which can be solved only by further experiments conducted in satellites. By placing various absorbers between the counter and the outside, one can undoubtedly find out in the next few months in further satellites whether these particles are low energy or high energy. Would you agree to that?

Mr. LEIPUNSKI (interpretation from Russian). I think that we are now discussing very recent experimental results which have not yet been determined qualitatively. For example, there is the difference in views between Van Allen and Virnov as to magnification. All of this naturally points to the fact that final conclusions will be possible through additional study. I agree with you that there is no proof, but there is at least room for discussion. This background does exist even though its size is still being discussed. In addition to the thousandfold increase which is referred to by Van Allen, we have the other figure of a thirtyfold increase which is given by Virnov. The latter view offers the possibility of using the sputnik to effect readings at a distance of 10,000 kilometers, even if the background is 30 times greater.

Mr. BETHE. I think we agree that we need further experiments. The difference between 30 and 1,000 disturbs me rather than comforts me because it might mean that, if we go from a 1,000-kilometer height to a still greater height, we might find still more electrons. We will have to find out how much background there is and what the nature of this background is before we make very definite statements about the capability of the satellite for detection of high-altitude explosions. I agree that, even if the background is 1,000 times, one still has a good margin and one can still detect high-altitude explosions, certainly at a 10,000-kilometer distance, and one can certainly improve the working by putting in suitable shielding and a suitable arrangement of detectors. But, it seems to me, here is a field where we have to learn more before finally designing the system.

I have another question. You have stated that one can determine the distance of the satellite from the explosion by observing the travel time of the neutrons as compared to the travel time of the gamma rays. This, it seems to me, would be right if you knew the energy of the neutrons. If the explosion were a thermonuclear explosion, then some of the neutrons would have an energy of 14 million electron volts, and in that case the neutron signal would set in sharply at a certain time—and from this I could deduce the distance with fair accuracy. If, however, the explosion were an ordinary fission explosion, then it seems to me that the neutron spectrum extends over a very wide range of energies and that therefore any conclusion on the distance from the explosion will be very uncertain. The same, it seems to me, is true when you come to the thermoneutrons because, from one bomb to another, the temperature will certainly vary considerably, and you therefore cannot tell with any assurance what the energy and the velocity of the thermoneutrons are. Do you agree with these remarks?

My third question refers to the use of the ionization in other ways than absorption of cosmic radio noise. We have also considered such other use. We have also considered the influence of ionization on the propagation of radio signals which are transmitted from one station to another. One point, however, I did not understand. Do you think that the ionization will serve to reflect a radio signal which is emitted by one station and observed at another station? This means: Do you think that the ionization will give reflection of radio waves or do you think that the ionization will give absorption of radio waves? In the latter case, the way one might use this in observation in a system would be to have a radio transmitter at one station, to have a radio receiver at another station, and to observe normally reception of the radio signals because they are reflected by the ionisphere. But if additional ionization is produced, and particularly if such ionization is produced at low levels, such as 30 kilometers, then this transmitted radio signal may be absorbed by the additional ionization created. In other words, my question is this: Do you think that the ionization will absorb a signal which is normally reflected from the ionosphere, or do you think that this ionization will reflect a signal which normally would not be reflected?

My fourth question refers to the high frequency signal which you mentioned yesterday. I have not fully understood the signal, and I have some doubts about it. The first doubt about the signal concerns the asymmetry of the bomb which is exploded. If you have a violator who wishes to make a nuclear explosion in violation of an agreement, and if he chooses to do so at high altitudes, he would perhaps try to avoid giving the signal which you mentioned, and I think he might do so by making the bomb very symmetrical. It seems to me that this is not difficult; that, with a good machinist, you can make a bomb which is symmetrical to 1 part in 10,000. In that case, your signal would be reduced to a fraction of a millivolt per meter. That is one comment. The other comment is that the signal which you talked about contains many different frequencies—it is not just one definite frequency—and, as the signal goes through the natural ionosphere, the different frequencies have slightly different refractive indices. This means dispersion, and I have calculated that this dispersion will spread out your signal, which originally is a sharp pulse, into something like 20 waves.

When this is done the magnitude of the signal again is reduced by a large factor. I therefore believe that this signal will in practice be extremely small, or at least can be extremely small, if care is taken to make the bomb symmetrical.

My fifth question is: What is the mechanism of direct emission of light which you referred to in your talk today? I think it would be nice to hear a little more about this.

That is all.

Mr. FEDOROV (interpretation from Russian). Are there any further questions to the speaker? For the time being there are no more. May we ask Professor Leipunski to answer these questions?

Mr. LEIPUNSKI (interpretation from Russian). Professor Bethe asked a number of questions which could be the subject of a very interesting physical conference on the special phenomena in high altitude, high atmosphere. Undoubtedly these questions are legitimate and will call for a detailed answer, although at this stage I will be unable perhaps to answer in great detail.

The question regarding the definition of distance is made difficult by the fact that the neutrons are not monochromatic, whereas in a hydrogen or thermonuclear explosion you have a number of monochromatic neutrons and therefore it would be relatively easy to determine the distance. In the case of normal explosions the neutrons are not monochromatic and it is difficult to do this. Then you also have thermal neutrons, which have an undefined temperature. If we speak in general terms, all this is of course quite true, but questions of degree of accuracy and degree of uncertainty are at stake and those calculations and observations which are available in connection with the spectrum of neutrons in the case of normal nuclear explosions show a great homogeneity in the spectrum both in relation to fast neutrons and thermal neutrons—in other words neutrons with energy of one kilovolt—that is that group of neutrons stuck in the periphery and assuming the temperature of the periphery. In the case of explosions at a high altitude we will have a train of neutrons which will reflect the spectrum of neutrons—in other words, we will have the characteristic of the spectrum of the neutrons, and I do not anticipate any great difficulty in evaluating the distance to the point of the explosion. So that Professor Bethe is quite correct that this result will depend upon the spectrum of neutrons, but this neutron spectrum is not so valuable that it will be possible to say that we could not assess the distance by means of observations of neutrons.

Regarding ionization, Professor Bethe asked how we visualize this method—in the form of interference with the dispersion of rays reflected from the ionosphere or in the form of an independently acting cloud which would constitute a sort of newly formed ionosphere. Both are possible, you can do it one way or the other, although neither version is very easy to achieve from the point of view of instruments.

Then comes the question of the high frequency signal in the case of an explosion in a vacuum which of necessity is related to the asymmetry of the bomb: what will happen if the bomb is made symmetrical? As I have already said, if the bomb is going to be symmetrical, nothing is going to happen. In other words, the whole point lies in the question to what extent it is possible to make a symmetrical bomb. I believe you are placing a very high requirement before the machinists if you think they can achieve a symmetry of one-thousandth. That is hardly possible and I have my doubts about it. But even one-thousands is a very arbitrary figure and of course it would constitute possibly 250 microvolts per meter. That is difficult but is within the limits of possibility, but to achieve a symmetry of one-thousandth is an extremely complicated procedure. These frequencies in the meter range, at least from what is known of the passage of radio signals, are not absorbed to such an extent in the ionosphere, therefore I think this evaluation of the decrease of the signal as 20 times is perhaps a little magnified. We do not expect such a high decrease in this signal.

Now, what is the machinery for the direct emission of light? I think this is a highly physical question and might perhaps be set aside for a private talk.

That is all.

Mr. FEDOROV (interpretation from Russian). Are there any further questions?

Mr. BETHE. I think I have not made myself clear about the attenuation of the high-frequency signal in going through the ionosphere. I do not mean that the signal is absorbed; I agree with you that the absorption for these high frequencies is extremely small. However, the signal is dispersed. That is, if you have an exponential signal of 300 megacycles this really contains all frequencies from, let us say, 100 to 500 megacycles. The 100-megacycle radiation has a large refractive index; the 500 megacycle radiation has a refractive index near one; and this gives a difference in the time of transit for the two different frequencies. That means that when the signal arrives at the surface it will have changed its shape completely and it will be resolved into some high-frequency signal coming first and lower frequency later on, with the result that this lengthening of the wave train has reduced the amplitude of the wave wherever the wave arrives. That is the point.

On the other point of how to use the ionization, I agree that it is somewhat difficult to design technically a system which makes use of this. I do think, however, that one can tell right away that ionization produced at 30 kilometers height and even up to about 100 kilometers height will give essentially only absorption and not reflection, and only ionization produced at greater height than 100 kilometers can give reflection. Most of the ionization by gamma rays and some of the ionization by X-rays is produced at lower altitudes than 100 kilometers, and therefore I believe that absorption is the method to look for, is the phenomenon to use, if one wants to make use of the ionization in a detection system for high altitude explosions.

Mr. FEDOROV (interpretation from Russian). Are there any further comments on the report presented by Dr. Leipunski?

Mr. LEIPUNSKI (interpretation from Russian). I should like to make a short reply concerning ionization. The fact is that the ultimate result of the selection of possibilities between work on reflection and work on absorption will depend to a very large extent upon the concentration of ions and therefore upon those constants which we take into account in calculations for defining the concentration of ions in a cloud. I was very cautious when I spoke of this because these constants are not very well known.

Mr. FEDEROV (interpretation from Russian). Are there any further questions or comments in connexion with this theme?

Mr. SEMENOV (interpretation from Russian). I would like to say that, even if we bear in mind that the number of these particles forms 1,000—or 10^3—this is not a handicap for detection from this sputnik. We have noticed at a distance of 10,000 kilometres the number of particles per square centimetre will be 10^4, and even if it will be 10^3, the increase as compared to the background will be considerable, so that the question might arise at a much greater length, 100,000 kilometres. If we use the direct gamma quanta released by a bomb after a quantum fission which occurs as a result of a nonelastic propagation of neutrons, and if the yield of neutrons is in the range of 10^{-7} of a second, then we should have an even better ratio. For 100 kilometres we shall have 10 kilometres. At 10 kilometres we shall have 100 particles per square centimetre during 10^{-7} second, whereas in the case of the background the background in the same period of time 10^{-7} second, will give only 10^{-4} particles. For this reason I think the method for determining a nuclear explosion through this method from a height of 10,000 kilometres and at even greater heights, can be viewed as one which can certainly be utilized.

For this reason it seems to me that the question of the background does not play any substantial practical role. The whole question depends upon the equipment installed, but a time of 10^{-7} second is not something which creates an impossibility in our work.

As to the question of symmetry, do you think it is possible to organize an absolutely symmetrical explosion—absolutely symmetrical? I think that is rather complicated.

Mr. FEDOROV (interpretation from Russian). Are there any further comments on the subject under discussion?

Mr. BETHE. I have been reminded by one of my colleagues that Van Allen found not 1,000 times the cosmic ray background but into the fifth times. This makes the discrepancy between his measurement and the Russian measurement even larger. I do not understand the discrepancy, but if the number of slow neutrons is really 10^5 we would have difficulty in observing at least the delayed gamma rays in the way Dr. Leipunski and I have proposed.

Mr. FEDOROV (interpretation from Russian). Are there any further questions or comments which the speaker would answer immediately? If there are none, I will call on Dr. Leipunski.

Mr. LEIPUNSKI (interpretation from Russian). If we increase the background 1,000 times—which, as I have said, is dubious—then for the slower process the conditions of observation will be more difficult. However, I have referred to a number of methods with which you can detect from an earth satellite a nuclear explosion. It is sufficient to have 1 secure method; you do not have to have 10; so that in the use of a large intensity of gamma rays following the explosion there is no handicap which is created for them by the background. Dr. Semenov has just referred to it. The possibility remains in all cases. I repeat, nevertheless, that the amount provided for the background is one which lends itself to further discussion.

Dr. FEDOROV (interpretation from Russian). Are there any further comments?

Mr. BETHE. I like the gamma rays which come out from the fission products because they are independent of the design of the bomb. If you have to rely on the prompt gamma rays, then somebody who wishes to carry out such tests in violation of an agreement might put some lead around the bomb so that these prompt gamma rays do not come out. Similar devices could be used to reduce the number of prompt neutrons. Therefore it seems to me that we would have a very much more secure detection possibility if we could be sure of detecting the delayed gamma rays.

I do agree with Professor Semenov and Dr. Leipunski that the prompt gamma rays and prompt neutrons stand out much better against the background than the delayed one; and I think I find no disagreement with the figures that Dr. Leipunski has presented. However, there is more possibility of making trouble if someone wishes to make trouble, and in the case of the delayed gamma rays people just cannot make any trouble.

Mr. FEDOROV (interpretation from Russian). Are there any further comments on this question? There being none, may I say a few words myself?

First, the difficulties to which Dr. Bethe has referred arise more particularly from the possibilities which seem to be offered to the violator. One can, of course, consider a number of possibilities in this connection, but the possibility of screening a bomb from the gamma rays generated by the explosion would require quite a sizable shell or casing. I think that even without such a casing or shell the cosmic field today is such—I refer to a distance of several thousand kilometers from the earth—that the lifting of such a weight, of many hundreds of kilograms of tons, into that distant area—we have thought of tons in many cases—would be viewed today as a great scientific achievement of which any country could be justly proud and which it certainly would not hide.

Thus, it seems to me, that the possibilities of detection, as of now, are greater to a considerable extent than the possibilities of violation. I speak of the purely technical possibilities. Your earth satellites and ours are flying about, and the equipment of the type which we need is in operation. It is not something sensational, from the point of view of equipment. If we use discrimination—which is always possible—or discrimination from the point of view of the intensity of the flow, well, from these points of view, the equipment is not that fantastic.

The energy of the gamma rays which we plan to register possess a specific value, whereas the energy of other particles which propagate themselves around the world do not seem to have as clear a range, or do not lie in a range of that type.

Furthermore, even if we have a one kiloton explosion near the moon, in the first portion of the gamma rays we shall have about five gamma quanta per square centimeter per second. Therefore, even if we accept the fact that the entire background discovered by your scientists by now is of five quanta per second, then we have five particles in the 10^{-7} seconds. Well, this sort of operation can be detected against a background of one-thousandth of a particle in a microsecond, so that the background here will not be a handicap. If the explosion is not too far away from the earth, say 30, 50 or 1,000 kilometers, then the general radiation of gamma rays will be sufficient. If, however, we consider the explosion of a small bomb at a considerable distance, then the first portion of the radiation will be highly concentrated and will have five particles to the 10^{-7} seconds. This question can certainly be settled on the basis of energy discrimination. For these reasons I think the possibilities are quite good and they improve very rapidly. The science of measurement from the earth satellites is developing very rapidly both in your country and in ours and I think it will certainly, and continuously, exceed the possibilities of violation. On the other hand, the placing of the bomb and the entire experimental device is still fraught with considerable complications if one considers really great distances. I will not refer to some of the other details—symmetrical explosion is a difficult matter of course. What I would like to do is to attempt to summarize the trends of the very interesting reports which we have heard from Professor Bethe and Professor Leipunski.

It seems to me that we are in complete agreement that gamma radiation following an explosion made at a considerable height, say from 30 to 50 kilometers up to hundreds of thousands of kilometers, may be recorded with considerable certainty by the equipment installed on the earth satellites. The creation of such equipment is a problem which can be solved at the present time, I think; it is a soluble problem for us all. Dispatching of earth satellites will be, I think, a very possible feat in the future. You, and we, are sending up several earth satellites a year and will probably continue to do so in the future, thus furthering the possibilities of control. I do not believe that the equipment necessary for the recording of gamma radiation, insofar as its parameters are concerned, is widely different from that which we use in the Soviet Union, or that you use in the United States for the recording of cosmic rays. It is not necessary to install the equipment on an earth satellite of great size. Such equipment can be supplied with energy from solar debris; it is possibly the simplest equipment and one which is most readily available and is of a type already in use in artificial earth satellites. I do feel that, in this particular field, hardly any differences of opinions exist between us. For that reason, I think we can recommend to our respective governments a regular placing of earth satellites, fitted with equipment for the recording of gamma radiation, or perhaps of other types of radiation, but primarily for the recording of gamma radiation which might be produced by an explosion. As I say, we can recommend this as being one of the most basic and reliable methods of control.

Originally such a proposal might have been regarded as a trifle too vast, as regards its possibilities. However, we must examine it. You see, it is possibly one of the easiest methods of control, and one of the cheapest. If you, and we, split the responsibility and send up two or three earth satellites a year, this could not create any difficulties. This system could be applied to any other important experiments. I really do believe that we can recommend this type of control; it is possibly one of the best.

We have looked into other possibilities of control, and I am very glad to note that, generally speaking, they seem to show a sim-

ilar trend. I refer in this connection to Professor Bethe's and Professor Leipunski's reports. I think this fact indicates to us that, in our various countries, we have been thinking independently along the same lines and have arrived at similar results.

It seems to me that these possibilities relate to the change in the ionosphere. We all understand that the explosion creates certain violent changes in the ionosphere which can take the form of either an individual cloud or a lowering of the general ionosphere. In any case, the ionosphere is changed, so to speak. We know that a number of methods are being applied by scientists. For instance, an ionosphere service is in existence which is operated by the ion stations which carry out soundings, from below, upwards. Then, there is a system of recording ionospheric noises.

We must also take into account the possibility of observing optic signals, both those that are elementary—such as the flash of an explosion—as well as those that are secondary, such as the luminosity of the atmosphere after the appearance of X-rays, gamma-rays, and so on.

Then there is the possibility of making use of regular data concerning the condition of the ionosphere which can be obtained by making use of the means already in existence for checking the lines of communication. A service of this kind is in use throughout the world. I think it can be said that the changes which occur in the ionosphere can, in principle, be used by the control service.

However, it seems difficult at present to indicate exactly which method of control should be used. I think that this question can be settled later. I believe that we should refer to this method as being possible in principle. We should note, again in principle, that a possible method exists in connection with the observation of bursts, the illumination of the atmosphere, the influence of gamma rays and other agents on the atmosphere, and so forth.

I would suggest that we should not go into this matter too deeply, since there is no possibility of rapidly putting it into effect. A great deal depends in this case upon the weather. If it is cloudy, it is very difficult for surface stations to operate or to obtain readings from the earth.

I therefore think that we should refer to the possibility, in principle, of using certain optical methods for detecting some of the events which occur. I think that our conclusions could refer to these various possibilities.

I do not claim that I have given an exhaustive picture of this situation, but I believe that the various points to which I have referred could be included.

Does anyone have comments on this matter?

Mr. FISK. We have, of course, considered the various techniques which you have mentioned, Mr. Fedorov. We would propose that in due course these techniques, and perhaps others, should be drawn together into a set of conclusions, or perhaps recommendations. I do not believe that we are ready to do that today, but perhaps we should consider doing it later this week.

Mr. FEDOROV (interpretation from Russian). I am not proposing that we should now draw up the conclusions on this point—that is, on the point of high-altitude explosions—but, since we do still have some time today, it would be desirable to have further comments, particularly as regards the use of gamma radiation from explosions as observed from satellites. We believe that this particular question is sufficiently concrete and clear. Should we include it in our conclusions, or are there valid and serious reasons for not including it? Is there any doubt about the value of this method?

Mr. BETHE. I agree entirely with your conclusion that gamma rays observed by satellites are a very direct, and probably a quite reliable, method of detection. I would say that, if we adopt this conclusion, we should at the same time recommend that research be done into the nature of the background of electrons, so that we know how to design our apparatus and what reliability this apparatus will have.

Mr. FEDOROV (interpretation from Russian). I think that Dr. Bethe's desire is quite reasonable, particularly since it is already being realized. On our third sputnik, we have instruments which apparently will give substantial additional data on the nature of the radiations being recorded. It is possible that early in August some results will be presented during the Moscow conference to be held in connection with the Geophysical Year. I think that American geophysicists and specialists in cosmic radiation are also developing interesting and highly important data on the increase in background. I believe that we can thus say that this is an interesting method. Even if we do not do that, scientists are studying the matter in order to come to a solution rather rapidly. Without any knowledge of the nature of this question, but assuming that there are completely unknown particles that number, let us say, 1,000 or 5,000 per square centimeter per second, the detection of explosions is possible if we use certain simple methods of selection. This relates only to explosions which occur higher than 10,000 kilometers, because at distances of less than 10,000 kilometers intensity is sufficient.

Mr. FISK. We shall, of course, discuss and give further thought to this method; perhaps we shall have some suggestions for draft conclusions in this respect. Apparently, however, there are no further questions at the moment.

Mr. FEDOROV (interpretation from Russian). In that case, I think that we may consider that we have concluded our discussion of the possibility of detecting explosions carried out at very high altitudes or in cosmic space. We must proceed to a discussion of draft conclusions on this subject. I think that it would be desirable to prepare such draft conclusion, so that if there is time tomorrow we might examine them. On our side, we shall be prepared tomorrow to present draft conclusions on this method. approximately on the lines that I have just indicated but with perhaps a few additions.

Mr. HUMPHREY. Mr. President, these papers have not been made available to date because the Department of State has not yet published the verbatim records of the Geneva conference of experts. However, I believe in view of the recent disclosure about the U.S. high-altitude tests, these papers should be made part of the record so that many observers, particularly those concerned with the problem of detection, might know the type of discussions carried on at Geneva. We must have access to information relating to tests and detection. The information coming from these experiments relates directly to our national security, our negotiations, and the ability of the Senate to give advice and consent on proposed treaties and agreements. The Atomic Energy Commission and the Department of Defense are not promoting effective and responsible cooperation between the executive and legislative branches by their leaks and piecemeal, delayed, and tardy release of vital information. The need and right to know is not a slogan; it is a basic requirement of responsible democratic government.

It is my intention to continue to pursue this matter so that the public will know the significance of the high-altitude explosions for a possible treaty on the discontinuance of nuclear weapons tests and, I might add, so that the people will know the significance of these high-altitude tests, insofar as our national security is concerned.

THE BERLIN CRISIS

Mr. BYRD of West Virginia. Mr. President, a specter is haunting Europe. This announcement was made a hundred years ago. It was made by the Communist League, in the "Manifesto" written by Karl Marx and Friedrich Engels. That specter is still haunting Europe. It has changed in character, it has gathered force, and it has won victories. Today the great powers are engaged in a test of strength and principle; they have committed their prestige and power; they approach the edge of war in apparent determination to resolve the issue or dissolve each other.

The center of crisis is Berlin, but it is not the center of conflict. Berlin is the most visible surface of the deep undercurrent of conflicting interests between East and West. It is, like the apex of a pyramid, the focal point of all converging forces of dissension and strife, extending down to the base where lie the many diverse and fundamental differences. Berlin is the center of the present crisis, but the conflict is over the future control of Germany, and thus the European Continent, both of which shall in turn determine the balance of world power.

In Berlin, the Russians have thrown down the gauntlet; the West has picked it up. Now the world anxiously watches the evolving crisis.

Before discussing the current situation, however, I should like to examine briefly the genesis of the Berlin problem. In 1944, the Allies reached agreements on the division of Berlin into zones of occupation. Subsequently, agreement on the general occupation of Germany was confirmed at the Yalta Conference. Among themselves, the Allied commanders, including the Russians, made arrangements during the following months to establish their authority in Berlin and specific routes of communication between West Germany and Berlin after the withdrawal of Western forces into their specific zones.

These agreements were reached and arrangements made when the Western Powers and Soviet Russia were in a desperate struggle to defeat Hitlerian Germany. The spirit of the Grand Alliance prevailed, at least among the Western Allies. All were determined in their course to prevent a resurgent Germany from ever again becoming a threat to the peace of the world. In brief, Allied policy was directed toward the containment of Germany. It is understandable, therefore, that the West did not, apparently, question the wisdom of holding such an exposed position as it did in Berlin. The Western Powers fully expected that a German peace treaty

would be concluded, ending the temporary occupation of Germany as a whole and establishing genuine peace and security in Europe.

But the West had completely miscalculated Soviet intentions at the close of the war and during the early postwar period. The world soon became divided into two major contending ideological blocs as the Soviet Union consolidated its hold over Eastern Europe in violation of its pledged word and stirred up a global campaign of hatred against the West. Immediately, Germany became a battleground of the cold war. Hopes for concluding a peace treaty, slowly dissipating by early 1946, were almost completely dashed by the time Stalin had established the Cominform in 1947. The direct challenge to the West's position in Europe, particularly in Germany, came with the Berlin blockade of 1948–1949. Soviet Russia's brash action set into motion forces that brought about a complete shift in Allied policy toward Germany. Countermeasures had to be taken against growing Soviet power in East Germany and throughout Eastern Europe. Thenceforth, the West was determined upon a course to bring West Germany into the North Atlantic Alliance system. This was finally accomplished in 1955.

During the years of growing tensions since 1945, West Berlin unavoidably became more and more a vulnerable outpost of the West lodged in the heart of Communist Eastern Europe. The Berlin blockade of 1948–1949 demonstrated that the Western position was maintained only on the sufferance of the Soviet Union. The supply corridors through Eastern Germany have always provided a convenient source for harassing the West. And, the Soviets have never been reluctant to avail themselves of this opportunity. On the other hand, West Berlin, emerging from a mass of war ruins, prosperous and genuinely democratic, contrasted markedly with the dismal failures of the Soviets in the East Sector. Mass riotings in 1953 and the constant stream of refugees, pouring from East to West, attested to the high degree of uncertainty of life in the Communist Zone and underscored dramatically the powerful influence emanating from West Berlin.

West Berlin was a monument of freedom and democracy along the outer periphery of the Soviet Empire; it was a rebuke to communism and all its works; it was a defiant reminder to the Soviet Union of our pledged word to our allies and of our determination to oppose communism.

The situation in Berlin has been fairly tranquil during the period from the harassments of 1955 to last autumn. As Senators know, Khrushchev then precipitated the issue in notes to the Western Powers. Subsequent exchanges of notes between Moscow and the Western capitals have increased tensions. Mutual recriminations, charges and countercharges, threats and counterthreats have created an atmosphere of fear and frustration, anxiety, and anger. The very nature of communism suggests that this is the desired political atmosphere in which to press the present Kremlin demands. Nathan Leites, in "A Study of Bolshevism," 1953, alerts us to the attitudes and methods of our adversaries as follows:

> To Bolsheviks, high tension is the normal state of politics. They do not experience it as something that just cannot go on, but rather as something that necessarily persists. What Westerners call a real agreement seems to Bolsheviks inconceivable. It is often predicted in the West that if particular issues * * * could be settled with the Politburo, an easing of the overall tension might ensue. For Bolsheviks, this does not follow. There might be less noise, but the basic situation—the presence of two blocs attempting to annihilate each other—would be unchanged.

Shifting Soviet lines on the German question reflected in recent exchanges and in statements by Khrushchev have confused the issue, compounded the complexities, and created a climate of crisis. Leites refers to the alacrity and purpose with which the Soviets are able to change position. He says:

> Westerners have often commented that there is, in negotiating with the Soviet Union, no common search for a solution to common problems, no discussion in the Western sense of the term; the Soviet delegates elaborate or change their position in strict isolation and then present it in dogmatic fashion. They rarely take account of the views and objections of the other side.

From the maze of confusion, however, discernible lines of policy and intended action emerge which involve four centers of power: the Soviet Union, Great Britain, an evolving alliance between France and West Germany, and, finally, the United States.

Let us first examine the Soviet position. Fundamental to current Soviet policy in Germany is the demand for Western acceptance of the long-held Soviet plan for reunification to be accomplished through a confederation of the two Germanys with eventual reunification under Soviet terms—terms, it should be added, which would insure the communization of all Germany. Khrushchev now demands that the West give up its position in West Berlin and sign a peace treaty with the two Germanys, which would then take the first step toward confederation. If the West refused, Soviet Russia would sign a separate treaty with East Germany, then, in open defiance of agreements on Germany, turn over to the East Germans control of the Western supply lines to Berlin. During the past few days, however, Khrushchev has changed his position on Berlin, but not fundamentally. The Soviet Premier now holds that the West could maintain some troops in West Berlin, if the Soviets could do likewise. The intractable Mr. Khrushchev calls this modification a compromise. At least, he, apparently, is retreating from the extreme position he had at first taken in November. But we must be ever wary concerning what may appear to be a concession or a modification of position or a retreat. In this connection, Lenin wrote:

> Revolutionary parties must go on learning. They have learned how to attack. Now it is time for them to realize that this knowledge must be supplemented by acquiring a knowledge of how best to retreat. We have got to understand (and a revolutionary class learns this by bitter experience) that victory can only be won by those who have learned the proper method both of advance and retreat. (Works, Russian edition, vol. XVII, p. 121.)

Stalin, in one of his lectures in 1924, explained the purpose of such retreat in this way:

> The object of such strategy is to gain time, to scatter the forces of the enemy while consolidating our own for a future advance.

The Western position in this crisis is not yet solidly united. While the range of difference is far from clear, it does seem to shape up into three separate approaches. I think it is fairly obvious that the British Government is moving toward a position that the West should negotiate with the Russians and earnestly try to find new ways to ease tensions over Berlin and settle the problem of European security. On returning to Britain from visiting the Soviet Union, Prime Minister Macmillan placed special emphasis upon the need for negotiations within a broader context and in a mood of greater flexibility. Presently, he is engaged in a series of missions to the Allied capitals, trying to seek an adjustment, and at this time he is visiting with the leaders of our own Government. Apparently, the Prime Minister will urge negotiations with Soviet Russia on the German question, even at the summit, and also suggest the possibilities of some form of demilitarization or of "disengagement" of military forces in Central Europe.

We must not permit ourselves to forget, however, the awful sequel to the course of appeasement followed less than a quarter of a century ago by another learned British Prime Minister, Neville Chamberlain. While the present Prime Minister must be commended for his noble efforts to find a way out of the present crisis, nevertheless he appears to disregard the lessons which the free world should long ago have learned regarding Communist methods and tactics, and the zeal with which Communists use these techniques to further their expansionist aims. The modern student of history and economics will have little difficulty discovering for himself where Communist theory departs from the most elementary aspects of reality, and he will readily perceive that the tools of Communist thought are complex devices which are completely foreign to the tools of thought ordinarily used by freemen. With a little effort they can be understood, in the light of past history. So it is little short of amazing to find that apparently some of our British friends continue to measure the Soviet leaders according to Western standards of values. If the West is to deal successfully with the intricate twistings and turnings of Marxist strategy, there must be an understanding of Communist tools of thought, philosophy, and motive.

On the other end of the allied spectrum are the French and West Germans. General de Gaulle and Chancellor Adenauer do not subscribe to the apparent optimism of Mr. Macmillan in negotiating with the Soviets. Both have not concealed their displeasure at the British attitude since the Prime Minis-

ter's Moscow trip. It is now apparent that the French and the West Germans are drawing closer together in a common policy of resistance to any scheme for disengagement which, in the view of Dr. Adenauer, would be disastrous for Western Europe.

Where the United States stands within these disparate positions of its allies is difficult to determine. On the one hand, the President and other leaders in our government have asserted their determination to hold fast in Berlin until the German question and the problem of European security are acceptably resolved. That the United States will risk war to maintain its position of no retreat in West Berlin has been unequivocally stated by the President. Yet, the administration seems determined to avoid the appearance of inflexibility, and has been searching for a basis of negotiations to end peaceably the stalemate. While presently the United States appears to lean toward the British view of reaching an understanding with the Russians, the Americans are less sanguine than the British about the fruits of such a discussion.

As expressed in the February note to the Soviet Government, the Western position is clear, at least on basic principles: All reject the Soviet proposals for making West Berlin a free city and ending the Western occupation, and concur in the view that a foreign ministers' conference should be called to discuss the broad, general problems of Germany and European security, with representatives of both East and West Germany present. But the responses to the recent Soviet note and methods contemplated in approaching the problem are, however, not quite so clear. On their part, the Soviets have countered with the proposal for a foreign ministers' conference, limiting the discussion to only the Soviet plan for demilitarizing Berlin and the signing of a peace treaty with the two Germanys. As yet, the West has not responded to these proposals. The notes are in preparation; but clearly the West cannot accept wholly the Soviet demands, since acceptance of an agenda so circumscribed would, in effect, mean capitulation to the Soviets and complete disintegration of the Western position in Germany.

In a discussion of this matter, the question naturally arises, Why did Khrushchev provoke the crisis in the first place? I think it is clear that the Soviet Premier acted out of fear of both Germanys—East and West—and their particular relationship to the Soviet bloc. In the first place, the Russians have a pathological fear of the resurgence of German military power. The main thrust of the Soviet political line in the last decade has been aimed at thwarting the rearmament of West Germany, although the Soviets had provoked such responses from the West by their militarization of East Germany. The Russians worked desperately in trying to bring global opinion to bear, through their propaganda apparatus, hoping to prevent the agreement that brought West Germany into NATO. When in May 1955, that development proved inevitable, Moscow launched a vigorous peaceful coexistence campaign to shift the Western trend, highlighted by concluding the Austrian treaty and meeting the West at the summit in Geneva. The failure to change the mood of the West provoked the Russians to attack strenuously the plans of NATO to establish nuclear missile bases in West Germany and throughout Europe. The failure to deter the West from German rearmament appears to have compelled Khrushchev to force a settlement of the German question by provoking the Berlin crisis.

Still, fear of Eastern Germany also seems to have entered into Khrushchev's motivations. It has long been known that East Germany is seething with discontent. The riots of 1953 demonstrated its vast dimensions; and, surely, the Hungarian and Polish crises of 1956 must have added considerably to Soviet anxieties over their uneasy satellites. According to recent reports from London, Prime Minister Macmillan realized for the first time, in his talks with the Russians, the depth of Soviet fears. The Prime Minister apparently came away from his meeting with Khrushchev convinced that the stabilization of the Soviet hold in East Germany was one of the top priorities, if not the top priority, for Moscow. Only when the West has withdrawn from West Berlin and when all Berlin has been made the capital of the East German Republic would the Russians, apparently, feel secure in their position in East Germany, and have less anxieties over the political incorruptibility of their satellites in east-central Europe.

By provoking the Berlin crisis, Khrushchev could make the allies come to terms—perhaps not on all Soviet terms, but at least on the question of Berlin. This appears to be his short-range objective. But the long-range objective seems to be the settlement of the German question, again largely on his terms. In one sense, the Berlin crisis is a subtly contrived psychological thrust intended to set off a chain of responses that would lead to broader settlements on Germany and European security. Khrushchev cleverly created the extreme situation in his demands of November 1958—demands the West probably never thought he would make. He shocked the Western nations into thinking about negotiating an immediate settlement. He gave the West only one alternative: the use of force, an alternative the West would be reluctant to use, since force in Berlin could lead to nuclear war. The next phase of his tactics appears to have already begun—that is, to lessen the extremity of the situation, in this case the ultimatum of May 27, at which time the issue would be clearly drawn, by seeming to offer reasonable points for negotiation. Khrushchev seems to be searching for means to relax the crisis he had purposely created by offering apparent compromises which shall stop at a line far in advance of any position the West had ever been willing to accept before. And the West, seeking to avoid an open clash over Berlin which imposes the risk of nuclear war, shall no doubt be compelled by existing limited alternatives to accept if not all what the Soviets will bargain for, at least far more than what they were ever before willing to concede.

Khrushchev's dangerous maneuver in Berlin is a cleverly contrived form of diplomatic blackmail in which he has all the advantages: position, maneuverability, and irresponsibility.

Furthermore, Khrushchev wants a summit conference. That seems to me to be an obvious motivation in his provoking this crisis. A summit conference would provide him with a vast public platform from which to influence and enlist world opinion in settling the German question on his terms. It will be difficult for the Western Powers to persuade world opinion that their legal rights in West Berlin and Western Germany, are just and legitimate, assuming that world opinion is important in international relations, while Khrushchev is able to make the simple appeal: Let the Germans solve their own problems. Also, even limited success at a summit conference would be a crowning achievement for Khrushchev. He could then no doubt command stronger loyalties from the Soviet people and most certainly could advance another step in establishing his uncontested authority over the entire Soviet system.

Mr. President, I think we must be extremely cautious of the dangers involved in a summit conference. I am not a member of the Senate Foreign Relations Committee, but I have had 6 years of service on the House Committee on Foreign Affairs. Perhaps I should even disregard this limited experience, and say that I speak as an average citizen of the United States and for the average citizen. Speaking in this capacity, I am concerned about the many suggestions that are again being made that we go to a summit conference. The pressure for another summit meeting finds substantial support in Britain and, as I have already indicated, it is already rearing its ugly head in our own country. Our record at previous top-level conferences with the Soviet Union strongly suggests the inadvisability of another venture at the peak. At Teheran and Yalta certain agreements were made, many of which were subsequently broken by the Soviet Union, and some of which we lived to regret. At Potsdam there was another summit parley. Again some of the agreements made were broken by the Russians, and others were regretted by the United States. Former President Truman, in Wednesday's Washington Post, refers to the Potsdam Conference and he voices his misgivings regarding the prospects of a future meeting at the summit, and I desire to quote him at this point:

> I hope that a foreign ministers' meeting can be held in an effort to make a fresh start to deal with the problems of Berlin and Germany. If a meeting at the summit is for the purpose of affirming and furthering the constructive actions taken at the foreign ministers' level—all well and good.
>
> But since the Potsdam Conference where the agreements made were immediately violated by Stalin, meetings at the summit have proved useless.

Mr. President, these are the words of one who, by his vast experience in dealing with the Soviet leaders, learned long

ago that they cannot be trusted and that their agreements are worthless.

Most fresh in our minds, of course, is the Summit Conference of the Big Four in Geneva in July 1955. This high-level parley in the diplomatic Alps engendered great expectations among the peoples of the free world.

The single most specific agreement made at Geneva was on the German question. The Four Powers declared it was their purpose to settle "the German question and the reunification of Germany by means of free elections" which "shall be carried out in conformity with the national interests of the German people and the interests of European security."

As Mr. Dulles has said, the Soviet Union has failed to keep this solemn pledge, and on November 16, 1955, the Foreign Ministers of France, the United Kingdom, and the United States said that negotiations on the German question had reached a deadlock because the Soviet Foreign Minister insisted on a German policy "which would have involved the continued division of Germany as well as the eventual dissolution of the Western security system." In a letter dated February 28, 1958, the Soviet Foreign Minister Gromyko tore up the final scrap of the Geneva agreement when he said the German question "is a question of relations between the two existing German States."

Mr. President, I was unalterably opposed to our participation in the 1955 Geneva Summit Conference. The Scriptures admonish us in this fashion:

> Be ye not unequally yoked together with unbelievers, for what fellowship hath righteousness with unrighteousness and what communion hath light with darkness?

Yet, this is exactly what we were permitting ourselves to become a party to. The Soviet leaders are atheists, and I was taught a long time ago, when I stood at my mother's knee, that one simply cannot do business with the devil. Nevertheless, some of our leaders felt otherwise. Some writers were able to whisk us out of the atomic and cobalt age and into the glorious age of rose-colored glasses. Everything was suddenly sweetness and light. There had virtually been a recognition of the status quo; the bear was not really a bad bear after all; everybody was buddy-buddy; and, following the summit conference, some of our British friends were of the opinion that "there ain't gonna be no war." A magic had been exuded from the conference which far excelled anything that could be found in the Arabian Nights and, borne upon the wings of soft breezes drifting down the slopes from the sunset summit, occult powers completely overcame some of the crystal gazers who were felled at a single stroke of the wand. Like a breath of fresh air, however, it was satisfying to find that a few writers refused to follow the white rabbit into the land of imagery; on the other hand, they showed a determination to study the facts realistically and relate the real results of the conference to the American people.

To those who may suffer the illusion that the real nature of international communism can be changed by any new show of amiability and affability put on by a Russian delegation at a summit conference, one might only point to the announcement, which came on the heels of the 1955 Geneva adjournment, that the Soviets were increasing their military forces in East Germany. Then, too, the Israeli plane disaster, in which more than 50 persons were shot down by Bulgarian Communists, only conformed to the Russian pattern of committing overt, violent acts in order to demean the United States before the eyes of the world. "So sorry," said the Bulgarian Communists, and they felt that they had atoned for their trigger-happy brutality. One must not forget, too, that it was virtually on the eve of the Geneva Conference that the Russians shot down one of our American planes over international waters, inflicting severe burns upon a number of American boys, scars which some of the victims will carry to their graves. In that instance, the Soviets quickly assumed the partial responsibility, a development, based upon past experience, that warranted the sound conclusion that they knew it was their full responsibility. Our State Department made a hasty agreement, accepting the Soviet offer to pay for the damages.

I merely mention these incidents at this juncture to point up the sorry standards of measurements we are using in our official dealings with the Russians and to stress the fact that our sincere desire for peaceful relations with the Communists will carry us into serious danger unless we base our reckonings and policies on realism.

Mr. President, the American people, without regard to political party, would literally have thrown their hats in the air with joy, if the Geneva Summit Conference in 1955 had produced any real, sound basis for peace in our day. But all of the smiling and hail-fellow-well-met show at the summit failed miserably to alter the totalitarian Soviet structure. The satellite peoples are just as captive after Geneva as they were before the 1955 Summit Conference. There is no plan for the Soviet lifting of the ban against freedom of worship. The loved ones of the thousands upon thousands of politically imprisoned foreign nationals have less hope now for the release of their relatives than they had before the 1955 Summit Conference. No edict was issued by the Kremlin for its subversive agents everywhere to cease and desist in their foul efforts to undermine national governments throughout the free world.

What really emanated from the Geneva meetings, Mr. President, was a vast flood of propaganda, all aimed at showing that the prospects of peace were soaring because Bulganin and his company exhibited party manners, that good fellowship was generated with the aid of cocktails and caviar, that a new climate had been produced, and that from there on everything was going to be "just ducky."

Once we had gotten out from under the terrific barrage of propaganda bilge, we discovered that the all-vital, all-important problem of German unification still was unsolved, and it is unsolved today. Mr. President, it is most disturbing to look back upon the fruitless Geneva Conference of 1955 and to wade one's way through the sea of phony claims being made for another summit conference. America has always gone to international conferences with good intentions, but only too often she has returned with scraps of paper, agreements which have been violated and broken by the totalitarian signatories. Intelligent realism is the need of today. I regret to say that, despite the vast library of unhappy examples to the contrary, there appears to be a substantial number of our policymakers who still mistakenly believe that a submissive type of conciliation promotes reasonable responses from the Communists. The plain fact is that the Communists—always and everywhere—mistake reasonableness for weakness; they have only contempt for softness, and they ruthlessly exploit anything that looks like indecision and vacillation.

The Russian dictum on all of this is plain and has been plain for a long, long time. The Marxian dogma and the policies of Lenin and Stalin are firmed to unremitting war on the democracies, not necessarily a war in the military sense, but a war of doctrinal tactics, of infiltration and subversion, of economic piracy, and the stimulation of moral chaos. For Lenin has said:

> We are living not merely in one state but in a system of states; and the existence of the Soviet Republic side by side with the imperialist states for a long, long time is unthinkable. One or the other must triumph in the end.

The Russian leaders, of course, change their tactics from time to time, as I have already indicated. But they have never departed from their historic objective of world domination. In 1923, Lenin, the high priest of Communist strategy, described the struggle between communism and the non-Communist world in these words:

> In the last analysis, the outcome of the struggle will be determined by the fact that Russia, India, and China, etc., constitute the overwhelming majority of the population of the globe. And it is precisely this majority of the population that, during the past few years, have been drawn into the struggle for its emancipation with extraordinary rapidity—there cannot be the slightest shadow of doubt what the final outcome of the world struggle will be—the final victory of socialism (communism) is fully and absolutely assured.

That was 35 years ago. Lenin prophetically foresaw the importance of China and India in the world struggle, perhaps more clearly than we saw it.

On December 26, 1922, in his report to the 10th All-Russian Congress of Soviets, Stalin declared that the decision to form a Union of Soviet Republics was "another decisive step toward the amalgamation of the toilers of the whole world into a single world Socialist republic." A few years later, Dimitri Manuilsky stated the objectives as follows:

> War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we

shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist.

The handbook of Marxism sets forth the Communist objective in the section on the program of the Communist International. It says:

Thus, the dictatorship of the world proletariat is an essential and vital condition precedent to the transformation of the world capitalist economy into Socialist economy. This world dictatorship can be established only when the victory of socialism has been achieved * * * uniting the whole of mankind under the hegemony of the international proletariat organized as a state.

Lenin outlined the modus operandi for this objective of world domination. He said:

First we will take Eastern Europe, then the masses of Asia. Then we will surround America, the last citadel of capitalism. We shall not have to attack. She will fall into our lap like an overripe fruit.

Quoting Lenin, Stalin has said:

Lenin never regarded the Republic of the Soviets as an end in itself. To him it was always a link needed to strengthen the chain of the revolutionary movement in the countries of the East and the West, a link needed to facilitate the victory of the working people of the whole world over capitalism.

And Stalin supported the view:

For the victory of the revolution in one country, in the present case Russia * * * is the beginning of and the groundwork for the world revolution.

And with the death of Stalin, Malenkov—notwithstanding his professions for a new order of coexistence—revealed his faith in Soviet destiny. He said:

We know firmly that the victory of democracy and socialism throughout the world is inevitable.

I do not wish to labor the point, but it is clear; and, irrespective of changes in strategy, irrespective of current rulers, the key objective of world domination has remained constant.

Mr. President, in his speech to the American people on Monday night, the President of the United States referred to a summer meeting at the summit, and I was pleased to note that such a summit meeting will likely materialize only if future developments justify such a conference. In other words, the President seemed to say that a summit meeting would only occur if it becomes obvious, as a result of lower level meetings, that lasting and beneficial results might accrue from such a conference. If this situation should evolve, then, and only then, would it become worthwhile for us to explore the possibilities of another meeting at the summit. I am doubtful, however, that the Soviets are really prepared for serious negotiation at the summit—or anywhere else—if by negotiation we mean what negotiation has always meant—a genuine give and take, a willingness to give up something in order to attain something of equal or greater value—a willingness, for example, to permit honest and free elections in East and West Germany for the larger objective of greater security in Europe. Since the Austrian peace treaty, what have the Russians been willing to give up in the interests of a larger settlement? They have made certain proposals about giving up nuclear tests and withdrawing their troops from certain central European countries in return for similar concessions from the United States. But upon closer examination these similar concessions are found to be quite dissimilar—they involve unequal sacrifice. Most of the Soviet proposals have been one-sided because they have required much more of us than of the Soviets themselves.

And so, Mr. President, I am not willing to be stampeded into any drive for a meeting at the summit. Of course, talks are necessary to explore the feasibility of negotiations, but if the Russians really want to negotiate, if they really want to engage in genuine give-and-take bargaining, they have countless opportunities through the normal diplomatic channels at the ambassadorial or lower levels. They also have the opportunity to make use of the channels provided by the United Nations.

Even if the Soviets were interested in serious negotiation at the summit or elsewhere, would they keep the agreements reached? The history of the last three decades suggests that they would keep those agreements which were in their interest to keep and would break those agreements which no longer served their interests, if they thought they could get away with it.

The long list of pledges broken by the Soviet Union leads almost inevitably to the conclusion that many of the agreements were entered into without good faith—that is, they were made to be broken like piecrusts.

Let us look at some examples from the sorry record of broken Communist pledges. At the Yalta Conference in February 1945, the United States, Great Britain, and the Soviet Union agreed to help the peoples liberated from Nazi control to solve their political and economic problems by democratic means. The U.S.S.R. has flagrantly violated the letter and the spirit of this pledge by installing Communist regimes in Bulgaria, Hungary, Poland, and Rumania. Also at Yalta, the Soviet Union agreed that the Republic of China should retain full sovereignty in Manchuria. The Russians flouted this agreement by tactics of obstruction designed to hand over Manchuria to the Chinese Reds.

At Potsdam in July 1945, the United States, the U.S.S.R., and the United Kingdom agreed that, subject to the requirements of military security, freedom of speech, freedom of the press, and freedom of religion would be respected in the occupation of Germany. As everyone knows, Soviet authorities in East Germany have curtailed genuine freedom of speech and press by imposing the totalitarian instruments of suppression, censorship, and secret police. Basic legal and political rights have been the victim of authoritarian edict and one-party control, with the inevitable result that a puppet regime has been installed.

On July 27, 1953, a Korean armistice agreement was signed by representatives of the Korean People's Army and the Chinese People's Volunteers on the one hand and the United Nations Command on the other. On July 11, 1955, the United Nations Command, after detailing seven pages of specific incidents, charged that the Communists had flagrantly violated every basic provision of the armistice agreement by a willful, deliberate, and illegal buildup of their military forces which demonstrated their aggressive intent of acquiring a favorable military position over the forces of the United Nations Command.

I have already referred to the German agreement made at Geneva in 1955, which the Soviets have thrown on the mounting heap of broken promises.

So I can only look with the strongest suspicion upon any new proposals for a summit conference with the Russians.

High-level conferences impose serious limitations upon genuine negotiation. In such public spectacles the diplomats are subjected to the shifting moods and emotions of the public and various pressure groups. Under these conditions, the diplomats are tempted to make propaganda speeches rather than to get into the hard bargaining which is the very essence of negotiation. Subject to the glare of publicity and to public pressure, it is difficult for the diplomats to make the necessary concessions for a viable settlement. This makes for rigidity and dries up any liquid assets the diplomat may have had at the outset of the negotiation.

Summit diplomacy tends to create unwarranted and unrealistic expectations in large segments of the public. When these great expectations go unfulfilled, the public mood often shifts from unjustified optimism to equally unjustified pessimism. The failure of an international conference tends to cast discredit not only upon the conference, but upon the diplomatic process itself. The Eisenhower administration and segments of the press must share the blame for the psychological backwash which resulted from their overselling of the Big Four Summit Conference in 1955.

Summit diplomacy tends to undercut the solid, steady, and quiet work of ambassadors and other members of the diplomatic corps. To be effective, negotiation must be continuous, confidential, and patient. Public diplomacy tends to be hasty, spasmodic, and public-relations conscious. Direct negotiation between heads of state, or even foreign ministers, has certain inherent weaknesses.

The noted British diplomatic historian, Sir Harold Nicolson, has this to say about summit diplomacy:

A minister who flies to a foreign capital to undertake negotiation is inevitably short of time, ill equipped in technical knowledge, subjected to great publicity, and inclined to conclude some vague and meaningless agreement rather than to return emptyhanded to his home. More misery has been caused to mankind by the hurried drafting of imprecise or meaningless documents than by all the alleged machinations of the cunning diplomatist.

These are a few of the perils in summit diplomacy. By adequate preparation it may be possible to avoid some of the pitfalls, but others are inherent in public diplomacy itself. At best, the risks are great. There is little need to elaborate further on the subject of the summit conference. I believe that the Russians would only use such a conference for propaganda purposes, and that it would be highly detrimental to the security of our own country and the future safety of the free world. Under such circumstances, and until the atheism of Communist leaders is replaced by belief in an omnipotent and omniscient creator and respect for human and divine laws, I must in all sincerity state that I am against a summit conference. If however, the leaders of our country finally determine that we shall participate in such a conference I beseech them that it only be held after prior lower level conferences and diplomatic activities have given reasonable assurance that agreements have been arrived at which will be kept and honored by the Communists, agreements which we as Americans can honorably and conscientiously adhere to, agreements which will give reasonable hope to the peaceful aspirations of freedom-loving peoples everywhere, agreements which will be dedicated to the ultimate renewal of liberty where it is now denied in Hungary, East Germany, Poland, and other subjugated countries. When such agreements, by prior lower level negotiations, can be assured, then, and only then, shall I favor a summit conference for the ratification of such agreements. I do not believe, however, that such assurance is forthcoming, for the class struggle, to the Communist, is not a struggle which can be negotiated. It is a struggle which cannot eventuate in peace until the capitalist class has been exterminated or liquidated. The conference table is just one more place where war is carried on, and it will be used by the Communists, as it has been used heretofore, as a place where they may maneuver themselves into the best available position for continuing war.

I compliment President Eisenhower for his exercise of restraint in approaching future summit conferences.

In the event, however, that a foreign ministers' conference and subsequently a summit conference are held, what are the alternative courses open to the West? For the West, two alternative courses exist in any discussion of the German problem and European security. I call one alternative, for the want of a better word, the soft line. This line has been identified with disengagement. The other alternative is what I call the hard line; that is, one of firmness and inflexibility and perhaps even a desire to maintain the status quo at worst and at best accept solutions only to the irreducible minimum of Western terms.

Let us first examine the principle of disengagement. Suggestions for disengagement have generally been focused on the idea of withdrawing military forces from an agreed zone, restricting nuclear weapons, and neutralizing the area under a system of guarantees. Plans for disengagement have been suggested by Sir Anthony Eden, Hugh Gaitskell, George Kennan, and Polish Foreign Minister Adam Rapacki. All vary in degrees of realism and acceptability. The Eden plan is the most reasonable and acceptable, since it links a genuine political settlement of Germany with a broader plan of disarmament. The others lack realism. The heart of the disengagement argument is as follows—and here I have in mind Kennan's ideas and those of others equally as unrealistic and unacceptable: Withdrawal of military forces from Germany and withdrawal of West Germany from NATO and East Germany from the Warsaw Pact would satisfy Soviet apprehensions over revival of German militarism and thus, by easing tensions in Europe, would prepare the way for a genuine settlement of European security. The German question, the central problem of our era, would be resolved by neutralization and denuclearization. Reunification could come about peacefully, perhaps, in the form of a confederation. As a consequence, Europe, would, presumably, enter a new era of peace, something akin to the Locarno spirit during the interwar period.

On the other hand, the alternative "hard" course collides directly with the notion of disengagement. Supporters of this course, among whom I align myself, would argue that the underlying assumptions of disengagement are based on an unrealistic appraisal of Soviet intentions and aspirations. It is assumed that disengagement is negotiable and is in the Soviet interest. It is difficult, however, to reconcile this assumption with the inevitable results of disengagement which compel Russia to sacrifice certain strategic positions in Europe, thus leaving its frontiers exposed to harassment by potential enemies. Clearly, Moscow would not negotiate away its security in such a cavalier manner. The Russians have now a solid *cordon sanitaire* in Europe by holding East Germany and the satellite states. It is hardly likely that they would feel more secure if this sensitive area were exposed to penetration by their only potential enemy, the West, in some scheme of neutralization. Disengagement also denies or ignores the deep-rooted ideological motivation of Soviet foreign policy which is inherently expansionist and aggressive and looks upon withdrawal as a strategic retreat in the face of inevitable defeat.

I should also like to stress the point that disengagement maximizes the danger of war rather than minimizes it. Neutralization is basically unrealistic. It would establish a dangerous power vacuum in the heart of Europe. Great powers, and certainly the U.S.S.R., are not self-denying when their interests are at stake, and power vacuums have a way of being filled by nations whose interests are most deeply involved. Doubtless, the days of any neutralization of central Europe would be numbered under any disengagement plan with Soviet Russia. Moreover, can one expect with any assurances that a guarantee of neutrality near the rimland of the Soviet Union would quiet Moscow's fears of insecurity and also negate four decades of ideological conditioning which has provided a paranoic dread of "capitalistic encirclement"?

Disengagement also assumes that neutralization is possible. Yet, I seriously question whether 161 million people in central Eastern Europe can be neutralized. The Germans and Slavs are dynamic peoples. Is it not unrealistic to expect that they would long tolerate a destiny of inactivity? Is it possible to quiet the turbulent political instincts of a people who for centuries have been the power centers on the European Continent? The case of Austria is often cited as a valid argument for neutralization. But, I submit, vital Soviet interests were not involved in the "Austrian solution," in anything approaching the degree that they exist in East Germany and its bordering states. Soviet Russia, apparently, conceded in Austria because such a solution suited the prevailing objective in Soviet foreign policy, that of advancing peaceful coexistence and, more specifically, promoting the Geneva Summit Conference.

Also related to disengagement are the political, logistical, and psychological obstacles that would no doubt have to be surmounted if U.S. military forces were to return after a period of withdrawal from Europe. The unfavorable psychological impact of withdrawal and return, and the problem that arises in democracies in manipulating mass opinion to support such a move, can create serious difficulties. Withdrawal would, moreover, probably strengthen those quasi-isolationist forces who advocate the "fortress of America" concept of defense.

Disengagement would also weaken the Western alliance system. Of this there can be no doubt. It would atomize Western Europe, weaken the will to resist collectively, and encourage false hopes of negotiating separately with Soviet Russia to seek an illusory advantage. No doubt it would also induce a false sense of security in Europe, an illusion of genuine peace and security which could lead to further demands in Europe, Africa, and elsewhere for the dismantling of American bases. I should also like to stress the point that in disengagement the United States gambles with the possibility of losing Western Germany as an ally. Basic to any effective Western defense system is enlistment of the great resources of manpower and material of West Germany. Neutralization would require withdrawal of West Germany from NATO. In this event, NATO would have lost its most formidable European ally, the ability of West Germany to defend itself against future Soviet aggression would have been radically reduced, and Eastern Europe would probably be irretrievably lost.

We could never take such dangerous risks that disengagement offers, and with no compensatory advantage.

The supreme irony of disengagement lies in the fact that it seeks to contain Germany. Fears of its supporters are focused upon the resurgence of German militarism at some future date. They are bedeviled by a myopic fixation that power relationships can never change

and that the enemy of yesterday can never be the friend of tomorrow. They do not seem to realize that the danger to the free world is not Germany; rather, it is the Soviet Union—the Soviet Union yesterday, the Soviet Union today, the Soviet Union tomorrow. Ironically, supporters of disengagement have actually been deluded by Soviet propaganda which in the past years has stressed again and again fears to European security with the revival of German military power.

As a practical policy, disengagement is dangerous; it offers no solution, but only an illusion. The struggle among powers cannot be suddenly resolved by some simple formula. This is a continuing struggle for basic interests that is rooted deeply in the relationships between man and his universe.

The other approach to the solution of the German problem and European security, which I call the "hard" alternative, gives the impression of apparent inflexibility and seeming acceptance of the dangerous status quo. Yet, is it not arguable that such a position, though not entirely accurately described, is broadly valid? We can never hope to solve the great problems of foreign policy by some magic formula such as the supporters of disengagement seem to believe. An intelligent, sound foreign policy is a matter of managing problems, seeking alternatives, and searching for ways to achieve our best interest. I am convinced that a firm policy in Berlin and West Germany is intelligent and sound and that we cannot accept any plan for demilitarizing Germany that is not linked with a genuine political settlement. Such a settlement must be consistent with the general principles of our postwar policy toward West Germany. It seems to me that we cannot deprive West Germany of its right to freedom, nor can we deny the West German people their right to accept a system of Government that conforms to their own wishes, nor can we deprive the West Germans of the natural right of self-defense. We cannot in all conscience accept a settlement in Germany which does not insure acceptance of these principles. To compromise on these principles is not a mark of flexibility; it is folly compounded by stupidity.

The illness of the Secretary of State complicates our role in this crisis. Until a decision is made upon Mr. Dulles' tenure, the lines of responsibility and authority will continue to be diffused and confused. It is regrettable that the Secretary is stricken at a time when his skill at negotiations, his breadth of vision, his depth of understanding, and, most of all, his realism in international relations—especially in evaluating Communist tactics—are so desperately needed. We are, however, presently suffering from the imprudence of personal diplomacy.

Mr. Dulles has failed to build up an adequate staff system in the State Department. We have been compelled to rely heavily upon Mr. Dulles and his solitary judgment in formulating policy. So has the President, and his present difficulties in grasping the details and implications of the Berlin crisis demonstrate the administrative weakness in the conduct of our foreign policy. Mr. Christian Herter has been trying to fill the administrative gap, but even here I have some serious misgivings on two counts. It is axiomatic that authority and responsibility cannot be divided; both must be fused in one person and in one office. The present arrangement violates this principle. Certainly, the results will place great strains on the formulation of policy. Another source of my misgivings is the report in the press that Mr. Herter is sympathetic to the British approach to the Berlin crisis and negotiations with the Russians. Now is the time for firmness, it seems to me, and I wonder what are the outer limits of flexibility in Mr. Herter's thinking on the German problem, and to what extent he will resist pressures from abroad.

Clearly, a balance of two forces exists abroad that adds further to the problems facing our policymakers. Both of these forces fit into the dual pattern of a "soft" and "hard" approach to the current crisis. Prime Minister Macmillan has been and will undoubtedly continue to be tempted to exploit the present situation for domestic political advantage. Domestic political pressures upon him are considerable in view of the coming British election. It may be that, in search for a dramatic issue to sustain the Conservatives in power, the Prime Minister may be willing to make concessions, not necessarily in principle, but for the purpose of conducting the negotiations. This may well have serious consequences; it may give the Russians unwarranted and mistaken optimism in the fragility of the Western alliance and thus encourage them to press a harder bargain; it may also endanger the unity of the West, indeed as the Prime Minister's conciliatory attitude is already doing.

The other ally to the Macmillan approach to the German problem is the Social Democratic Party of West Germany. In search of domestic political issues the Social Democrats have stressed the need for greater flexibility in dealing with the Russians. They have hammered away persistently at the Adenauer government on this point. Perhaps, it is unrealistic to expect them to do otherwise, for politicians thrive on power and the drive to attain it. Yet, the future of Germany and the West is at stake here. This issue, it seems to me, should transcend party politics. Pressure for flexibility generated by this group has undoubtedly had an effect upon the mood of the West German people. It has certainly influenced persons in the United States and Great Britain who seek allies for their disengagement argument. On the whole, they may well constitute a great pressure upon our State Department during this crisis.

At the other end of the diplomatic spectrum, counterbalancing the pressures for the "soft" approach, are the Adenauer and de Gaulle governments. It is refreshing to see the realism with which they have viewed this problem. Dr. Adenauer is a wise and thoughtful man. An elder statesman in the truest sense, the Chancellor has the perspective gained by living German history since the days of Bismarck. He has seen the glories and the tragedies of his people, and he is now determined that Germany shall play a constructive and positive role in international relations befitting a great nation. The Chancellor sees the folly of disengagement and negotiations on terms with Soviet Russia which would lead to the ultimate destruction of his nation, the subjugation of his people, and the loss of Germany as a free, independent, and democratic state. Wisely, the Bonn Government maintains the principle that any limitation of military forces must be linked with a genuine political settlement for all Germany.

Thus, our policymakers are faced with great difficulties. Three of our allies are at polar opposites in this crisis—the British at the one end, and the French and West Germans at the other. And although we are, apparently, inclining toward the British view, yet the alignment is still very much in a state of flux and shall not be firmly fixed for days or perhaps weeks. This raises the problem of coordinating and adjusting the differences among the Western Powers; and while they are not now insurmountable, they are, nonetheless, great, and, in some instances, profoundly deep.

The final danger facing our policymakers is inherent in the problem of military preparedness and the processes of negotiations. It is distressing that our extended commitment in West Berlin has not had equivalent support in military strength. Only last week, Gen. Maxwell D. Taylor, the Army Chief of Staff, underscored our lack of preparations before the Senate Preparedness Subcommittee. Viewing the problem realistically, the Russians have us militarily over a barrel. We have not the resources immediately available to carry out an effective defense of our commitments should an attack come on the ground or should trouble appear in other parts of the world.

Our reliance is almost totally upon massive nuclear retaliation. The President has already said that we would never fight a ground war against the Soviet Union, and he refused to rule out a nuclear war if hostilities developed over Berlin. Senators can draw their own conclusions.

But what alternatives are open to us if the East Germans and Russians provoke a nonnuclear limited war in Germany? Would we run the risk of exposing the United States to nuclear attack by massively retaliating against the Soviet Union in Germany or at some other point?

This is a serious matter and one which our leaders must face up to before the crisis goes beyond our control. That we are sorely unprepared militarily in West Germany is dramatically seen by the alignment of forces. According to Government sources, there are 315,000 Soviet troops in East Germany and 15,000 Soviet policemen; 75,000 East German troops and 45,000 East German policemen. On the other hand, the United States has 4,000 troops in Berlin; Britain and France have an additional 7,000. In addition, there are five U.S. divisions in

the rest of Western Europe, and in all, an estimated 21 divisions of NATO in Western Europe, as compared with 175 Soviet divisions in Eastern Europe. The great danger of our present military position is fairly clear. Yet, it is the effects of our unpreparedness that may well be disastrous for us. Owing to limited alternatives open to us in the Soviet challenge in Berlin, we may well be compelled to accept Russia's demands, not because we want to, but as the only rational and realistic alternative to unleashing a nuclear war. Failure to rely upon multiple deterrence has placed us in an awkward position in this crisis. We are now facing up to the awful consequences of unwise, shortsighted military planning.

Nor are the dangers inherent in negotiating with the Russians any less serious, though their consequences may be less direct and less deplorable. Our experience with the Russians has been sufficient to make us aware of their unreliability in keeping promises. It is a truism that the Russians will keep treaties only so long as they conform to their general political line. The Soviet attitude toward international law, treaties, and agreements is rooted in Marxist-Leninist ideology. According to this doctrine, international law is a part of the superstructure of Communist society, and contributes to the common objective of seeking to establish a universal Communist state. Soviet international law conforms to the prevailing political line, and is thus an instrument of politics. As Lenin once said, "International law is only continuation of domestic policy by other means." The Soviet leaders contemplate life through the prism of Communist theory, and what they see is the ultimate victory of communism and the complete destruction of Western capitalism. Thus, we of the West operate within an entirely different framework than do the Soviets. Our standards of international conduct and accepted customs vary widely. The Soviets have debased the coin of morality. Soviet international law and the Soviet conception of treaties and agreements are basically incompatible with accepted practices in the West. One might, at this point, ask the question: Is there no such thing as Communist morality? Let Lenin answer for himself, as he did in a speech to the Third All-Russian Congress of the Young Communist League, in 1920:

> For us there is no such thing as morality taken outside of human society. Such a morality is a fraud. For us, morality is subordinated to the interests of the class struggle.

To the Communists, then, only those acts are moral which contribute to the building up of a Communist society. When morality has once been defined as "class morality," promises become tactics; and tactics are subject to change without notice.

But, Mr. President, is there no such thing as Communist ethics based on moral and religious principles? Again, let Lenin speak as he spoke in 1920:

> We, of course, say that we do not believe in God and that we know perfectly well that the clergy, the landlords, and the bourgeoisie spoke in the name of God in order to pursue their own exploiters' interests. We repudiate all morality that is taken outside of human, class concepts. We say that this is deception, a fraud.

Mr. President, this is the infidel with whom we are dealing, lower than the rebel archangel, Lucifer, himself. What can one hope to gain by a summit conference and new agreements? Enough agreements have been reached already. They need only to be kept. An enlightening commentary on Soviet agreements is made, Mr. President, by Harry and Bonaro Overstreet in their new and interesting book, "What We Must Know About Communism." I shall read three paragraphs therefrom:

> The Soviet empire rests on broken promises. In 1932, for example, the U.S.S.R. signed nonaggression pacts with Estonia, Latvia, and Lithuania; and in 1934, these were extended for 10 years. Six years later, in 1940, all three countries were invaded and incorporated into the Soviet Union. The satellite empire is a vast monument to the Soviet's disregard of the Yalta Agreement. These are not isolated instances. It would not be an exaggeration to say that they could be multiplied hundreds of times over. For the Soviet Union, since 1917, has entered into literally hundreds of agreements, large and small, and has kept almost none of them.
>
> Even the ideological outposts of empire rest on broken promises. Thus, on November 12, 1933, Litvinoff gave a 4-point pledge to President Roosevelt—as a condition of the U.S.S.R.'s being officially recognized—guaranteeing that the Soviet Union would refrain from all propaganda and organized activity that had as its aim the overthrow of the U.S. Government or the undermining of our institutions. Five days later, however—with recognition accomplished—he released a statement which said, "The Third International is not mentioned in this document. You must not read into it more than was intended." A month later, the Comintern met in Moscow and adopted resolutions which instructed all parties—including the CPUSA—that there was no way out of the general crisis of capitalism other than the one demonstrated by the Bolshevik revolution.
>
> In the face of this record, we have no right to ask that our delegates to any summit or pre-summit conference negotiate an agreement with the Soviet Union—on disarmament or anything else—so binding, so proof against bad faith, that we can relax and call the problem settled. Neither do we have any right to ask that they sign any treaty so far-reaching in its terms, and so innocent of objective safeguards, that if the Soviet Union—having had a "breathing space" in which to gather its strength—broke the agreement while we were keeping it, the result would be catastrophic for ourselves and the whole free world.

Mr. President, experience has shown that only when power was equally balanced between the Soviets and their antagonists would they live up to agreements. I am convinced that the Russians can be expected to violate agreements with other States when they consider violation to be in their interest, but only when they can violate them with impunity. The viability of agreements with the Soviet Union would seem, therefore, to depend, in part, upon the capacity of the West to make violation unattractive. It behooves our policymakers, therefore, to be circumspect in negotiating with the Russians; for the promise to be virtuous is not virtue.

Great responsibilities press upon our Government in this crisis, and it is the duty of that Government to assume them responsibly and intelligently. Weeks are passing rapidly by, and yet indifference has seemed to prevail in the administration until very recent days. It is unwise, I know, to arouse the Nation to a point of heated frenzy. Our intentions could then be miscalculated by our adversary, and a massive popular upsurge might well demand action unwisely conceived and dangerous to our national existence. The administration can, however, go much farther than it has, I believe, to emphasize the seriousness of the Berlin crisis. I was very much pleased to hear that the President had finally decided to explain to the American people the nature of this crisis. An apparent abdication of will, a kind of passive fatalism, seems to have found its way into American thought. Consequences of this development could be serious in this current crisis, for once man ignores his God-given power to control his destiny, he lays himself open to manipulation, pressure, and harassment by his adversaries. Failure to face up to the crisis and failure to resist the Soviets in Berlin will, I believe, be the beginning of the end. Western prestige, influence, and strength—and, thus, power—will surely decline, while that of the Soviets will increase; for withdrawal from Berlin under pressure of Soviet blackmail will probably turn loose forces of disillusionment in Germany and elsewhere in the West—indeed, throughout the whole free world. The consequences of this could be disastrous for us.

I am pleased at the position taken by the President in his speech on Monday night, when he indicated that, while we are ready to consider all proposals, and are willing to listen to new ideas and are prepared to present others, we will not foresake the free people of Berlin, nor will we agree to any permanent and compulsory division of the German nation. The President has indicated his intention to stand firm; and, although I have sometimes been critical of him, I support him in taking a firm position. I support him today, Mr. President; I shall support him tomorrow; I shall support him so long as I have the breath and the strength to support him, if he stands firm.

In the present crisis we cannot yield. We cannot forego the challenge of this day for the illusion of peace for tomorrow. Sacrifices of principles now have no reward but the agonies of national disaster in the future.

Let us, therefore, steel ourselves in this supreme moment of challenge. We must be prepared for the worst, hoping that our posture of resolution and strength will deter the Soviets. We must be prepared militarily now, and not when the crisis has passed. Here is the heart of the whole problem: military preparedness. I deplore what I consider to be the complacency of the administration in this vital matter.

Mr. President, I realize that I am not an authority on military matters. But today I am speaking as an average cit-

izen, and for the average citizen. I sincerely believe there has been too much complacency, too much waiting, too much delay, in regard to the vital matter of military affairs. Regrettably, the administration has never understood the simple fact that the balance of world power is far more vital to us than the balance of our budget. Americans should also be more fully informed of the implications of the crisis, especially of the need to meet force with force. The Communists should never have reason to miscalculate the determination of the American people to resist their challenges, nor should they miscalculate the range of bipartisan support in times of national crisis. In a democracy, existence of an informed public opinion is vital; yet, if the administration fails to create an intelligent, informed opinion, it will have difficulty in gaining support for its policies when the time for decision is upon us. Failure to communicate in this way can also mislead the Communists into miscalculating not only the intentions of our Government but also the depth of support of our Government and its policies among the people.

Finally, let us hope that our policymakers will not submit to misguided domestic and foreign pressures to make concessions on Berlin and to accept the concept of disengagement as a solution to the German problem and European security. Now is the time for strength, not weakness; now is the time for determination, not irresolution; now is the time for sound judgment, not imbecility. History is strewn with tragedies of nations unprepared and irresolute in times of crisis. Failure to respond to challenges of crisis and of adversity has reduced the mightiest to impotence, propelling them precipitously down the road to decline and decay.

Mr. President, shall we meet this challenge of crisis now before us? We must decide soon, before it is too late. And, above all, we must prepare.

"When a strong man, armed, keepeth his palace, his goods are in peace."

Mr. YOUNG of Ohio. Mr. President, will the Senator from West Virginia yield to me?

Mr. BYRD of West Virginia. I yield to the distinguished Senator from Ohio.

Mr. YOUNG of Ohio. For some minutes, Mr. President, I had felt the impulse to get to my feet, but I waited until the Senator from West Virginia completed his statement. I have a couple of questions to ask of him; but first, I wish to say that today we have listened to a forthright address by the Senator from West Virginia, giving a profound, scholarly, and, in fact, magnificent statement of the situation confronting the American people at the present time.

I compliment him for the service he has rendered to our country in making this address. A few moments ago he asked the question, What alternatives are open to us if the East Germans and the Russians provoke a nonnuclear, limited war in Germany?

May I ask the Senator, Is not the only alternative confronting us to use nuclear weapons against the East Germans and the Russians in that area, and use them in such a manner as to repel and in the hope that they would repel the East Germans and keep West Berlin free, at the same time seeking, of course, to make such a nuclear war a limited war?

That leads me to another question. Coming from a neighboring State, I too, like the Senator from West Virginia, desire, in this type of crisis, to support the Commander in Chief of our Armed Forces. I listened with satisfaction and with a degree of pride to the President's statement to the Nation last Monday evening. The Senator from West Virginia stated, in a better way than I can, that politics ends at the water's edge, and we all want to support our Commander in Chief. Along with that feeling, however, I had the feeling notwithstanding the address of our Commander in Chief to the Nation, it was hinted that if the Communist dictators of the Soviet Union persisted in their attempt to drive us from Berlin we were giving notice that nuclear weapons would be used by us to fight back at them. I am wondering what the Senator from West Virginia has to say on that subject, because we can assume, from the magnificent address the Senator from West Virginia has delivered, that he has given the entire subject a great deal of thought.

Mr. BYRD of West Virginia. I thank the Senator from Ohio. I agree with him, and wish to state that I formed the same impression he formed from listening to the President's statement. I feel that the President has pretty clearly indicated that we would be compelled to fight a nuclear war. I have the distinct impression from his public statement—and I think most of the people throughout the country have the same impression—that we cannot hope to repel, cannot hope to overcome, with ground forces any attack which might develop in that area. The President made no bones about that. The clear implication was that we shall have to resort to nuclear war. The President himself has answered the first question of the Senator from Ohio.

I share with the Senator a strong feeling that the President should have stated categorically and in no uncertain terms that we are ready to meet the Soviets, if we must meet them, with nuclear weapons. I think the time has come when we must let these infidels, these atheists, these international murderers know that the American people are still made of the good pioneer stock which built this country, and which fought a revolution against tyranny. I think it is time to stand firm and speak up in such a manner that no one—the Russians, the British, the Germans, the people of the satellite countries or the people of America—will misunderstand where we stand and what we intend to do.

Mr. YOUNG of Ohio. Mr. President, will the Senator yield further?

Mr. BYRD of West Virginia. I yield further.

Mr. YOUNG of Ohio. The Senator from West Virginia and I agree fully that the dictators of the Soviet Union respect and fear strength. The Senator and I agree fully that this Nation must by its strong action take its proper place of leadership of the free world.

I am sure the Senator feels there was a clear implication in the President's address to the Nation last Monday night. It is my hope there was that clear implication. It seemed to me, as I watched the Commander in Chief of our Armed Forces and listened to his address, that it was in the main a reiteration of what has been said time and again by him in connection with the various crises with which we of this Nation have been confronted because of the aggression of the dictators of the Soviet Union and because of the threats and the continuing cold war waged by the dictators of the Soviet Union.

I should like to ask the Senator from West Virginia a further question. In the judgment of the Senator from West Virginia, instead of having an implication or an inference from our Commander in Chief that at the time of the deadline the dictators have fixed, or at some future deadline they may fix, if they persist in what they have said they are going to do, would it not be better for the Commander in Chief to say to the world that this Nation will resort to nuclear weapons to keep West Berlin free? Would it not be better, in the judgment of the Senator from West Virginia, in the course of the present conferences going on with the Prime Minister of Great Britain, tomorrow or the next day, for the President of the United States as Commander in Chief of our Armed Forces to say in no uncertain terms that we will use nuclear weapons in the Berlin crisis to keep West Berlin free?

Mr. BYRD of West Virginia. Mr. President, I answer the question by saying "Yes." I am very pleased that my delightful friend, the distinguished and lovable Senator from Ohio, takes the strong position he has indicated.

I compliment the President of the United States for his speech of a few nights ago. I have long felt that the President was a man who could, if necessary, stand firm. I saw the evidence of that firmness as I watched the President on television. I think the President should speak out in more and more certain terms and put Soviet leaders on notice, so that there will be no danger of their miscalculating our intentions.

Mr. YOUNG of Ohio. Mr. President, I wish to say finally that as a Senator representing in part a neighbor State who listened to the Senator from West Virginia yesterday and who has listened to the Senator's magnificent address this afternoon in the Senate, I am very happy that the citizens of West Virginia sent him to Washington, D.C., to represent in part that State.

Mr. BYRD of West Virginia. I thank the Senator from Ohio. I assure him that I have no particular pride of authorship in these remarks, except, I wish to say, that they portray my sincere and very strong feelings on this important matter. There may not be very many persons who will even read these remarks of mine. That does not matter to me, from a personal standpoint, but I believe someone has to speak out to express the thinking of the man in the street.

I feel I am close enough to the man in the street to know that the American people, once they have been told the truth and once they have been alerted to the danger, are ready to stand firm.

I do not believe that the American people are going to be stampeded into adopting any policy of compromise or appeasement. I have often said that the people of America are 1 or 2 or 3 years ahead of their leaders.

I appreciate very much the kind words of the Senator from Ohio.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield to the Senator from Pennsylvania.

Mr. SCOTT. I wish first to compliment the Senator from West Virginia for an excellent, thoughtful, and very cogent address.

I am in agreement with the Senator as to the objectives which he so well states. His opposition to disengagement, to the Kennan theory, is a position which I share. His view that a summit conference should not be held without first having some adequate determination of Soviet intentions to make genuine agreements and assurances that they will keep such agreements is also a position of which I thoroughly approve.

I should like to ask the distinguished Senator from West Virginia a question with regard to his reference to Prime Minister Macmillan. I am not clear whether Prime Minister Macmillan is considering disengagement or some form of demilitarization.

I do know that in discussions with British officials from time to time they have taken the attitude with regard to the Soviet, and even with regard to the Red Chinese, that "We have dealt with rascals before. We are experienced. We know how to deal with rascals. You do not know how to deal with them; and, since we have such experience, we are willing to recognize Red China and we are willing to enter into various discussions with Soviet Russia."

My comment in reply to those distinguished British public officials, when they spoke of dealing with rascals, was: "Look at what it got you."

I have no evidence that we are actually considering seriously disengagement, or some form of demilitarization, even if Prime Minister Macmillan is considering it. Does the distinguished Senator know whether or not that is the position the Prime Minister is taking on his visit to this country?

Mr. BYRD of West Virginia. I cannot categorically state that that is his position. I do not think I have said so in my remarks.

Mr. SCOTT. I did not mean to infer that.

Mr. BYRD of West Virginia. I do not misunderstand the Senator.

I have the impression, from reading the reports in the press, that the Prime Minister is very desirous of finding a way whereby we can sit down with the Russians; and I have the impression that he is desirous of going to the summit.

I have the additional impression that he is willing to yield on many of the important points, to an extent which is certainly far beyond what our leaders have been willing to go in the past. I am afraid that he is traveling along the same disastrous path which has been traveled by one of his predecessors in our own time. I am much concerned lest we let ourselves fall prey to any suggestion that we do anything other than stand absolutely, strictly, and positively firm.

I believe that the Soviets are bluffing; and if they are not bluffing, we might as well get this thing over with now as some time later.

Mr. SCOTT. Mr. President, will the Senator from West Virginia further yield in order that I may pursue another thought, for purposes of clarification?

Mr. BYRD of West Virginia. I yield.

Mr. SCOTT. The distinguished Senator referred to the fact that the Eisenhower administration must share the blame, as the statement goes, for the psychological backwash which resulted from their overselling of the Big Four Summit Conference in 1955.

Aside from the fact that this was the first summit conference at which we gave nothing away, and that no nation or people lost their freedom at this summit conference, I agree with what the Senator has said, that we could not do business with the devil.

I further note that at this conference we did not sell any souls to him, either.

I point out what the Secretary of State said on the 13th of July 1955, at the beginning of the Geneva Conference:

> The Geneva Conference will be a beginning and not an end. It is not to be expected that great decisions of substance will be made there. What is to be hoped is that the Geneva Conference will implement our unceasing quest for a secure and just peace and breathe a new spirit into the future efforts needed to achieve that result.

That statement was made by the Secretary of State just before leaving for the conference. On July 15, 1955, President Eisenhower, far from encouraging any overselling—he having, in my experience, constantly warned against that danger, as he did in his press conference March 17, 1959—said:

> Now for these things there is no easy settlement. In the brief time that this conference can exist, it is impossible to pursue all of the long and tedious negotiations that must take place before the details of these problems can be settled. Our many postwar conferences have been characterized too much by attention to details. * * * Success, therefore, has been meager. Too often, indeed, these conferences have been mere opportunities for exploitation of nationalistic ambitions or, indeed, only for sounding boards for the propaganda that the participants want to spread to the world.

In the press conference of March 17, 1959, the President said particularly:

> The United States and its allies stand ready to talk with Soviet representatives at any time and under any circumstances which offer prospects of worthwhile results.

He further stated:

> We would never negotiate under a dictated time limit or agenda, or on other unreasonable terms. We are, with our allies, however, in view of the changed-tone Soviet note, concerting a reply to that note.
>
> It is my hope that thereby all of us can reach agreement with the Soviets on an early meeting at the level of foreign ministers.
>
> Assuming developments that justify a summer meeting at the summit, the United States would be ready to participate in this further effort.

I agree with the Senator that there should be no summit negotiations unless real and positive gains are made at echelons below the summit.

Mr. BYRD of West Virginia. Does the Senator not agree with me when I say that we shall have to view the statements or agreements arrived at in prior lower level conferences within the whole context, or certainly in the light, of the background of revealing statements of leading Communists through the years, and against the disappointing background of Soviet shattered agreements and Soviet broken promises.

Mr. SCOTT. I agree entirely with the Senator in that observation. I do not believe the Soviet Empire, from its inception, has ever been worthy of trust, or has ever at any time given evidence that it should be trusted.

In his address the Senator from West Virginia quoted statements dealing with events at the time when Mr. Litvinov defrauded President Roosevelt in order to gain recognition, and immediately reversed himself, having gained what he wanted.

The wonder is that we ever, at any time, seriously believed Soviet words when not accompanied by effective deeds in the interest of all men.

I close my comments to the distinguished Senator by saying that I agree with his conclusion, which is taken from the Bible. I note, as a matter of interest, that the President used that expression about the time of his inauguration. Therefore, we all support the Commander in Chief in the view that:

> When a strong man, armed, keepeth his palace, his goods are in peace.

It is not important that we agree in every detail or method, but none of us disagree on the question of seeking the best protection and security for our country.

That leads me to one final inquiry, with respect to which I am a little unclear. Does the Senator from West Virginia feel that there would be any useful purpose served by maintaining additional troops in Europe? We have heard talk about a ground war, or the impossibility of a ground war. Does the Senator see any way by which we could use troops in a ground war against the Soviet Government in Europe?

Mr. BYRD of West Virginia. First of all, I should like to say, in connection with the Senator's observation a little earlier, regarding the part played by the administration in creating a false impression in the minds of the American people about the Geneva Conference in 1955, it has been my position all along that Secretary Dulles is the one man in the administration who has understood the Soviet leaders from the beginning. I have maintained that he is the one man —although there may be others—who has understood them. Some people say

he is inflexible. If he is, maybe that is a good thing. Perhaps it is because he understands the objectives the atheistic, power-crazed men in the Kremlin are bent upon achieving. I do not mean to say for a moment that Secretary Dulles was fooled by Bulganin and company at the summit. I am not sure that the President was fooled. The President has been resisting any move for another summit conference. He may have had his fingers burned the last time.

So he is strongly resisting being pushed into another summit conference.

However, there are others in the administration, and certainly in the State Department, whose philosophy certainly does not agree with the philosophy of firmness which has been laid down and followed fairly consistently by the Secretary of State. I, for one, regret very much that he has been stricken at this critical moment in American and world history.

Mr. SCOTT. I agree with the distinguished Senator that the illness of Secretary Dulles is not only a personal tragedy but also a tragedy for the United States and for the free world. Without attempting to quote the President, I can certainly say that the Senator's comments are directly in line with those of the President in his feeling of skepticism as to what could be accomplished at this time by a summit conference.

I should like to add, however, that the Acting Secretary of State, Mr. Herter—and those of us who have served with him in the other body have had an opportunity to know him—does have the confidence of the American people and the confidence of the President. I believe he is carrying on well the duties of the Department of State.

Personally I am glad to note that the President himself is clearly and vigorously enunciating our foreign policy, particularly as it presently relates to Germany. I believe it is in good hands. I wished to say this lest failure to say it, in the course of tributes to Secretary Dulles, might be misunderstood.

Mr. BYRD of West Virginia. The President of the United States has the inclination, I think, to stand firm, but I believe he needs the strength and resolution of the American people behind him. He will have to provide the kind of leadership, however, which will awaken and nurture such resolution and such awareness on the part of the American people. I regretfully believe that the public has not been alerted enough to the situation and, moreover, I think that the people are hearing too much from the lips and reading too much from the pens of a few individuals who are virtually running over one another in their desire to be the first to reach the summit and start making concessions. I hope the President will continue to go to the people by radio and television, and I hope he will speak plainly about the crisis confronting them. If he does, he will engender and encourage the kind of strength and determination among the American people which will back him as I believe he needs to be backed, and which will help him to go in the direction which he wishes to travel.

Mr. YARBOROUGH, Mr. KEATING, and Mr. DODD addressed the Chair.

Mr. BYRD of West Virginia. Before I yield further I must attempt to answer the question asked by the Senator from Pennsylvania concerning the use of American ground troops in Berlin if we had more of them there.

Mr. SCOTT. Or in East Germany.

Mr. BYRD of West Virginia. I, of course, cannot answer that question. That is a question which only the men in the Pentagon can answer, or which perhaps only the Commander in Chief can answer. However, I feel this way about it: I am not too sure that Berlin will be the only thorny problem that will confront us when the showdown comes. Knowing the Russian rulers' methods, I am not certain that they will not manufacture additional problems or crises elsewhere. They seem to possess an ingenuity for doing that sort of thing. I maintain that we need more forces, ready to send to Iran or Lebanon again—who knows?—or to the Suez—we never know—or to Formosa. We need more forces in being, ready to counter the thrusts of our arch enemy wherever those thrusts may be launched.

Berlin may be only one point of challenge when May 27 arrives. But as to Berlin, if we were stronger in conventional weapons, and if we had not already weakened and reduced our military forces, we would not be put into a corner or straitjacket at this time and have to say, "It's all or nothing; it's nuclear war or surrender."

Mr. SCOTT. Would the Senator from West Virginia yield at this point for me to ask him whether he believes that 870,000 troops represent a serious depletion of our ground forces I do not undertake to know myself. I wonder whether 30,000 ground troops, the difference between 870,000 and 900,000, is the difference between security and the lack of it. At any rate, who should know better than the Commander in Chief?

Mr. BYRD of West Virginia. In terms of Soviet forces and Soviet might, of course, I think our own ground forces have been seriously depleted. How many troops did we send to Lebanon last year?

Mr. SCOTT. We sent fewer than 30,000 to Lebanon, I believe. I am not sure that I can advise the Senator how many, because I do not carry those statistics in my head. At any rate, the number was sufficient.

Mr. BYRD of West Virginia. Did we send 30,000?

Mr. SCOTT. If the Senator remembers, I hope he will enlighten all of us. I do not remember, but it is my impression that we sent far fewer than 30,000.

Mr. BYRD of West Virginia. That is my impression, also. Thirty thousand men in that instance, I sincerely believe, were the instrument or means by which peace was maintained for the moment in that area of the world. Who knows that an additional 30,000 men may not be very much needed on May 27 to send somewhere else?

Mr. SCOTT. I am not arguing that we should have an Army of 30,000. I am inquiring whether there is a need for an Army in excess of 870,000. I wonder whether the Commander in Chief is not the best one to answer that question. We have had 18 limited wars since World War II. We certainly need to have forces in being to cope with such situations.

Mr. BYRD of West Virginia. I would merely say, in answer to the Senator, that 30,000 more men may be very much needed. It would be far better to have them than not to have them. I, for one, believe we should not have cut our forces as we have in recent years. We ought to have greater strength rather than less strength as long as we are confronted with a grave menace to our country. As to whether or not the Commander in Chief is capable of being the supreme judge, I cannot say. I have considerable confidence in our President where military matters are concerned. However, he may be out of touch with things. For example, I served in the West Virginia Legislature a dozen years ago. I served in both houses. However, I am no longer in touch with the matters which come before that body.

I am not saying I am completely in touch with the problems which come before this body, but I hope to increase my knowledge of them as the days come and go. The President may not be so closely in touch with the situation as he once was. He evidently miscalculated the psychological effect which Sputnik would have upon the world, and he may miscalculate again, this time concerning the adequacy of our military preparedness. From reading the press, I have formed the impression that certain very competent military men in this country do not agree with the theory that we can afford to cut manpower in our Military Establishment.

Mr. SCOTT. The Senator is aware of the fact, is he not, that the service chiefs have all agreed that the total amount for our defense is an adequate sum, even though each of them has indicated his reservation along general lines that he would like to have more for his own service? But as to the total sum involved, they have agreed with the President, and the President has so stated, that they accepted the total figures as adequate to our defense needs, although they may not necessarily be receiving enough for their own respective services.

Mr. BYRD of West Virginia. I am sorry; was the Senator propounding a question to me?

Mr. SCOTT. I assume the Senator is aware of the statement by the President that the service chiefs had agreed that the total overall defense budget is an adequate budget for the purposes of the Nation and its security at this time. But the comment has been made by the President and the service chiefs that they individually, on behalf of their respective services, were not necessarily satisfied with the share of the total budget allocated to each service. It is natural that they should say so. I imagine that Hannibal used to complain to Hamilcar: "Where are those elephants? Why do we not have more elephants coming over the Alps?"

Mr. BYRD of West Virginia. I imagine there might have been some

agreement ostensibly, after the heat had been put on them.

Mr. SCOTT. I thank the Senator from West Virginia. I do not presume to have this knowledge within myself. I asked the Senator for his views. The Senator has made a very distinguished and excellent contribution to the sum of knowledge on this very difficult question.

Mr. BYRD of West Virginia. I do not presume to be omniscient; I can speak only from the impressions I have received in my efforts to follow this matter carefully day by day in the press.

Mr. YARBOROUGH. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD of West Virginia. I yield.

Mr. YARBOROUGH. I commend the Senator from West Virginia for the careful study he has given to this question. I know he will be impressed by the question asked by the junior Senator from Pennsylvania about Hannibal's plight. I certainly hope we will not be cut as short on manpower as Hannibal was on elephants, and that our heads will not be carried to Moscow as his was to Rome. I think that should be a warning to us not to reduce our Armed Forces now.

As I heard the speech of the Senator from West Virginia—and it is obvious that much study was put into it—it seemed to me that, boiled down, the Senator from West Virginia was saying to the President of the United States: "If you go to this conference to play strip poker with the Russians, keep your gun on, and don't let them take your shirt and pants and boots off and send you home in your sock feet."

Mr. LONG. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. LONG. I assume the Senator is aware that when the Bureau of the Budget recommends to the President that the manpower of the Army be cut from 925,000 to 870,000, the President tells his Chief of Staff: "This is what you will get." That Chief of Staff can either testify for that amount or resign. It is his choice. The same is true of the Chief of Naval Operations. When he is told that he will get three atomic submarines, and that is all, perhaps the Senator knows that the Chief of Naval Operations tells the committee only what he is free to say.

When the Chief of Staff of the Army tells the committees that he still thinks the Army should have 925,000 men, he can point out that there have been 18 wars since World War II which have been fought without thermonuclear bombs, and that we are not likely to use them; that the probability is that it will be a long time in the future before they are used.

It will be mutual suicide if nations resort to the use of such weapons. We know it, just as the Russians know it. I suspect that the Russians themselves are gambling as to when we will use such weapons. The only way we think the Russians have a possibility of winning is to resort to the method of mutual international suicide.

Mr. BYRD of West Virginia. I am glad the Senator from Louisiana made that point. We are being threatened again and again by the Soviets and their East German puppets with the destruction of our cities. They are telling us that America will be destroyed if war results from the present situation. I wonder if anyone among them believes that the Russian cities will be spared. Their cities will be destroyed, too, and their people are just as fearful of war as are our people. The Russian people have been subjected to the terrible effects of war time and again, and I am constrained to believe that the Russian people do not want war any more than the American people want war.

We Americans recognize the fact that some of our cities would be reduced to rubble, and we recognize the additional fact that some of us would not be around the next morning to crawl over the rubble. But at the same time, the necks of the Russians are in the noose, too, their cities are not bomb proof, nor their people immortal. If they want to call it the end, we might as well have it now as to have it in our children's day, or in the time of our children's children.

The Soviet rulers are out to gain the mastery of the world by hook or by crook, and they think they will get it without a war. But I believe that so long as we can convince them that they cannot have it without a war, they will not resort to war to secure it. I am certain the Senator from Louisiana will agree with me that the best way to peace is to be prepared for battle and refuse to be pushed around by these international hoodlums.

Mr. LONG. I certainly hope the Senator from West Virginia, however, will not fall into the trap of leaving the United States in the situation where the only way in which it can meet an emergency is to threaten to use thermonuclear bombs, which perhaps could destroy Russia but would doom this country to destruction, as well, or else to surrender.

There are many shades of possibilities in between to which we could resort. I do not believe the Senator from West Virginia will find that we will reach the stage when we will dare to rely entirely upon engaging in nuclear warfare. There are methods short of that which can be used. I believe that if we are wise, we will remain capable of using such methods again.

Mr. BYRD of West Virginia. I hope the Senator from Louisiana is correct. I fear we may have already fallen into the trap of having to resort to nuclear weapons if an emergency develops. I think we have already reached that stage perhaps and the President has literally said as much. I think that if the Russians really mean this time to carry through at all costs, we are there now. I do not think we can repel them with our conventional weapons and with the meager manpower establishment we have in comparison with theirs.

If the Russians are now calling a spade a spade, the only way to meet their threat is by nuclear weapons. I repeat that the President has as much as said so already. We might as well let the Russians know that we value life as lightly as they do, but that we value liberty a great deal more than they do.

Mr. SCOTT. Mr. President, will the Senator yield to permit me to comment upon his colloquy with the distinguished Senator from Louisiana?

Mr. BYRD of West Virginia. I yield.

Mr. SCOTT. The Senator from Louisiana has cautioned the Senator from West Virginia not to fall into the trap of believing, or seeming to believe, that there is no recourse available to the United States in the event of a crisis or a threatened catastrophe other than by resorting to nuclear weapons.

I would remind the Senator from West Virginia of what we were discussing a moment ago, namely, that, in fact, our country already has demonstrated twice within the last year or so that other resources are available to it. In fact, in Lebanon the forces of the United States, as manifested in its Navy and its Marine Corps, were used—without resort to nuclear war—to prevent the expansion or extension of danger beyond the shores of the Lebanon-Jordan area. We deployed the 7th Fleet in the Formosa Straits, in the Quemoy-Matsu incident, without resort to nuclear war, although at that time Members of both Houses of the U.S. Congress indicated that that could not be done, that it would not work, that it was the wrong course to pursue. But it did work.

I should like to indicate to the Senator from West Virginia that, in my opinion, those resources are still available to us. Our Navy is still deployed to maintain the freedom of the seas. Our Navy and our Marine Corps are prepared to move with the 6th Fleet in the Mediterranean, or with the 7th Fleet in Asian waters, short of nuclear warfare. Our air forces, including our Strategic Bombing Command, are available at any place in the world where they may be needed to protect the security of this country and its allies—all without forcing us to take the position that whenever danger comes, we can resort only to nuclear-war retaliation.

I hope the Senator from West Virginia agrees with me.

Mr. BYRD of West Virginia. Mr. President, I do agree with the Senator from Pennsylvania. But I hope the Senator will keep in mind that the men in our Armed Forces have not yet looked across their gun barrels at the 175 ready divisions of the Red Army.

Mr. SCOTT. Of course the Senator from West Virginia is correct in the inference that the 15 NATO divisions—which could be "beefed up" to only 17 or 18 divisions, if all the extra men we have been discussing were added—hardly could be expected to achieve success by hurling themselves at the 175 divisions the Soviets have east of the Urals and the 17 divisions in East Germany, to say nothing of the satellite divisions, if the Russians can depend upon them.

That is why I am of the opinion that a resort to ground warfare in Europe

would probably be our last recourse, and that any ground action would probably, at the most, be collateral to, or in connection with, other measures, which, indeed, would involve nuclear action, but also would involve blockade by our naval forces, other use of our naval forces, and the use of our air forces—all of which we hope will not be necessary.

Mr. DODD. Mr. President, will the Senator from West Virginia yield to me?

The PRESIDING OFFICER (Mr. DOUGLAS in the chair). Does the Senator from West Virginia yield to the Senator from Connecticut?

Mr. BYRD of West Virginia. I yield to the distinguished Senator from Connecticut.

Mr. DODD. Mr. President, I wish to join my colleagues in complimenting my friend, the Senator from West Virginia [Mr. BYRD], on the studious, thoughtful address he has delivered today about the critical situation which confronts us.

I was privileged to serve with the Senator from West Virginia in the House of Representatives and on its Foreign Affairs Committee; and I remember very well—indeed, I am particularly reminded of it tonight—the manner in which he approached the problems which confronted us then, and of the great intellectual integrity and the thoughtfulness and patience he demonstrated. I feel that today he has offered yet another demonstration of those wonderful qualities.

I think his contributions have been good for the country. The more we can discuss these problems and the more we can inform the people of the United States, the better we shall be able, as a people, to arrive at the best possible solutions.

I was intrigued by the colloquy between the Senator from West Virginia [Mr. BYRD], the Senator from Pennsylvania [Mr. SCOTT], and the Senator from Louisiana [Mr. LONG]. I wonder whether I understood it correctly.

On the one hand, it has been suggested that we should try to limit to ground warfare whatever action may be required by the difficulties which may arise.

I also understood it to be stated, however, that we are not nearly well enough equipped successfully to defend ourselves on the ground—at least, I believe that is a fair interpretation of what was said—in view of the other side's 175 divisions, as against less than 20 in NATO.

In addition, it was suggested that if we have to fight with nuclear weapons, we—as well as the other side—will be destroyed.

If the Senators are correct, we may soon be faced with a horrible dilemma—a choice between subjugation and mutual suicide. We can avert ever having to make this painful choice by strengthening our conventional forces, and by giving our military leaders the men and equipment they need to carry out their assigned responsibilities for our defense. Perhaps the greatest service the Senator from West Virginia [Mr. BYRD] has rendered this afternoon is the service of bringing this dilemma squarely before the American people, with his usual candor, courage, and honesty.

Mr. BYRD of West Virginia. Mr. President, I value highly and I cherish greatly my friendship with the Senator from Connecticut [Mr. DODD].

He has spoken about our service together on the Foreign Affairs Committee of the House of Representatives. Over those years of service, I formed a very profound affection and admiration for the Senator from Connecticut; and I appreciate very, very much the kind words he has spoken concerning my feeble efforts here today.

I certainly want it understood that I hope we can work our way out of this situation.

What I have today sought to do—although I may fail in the effort—is to alert the American people who read the CONGRESSIONAL RECORD, to alert those in the State Department who read the CONGRESSIONAL RECORD, to alert those at the White House who may read the CONGRESSIONAL RECORD—to alert all of them to the fact, if they are not already aware of it, that we are dealing with men who will stop at nothing, men who intend to conquer the world; men who have no intention of changing their philosophies toward religion, freedom, capitalism, or anything else; men whose promises mean nothing, and who are absolutely devoid of scruples, principles, or conscience. Integrity is not a word to be found in the Communist lexicon.

Mr. President, "What can we expect in the future?" asked J. Edgar Hoover, in his book, "Masters of Deceit." Let Khrushchev himself answer: 'Those who expect us to abandon communism will have to wait 'until a shrimp learns to whistle.' "

There we have the answer from the leader of Soviet might and power. I repeat his answer: He has said there will be no change in Communist theory, method, or goal "until a shrimp learns to whistle."

The goal is communization of the world, and that includes the United States. That goal will be abandoned when a "shrimp learns to whistle." Let us not kid ourselves. Khrushchev meant what he said when he said, "We will bury you yet." He did not speak lightly when, in June 1957, he stated before a nationwide American television audience: "I can prophesy that your grandchildren in America will live under socialism."

Let us, then, be alert to the baldfaced ambitions of those with whom we are locked in struggle.

I would certainly have nothing to gain in a nuclear war or in any other kind of war. I expect to lose my life and my family, just as you, Mr. President, would expect to lose yours if total war should come.

But, Mr. President, America was not built by weak men and women or by those afraid to take a stand and remain firm.

The red stripes in the flag that stands at your shoulder, Mr. President, were not put there by the blood of cowards. The red is emblematic of the blood which was shed by men and women who were patriots and who dared accept the challenge to liberty whether at home or on foreign fields, on land or on sea. Mark my word, Mr. President, that flag will not long unfurl before the world as the symbol of freedom if we knuckle under and grovel in the face of totalitarian threats.

Mr. President, in a book "The Naked Communist," written by W. Cleon Skousen, there appears a statement from the thesis of the Sixth World Congress of the Communist International, November 28, 1926:

> The proletariat in the Soviet Union harbors no illusions as to the possibility of a durable peace with the imperialists. The proletariat knows that the imperialist attack against the Soviet Union is inevitable; that in the process of a proletarian world revolution wars between proletarian and bourgeois states, wars for the emancipation of the world from capitalism, will necessarily and inevitably arise. Therefore, the primary duty of the proletariat, as the fighter for socialism, is to make all the necessary political, economic and military preparations for these wars, to strengthen its Red army—that mighty weapon of the proletariat—and to train the masses of the toilers in the art of war.

The Russian apostles of communism know what they are after, and they know how to go about getting it. To them, the end justifies the means. They are preparing every day for the coming showdown.

William Z. Foster, former national chairman of the Communist Party of the United States, said:

> With him—
>
> Meaning the Communist—
>
> the end justifies the means. Whether his tactics be "legal" and "moral," or not, does not concern him, so long as they are effective. He knows that the laws as well as the current code of morals, are made by his mortal enemies.* * * Consequently, he ignores them insofar as he is able and it suits his purposes. He proposes to develop, regardless of capitalist conceptions of "legality," "fairness," "right," etc., a greater power than his capitalist enemies have.

Mr. President, I am asking to have developed in this country a power which cannot be excelled by the Communists—military power, moral fortitude and spiritual strength.

Our people need to be awakened and warned. They need to be reminded of the broken promises of the past and the threats of yesteryear. They then will not succumb to blandishments or threats in the days ahead. They will fully understand that the only way to avoid war is to be prepared for it, and to let the Communists know that we are willing to resort to it, if resort to it we must.

Mr. KEATING. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD of West Virginia. I yield to the Senator from New York.

Mr. KEATING. I commend the Senator from West Virginia for the sturdy position he has taken in behalf of a policy of strength and firmness in our dealings with the Russians. He has demonstrated a realistic attitude in that respect. I was pleased to hear his commendation of the President and of Secretary Dulles for the firmness of their position.

However, I was a little bit disturbed—and perhaps the implication was not intended—by the Senator's reference to

the Acting Secretary of State, Mr. Herter, as implying that perhaps he would not be as firm and as strong in his position as would Secretary Dulles.

Perhaps the Senator did not intend to leave that impression. If he did, I think it would be a fair appraisal to say that Acting Secretary Herter has worked closely with Secretary Dulles. I have never known of serious differences between them on questions of method in dealing with the Communists. I feel certain that Mr. Herter is equally firm in his position that we must not back down in any way, and must stand up in this Berlin situation.

Mr. BYRD of West Virginia. I certainly do not mean to imply that I think he will yield, but I have expressed the fear that he might. I have yet to be shown that he will be as strong as has been Secretary Dulles, and I merely express the feeling, and with it, the hope.

Mr. KEATING. I realize that. I do not want to cast any improper implications on what the Senator said. I sincerely feel that the Senator's fears in that regard are groundless, and that Acting Secretary Herter is a man of sterling character and firmness of purpose, who would, under like circumstances, take a position alongside Secretary Dulles, with whom he has worked so intimately, and whose thinking and resolution in the case of this problem must be well known to the Acting Secretary. I, of course, hope, as does the Senator, that policy will continue in its present state.

Mr. BYRD of West Virginia. I remember the report in the press, somewhere and at some time in the recent past, that Mr. Herter was thought to be sympathetic with the British views on negotiation, and so forth. We followed the British will-o'-the wisp to the summit conference in 1955. The world followed the British will-o'-the wisp to Munich. I certainly have admiration for our British friends, and they are a great and noble people, but I am quite concerned about the attitudes that certain of their leaders seem to manifest in these days of severe trial. I hope that our leaders will not let them drag us to another summit conference unless, by prior lower level conferences, we have determined without any doubt that a summit conference could be useful and beneficial, and that its beneficial results would be lasting. We are going to have to demonstrate a little leadership of our own. By so doing we can maintain a unity of purpose among the Western Powers and it will be a firm purpose, unyielding on principles, and based upon realism.

Mr. KEATING. My understanding of the President's remarks is that that is exactly what he wants to be convinced of before going to any summit meeting.

Mr. BYRD of West Virginia. I am happy to say I understood his remarks in the same fashion. Mr. President, I thank the Senator from New York, the Senator from Pennsylvania, and other Senators for contributing to this discussion. I think that we are all in agreement that "eternal vigilance is the price of liberty" and I believe my colleagues will agree with me when I say that a few days spent in a good library studying Communist theories and tactics and reading the statements of Communist leaders would be very illuminating perhaps in revealing to us the future course we should pursue in dealing with them.

Mr. President, I yield the floor.

MANDATORY CONTROL OF OIL IMPORTS

Mr. LONG. Mr. President, on March 10 the President of the United States announced a plan for mandatory control of oil imports. Under the law, this was his plain duty. To have permitted oil imports to continue to increase would have seriously imperiled the defense capabilities of this Nation.

Those who are aware of the needs of national security know that this Nation must be able to provide its fuel needs at all times. Those of us who recognize this situation are well aware of the needs of foreign trade. We are just as much aware of the desirability of low consumer prices as anyone. As a matter of fact, many of us have voted for measures to permit increased imports of oil and other commodities produced in the areas from which we are elected in order that a vigorous trade program might expand.

Like all of those who are interested in a wise and sensible foreign trade program, however, we have recognized several concepts. One of those concepts is that the expansion of foreign trade should not be limited to a single commodity. No single industry should be required to stand the entire brunt of increased imports. Tariffs should not be so high that any high-cost American industry would be protected completely from foreign competition.

Those who have criticized the President's action fail to realize that they themselves voted for the law that required him to take this action.

The purpose and meaning of the defense amendment, which was contained in the Trade Agreements Extension Act of 1958, was clearly explained and well understood in both the House Committee on Ways and Means and the Senate Committee on Finance. This matter was explained on the floor of the House of Representatives and it was adequately discussed in the U.S. Senate.

At the time that the defense amendment was pending, every Senator and Representative had available to him the reports of the President's Committee.

The President's Cabinet Committee, in its report to the President, had spelled out quite clearly that an adequate supply of domestic oil and an American industry capable of supplying petroleum needs during times of emergency were essential to national security. It had further been explained that an expansion of oil imports beyond the ratio of 1954 would threaten to impair national security.

Since 1934, imports of foreign oil have increased by 5,000 percent.

Compared to the average American industry, the petroleum industry was absorbing five times its fair share of imports.

Through the period 1934 to 1939, the first 6 years of the Reciprocal Trade Agreements Act, oil exports exceeded imports by 6 to 1. During 1958, and the early part of 1959, the situation was just exactly the opposite. Oil imports exceeded oil exports by 6 to 1.

Foreign oil imports had become the No. 1 commodity to be imported into the Nation. The value of foreign oil imports exceeded even that of coffee, which is not produced in this country.

It comes with particular inconsistency that some Senators from areas which are protected by high tariff walls should be complaining when an industry which has watched more than 20 percent of its market turned over to foreign producers receives reasonable protection to which it is entitled.

Those who come from areas producing textiles have been heard to complain bitterly about the importation of foreign textiles. Many of us from oil-producing areas have been sympathetic to their problem. I, for one, have voted to extend protection to them. Yet, the last figures made available to me indicated that textile exports still exceed textile imports.

Those of us from Louisiana know something about the problem of maintaining a domestic industry. In spite of large-scale imports we have supported a sugar act which permits offshore producers to have more than 50 percent of the American market for sugar, although our State is the largest single cane sugar producer.

Historically, we have complained that our farmers were compelled to sell at world market prices while they were compelled to pay for commodities produced in a protected market. Because of our attitude toward expanding trade, we have been reluctant indeed to ask for protection while others from areas accustomed to this protection would have been screaming from the housetops.

I, therefore, suggest to my friends from areas which do not produce oil that they be as fair with us as we are willing to be with them. I suggest that they should forego the protection which they enjoy in terms of tariffs and quotas until foreign producers have taken at least 20 percent of their market and until the imports of commodities in which they are interested exceed exports by a ratio of 6 to 1.

I urge my friends from those areas to come up to the lick-log and shoulder their fair share of the burden. This would require that all tariffs should be reduced to 3 percent on an ad valorem basis until foreign imports are in a position to share 20 percent of the market of each commodity produced by American industry.

I am waiting for volunteers.

Mr. President, those of us interested in a strong fuel industry in America wish to keep the price of oil low. I am sure that the entire domestic industry feels the same way about this matter.

The President can expect wholehearted cooperation from the domestic petroleum producers. If the major oil companies which have used their influence to prevent the limitation of foreign oil imports will cooperate in

keeping prices low, there will be no problem.

I am frank to say that it is completely within the power of the larger oil companies to see that this result obtains. Nevertheless, it may be within the power of these same major corporations to sabotage the program, just as they used their influence for 5 long years to prevent a mandatory program from ever going into effect, while some of them fudged and cheated on the spirit of the voluntary import control program.

I have only today returned from a meeting of small independent producers of petroleum products at Evansville, Ind. At this meeting I felt it my duty to explain to those independent producers how the major oil companies of America have found it possible to make billions of dollars of profits from foreign oil and foreign oil imports while avoiding their share of tax liability to this Government.

I believe it is time that we demand a report explaining how the Arabian American Oil Co., for example, has escaped more than a billion dollars in taxes by taking full advantage of the foreign tax credit.

When this foreign tax credit proposition is understood, particularly insofar as it applies to the production of oil by American companies in areas outside the United States, it will make any criticism of the depletion allowance look like a mere tempest in a teapot. For any tax avoidance that may result from an application of the percentage depletion allowance, at least 10 times that much tax avoidance results from the operation of the foreign tax credit employed by the major oil companies in manners in which it was never intended by Congress. It is these companies, benefiting from fantastic profits, paying little or no taxes on those profits to the U.S. Government, who do not seem to be satisfied as long as they have competitors in their business.

Perhaps when the foreign tax credit is explored, they will be more content to settle for the billions of dollars of tax-free profits which they are enjoying.

Mr. President, the need of the mandatory program to limit oil imports has been long recognized. It is very long overdue.

Recently, I joined with 21 other Senators in requesting the President to put into effect such a program. I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks a copy of the letter sent to the President on February 25, 1959, by the Senator from Montana [Mr. MURRAY] and 21 other Senators, asking that this program be put into effect.

The PRESIDING OFFICER (Mr. DODD in the chair). Is there objection to the request of the Senator from Louisiana? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. LONG. And now, Mr. President, I have a suggestion to make: I suggest that the tariff on all products be lowered to the same 3 percent ad valorem equivalent to that presently being enjoyed by oil, until foreign imports share 20 percent of the domestic market of all products.

I invite my friends from other areas, and particularly those from New England, to join me in supporting such legislation.

Sometime next week I expect to discuss this subject in greater detail. At that time, I hope that Senators who are interested in this subject will make themselves available to join in the discussion.

EXHIBIT 1

FEBRUARY 25, 1959.

THE PRESIDENT,
The White House, Washington, D.C.

DEAR MR. PRESIDENT: An increasing volume of foreign oil imports which continues despite 4 years of Government efforts of a voluntary nature emphasizes the need for early and effective steps if this critical situation is to be relieved.

In order to provide clear authority for corrective action in such cases, the Congress adopted the defense amendment (sec. 7, Trade Agreements Extension Act of 1955). Last year the Congress, having growing concern about the effect of imports upon essential domestic industries, further amended the defense amendmenst so as to strengthen the authority to limit such imports. Repeated assurances, in the past, that action would be taken to restrict excessive imports of oil and other essential commodities resulted in these amendments to the Trade Agreements Extension Act which were substituted for mandatory legislative controls on specific items. Despite these assurances, the volume of foreign oil imports has continued to grow.

In 1955 when this matter was before Congress, we were concerned about the 1954 rate of oil imports which were about 1 million barrels daily, amounting to 16.6 percent of domestic demand. During recent weeks, imports have averaged about 2 million barrels daily, amounting to almost 30 percent of domestic production. This trend is alarming.

Concern about this matter on the part of the Members of the Senate is not new. Members of the Senate have previously brought this matter to the attention of the executive branch of the Government. On July 30, 1955, and again on July 31, 1956, a group of Senators, many of whom are also signatory to this letter, wrote to the then Chairman of the Advisory Committee on Energy Supplies and Resources Policy, urging immediate steps be taken to curtail the volume of foreign oil imports which were so adversely affecting our domestic oil and coal industries. In those letters, we referred specifically to administration guarantees that oil imports would be held down.

Of particular concern has been the rapid increase during recent years in imports of petroleum products. In 1954 total product imports were less than 400,000 barrels daily. During 1958 product imports exceeded 700,000 barrels daily. It appears that during recent weeks imports of products have reached even higher levels. This increase in product imports has been dramatized by the press report of February 3 that a tanker of residual oil from Rumania is expected to be landed in New York shortly and may be a forerunner of the current Russian effort in foreign trade. History indicates that product imports will continue to increase unless restricted and it is our belief that products must be included in any new program if it is to be effective.

Changes made in the Trade Agreements Extension Act of 1958, in our opinion, contain a clear mandate from Congress to relieve essential industries from damage done by foreign imports. In directing the President to limit imports of strategic and critical materials which threaten to impair the national security, the defense amendment in the 1958 Act (sec. 8) specifies that he shall take action to adjust the imports of such article and its derivatives. Applied to oil imports, this means that all product imports as well as crude oil imports should be limited.

As Senators representing those States in which the major production of our domestic fuels is located, we urge that immediate action be taken to give substantive relief in this aggravating problem. It is further urged that such action provide mandatory limitations under the law, and that it be based upon the 1954 ratio of imports to domestic production.

We would appreciate advice as to when this action may be taken and in what form relief is anticipated. Further delay will result in more economic distress to essential fuel industries and their employees and, more important, it will cause further impairment of the national security.

Respectfully yours,

JAMES E. MURRAY and MIKE MANSFIELD (Democrats, Montana), WILLIAM LANGER and MILTON R. YOUNG (Republicans, North Dakota), ROBERT S. KERR and MIKE MONRONEY (Democrats, Oklahoma), DENNIS CHAVEZ and CLINTON P. ANDERSON (Democrats, New Mexico), ALLEN J. ELLENDER and RUSSELL B. LONG (Democrats, Louisiana), E. L. BARTLETT and ERNEST GRUENING (Democrats, Alaska), JENNINGS RANDOLPH and ROBERT C. BYRD (Democrats, West Virginia), ALAN BIBLE and HOWARD CANNON (Democrats, Nevada), JOHN L. MCCLELLAN (Democrat, Arkansas), and JOHN S. COOPER (Republican, Kentucky), FRANK E. MOSS (Democrat, Utah) and R. VANCE HARTKE (Democrat, Indiana), JOHN CARROLL (Democrat, Colorado) and GALE MCGEE (Democrat, Wyoming).

ADJOURNMENT TO MONDAY

Mr. LONG. Mr. President, in accordance with the order previously entered, I move that the Senate stand adjourned until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 7 o'clock and 34 minutes p.m.) the Senate adjourned, the adjournment being under order previously entered, until Monday, March 23, 1959, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES

FRIDAY, MARCH 20, 1959

The House met at 12 o'clock noon.

Rev. Paul J. Harrell, Memorial Baptist Church, Arlington, Va., offered the following prayer:

God so loved the world, He gave His only Son.—John 3: 16a.

Our Father, Thou who hast proven Thy love by sending us Jesus Christ and hast illumined our human life by the radiance of His presence, we give Thee thanks for this Thy greatest gift.

Grant that our remembrance of the blessed Life that once was lived out on this earth may remain with us in all the duties of this day.

Let us remember His eagerness, not to be ministered unto, but to minister; His bravery in the face of opposition; His quickness and courage in making decisions; His meekness of bearing, so that, when reviled, He reviled not again; His serenity of spirit; His desire to do the will of the One who had sent Him.

Grant, O God, that these Members of the House of Representatives, elected by the people, may here and now elect to follow the Christ and the leading of His Spirit in all actions and decisions this day.

In Jesus' name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McGown, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 1094. An act to amend the Bretton Woods Agreements Act.

The message also announced that the Vice President had appointed the Senator from Massachusetts, Mr. KENNEDY, as an additional member of the Joint Economic Committee.

PERMISSION TO SIT DURING GENERAL DEBATE

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent that the Subcommittee on Indian Affairs of the Committee on Interior and Insular Affairs may have permission to sit during general debate in the House today.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

TREASURY AND POST OFFICE DEPARTMENTS AND THE TAX COURT OF THE UNITED STATES APPROPRIATIONS BILL, 1960

Mr. GARY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 5805) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States, for the fiscal year ending June 30, 1960, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5805, with Mr. BLATNIK in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday, the gentleman from Virginia [Mr. GARY] had 9 minutes remaining, and the gentleman from New Jersey [Mr. CANFIELD] had 40 minutes remaining. The gentleman from New Jersey had been recognized for 20 minutes and had consumed 15 minutes of his time. The Chair recognizes the gentleman from New Jersey for the remaining 5 minutes.

Mr. PELLY. Mr. Chairman, will the gentleman yield?

Mr. CANFIELD. I shall be happy to yield to my colleague.

Mr. PELLY. I would like to ask a little more about the figure in the Treasury budget for interest on the national debt. We were told yesterday that it amounted to, as I recall, $8 billion. I wonder whether the committee has considered that and whether it is going to be enough.

Mr. CANFIELD. May I say to my colleague from Washington that the amount of the interest on the public debt for the new fiscal year 1960 is $8 billion. That amount, in fact, is really not carried in this bill. That is what we call an indefinite appropriation, as the result of permanent appropriation statutes of yesteryear. Our committee does not exercise jurisdiction over that particular item in the regular annual bills. What we are discussing today are funds to operate the Treasury Department, the Post Office Department, and the Tax Court.

Mr. PELLY. I thank the gentleman. If I might inquire further, I wonder if the gentleman would agree with me, though, that there is apathy toward buying Government bonds now, and the Secretary of the Treasury is having difficulty in refinancing and getting enough interest in exchanging bonds and whether or not the figure that is put in by the administration is actually going to be short of the amount that will be called for in fiscal 1960.

Mr. CANFIELD. I hope it is not. However, may I point out to the gentleman that this is an indefinite appropriation, and whatever amount is required is automatically available. The $8 billion we are speaking of is the current estimate.

Mr. PELLY. I agree with the gentleman, but I am very fearful that the estimate is inadequate.

Mr. CANFIELD. Mr. Chairman, I could start my remarks this afternoon with this expression "As I was saying late yesterday before I was grossly interrupted," but I shall not do that because I have too much respect for my friend and colleague, the gentleman from Iowa [Mr. GROSS].

Mr. Chairman, because the American people send and received two-thirds of the world's mail, the Post Office Department of the United States is one of the largest businesses to be found anywhere. It is a very unique one.

While the principal business of the Department is to deliver the mails for its customers, a staggering volume that may exceed 61 million pieces this year, it has no control over the postage rates it may charge for the service. To carry on this business it must employ hundreds of thousands of employees but it has no control over the salaries it must pay them. The total amount it may spend in any one year is fixed by law. While this amount is geared to workload estimated at the time of budget presentation, it cannot be increased without legislative action if actual workload experiences exceed the estimates.

In making up its budget, the Post Office Department must project its needs from 8 to 20 months in advance of expenditure. They must first estimate the volume of mail the public will call upon them to handle. The next step is to translate this workload into units of labor required to perform this function. This involves the utilization of over 540,000 employees; the operation and maintenance of over 41,000 vehicles owned by the Post Office Department; the use of 4,700 vehicles rented by the Post Office Department; the travel of over 1.6 million miles each day by 31,000 rural carriers; 48 airlines to fly the mail over 2.8 million miles each day; 2,400 mail-carrying trains which travel 1.4 million miles each day; highway vehicles which travel another 2.1 million miles each day to complement the delivery system within the United States.

To house these farflung activities, the Post Office Department rents approximately 24,000 buildings and uses 52 million square feet in about 3,300 Government-owned buildings. Here again they must plan and procure in advance the space they will need; provide new and replacement equipment, and through research develop mechanization and automation that will afford a more economical handling of the mail and the more expeditious movement of an ever-increasing workload.

Compare these problems with those of private enterprise. They, too, operate on a budget. But there the similarity ends. Their operating budget is tied directly to their volume of business. If their workload increases, their operation funds automatically go up. Variation from their original estimates may be as much as 25 percent, but this does not affect work schedules. Compare this with the Post Office Department which over the years has varied only a few percentage points at most from its estimates. Private business spends for modern space and equipment based on the economies involved; the Post Office can spend only what the Congress authorizes, regardless of what their real needs may be.

Mr. Chairman, it will be noted in the committee report accompanying the bill our committee has felt that the increase of 4.3 percent in volume projected by the Department months ago is too high and the committee feels that allowances for an increase of 2.5 percent will be sufficient in view of the best information we now have regarding the state of our economy. This clearly means, and there was considerable discussion in our committee on the point, that if the committee's figure proves to be unrealistic and a further volume increase develops, the Department through the President and the Bureau of the Budget can present new facts warranting appropriate consideration and action. Certainly the Department will want to reappraise the picture before the Congress adjourns later in the year and, of course, at the beginning of the second session next January. Meanwhile, as indicated in the report, the 5 percent transfer feature continued in the appropriation will present a safety factor.

The chairman has related the story of the Department's modernization program which has been developed at the request of the committee. With a 31 percent increase in population and a 131 percent increase in mail volume in the past 20 years, the Department has outgrown facilities available in thousands of communities. Surveys have indicated that approximately 2,500 federally

owned and 12,000 leased post office buildings need to be either remodeled or replaced and provided with modern equipment. Approximately $150 million allowed in this bill for capital and modernization programs is a real start on this mammoth undertaking.

The Washington, D.C. post office—now the world's most mechanized post office—is the latest answer to an ever-accelerating problem of moving an increasing volume of mail efficiently and rapidly through a big city post office. The reaction of employees to this and other types of automation in the Department has been very favorable.

Through the so-called Metro plan, more than 58 million Americans living withing 19 metropolitan areas are today receiving next-day mail delivery. During the 1959 calendar year, 40 more metropolitan areas will be embraced, the nationwide program to account for possibly 100 areas.

Mr. Chairman, if there are no questions at this time I shall proceed to yield time to those who have requested it.

Mr. Chairman, I now yield 10 minutes to my friend and colleague, the distinguished gentleman from Louisiana [Mr. PASSMAN], one of the members of our subcommittee.

Mr. PASSMAN. Mr. Chairman, I want to pay tribute to the distinguished chairman of the subcommittee, Mr. VAUGHAN GARY, and also the ranking minority member, Mr. GORDON CANFIELD, with whom I have been associated as a member of the committee for 11 years. I should like to say to you that when Mr. GARY and Mr. CANFIELD have finished with the examination of witnesses before the committee there is very little of real significance left for other members to ask, because they go into the subject so thoroughly.

This morning I was reading the Treasury statement for the fiscal year 1959. We have already withdrawn in excess of $8 billion more from the U.S. Treasury than we had withdrawn in the comparable period of the preceding fiscal year. We have gone completely wild on spending. I am moved to ask if the Congress has lost the will or the power to bring fiscal policies under control. I fear that this may be a fact. The administration is now requesting, for example, $8,700 million in deficiency appropriations applicable to the present fiscal year.

Even with very good management in the Post Office Department, this year there will be an operating deficit of $470 million, notwithstanding the fact that the Department today has fewer personnel employed than was the case 5 years ago. The Department, nevertheless, is doing an excellent job, and I certainly want to pay my respects to Postmaster General Summerfield and his able staff.

Mr. Chairman, sometimes we do not face factual realities in such a manner as we should. It costs a certain amount of money to carry the mails. We collect a certain amount of money in postage. We apply that credit to the total expense. Then we get a deficit or we get a credit. But for many years, because of our failure to increase the postage rates adequately, there has been a deficit, and certainly not a credit.

So far as I know, never before this year has there been a request for a nongovernmental supplemental appropriation. But this year a request came before the committee from the Director of the Budget for a $172 million supplemental appropriation to be applied to certain classes of mail. If we should recommend this $172 million subsidy, a nongovernment subsidy, it would have the effect of reducing the overall deficit, and present a more favorable picture for the classes of mail and for the publishers being subsidized. I think if we view this matter upon the basis of fiscal responsibility, we shall agree that this committee and the deficiency subcommittee acted wisely in declining to recommend this particular appropriation.

It is my understanding it is basic law that when the Government performs a personal service, as such, payment is required in return for that service. If a citizen writes to the Bureau of the Census, for example, for information, such as verification of birth dates, he pays for that personal service.

It costs a certain amount of money to carry the mail, and any deficit comes out of the pockets of the taxpayers of this country. So I think it is only proper that those who are using the mail should pay the freight.

Last year we were requested to raise the first-class postage rate to 5 cents, and we increased it only to 4 cents. This was the first increase at all since 1932. But had we been realistic and followed the upward climb in our economy with a rate of postage commensurate with that trend, the first-class letter rate would have gone up to 7 cents, and not 4 cents. I am personally prepared to support increase of the postage rate on first-class mail to 6 cents, and not 4 cents, because we are going to have to put the Post Office Department on a self-supporting basis or else we are going to have to ask all the people to make up the deficit. Why should all the people be subsidizing me in my business by carrying my mail for less than it actually costs the Government to handle it?

I want to see the Post Office Department put on a self-supporting basis, because its work is a personal service which is performed for the benefit of certain individuals. Therefore, I repeat, if I am given an opportunity to vote to increase the first-class postage to 6 cents, I am going to do so. Likewise, I am going to vote to remove the subsidy from these other classes of mail. Perhaps, this ought to be done gradually, over a period of years, so that the companies with heavy investments in the businesses involved will not be unduly damaged as the result of the loss of their subsidies.

Mr. Chairman, I think we have a sound bill before us, and I certainly hope that the committee will support it.

Mr. CANFIELD. Mr. Chairman, I yield five minutes to the distinguished gentleman from North Carolina [Mr. ALEXANDER], a member of the committee.

Mr. ALEXANDER. Mr. Chairman, it has been my pleasure to sit on the Subcommittee of the Post Office and Treasury of the Appropriations Committee and I have enjoyed the leadership and fellowship of our distinguished chairman and all of the members of this distinguished subcommittee on both sides of the aisle.

I feel the committee has done an outstanding job in going into the justification of all the requests and I wish to say here and now that I am going to support the recommendations of the subcommittee and vote with them on this appropriation bill.

I would also like to say that in my opinion the Departments whose requests we have scrutinized, such as Post Office Department, Treasury, Coast Guard, Customs, Internal Revenue, and Bureau of Narcotics, have all, generally speaking, done a workmanlike job with the funds which have been granted to them.

I would like to bring to the attention of the membership of the House, however, a trend which has been going on in government for sometime and that is the continual addition of Federal employees through Federal agencies. This has been done in spite of modernization and mechanization and facilities improvements, which have recently been increased to a large degree.

If I remember correctly the overall picture of the increase in Federal employment has been astounding; for example, on June 30, 1940, the grand total was 1,002,820 and on January 1, 1959, the total was 2,353,116. To break that down into the Departments which we are considering today, such as Post Office Department and Treasury—on June 30, 1940, the Post Office Department had 323,481 while on January 1, 1959, it had 542,551; the Treasury had 59,256 on June 30, 1940, and 75,801 on January 1, 1959. These figures were supplied by the Library of Congress and represent total employees as of the dates given.

The bill now under consideration will support additional increases in average employment in fiscal year 1960 of approximately 1,000 in the Treasury and more than 12,000 in the Post Office Department. This represents a reduction of approximately 500 from the request of the Treasury Department and more than 4,000 from the request of the Post Office Department, but still the trend continues upward.

We have appropriated money for modernization and mechanization in past years. The bill now before the House appropriates as much additional money for these modernization and mechanization programs as the committee believes can be wisely and economically utilized.

It is my hope that the Departments receiving appropriations under this bill will make every effort to restrict employment in every reasonable way and hold increases in employment to the most essential cases, and eventually that the modernization and mechanization improvements will allow the Departments to decrease, from year to year, total employment rather than continue in the present trend.

Mr. Chairman, I yield back the balance of my time.

Mr. GARY. Mr. Chairman, I yield 5 minutes to the gentleman from Louisiana [Mr. MORRISON].

Mr. CANFIELD. Mr. Chairman, I yield 5 minutes to the gentleman.

Mr. MORRISON. Mr. Chairman, I want to pay tribute to and commend the chairman of the Subcommittee on Appropriations and the members for the very excellent job they have done and for the diligence and tremendous amount of time and effort they have put forth on this bill in order to bring it to the floor today, but as ranking member of the House Post Office and Civil Service Committee, I cannot remain silent after reading the report of the House Committee on Post Office Appropriations. I am shaken to my very depths to find that this committee has taken it on itself to incorporate into an appropriations bill what amounts to a repeal of a law passed by the last Congress. I am referring to the 1958 postal rate increase act. I was one of the conferees on that measure, and I can assure my distinguished colleagues on the Appropriations Subcommittee that a decision on postal policy, which is to be voided by the pending appropriations measure, was not made lightly, nor was the language of that bill written in haste and without serious consideration of the import of every word and phrase.

I cannot understand the action of the Appropriations Subcommittee unless it wished to undo the postal policy provision of Public Law 85–426 since the postal policy section of the act does not, as the Appropriation Committee recognizes, call for any new appropriation of money. It merely sought to bring out into the open and allow for proper accounting of money being spent to maintain such public services as free mail for the blind, support of small-town newspapers, and other worthy causes approved by congressional action. The budget is not affected one way or the other by as much as one penny. The moneys appropriated in the bill before the House today are exactly the same amount which would have been recommended anyway. Only the ability of the post office to serve the people will be affected.

What the postal policy section was intended to accomplish and did accomplish was to highlight for the first time in a hundred years the various postal services that Congress provided below cost in the public interest, as well as the extensions and enlargements of service that were made because the national welfare was involved. These issues and many others were considered and made the basis of the statement of postal policy. No rates were changed by this section. No service was added or subtracted. No citizen received any special benefit or hurt because of it. What was intended, and in large measure accomplished, was a statement of national postal policy, just as we have in our laws a *statement* of national transportation policy.

Before this legislation was passed there were literally years of hearings and studies made by congressional groups on the need for a postal policy—most of them, to be sure, in the other body—the results, the background studies were freely available to Members of this body and in particular to the conferees who spent hour after hour trying to arrive at a clear and honest appraisal of the philosophy governing our postal system.

The action of the Appropriations Committee can only serve to distort the problem and might possibly lead to the curtailment of such vital services as post offices in smaller communities or make it impossible for some church organizations to raise missionary funds.

What Member here does not know of post offices in his own district that have been closed—a sacrifice on the altar of a phony deficit, despite the protests of the people it had served. Many fourth class offices, threatened with such extinction, have been saved only through the intervention of the Representatives of the districts involved. What Member is not aware of the great work done by the Scout groups, the various charities, and the fraternal organizations? Can we say that the below cost rates granted them are not a matter of postal policy? I could go on indefinitely but the time here is limited. I wish only to register my grief that legislation which culminated years of study and which passed both House of Congress after prolonged debate and which is the law today is to be thus uncermoniously dismissed and canceled—legislation killed within the framework of an appropriations bill.

Senator OLIN D. JOHNSTON, chairman of the Senate Post Office and Civil Service Committee, declared:

> The House Post Office Subcommittee on Appropriations is attempting to cover up postal subsidies.

I am quoting Chairman OLIN JOHNSTON:

> The action of the House Committee on Post Office Appropriations in refusing to earmark funds called for in title I of Public Law 85–426 is a refusal to recognize and to sell the public how much the free mailing privileges voted by the Congress is costing the Government. These very same members of this Appropriations Committee which have voted in the past to continue free in-county delivery of newspapers, free mail for the blind, preferential rates granted to so-called exempt or nonprofit publications, low rates on special services such as registered mail, money orders, and so forth, and who continue to bombard the Post Office Department with the request for extensions of rural free delivery routes and continuance of uneconomical 3d and 4th class post offices are apparently unwilling to tell the people of the Nation what this free service is costing the Government.

Senator JOHNSTON said this after reading the report of the House Committee on Appropriations released today.

Senator CARLSON, ranking Republican minority member of the Senate Post Office and Civil Service Committee, declared:

> Notwithstanding the clear mandate set forth in Public Law 85–426 which enumerates in detail the items of postal service that should be earmarked as public service, the House Appropriations Committee is seeking to inflict the minority opinion upon the majority of a Congress that approved this principle last year. It is unfortunate that this subcommittee does not recognize the 5 years of hard labor that went into the development of this postal policy concept and the effort on the part of Congress last year to tell the American people why there is a postal deficit and who is receiving the so-called postal subsidies.

Both Senators declared an intention to personally appear before the Senate Appropriations Committee in an effort to see that the Senate recognizes its obligation under Public Law 85–426, and earmarks the $172 million requested by the administration as public service cost.

During the debate on Public Law 85–426, the bill to increase postage rates last year on the Senate floor, at least 4 days were consumed on title I—Postal Policy. The Senate Post Office and Civil Service Committee had recommended at least $300 million which included losses incurred by the Post Office Department in operating uneconomical third- and fourth-class post offices and star routes as well as rural free delivery routes. The Senate agreed in conference with the House to eliminate R.F.D. routes from the list of public service items that had previously been approved by the Senate.

The request of $172 million which the House committee was considering did not include losses incurred in operating third- and fourth-class post offices and star routes.

Mr. WIER. Mr. Chairman, will the gentleman yield?

Mr. MORRISON. I yield to my distinguished colleague from Minnesota.

Mr. WIER. I have listened with some interest, and I think the gentleman from Louisiana made the statement that in its deliberations the Subcommittee on Appropriations had repealed a public law, as I understand it, and he somewhat described what that repeal does. Now, that is what I am trying to have clarified in my own mind. What excuse or reason would there be for the repeal of any public law by the committee handling the appropriation? I thought that legislation came from the committee upon which the gentleman serves.

Mr. MORRISON. That is right; the gentleman is correct. And, this is a law that was enacted by Congress and is the law today. It was voted upon by a vast majority of the Members of Congress, and now the Appropriations Committee is attempting to actually repeal a law already passed by the Congress and signed by the President.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. MORRISON. I yield to my distinguished colleague from Louisiana.

Mr. PASSMAN. I took the position I did on account of reading the gentleman's own prepared statement, and I shall quote the last sentence from one of the paragraphs: No matter what anyone calls it, the appropriation is the same in that it neither adds nor subtracts 1 cent from the General Treasury. So, if we are giving as much money to carry the same amount of mail, then what does the gentleman's law propose to do other than to hide the actual deficit? Now, I am asking for information. If your statement here—and I am sure the gentleman meant that—is true, how can you point then, that we may take away some of the services?

Mr. MORRISON. My statement, a part of which you read is true and cor-

rect. Evidently the gentleman was not listening to my remarks that I made a few minutes ago, because I definitely stated that the law was passed on postal policy in the last session, and this is the law today. Your Appropriations Committee is attempting to abolish a law of the land without legally repealing it. This is not only unethical but it is illegal.

Mr. CORBETT. Mr. Chairman, will the gentleman yield?

Mr. MORRISON. I yield to the distinguished gentleman from Pennsylvania.

Mr. CORBETT. Is not the gentleman saying, and correctly so, that the provisions of the policy act of last year provide for a full and complete disclosure of where the money is allocated to public services or to postal deficit, and that if it is lumped simply as a deficit, there is no way of telling where it goes. It is just a big lump sum showing a deficit. So, without getting into the merits of whether or not it should be public service or deficit, this $172 million, certainly the law as passed last year provides for that full disclosure and earmarks it item for item.

Mr. MORRISON. The gentleman is exactly correct. I contend, and I think the vast majority of the Members of Congress contend likewise, that when this Congress passes a law, no committee, whether the Committee on Appropriations or any other, shall so attempt to erase it.

Mr. CANFIELD. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Pennsylvania [Mr. CORBETT], a member of the House Committee on Civil Service and Post Office.

Mr. CORBETT. Mr. Chairman, a noted historian once said that the only certain thing he knew about history was that the people never learn anything from history. From time to time throughout the history of our Republic people have come forward with the notion that the Post Office should pay its own way, that the users of the mail should pay into the Treasury or into the Post Office Department an amount at least equal to that which it costs to handle the mail. Repeatedly throughout the history of the Post Office Establishment this has been proved to be not only unsound but decidedly unfair to the users of the mail. The reasons for that are quite obvious. I cannot read too much history to the committee today—I am going to read a little—but it comes down to this, if I can simplify it.

We, as Members of Congress and other Congresses have from time to time directed the Post Office to perform certain functions at a calculated loss. The clearest example is when Congress decided by law that all mail transmitted by the blind shall be free. We decreed that the Post Office Department render all kinds of services which cost, as a total, perhaps up to $300 million a year.

So the question comes to this: Should the users of the mail, or the Treasury, pay for these services which do not and cannot ever pay their own way? As I say, one example is free mail to the blind. That is a clear example of public service that should be chargeable to the Treasury.

When you get into the matter of third- and fourth-class post offices it becomes vague as to just what part of their total calculated loss each year is public service and what part is postal service used by the mailers. Certainly we know, I am sure no one will deny, that there is not a third- or fourth-class post office in the United States, not one out of some 28,000, that does not lose money. None of them makes a profit. If anyone wants to advocate that we close all the third- and fourth-class post offices, all right. The Carlson committee which made extensive studies of the rural free delivery service said that we lose in the neighborhood of $119 million a year, and they recommend that some portion of it—perhaps $70 million—be considered public service. This mail costs three times as much as ordinary mail to deliver.

If the Congress wants to put the Post Office on a pay-as-you-go basis, if they want to make it pay its own way, they ought to close every third- and fourth-class post office. They ought to shut down the rural routes, just as the American Express Co. would do if they were faced with that problem, or as any business would do.

You cannot just keep piling up the cost to the users of the mail because we keep piling up expenses against the Post Office Department. I say when people call this a dishonest policy they ought to say very frankly that we are taxing some segments of the public, some segments of American business, to finance the policies of Congress; that benefit somebody else.

Let us just take a moment of history. This is from Congressman Clyde Kelly's book "U.S. Postal Policy" published in 1935. He was one of the greatest chairmen of the Post Office Committee we ever had. He wrote a history of the Post Office. After pointing out how hard a time we had getting the postal service going he said that:

> In 1851 the Congress adopted the policy of service first and, although often vigorously assailed, that policy has continued, from that day to this, to guide the destiny of the Postal Establishment.

He goes on:

> It was no longer to be a question of arithmetic but of public good.
>
> The theory that postal progress must depend on receipts had been weighed in the balance and found wanting. The needs of a rapidly growing Republic doomed such a policy.

Later on that act of 1851 was attacked by politically appointed Postmaster Generals who did not know beans about the service or the establishment, and every time the self-sustaining policy was tried it resulted in almost a complete breakup of the Postal Establishment and had to be terminated.

May I say that this is a complex problem, and I am sorry the argument has got into a rather vitriolic tone.

The matter of the post office service involves the economy of the United States. If you want to study it carefully, I recommend to the Subcommittee on Appropriations that they look at some of the tens of volumes of testimony and reports and the years of history of this great debate on postal policy. They are very revealing. I think there is proper ground for compromise. I believe that the bill last year came close to that, and I think that whatever is the situation, I will agree that those things which are chargeable to the users of mail ought to be charged to them, and the things that ought to be charged to the Treasury because of acts of Congress ought to be charged to the Treasury. Then we could all feel that we were doing an honest job.

Mr. CANFIELD. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Michigan [Mr. LESINSKI], a member of the House Committee on Post Office and Civil Service.

Mr. LESINSKI. Mr. Chairman, I am not here advocating that second-class mail pay the same rate as first class, for it would tend to nullify second class. I believe, though, that we should be a little more careful as to what we say. Second-class mail today brings in a little over $65 million. If the second-class mail paid the same rates that first class does, we would be astounded, and we would have so much money left over in the Post Office Department that we would be able to build a lot of post offices and refund money back into the Treasury.

I have a letter from the Department dated in 1957, prior to the increase from 3 to 4 cents, and I will place the letter in the RECORD at this point.

SEPTEMBER 4, 1957.

Hon. JOHN LESINSKI,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN LESINSKI: This is in reply to your letter of August 22 requesting confirmation of an unofficial report that the amount of revenues which second-class mail would bring in at first-class rates would be between $1.2 billion and $1.3 billion.

Let me say at the outset, and I am sure you will agree, that in the event second-class rates were raised to the level of first-class rates, it would put an end to many of the publishers of the country, and in all probability produce little more revenues than are produced today.

If, for the purpose of answering your hypothetical question, we assume that present second-class volume will remain unchanged, it may then be said that the amount of revenues cited above is correct on a strictly arithmetical basis.

I trust that this answers your question fully, and if not, I will be happy to provide any additional information you may require.

Sincerely yours,

_____,
Deputy Postmaster General.

The letter states very simply that if the second-class mail paid first-class rates, it would bring in between $1,200 million and $1,300 million. The letter does not consider the additional increase of last year. I point that out not for the purpose of saying that second class should bear the same rates as first class, but to show the big discrepancy. Going back again into history, to Benjamin Franklin, second class received special rates. Congress has many times reiterated, if we check the record, that second-class mail is for the education of the American public or as stated for the dissemination of information.

Therefore the criteria is set by the laws and precedent preceding us. The American public is to be informed thoroughly on what is going on and second-class mail should be given special consideration. Do not forget in 1932 Congress raised second-class rates 30 percent and also raised first-class rates from 2 to 3 cents. In 1933 the second-class increase was repealed. In 1951 we raised second-class rates 30 percent and that rate was 18 years overdue at that time. When I tried last year to increase second-class rates an additional 10 percent a year to bring in additional revenue, I was a lone individual here with very little help. To criticize us on the Committee on Post Office and Civil Service and to say that we do not know what we are doing, I do not think is appropriate. We studied the problem thoroughly. We gave it full consideration. We have reviewed all the facts and figures. To say that in order to solve the problem, we should raise the first-class rate from 4 cents to 5 cents or even 7 cents is quite farfetched. First of all, they say the users should pay the freight. Then they say that first-class mail should be raised to 7 cents when, as a matter of fact, the second-class rates would have to be raised 20 times that to bring it up to the equivalent of the first-class mail.

To give you another idea briefly. I talked to a postmaster in the Detroit area. He claims that 100,767 copies of a paper were mailed out. The income from these papers was $592.29. That is just a little bit over a half cent per copy to pay for mailing. Many papers are sent for less and some for a little more depending on the weight and size. To give everyone an idea as to the differential of rates—why do not those who are criticizing the rates and advocating a first-class increase send a magazine like Life or any magazine first class? It now costs the publisher 1½ cents or thereabouts to send the same magazine.

Let us take a look at the following statistics showing the differences between first-class mail, which is used by the average American when he writes a letter, and second-class mail, which is used by the big magazine publishers. The figures are for the fiscal year 1958:

	1st class mail	2d class mail
Pieces handled	32,218,319,000	7,147,956,000
Total weight	921,402,000	2,695,076,000
Total revenue	$1,092,441,000	$65,622,000

Total income from all classes of mail, $2,314,038,000.

Therefore, of the total income to the Post Office Department in fiscal year 1958—which, incidentally, was before the 4-cent rate went into effect—first-class mail was already producing over 47 percent while the big business users of second-class mail contributed only a little over 2 percent. Add airmail revenue of $136,580,000 to first-class mail revenues and you will see that the everyday users of the 4-cent and 7-cent stamps are the ones who are carrying the burden of postal costs, while the postman who delivers your mail has to shoulder the burden of one-third of a pound on an average for each piece of second class mail, but only one thirty-second of a pound for each average piece of first-class mail.

I believe that all of us would do well to devote our efforts toward closing the tax loopholes and special concessions to big business in order to get additional revenue for the Federal Government, instead of constantly trying to milk the small individual taxpayer and small businessman.

Mr. GARY. Mr. Chairman, I yield myself 4 minutes.

Mr. Chairman, I simply want to state the position of the committee on this question of public service. Last year, you will recall, when Public Law 426 was passed, which is the law increasing postal rates, it was first passed by the House and then went over to the other body which added this provision defining public services. It was not in the bill as passed by the House. It came back to this body right at the close of the session and was referred to a committee of conference. The conference committee worked over it and it was brought to the floor of the House, as I recall it, on the last day of the session of the Congress. Everything was in a state of confusion. The chairman of the legislative committee on Post Office and Civil Service said that he was opposed to it on the floor of the House. I expressed myself also as being opposed to it, but under the circumstances we agreed to the conference report. Now, what did it provide? It provided that the definition of public services should include the loss on star routes and on third- and fourth-class post offices. If anybody can tell me why the losses on third- and fourth-class post offices are a public service and the losses on first- and second-class post offices are not a public service, I would appreciate enlightenment.

I am perfectly willing to admit that the entire postal service is a public service; otherwise the Government of the United States would have no business operating the postal system.

But when you begin to single out certain parts of the service and say "This is public service, and this is not," it is absolutely ludicrous, in my judgment.

The President said that the Post Office Department could not determine the loss for star routes and third and fourth class post offices; therefore, nothing was included in the budget for that item.

Mr. CANFIELD. Mr. Chairman. Will the gentleman yield?

Mr. GARY. I yield to the gentleman from New Jersey.

Mr. CANFIELD. I wanted the gentleman to yield to me to express the President's position on signing Public Law 426 of the 85th Congress. The President said this:

> There are in the bill several matters which cause me grave concern. The first is the excessive amount of postal services costs which are assessed against the U.S. Treasury. Certain items identified as "public services," such as the star-route system, are not services at all but are basic components of the system of moving mail between post offices. The consequence of this misconstrual of the public services performed by the Post Office Department is to burden the Treasury annually with $100 million or more of operating costs which logically and equitably should be paid by the users of the mails by means of proper rates of postage. The concept of public service which is inherent in the bill is clearly in error and without precedent. The true measure of the cost of the public services performed by the Post Office Department is the loss of revenue arising from specific rate concessions made under the law to certain subclasses of mail users.

Mr. GARY. I thank the gentleman.

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. CANFIELD. Mr. Chairman, I yield the gentleman 2 additional minutes.

The CHAIRMAN. The gentleman from Virginia is recognized for 2 additional minutes.

Mr. GARY. Now, let me read you what Mr. Sessions, the Deputy Postmaster General, had to say about this matter. You will find it at page 105 of the hearings. He said:

> Mr. SESSIONS. My personal convictions are the public services concept is a most dangerous vehicle, and if it is carried out to its possible logical conclusion, I feel it can destroy the ability of the Post Office Department to operate on a pay-as-you-go basis. I foresee that successive sessions of Congress will be beset by pressure groups seeking to be included as beneficiaries of this concept.
>
> This will make it difficult for the Post Office Department to charge for its services which it is now giving.

We have been accused of a possible interference with the delivery of mail. Does the gentleman think that the Deputy Postmaster General would have condemned the public service concept if he had thought that it would help the postal service? The Post Office Department has expressed itself as opposed to the definition of public services as set forth in Public Law 426.

There is one other item I wish to mention, and that is the appropriation of $172 million to cover this so-called public service in handling free mail which is still in the bill. Instead of figuring the loss on the basis of what that free mail would pay if it were not free, in other words, because of the differential in rates between free mail and what it would pay, they are estimating the entire cost of carrying that free mail. The differential in rates would be only a difference of about $30 million. Therefore, under no circumstances should this item be considered as an item of $172 million. At the most it would be $30 million. But our committee was unwilling to recommend the appropriation of funds for a defective concept, unwisely conceived and inaccurately priced, and we struck the entire item from the bill.

Mr. CANFIELD. Mr. Chairman, I yield 3 minutes to the gentleman from Michigan [Mr. CEDERBERG].

Mr. CEDERBERG. Mr. Chairman, postal policy is a matter that concerns me. I want at this time to say that I think the report of the Committee on Appropriations is correct. I believe it is inadequate and wrong to charge as part of the postal policy, charge to the individual taxpayer the cost of such services as third- and fourth-class post offices and the star-route system.

We all recognize that this is an integral part of the entire system.

One of the things that concerns me about charging too much to postal policy

is this: The $172 million, as I understand it, will not really reflect the true deficit of the Department. In other words, if approximately $350 million, which is the deficit now, and the $172 million of public service are added up it reaches a total of something over $500 million of actual and real deficit to the Department.

I am concerned about charging too much to postal policy because I realize that when we come to facing a $350 million deficit it will not reflect the true deficit. We find very little sentiment to do anything about increasing the rates to make up that part which we claim is not public service yet shows up in the deficit. That is one of the things that concerns me because I believe when we face these rate problems we should take a look at the overall deficit of the Department.

There are some legitimate charges to public service, for instance, the mail of the blind, certain mail that is handled for nonprofit organizations. There are some real legitimate charges that can be made to public service, but I fail to see how we can justify $172 million. If we continue from year to year to increase the amount that we are going to charge for public service, then, in my opinion, we are going to put off inevitably or at least beyond a reasonable length of time when we will again face the very facts that rate increases are necessary.

What class of mail they should go on is a matter for the legislative committee to undertake to decide. It seems to me we are going overboard on this public service item, and unless we pare it down to something reasonable we are very apt to be in trouble. As I said before, I have no objection to legitimate public services being charged to the Public Treasury, but when we continue with deficits in the Post Office Department of something like $500 million a year, then I think we better take a good look at the situation.

I would like to say that even if we went for this $172 million for public services, what about the $350 million deficit that still exists? No one seems to be very much concerned about that. There is where the taxpayer picks up at least twice as much as is being charged to public service and I think that is wrong.

Mr. CANFIELD. Mr. Chairman, I yield 2 minutes to the distinguished gentleman from Michigan [Mr. JOHANSEN].

Mr. JOHANSEN. Mr. Chairman, I thank the gentleman for yielding to me. I simply want to support the statement made by my able colleague from Michigan [Mr. CEDERBERG], who served on the Committee on Post Office and Civil Service.

I want to call the attention of the House to the fact that during the 2 or 3 years that I served on the committee, during which the matter of postal rate increases was being considered, we were being constantly bludgeoned over the head with this argument of setting up some set of pubilc service standards. We were told continually that there should not be any rate increase until that was done. In other words, this whole concept which the gentlemen from the Committee on Appropriations have rightly identified was used for 2 or 3 years in an effort to forestall any rate increases. If it becomes established, and particularly on the scale that was proposed, as a permanent fixture, I am confident it will be used again and even more effectively as a device for preventing an equitable distribution of the cost of the postal service to the users of the service.

I commend the subcommittee for the stand it has taken.

The CHAIRMAN. All time has expired. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1960, namely:

TITLE I—TREASURY DEPARTMENT

Office of the Secretary

Salaries and Expenses

For necessary expenses in the Office of the Secretary, including the operation and maintenance of the Treasury Building and Annex thereof; services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), at rates for individuals not to exceed $50 per diem; and the purchase of uniforms for elevator operators; $3,300,000.

Bureau of Accounts

Salaries and Expenses

For necessary expenses of the Bureau of Accounts, $3,464,000.

SALARIES AND EXPENSES, DIVISION OF DISBURSEMENT

For necessary expenses of the Division of Disbursement, $21,500,000.

Bureau of the Public Debt

Administering the Public Debt

For necessary expenses connected with any public-debt issues of the United States, $47,000,000.

Office of the Treasurer

Salaries and Expenses

For necessary expenses of the Office of the Treasurer, $17,500,000.

Bureau of Customs

Salaries and Expenses

For necessary expenses of the Bureau of Customs, including purchase of seventy-five passenger motor vehicles for replacement only, of which forty for police-type use may exceed by $300 each the general purchase price limitation for the current fiscal year; uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); and awards of compensation to informers as authorized by the Act of August 13, 1953 (22 U.S.C. 401); $53,865,000.

Internal Revenue Service

Salaries and Expenses

For necessary expenses of the Internal Revenue Service, including purchase (not to exceed one hundred for replacement only, of which forty for police-type use may exceed by $300 each the general purchase price limitation for the current fiscal year) and hire of passenger motor vehicles; and services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), and of expert witnesses at such rates as may be determined by the Commissioner; $363,000,000.

Bureau of Narcotics

Salaries and Expenses

For necessary expenses of the Bureau of Narcotics, including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); and hire of passenger motor vehicles; $4,080,000.

United States Secret Service

Salaries and Expenses

For necessary expenses of the United States Secret Service, including purchase (not to exceed thirty-seven, of which twenty-five are for replacement only, including ten for police-type use which may exceed by $135 each the general purchase price limitation for the current fiscal year) and hire of passenger motor vehicles, $4,000,000.

Salaries and Expenses, White House Police

For necessary expenses of the White House Police, including uniforms and equipment, and for performing such protective duties in the White House areas of the Executive Office Building as the Secretary may prescribe, $1,055,000.

Salaries and Expenses, Guard Force

For necessary expenses of the guard force for Treasury Department buildings in the District of Columbia, including purchase, repair, and cleaning of uniforms, $338,000.

Bureau of the Mint

Salaries and Expenses

For necessary expenses of the Bureau of the Mint, including purchase and maintenance of uniforms and accessories for guards; purchase of one passenger motor vehicle for replacement only; and not to exceed $1,000 for the expenses of the annual assay commission; $4,300,000.

Coast Guard

Operating Expenses

For necessary expenses for the operation and maintenance of the Coast Guard, not otherwise provided for, including hire to passenger motor vehicles; services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); purchase of not to exceed thirty-two passenger motor vehicles for replacement only; maintenance, operation, and repair of aircraft; recreation and welfare; and uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); $189,000,000: *Provided,* That the number of aircraft on hand at any one time shall not exceed one hundred and thirty-two exclusive of planes and parts stored to meet future attrition: *Provided further,* That amounts equal to the obligated balances against the appropriations for "Operating expenses" for the two preceding years, shall be transferred to and merged with this appropriation, and such merged appropriation shall be available as one fund, except for accounting purposes of the Coast Guard, for the payment of obligations properly incurred against such prior year appropriations and against this appropriation: *Provided further,* That except as otherwise authorized by the Act of September 30, 1950 (20 U.S.C. 236–244), this appropriation shall be available for expenses of primary and secondary schooling for dependents of Coast Guard personnel stationed outside the continental United States in amounts not exceeding an average of $250 per student, when it is determined by the Secretary that the schools, if any, available in the locality are unable to provide adequately the education of such dependents, and the Coast Guard may provide for the transportation of said dependents between such schools and their places of residence when the schools are not accessible to such dependents by regular means of transportation.

Acquisition, Construction, and Improvements

For necessary expenses of acquisition, construction, rebuilding, and improvement of aids to navigation, shore facilities, vessels, and aircraft, including equipment related thereto; and services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); $22,000,000, to remain available until expended.

Retired Pay

For retired pay, including the payment of obligations therefor otherwise chargeable to lapsed appropriations for this purpose, and payments under the Uniformed Services Contingency Option Act of 1953, $29,500,000.

Reserve Training

For all necessary expenses for the Coast Guard Reserve, as authorized by law (14 U.S.C. 751–762; 37 U.S.C. 231–319), including direct expenses and repayment to other Coast Guard appropriations for indirect expenses, for regular personnel, or reserve personnel while on active duty, engaged primarily in administration and operation of the reserve program; purchase of not to exceed two passenger motor vehicles for replacement only; and the maintenance, operation, and repair of aircraft; $15,500,000: *Provided*, That amounts equal to the obligated balances against the appropriations for "Reserve training", for the two preceding years shall be transferred to and merged with this appropriation, and such merged appropriation shall be available as one fund, except for accounting purposes of the Coast Guard, for the payment of obligations properly incurred against such prior year appropriations and against this appropriation.

Liquidation of corporate assets

The Secretary of the Treasury is hereby authorized to make such expenditures, within the limits of funds and borrowing authority available therefor and in accord with law, and to make such contracts and commitments without regard to fiscal year limitations as provided by section 104 of the Government Corporation Control Act, as amended, as may be necessary in carrying out the programs set forth in the budget for the fiscal year 1960 for the following functions, except as hereinafter provided:

Limitation on Administrative Expenses, Reconstruction Finance Corporation Liquidation Fund

Not to exceed $90,000 (to be computed on an accrual basis) of the funds derived from functions transferred to the Secretary of the Treasury pursuant to Reorganization Plan No. 1 of 1957 (22 Federal Register 4633) shall be available during the current fiscal year for administrative expenses incident to the liquidation of said functions, including use of the services and facilities of the Federal Reserve banks: *Provided*, That as used herein the term "administrative expenses" shall be construed to include all salaries and wages, services performed on a contract or fee basis, and travel and other expenses, including the purchase of equipment and supplies, of administrative offices: *Provided further*, That the limiting amount heretofore stated for administrative expenses shall be increased by an amount which does not exceed the expenses of services performed on a contract or fee basis in connection with the termination of contracts or in the performance of legal services; and all administrative expenses, reimbursable from other Government agencies: *Provided further*, That the distribution of administrative expenses to the accounts shall be made in accordance with generally recognized accounting principles and practices.

This title may be cited as the "Treasury Department Appropriation Act, 1960".

TITLE II—POST OFFICE DEPARTMENT

Contribution to the postal fund

For administration and operation of the Post Office Department and the postal service, there is hereby appropriated the aggregate amount of postal revenues for the fiscal year ending June 30, 1960, as authorized by law (39 U.S.C. 786, 794a), together with an amount equal to the difference between such revenues and the total of the appropriations hereinafter specified and the sum needed may be advanced to the Post Office Department upon requisition of the Postmaster General, for the following purposes, namely:

Current authorizations out of postal fund

Administration, Regional Operation, and Research

For expenses, not otherwise provided for, necessary for administration of the postal service, operation of the inspection service and regional offices, uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131), and conduct of a research and development program (including current increases in prior year contracts thereunder), including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a); management studies; not to exceed $25,000 for miscellaneous and emergency expenses; rewards for information and services concerning violations of postal laws and regulations, current and prior fiscal years, in accordance with regulations of the Postmaster General in effect at the time the services are rendered or information furnished; expenses of delegates designated by the Postmaster General to attend meetings and congresses for the purpose of making postal arrangements with foreign governments pursuant to law, and not to exceed $15,000 of such expenses to be accounted for solely on the certificate of the Postmaster General; and not to exceed $20,000 for rewards for information and services, as provided for herein, shall be paid in the discretion of the Postmaster General and accounted for solely on his certificate; and settlement of claims, pursuant to law, current and prior fiscal years, for damages, and for losses resulting from unavoidable casualty; $71,500,000.

Operations

For expenses necessary for postal operations, not otherwise provided for, including uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); for repair of vehicles owned by, or under control of, units of the National Guard and departments and agencies of the Federal Government where repairs are made necessary because of utilization of such vehicles in the postal service, and for other activities conducted by the Post Office Department pursuant to law; $2,988,000,000: *Provided*, That not to exceed 5 per centum of any appropriation available to the Post Office Department for the current fiscal year may be transferred, with the approval of the Bureau of the Budget, to any other such appropriation or appropriations; but the appropriation "Administration, regional operation, and research", shall not be increased by more than $1,000,000 as a result of such transfers: *Provided further*, That functions financed by the appropriations available to the Post Office Department for the current fiscal year and the amounts appropriated therefor, may be transferred, in addition to the appropriation transfers otherwise authorized in this Act and with the approval of the Bureau of the Budget, between such appropriations to the extent necessary to improve administration and operations: *Provided further*, That Federal Reserve banks and branches may be reimbursed for expenditures as fiscal agents of the United States on account of Post Office Department operations.

Transportation

For payments for transportation of domestic and foreign mails by air, land, and water transportation facilities, including current and prior fiscal years settlements with foreign countries for handling of mail, $524,000,000.

Facilities

For expenses necessary for the operation of postal facilities, buildings, and field postal communication service; uniforms or allowances therefor, as authorized by the Act of September 1, 1954, as amended (5 U.S.C. 2131); procurement of stamps and accountable paper, postal supplies, and equipment; and storage of vehicles owned by, or under control of, units of the National Guard and departments and agencies of the Federal Government; $188,660,000: *Provided*, That this appropriation shall be available for the repair, alteration, and improvement of the mail equipment shops at Washington, District of Columbia, and for payment to the General Services Administration of such additional sums as may be necessary for the repair, alteration, preservation, renovation, improvement, and equipment of federally owned property used for postal purposes, including improved lighting, color, and ventilation for the specialized conditions in space occupied for postal purposes.

Postal modernization

For postal modernization as authorized by title III of the Act of May 27, 1958 (72 Stat. 144), $75,000,000: *Provided*, That the funds herein appropriated shall be available for payment to the General Services Administration for the repair, alteration, preservation, renovation, improvement, and equipment of federally owned property used for postal purposes, including improved lighting, color, and ventilation for the specialized conditions in space occupied for postal purposes, and for services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a).

This title may be cited as the "Post Office Department Appropriation Act, 1960".

TITLE III—TAX COURT OF THE UNITED STATES

Salaries and expenses

For necessary expenses, including contract stenographic reporting services, $1,535,000: *Provided*, That travel expenses of the judges shall be paid upon the written certificate of the judge.

This Act may be cited as the "Treasury-Post Office Appropriation Act, 1960".

Mr. GARY (interrupting reading of the bill). Mr. Chairman, I ask unanimous consent that the bill be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The CHAIRMAN. Are there any points of order against the bill?

Mr. SMITH of Iowa. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I have been hearing a lot, the last couple of days especially, about balancing the budget, and I certainly am in favor of balancing the budget. And, we have been hearing a lot also about the postal deficit or the deficit in the Post Office Department, and certainly we want to do what we can to eliminate any wasteful expenditures in that regard. But, I do think there is a big difference between investing three-tenths of a billion dollars in the future of America and some of these expenditures that are being made by the executive department that are going down the rathole, and I

am talking about some of the featherbedding in the upper echelons of the administrative branch of the Government. The real spenders are those who are featherbedding the upper echelons of the Government, and I will give you an example of just what I am talking about. We find that in the Post Office Department, in the position of postal supervisor, which is nonproductive work—this has nothing to do with the clerks and carriers—in the year 1952 there were 20,864; in 1953 there were 21,481; in 1954 there were 21,632; in 1955, 22,107; in 1956, 22,771; in 1957, 23,255; in 1958, 24,792; in 1959, 26,007; and request for 1960, 26,961. Figures are as of June 30 for each year.

Now we have a proposal for 26,961 in 1960, an increase of 6,097 nonproductive workers since 1952, and the cost of those additional nonproductive personnel is almost $50 million per year. Now, I think we should give more attention to the featherbedding in the upper echelons of this Government by the administrative branch of this Government and we should consider those expenditures much different than the investments in the future of America, such as dams on our rivers, airports for our ever-expanding and fast-moving transportation system, and housing for the citizens of our country.

Mr. LAIRD. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Wisconsin.

Mr. LAIRD. Is the gentleman suggesting that all supervisory personnel be eliminated from this bill?

Mr. SMITH of Iowa. I am suggesting that the additional 6,000 that have been added, that are not producing any additional service for the Post Office Department, should be eliminated.

Mr. LAIRD. Are you offering an amendment to eliminate them?

Mr. SMITH of Iowa. I am preparing to take care of the matter through the regular channels.

Mr. LAIRD. It would be in order to reduce the appropriation if the gentleman wants to eliminate those positions.

Mr. SMITH of Iowa. I want to make sure the executive department does not lay off productive personnel. The way they have been operating, they would probably lay off productive employees instead of reducing the number of upper echelon nonproductive employees.

Mr. LAIRD. It could be stated in your amendment that the reductions apply to that particular area.

Mr. SMITH of Iowa. I am also speaking here of the future appropriations that will come up for the different departments of the executive branch of Government.

Mr. LAIRD. Then, the gentleman has no amendment to offer at this time?

Mr. SMITH of Iowa. I am also taking the matter up with the Government Operations Committee, of which I am a member.

Mr. BATES. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Massachusetts.

Mr. BATES. Has the gentleman determined the number of postmasters we have today compared with 1952?

Mr. SMITH of Iowa. I know this, that in the big post office in Des Moines there has been an addition of a good many postal supervisors, and I have been told that they produce nothing in the way of making the postal service better. As a matter of fact, the principal thing some of them do is to interfere with some of the work that is being done.

Mr. WHITENER. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from North Carolina.

Mr. WHITENER. I might undertake to answer the question of the distinguished gentleman from Massachusetts that, if they had been abolishing postmasters in his district like they have in mine, there would be a great many less postmasters than we had some 6 years ago.

Mr. SMITH of Iowa. I might say I am referring also to those other department appropriations which have not come in yet. Some have new consultants, so-called, nonproductive people, at $15,000 per year; some of which are getting $10,000 from the Government retirement fund at the same time.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Louisiana.

Mr. PASSMAN. I represent a district with 12,000 post offices. They have abolished 12 of them. And I have endorsed the program every time, because it has been established that they get better service by abolishing these post offices, and, as a usual thing, the patrons are better satisfied. And so in the interest of economy, I shall continue to support the Post Office Department in abolishing these useless post offices in my district where adequate service can be rendered by RFD.

Mr. SMITH of Iowa. It does not do any good to abolish post offices if you are going to turn around and put on nonproductive personnel in the administrative branch. That does not excuse the expenditure of additional millions of dollars per year for nonproductive upper echelon personnel, and I say again that the featherbedding by the administration of the upper echelons of the departments should be stopped.

Mr. MOSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would like to address myself to the question of postal policy because I have been rather interested in the remarks I heard as I came into the Chamber a little earlier.

I had the opportunity of serving for 4 years as a member of the Committee on Post Office and Civil Service at a time when the question of rates was an annual experience, and I think that the committee, in its wisdom, made a very important forward step when it directed that appropriations should annually be made for public service costs.

I want to deal with just what those costs are, in my opinion. I think, first, they are the cost of handling as determined by the only yardstick employed in the Department, that of the cost ascertainment system, of the classes of mail which by law travel at less than cost, and the many free services, the activities the Department carries on for other agencies of the Federal Government, the maintenance of obviously nonpaying activities, or, at least, activities which cannot be expected to fully recover their costs from rates.

I have reference to the maintenance of many admittedly uneconomic post offices. We have them because it has been the policy of our Government to maintain them in order to bring about the widest dissemination of information and intelligence in this Nation.

We have the rural free delivery system which, in its very name, carries with it a part of the public service determination, a free system of delivery in rural areas. Never was it expected that the rates assessed would cover the cost of maintaining that system.

We have the free-in-county mailing privilege for newspapers, and the cost of free-in-county mail is not what it would have produced at lower than cost rates, but the actual allocable cost of handling. That is the cost and the public service cost is the difference between what a rate would produce and the actual cost of handling it. Because we cannot, by any rational approach, say that the man who mails a first-class letter—and this seems to be the policy being now pursued—the man who mails a first-class letter should not only underwrite all of the costs properly allocated to the handling of first-class mail, but should also pick up the deficits incurred in the free services of the Department and the less-than-cost services of the Department.

If it is to be the studied policy of the Congress of the United States as the Board of Directors for the Post Office to give service at less than cost, then it is my contention that that is properly a charge against the revenues of this Government and not against the other users of the mail.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I am happy to yield to the distinguished chairman from Virginia.

Mr. GARY. Would the gentleman say that the fact that the Department is carrying magazines and newspapers and other commercial mail at less than cost would make that a public service?

Mr. MOSS. If that is the determination of the Congress, that the rate should be at less than cost, it is then a public service. It certainly is not properly a charge against the other users of the mail. I think there is where we have the exercise of congressional discretion, and we have long since determined that we would have subsidized rates.

Mr. GARY. In other words, if the lobbyists can successfully hold the rates down on those classes, we should call it a public service?

Mr. MOSS. Would the gentleman now respond to a question? Where would you look for the revenue? If it is the policy of the Congress which sets the

national policy that the rate not produce its full share of the cost, do you then look to the other rate users?

Mr. GARY. I would impose it on the people who are getting the benefits, and that is all we are trying to do. I think this move is to try to relieve them from paying the proper rates.

Mr. MOSS. The entire American public gets the benefit. The man who buys the magazine is not necessarily the one who mails the letter.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. GROSS. Mr. Chairman, I ask unanimous consent that the gentleman be permitted to proceed for 5 additional minutes.

Mr. ARENDS. Reserving the right to object, Mr. Chairman, and I am not going to object, may I say that we have several bills we want to complete before this evening is over.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. GROSS. I think it was unfair to imply that Congress has been yielding to the pressure of the lobbyists in the establishment of postal rates.

Mr. MOSS. I think that each of the Members of this body can speak only for himself. In stating my position I am speaking my personal conviction. I am convinced that our second-class rate is subsidized, but I do not think the man who uses the mail to send a first-class letter is responsible for that subsidy. I do not think his first-class rate should pick up the subsidy because the man who gets the magazine may never write a letter. They are not the same group of users, but they are all part of the great American public. That is the public policy determination, that we have subsidized rates, and then they should properly be charged against the general governmental revenues of this Nation and not against just the users of the mail.

Mr. GROSS. I want to associate myself with the statements made by the gentleman from Louisiana [Mr. MORRISON], the gentleman from Pennsylvania [Mr. CORBETT], and the gentleman from California [Mr. MOSS], who now has the floor, in support of the policy statement that was contained in the legislation enacted last year. I regret that the Subcommittee on Appropriations saw fit to scuttle, in effect, this policy by refusing to earmark the money to implement the policy that was established by law.

Mr. MOSS. I want to thank the gentleman and acknowledge the fact that during my 4 years of service on the committee I was privileged to work closely with him in an effort to bring about a policy statement, one which had long been needed in this Government. This Department, the Post Office, has operated far too long without adequate definition as to what constitutes its public service functions and those things which constitute its purely commercial functions.

Mr. CORBETT. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from Pennsylvania.

Mr. CORBETT. I do not want to take the gentleman's time, but I would be remiss not to point out to this Congress that the gentleman now addressing the House has been 4 years doing exactly what I recommended to the Subcommittee on Appropriations, namely, trying honestly and conscientiously to find the proper definition of public service and to implement it as it ought to be done and as attempts have been made to do. I simply want to point out to the House that the gentleman from California did that job and did it well. I commend him for his efforts.

Mr. MOSS. I want to acknowledge the help of the gentleman from Pennsylvania, because it was a material contribution in our first pioneering effort to bring about a statement of postal policy.

I should like to point out to the members of this committee that the policy being pursued by our Government in connection with the operation of its Post Office is not one of consistency. We say that for many purposes our cost ascertainment system is inadequate, that it cannot be used and that it should not be regarded at all as a tool for the setting of rates, and yet by law we require the employment of that system in the setting of rates for fourth-class mail. We expect that one group of users to cover fully the allocable costs of handling their type of mail. So we have here a clear inconsistency and rather than avoiding the question of a clear definition of postal policy, we should bend our efforts and use the best of our intelligence to arrive at a really definitive statement of postal policy.

Mr. PASSMAN. Mr. Chairman, I move to strike out the last word.

I have asked for this time as I am a member of the appropriations subcommittee handling this bill. We are certainly not trying to repeal any law which has been recommended by any other committee. But, we know that even under the bill now before us, there is going to be a Post Office Department deficit for the fiscal year 1960 of $470 million. Under the legislation that we are discussing, there would be an appropriation of $172 million so as to make the deficit appear that amount less than the actual deficit. I should like to ask if there has been any other instance in the postal operations where request has been made for an appropriation for a nongovernmental subsidy.

Mr. CORBETT. I would like to reply to the gentleman in this way. The gentleman spoke earlier about a nongovernmental subsidy. Who gets this subsidy?

Mr. PASSMAN. Will the gentleman please answer my question? We do not have time to debate the question as the time is limited. Do you know of any instance where the Congress has appropriated money for a nongovernmental service? I am not arguing the merits; I am just asking the question, which can be answered "Yes" or "No."

Mr. CORBETT. The answer is that this is not a nongovernmental subsidy—certainly not like a subsidy to keep up the price of peanuts or tobacco.

Mr. PASSMAN. This is an appropriation that will serve to reduce the annual deficit though; is that not true?

Mr. CORBETT. The money is expended in any case. The question is as to the allocation.

Mr. PASSMAN. But the record would then show a deficit of $172 million less than if we had not followed such procedure.

Mr. CORBETT. You can call it a deficit, if you insist on calling it that.

Mr. PASSMAN. I am speaking of the record. Does it not stand to reason that if you could cover $172 million of the deficit by this vehicle, in subsequent years someone could come in with more legislation and cover, say, an additional $200 million; and finally get the entire matter under the rug to such an extent as to be showing the Post Office Department as being self-supporting, whereas there might actually be a $700 million or $800 million subsidy?

The time has come for us to recognize that there are 175 million Americans, all of them interested in the postal service. We are not going to carry the mail at any less cost by making one group subsidize another one. The time has come to let each user of the mail pay for his own postage. I hope that, in due time, the committee with the jurisdiction over such legislation will present a bill that will give us an opportunity to vote for measures that will serve to make the Post Office Department self-supporting.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I am happy to yield to my colleague.

Mr. MOSS. I want to associate myself completely with the statement of the gentleman when he says that the time has come today, and I will just make this modification—that we have to look to each class to cover fully, if that is the determination of the Congress, the cost of handling its class of mail.

But so long as there is a deficit as a result of the considered ratemaking policy of this body, then that is a public service underwriting and not a deficit.

Mr. PASSMAN. That is the gentleman's own view. I say it is an attempt to reduce the annual deficit. If we should follow this policy we would be covering up annual deficits. I am not going to make myself a party to doing this.

Mr. DADDARIO. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, we in Connecticut are particularly concerned about the Coast Guard Academy, and for some period of time the Connecticut delegation has concerned itself with living conditions of the cadets who are located there and the officer candidates who go there for training during the course of the year. We have been proud of the way the Academy has been conducted, and proud of the men who have participated in the operation.

I notice on page 622 of the hearing that the Officer Candidate School will be moved from New London, Conn., to Yorktown, Va. I note also that the question was asked of Admiral Richmond if this is a more expensive operation. Admiral Richmond said "Yes; it is."

Then he was asked what would be the annual cost, and his answer was: "The

annual increased cost would be about $950,000."

We are under considerable pressure to reduce governmental costs; yet in this instance we are being asked to add almost a million dollars a year to the budget. This was the recommendation of Coast Guard and Treasury officials—the same Treasury officials who have warned of the debt problem. The admiral explained that there was a problem of enlisted men and cadet relationships, but I have examined the report of the 1958 Board of Visitors carefully and I find no such concern expressed to us previously. Indeed, one of the recommendations of that Board of Visitors was that plans be made to replace the present wooden barracks for the Officer Candidate Indoctrination School at New London.

I am not persuaded that there is sufficient urgency about this proposed move to make it necessary. There will be a slowup in the number of men trained if we take on this base. An initial cost of $500,000 to outfit the Yorktown base must be diverted from other, more essential Coast Guard programs. Then an added cost of almost a million dollars a year must be faced, in the duplication of personnel and the provision of added maintenance. I find that when Yorktown was first suggested as a base, the suggestion was not followed up rapidly, and it is implied in testimony before the appropriations subcommittee that this lack of interest also cost the taxpayer some money, since the Navy was removing some facilities that will have to be replaced. I find that the Coast Guard has not looked at a prospective site in Massachusetts that is highly recommended.

It seems to me there is no reasonable and satisfactory explanation that we should have added to the cost of Government and particularly to the cost of the Coast Guard Academy expenditures and overhead an item of $1 million per year when the situation is certainly satisfactory the way the job is being done at one location. This increase of $1 million a year is entirely unnecessary.

Mr. Chairman, I yield back the balance of my time.

Mr. SISK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I hesitate to get into this postal argument and the matter of cost. I am not an expert and I have never been a member of the Committee on the Post Office and Civil Service or of the Appropriations Committee, but I am concerned about just what our policy is.

I apparently have constituents who are somewhat different from those of my friend from Louisiana.

I would have to go along with the closing of every fourth-class post office in the United States if it is going to be the policy of this Congress, but I would like to ask a question of the gentlemen of the Appropriations Committee as to whether or not that is the policy we are talking about.

Mr. GARY. I will say to the gentleman that it has been the policy of the Post Office Department for a number of years to close fourth-class offices wherever possible. The postal system, as the gentleman knows, was established during the horse-and-buggy days. In those days a man could not drive more than 4 or 5 miles a day to the post office and back to get his mail. The Post Office finds that today, under modern conditions, with modern roads and modern transportation, they can give very much better service at much less cost by using the rural routes than they can with fourth-class post offices. Therefore, they have abolished and will continue to abolish a great number of fourth-class offices all over the United States.

I will say to the gentleman that he is not being favored by this policy at all; every other Member has closings in his district. They have adopted a policy of closing these post offices in most cases when there is a vacancy in the office of the postmaster or where there is a consolidation of offices.

Mr. SISK. That is the very point I want to get to. The gentleman mentions the economic aspects of it, but I am concerned about the part that politics play in these closings. I agree that there are some being closed all over the country, but I know there are thousands of them open in various areas yet. I have had a number of closings in my district, and my constituents are very unhappy about it and I might say that I have raised a bit of Cain with the Department about it. Maybe I am not in as good a situation as is the gentleman from Louisiana. I am insisting on some type of uniform policy. As I say, if it is going to be the policy of this Congress that we once and for all say that all fourth-class post offices are to be closed, let us consider legislation to establish the policy.

Mr. GARY. I agree with the gentleman most heartily that there should be a national policy. That policy should be carried out impartially and any attempt whatever to make political capital out of the closing of a post office would be reprehensible.

Mr. SISK. I agree with the gentleman in that statement 100 percent.

Mr. PASSMAN. I did not mean to infer I have received special consideration. The consideration has been in favor of closing up these post offices in my district. Where they substitute a service equally as good, then I do not protest; in fact, I endorsed the program. There was no favoritism. Let us get that straight. I did not want the gentleman to think we were not out in the open on this matter.

Mr. SISK. The gentleman from California did not mean to intimate that at all. I want to get quickly to this idea. It is my understanding that the reasons given for the closing of these fourth-class post offices has always been upon the economic factor. Then they say we are going to replace them by rural or star routes. I understand there are certain deficits and certain losses that were discussed here, showing a large deficit on these route operations. Actually, when you consider the deficit and the reasons for it in the Post Office Department, the small amount of deficit attributable to these fourth-class post offices is insignificant when compared to the deficit created by the carrying of a lot of this mail at less than cost. We have a situation here where certainly the tail is wagging the dog if we are simply going to resort to closing a lot of little post offices which are the heart of a lot of our rural villages across the country. This action will destroy thousands of our small towns across the Nation. That is the reason I am concerned so much about this matter.

The reason for my taking the floor today is because as late as this morning I have directed a letter to the Postmaster General requesting full information on the closing of post offices in California since 1955, with a designation of the congressional districts in which they were located.

I am vitally concerned with the community welfare of such towns in my district as Nippinawasee, Irwin, and Volta, and I want to find out whether or not they are being singled out to lose their post offices on any basis of political reprisal. I note that one of these offices was kept open, after an announced closing, until after the election of last November, and then was closed. Why?

It has been the established policy of this Nation since its founding that its postal service has been operated on the basis of public service. Now it appears other considerations are more important. I realize this is not solely a problem of the district I represent, but I want to find out what standards and policies we are now pursuing and whether or not those standards and policies are being equally applied with no political considerations involved.

Mr. PASSMAN. In many instances you will find that the R.F.D.'s pass in front of a fourth-class post office and the patrons can get better delivery by R.F.D. than through the post office. Some of these post offices may have only 10 or 15 patrons. The R.F.D. would render equally as good a service or even a better service.

Mr. GARY. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with the recommendation that the bill do pass.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. BLATNIK, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5805) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1960, and for other purposes, had directed him to report the bill back to the House with the recommendation that the bill do pass.

Mr. GARY. Mr. Speaker, I move the previous question on the bill to final passage.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

INCREASE READJUSTMENT PAY TO CERTAIN RESERVISTS

Mr. TRIMBLE. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 211 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5132) to amend title 10, United States Code, with respect to active duty agreements for reserve officers, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. TRIMBLE. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN] and myself such time as I may consume.

Mr. Speaker, House Resolution 211 makes in order the consideration of H.R. 5132, authorizing an increase in the amount of readjustment pay payable to Reserve personnel involuntarily released from active duty. The resolution provides for an open rule and 2 hours debate.

The proposed legislation has two main objectives; first, to raise the critically low rate of retention of Reserve officers beyond their obligated tours of active duty with the Armed Forces; and second, to provide for more equitable treatment of those Reserve officers who supplement the regular corps but who may not be continued on active service long enough to be entitled to retirement. These objectives will be realized by providing a substantial increase in the amount of readjustment pay made payable to Reserve officers involuntarily released to inactive duty.

After the Reserve officer completes his obligated service he is continuously subject to involuntary release. In the event of such release, the only compensation he would receive would be from the Readjustment Pay Act of 1956 which provides that for those officers involuntarily released after extended active duty in excess of 5 years, a readjustment payment amounting to one-half month's basic pay for each completed year of active duty. Unfortunately, this amount of readjustment pay has proven inadequate to eliminate the high degree of insecurity now felt by Reserve officers on active duty.

Out of the 40,000 young officers who complete their obligated service each year, the Defense Department has estimated it requires a minimum of 15,000 of these officers to remain on active duty beyond their obligated service to meet the annual needs of the Armed Forces. However, during the last year only 10,000 of this group of 40,000 indicated a desire to remain on active duty.

Another significant consideration relating to the high rate of turnover in junior Reserve officer personnel is the fact of training costs. For example, it is estimated that a newly acquired military pilot represents an investment ranging from a minimum of $80,000 to a maximum of $120,000. Therefore, if 1,000 Reserve officer pilots who would otherwise leave the Armed Forces upon completion of their obligated service, were induced to extend their period of active duty another 6 years, it would reduce significantly the requirement for training new pilots, with the consequent savings in training costs.

In addition to training costs, a reduction in the turnover of junior Reserve officers would create significant savings in transportation costs necessarily incurred in the processing of junior Reserve officers on entrance to and separation from active duty.

Because of the questionable career status of senior Reserve officers, the average junior Reserve officer, regardless of his motivation and desire to continue on active duty, has been forced by prudent judgment not to permit himself to remain on active duty beyond his obligated service.

Although the Congress, under the terms of Public Law 676, of the 84th Congress, did provide a lump-sum readjustment payment for Reserve officers involuntarily released to inactive duty, the provisions of this law have admittedly proven inadequate to provide sufficient inducement for junior Reserve officers to continue on active duty.

I urge the adoption of this resolution.

Mr. BROWN of Ohio. Mr. Speaker, H.R. 5132, which is made in order under the rule, is a bill which would correct an evident inequity which has existed in the Reserve Officers Incentive Act in the past and has the support of the members of the Committee on Rules and I think, if I am correct, the unanimous support of the entire Committee on Armed Services.

Mr. Speaker, I have no requests for time.

Mr. TRIMBLE. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

LOAN OF NAVAL VESSELS TO THE GOVERNMENTS OF ITALY AND TURKEY

Mr. TRIMBLE. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 213 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3366) to authorize the extension of loans of naval vessels to the Governments of Italy and Turkey. After general debate, which shall be confined to the bill, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. TRIMBLE. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN], and myself such time as I may consume.

Mr. Speaker, House Resolution 213 makes in order the consideration of H.R. 3366, authorizing the extension of loans of naval vessels to the Governments of Italy and Turkey, with the committee amendment to include the Republic of China. The resolution provides for an open rule and 1 hour of debate.

The purpose of this legislation is to authorize the extension of the existing loans of two submarines each to the Governments of Italy and Turkey and two destroyers to the Republic of China. The extension would be for a period of 5 years.

This proposal is designed to assist our country in carrying out its responsibilities in the North Atlantic Treaty area implementing recommendations of the Joint Chiefs of Staff concerning support of allied forces under the mutual defense assistance program. In view of the unstable situation in the Middle East, both Turkey and Italy are in vital positions to support the NATO organization and the 6th Fleet, if required. It is always important that our forces be placed at strategic locations prior to the outbreak of hostilities.

The Navy, under the delegated authority of the President, pursuant to Public Law 188 of the 83d Congress, loaned two destroyers to the Republic of China, the term of the loan being for a period of 5 years. The Government of the Republic of China has asked for renewal of the loan for an additional 5 years. In drafting the original agreement the renewable clause was inadvertently omitted, and it is for this reason that clear authority has been inserted in this bill.

Title to the ships remains in the United States even though the ships may be placed under the recipient Government's flag. Possession of the ships will not be relinquished without consent of the United States, and no claims arising as a result of transfer and operation of the ships may be assessed against the United States. Our Government may repossess these ships at any time if necessitated by its own emergency defense requirements. At the expiration of the loan, the ships will be returned in the same condition as when loaned, except for fair wear and tear.

This bill is a part of the legislative program of the Department of Defense for the 86th Congress and has the ap-

proval of the Bureau of the Budget. Since this legislation will involve only the extensions of existing loans, enactment would involve no additional cost to the Government.

I urge the adoption of House Resolution 213.

Mr. BROWN of Ohio. Mr. Speaker, this is a unanimous report of the Committee on Rules. I have no requests for time on this side.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

INCREASE READJUSTMENT PAY TO CERTAIN RESERVISTS

Mr. RIVERS of South Carolina. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5132) to amend title 10, United States Code, with respect to active duty agreements for Reserve officers, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5132, with Mr. JONES of Missouri in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. RIVERS of South Carolina. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, it is with pleasure that I rise in support of H.R. 5132, which if passed, will be known as the "Reserve Officers Incentive Act of 1959." This bill is the product of lengthy study and consideration by the Committee on Armed Services and the Department of Defense. Representatives of the Reserve Officers Association have wholeheartedly endorsed this measure. It deals with a problem which is of great importance to our Armed Forces in an era that is dominated by the continuing precarious international situation.

Since World War II and particularly since the Korean war it has been necessary for us to maintain a greatly expanded National Defense Establishment and the prospect is that this necessity will continue for the foreseeable future. Because there are not nearly enough Regular career officers to lead our Armed Forces large numbers of Reserve officers in the lower ranks are required to meet this essential need. During the past 2 decades the Reserve officer has taken his place beside his professional counterpart to render faithful and competent service. Indeed, he has made himself indispensable and it is now clear that his continued service is vital to our national defense posture.

Although this need has long been recognized—for the reservist actually constitutes the great majority of the officer corps—little has been done to make extended active duty attractive or rewarding for the loyal and competent reservist. He currently has no career security but can be released to inactive status at any time a fluctuating policy calls for a diminution in strength or change in character of the Armed Forces. Thus, the Reserve officer who is released is compelled to readjust to a new civilian career under difficult conditions, often on very short notice. This unfortunate circumstance was rather dramatically illustrated several years ago when thousands of Reserve officers were released from active duty pursuant to a substantial reduction in force. The return to civilian life after years of faithful service imposes in many cases a real hardship accompanied by a trying period of readjustment. As a result of this past experience and the ever-present prospect of repetitions of the same in the future there has developed a great reluctance on the part of young Reserve officers to serve beyond their initial obligated tour of 2 years' active duty. The natural consequence has been a critical shortage of the junior reservists who are so urgently needed to supplement the regular officer corps.

The present bill is designed to deal with this increasingly serious problem by providing for the reservist a limited measure of career security as well as certain other incentives so that a sufficient number will remain on extended active duty to meet the minimum needs of the services.

Thus, this proposed legislation therefore has two main objectives: First, to raise the critically low rate of retention of Reserve officers beyond their obligated tours of active duty with the Armed Forces, and second, to provide for more equitable treatment of those Reserve officers who supplement the Regular Corps but who may not be continued on active service long enough to qualify for retirement. These objectives, I believe, will be realized by providing a substantial increase in the amount of readjustment pay made available to Reserve officers involuntarily released to inactive duty.

These objectives are accomplished by five main features which highlight the bill as follows:

First. It makes contracts mandatory rather than permissive for Reserve officers on active duty after the first 2 years of commissioned service, but eliminates the present one-half month pay for these first 2 years.

Second. If he completes a contract, a Reserve officer would receive 2 months' basic pay for each year served under that contract, whether he is released involuntarily or not. Under present law he receives one-half of 1 month's basic pay for each year served, but receives nothing if he leaves the service at his own request.

Third. If the Reserve officer, while rendering satisfactory service, is involuntarily released during the term of the contract, he would, under this proposal, be paid 2 months' basic pay for each year that he has served under contract. In addition, he would receive 1 month's basic pay and allowances for each year of the uncompleted contract. Under the present law if he is involuntarily released during the term of a contract, he can receive only one-half of 1 month's basic pay for each year served, or 1 month's basic pay and allowances for each year of the uncompleted contract, but not both.

Fourth. As a transitional measure for those presently on duty who would be eligible for a contract under this proposal and who may be separated involuntarily, the bill would provide more equitable treatment for those who have served on active duty for more than 10 years by increasing the present rate from one-half of 1 month's basic pay per year to 2 months basic pay per year beyond the 10-year mark.

Fifth. Finally, this proposal would provide that if a Reserve officer has rendered satisfactory active commissioned service for a period of 14 years, he will either be given a Regular commission, be released from active duty with appropriate readjustment pay or given a contract that will carry him to retirement eligibility. Such a Reserve officer who has served 12 years under contract would, if released, receive the equivalent of 2 years basic pay as would a Regular officer with 14 years of service if involuntarily released.

Although the bill as originally recommended by the Department of Defense—H.R. 3369—appeared to be basically sound it did possess several weaknesses which the Committee on Armed Services resolved. These significant changes which have been incorporated into H.R. 5132 are as follows:

First. The bill failed to address itself to the possibility of a Reserve officer remaining on active duty beyond the 10-year period. Although the Department of Defense witnesses indicated that the bill was not to be construed as a prohibition against retaining a Reserve officer on active duty beyond the 20-year period they agreed that language should be inserted to clearly indicate this possibility. The bill was changed accordingly.

Second. The bill provides a grace period of 1 year for implementation. The committee recognized the administrative difficulties involved in initiating a contract program to allow Reserve officers to remain on active duty and therefore did not consider this unreasonable. However, since no provision was made for those officers presently on active duty who will on the date of enactment of the bill complete 14 years of active duty, the point in service at which the service department must resolve a reservist's future, the committee felt that these individuals should be protected from the possibility of a general reduction-in-force action. Accordingly the committee prepared an amendment to the bill which would provide all such individuals with a constructive contract of such duration to permit them to go on to retirement. It should be noted, however, that this action does not force the armed services to retain these officers on active duty but does provide the Reserve officer with the protection afforded by a written contract.

In this connection the Department of Defense witnesses stressed the fact that at the present time there are no plans for a reduction-in-force of Reserve personnel for now or the foreseeable future.

Witnesses for both the Departments of the Army and Air Force indicated that as a matter of departmental policy the bulk of their Reserve officer personnel will be provided an opportunity to continue on to retirement. On the other hand, the witness for the Department of the Navy indicated that because of the unusually high percentage of Regular officers in the higher grades in the Navy it was contemplated that approximately one-half of the 1,200 officers presently in the 14- to 18-year group would possibly not be given an opportunity to continue on to retirement. In view of these assurances the Committee on Armed Services will scrutinize most carefully further Defense and individual service policies in respect to involuntary release of Reserve officers, and the committee therefore wishes to emphasize that H.R. 5132 is in no way intended to provide the service departments with a statutory vehicle to effect a major reduction-in-force for Reserve personnel.

Third. The bill as written addressed itself to commissioned officers. The Committee on Armed Services felt that this bill should not be discriminatory and should apply also to warrant officers. Accordingly the Committee on Armed Services effected the necessary changes to accomplish this purpose.

Fourth. The Department bill provided that an officer, who once having completed a contract of any duration, would be entitled thereafter to voluntarily leave the service and benefit by being able to collect readjustment pay from the inception of his active service. This would be true after the effective date of the act for all officers who complete a contract agreement and included those officers who might have completed 14 years or more of service. The committee believes this particular feature might be an inducement for the trained, seasoned officer, whose services were critically necessary to the Armed Forces, to request voluntary release from active duty to permit him to take advantage of the large readjustment payment available to him. The committee felt that in such a case the service needs should prevail and if this officer were offered the contract to continue beyond the 14-year period and he refused to accept such a contract he should be penalized by not being given readjustment pay. However, the committee also felt that there might be an instance where an officer because of good and sufficient reason, such as extreme personal hardship or family difficulties should not be penalized under this rule. Therefore, the committee further amended this section of the bill to provide that under such regulations as may be prescribed by the Secretary of Defense exceptions may be made for the officer with over 14 years of service leaving the service voluntarily to permit him entitlement to readjustment pay.

Fifth. The committee also found that the language of the Defense Department bill was difficult to understand and accordingly large portions of the bill had been rewritten.

Sixth. The committee felt that the bill should properly be given a title and accordingly the bill has been named the "Reserve Officers' Incentive Act of 1959."

Seventh. Under the terms of the defense bill, individuals who may be awarded retired pay subsequent to their receipt of readjustment pay would be required to repay such readjustment pay as deductions from their monthly retired pay. The committee felt that title III retirees—reservists at age 60—should be exempted from this requirement since any effort made to recoup such readjustment pay from this group would, in addition to being difficult to administer, be inequitable since the recoupment feature would not affect those not ultimately awarded the benefits of title III retirement at age 60. Thus, this provision would for practical purposes treat the readjustment payment as a loan payable at age 60, a point in time when such individuals could least afford such payment. The bill was therefore amended to exclude from the repayment requirement reservists who may become eligible for modest retirement benefits at age 60.

After incorporating the foregoing changes to H.R. 3369, the Committee on Armed Services agreed to draft a clean bill in lieu of amending H.R. 3369 and accordingly reported the subject matter of this legislative proposal as H.R. 5132, the bill presently under consideration.

In conclusion, Mr. Chairman, I wish to emphasize that this bill is not a hastily contrived scheme to provide Reserve personnel serving on active duty with a handsome lump-sum payment in event they are involuntarily released to inactive duty—it is rather a most carefully designed legislative effort to provide some stability in the career service performed by Reserve personnel and to recognize that in event such reservists may be released to inactive duty prior to retirement—they be provided with monetary benefits similar to those available to members of the Regular forces similarly situated.

For the foregoing reasons I urge unanimous support of H.R. 5132 by the House.

Mr. VAN ZANDT. Mr. Chairman, I yield myself 10 minutes, and rise in support of H.R. 5132.

This bill is long overdue. It satisfies a most pressing need—namely the statutory recognition that at the present time and for the foreseeable future large numbers of Reserve personnel will be required on extended active duty to supplement the Regular forces in the defense of our Nation.

Historically, since the Revolutionary War and every war thereafter, we, as a Nation, have been content to maintain a small Regular armed force secure with the knowledge that in the event of future hostilities we could mobilize our Reserve and Regular forces in sufficient time to properly defend our Nation.

This policy has therefore been evidenced in all our military legislation, and traditionally therefore the statutory benefits provided for members of the military have always been based on the acknowledged concept that, except in times of hostilities, the members of our Military Establishment will consist solely of Regular career personnel.

During World War II, our Regular forces were augmented by millions of citizen soldiers and sailors so that at the end of World War II we had increased the strength of our Armed Forces from less than one-half million to more than 12 million men.

However, once again after World War II we attempted to return to our traditionally small Regular military organization but suddenly discovered, to our dismay, that the world had changed and because of the precarious international situation we were forced to maintain a large standing military organization composed of both Regular and Reserve personnel.

Today, we have approximately 2½ million men on active duty with the Defense Establishment. A significantly large percentage of this number are necessarily Reserve personnel who have remained on continuous active duty with the military departments since World War II. For example, at the present time over 180,000 of the 322,000 officers on active duty with the Armed Forces are Reserve personnel. Thus, we are confronted with the stark fact that although approximately 60 percent of all officers presently on active duty are Reserve personnel, we have failed to acknowledge that these officers as a group have no statutory career status.

This failure to acknowledge the reality that since World War II, Reserve officers had represented from 60 to 90 percent of all officers on active duty, has resulted in the inequitable treatment accorded our Reserve personnel as outlined by my colleague and has given rise to the circumstances which today forced the Department of Defense to request corrective legislation.

In 1956 we made an effort to partially satisfy this need to provide equitably for our Reserve members on active duty and accordingly enacted legislation which provided a Reserve member involuntarily released to inactive duty, a readjustment payment of one-half month's basic pay for each year served on active duty and we also enacted legislation which required the armed services to maintain on active duty those Reserve officers who had completed in excess of 18 years of active service.

However, neither of these legislative efforts faced the problem squarely—since they failed to acknowledge that Congress must in fact establish an integrated and coordinated statutory basis for a limited-career status for Reserve officers. This legislation being considered by you today, I believe, goes far toward accomplishment of this purpose.

It will for the first time acknowledge that in troubled times such as these we must continue to augment our Regular Establishment with large numbers of Reserve personnel and therefore to insure that such reservists will volunteer for such extended active duty in consonance with the ever-changing needs of our Defense Establishment—we must provide them with a bill of rights which will assure them equitable treatment in any event.

I sincerely believe H.R. 5132 accomplishes this purpose, for it contemplates both the possibility of a limited career and a full career for reservists on extended active duty and assures such reservists equitable treatment in either case.

For these reasons I urge that the House unanimously approve H.R. 5132.

Mr. RIVERS of South Carolina. Mr. Chairman, I yield such time as he may desire to the gentleman from Mississippi [Mr. WINSTEAD].

Mr. WINSTEAD. Mr. Chairman, it is with genuine conviction that I rise in support of H.R. 5132. I wholeheartedly endorse the statements made in support of this proposal by my colleagues.

I am certain all of you received an abundance of mail because of the unfortunate release of thousands of fine Reserve officers several years ago. You will recall that these capable officers were suddenly and on very short notice forced to leave the profession that they had chosen and sent back to civilian life. For some there was hardship. For many there was inconvenience. For all there was a necessary period of readjustment. At that time these individuals received, under the present law, one-half of 1 month's basic pay for each year of service provided they had at least 5 continuous years of service on active duty. This certainly was not adequate compensation for these loyal, efficient officers who were summarily separated at great inconvenience and personal hardship. Nor is it equitable when compared with the severance benefits paid to the Regular officer involuntarily separated who receives 2 months' basic pay for each year of active duty if he is separated before retirement.

We all know from firsthand knowledge, from our correspondence, and, I dare say, from personal inquiry, that the Reserve officer serving side by side with the Regular is vital to our national security and therefore should be treated with the same degree of equity as the very fine Regular. This measure does just that. I think it also is a forward step both for the career Reserve officer serving on active duty and for the Military Establishment itself that this measure requires the military departments to give contracts to these officers.

The Defense Department supports this bill and the Reserve Officers Association supports it. They feel, as I do, that this measure will have a great morale effect and bring greater stability to the Reserve officer structure. Furthermore, it has another most important salutary benefit. The Defense Department convincingly stated, and showed us statistics, which indicated that most of the Reserve officers who enter the services under the ROTC and other officer-procurement programs are not disposed to continue on active duty beyond the 2-year obligated tour. One of the important reasons for their not continuing is the fact that they have not been guaranteed even limited tenure. They were further discouraged because their readjustment pay was wholly insufficient to provide the necessary financial incentive. The Department of Defense has testified that this measure will induce many of these fine young Reserve officers who are returning to civilian life after their 2 years of mandatory service to remain on active duty. Yet the need for their retention beyond their first 2 years is vital to the maintenance of effective Armed Forces.

Testimony indicated that the Reserve officer with from 3 to 12 years of service is the one who is needed to lead our troops in combat if war is thrust upon us. Because there is a shortage of Reserve officers on extended active duty in this age group, the military services are forced to assign this important responsibility either to the young officer with less than 2 years of active service or the older officer who has had World War II experience. Thus, we are confronted with the problem of having our combat troops led and trained by officers who are either too young and inexperienced or too old and lacking in the vitality necessary for the rigors of combat. This measure will materially help us to get the right officer who is both youthful enough and experienced enough to fill the very important role of the combat leader. According to Defense Department testimony the bill's enactment is absolutely essential to the solution of this pressing problem.

I concur wholeheartedly with my colleagues and commend this measure to you as a forward step in the strengthening of our Defense Establishment. I would like to see it passed unanimously by this body, and hope that it then receives favorable and expeditious consideration in the Senate of the United States.

Mr. RIVERS of South Carolina. Mr. Chairman, I yield such time as he may desire to the distinguished chairman of the Committee on Armed Services, the gentleman from Georgia [Mr. VINSON].

Mr. VINSON. Mr. Chairman, I rise in support of H.R. 5132 and urge its passage by this body.

BACKGROUND

This legislative proposal is the result of extensive hearings conducted by the Committee on Armed Services in connection with a legislative recommendation made to the Congress by the Department of Defense and introduced as H.R. 3369. This legislative proposal by the Department of Defense was largely based upon recommendations of the Defense Advisory Committee on Professional and Technical Compensation, more commonly referred to as the Cordiner Committee, and was designed to establish a program of adequate incentives to retain Reserve officers on active duty.

H.R. 3369 was subsequently modified and redrafted by the Committee on Armed Services on the basis of information obtained during the course of hearings on the problem and the legislative proposal was therefore reported out as H.R. 5132, the bill presently being considered by this body. However, I wish to emphasize that the bill as modified retains the basic recommendations made by the Cordiner Committee and the Department of Defense in respect to this problem.

The Cordiner Committee in its study of the need for adequate incentives for noncareer Reserve officers made the following observation:

> As previously noted, there exists a pronounced and, in fact, unique lack of security for the noncareer officer. Although the services have a great need for officers to serve for periods beyond obligated service but short of qualification for retirement, they are unable to provide an adequate incentive for such service. The basic officer pay proposal dealt with up to this point is designed to attract young officers for a full career, and for this reason does not hold particular appeal for the Reserve officer who considers his chances for a full career extremely slight. The Committee is convinced, therefore, that an inducement over and above the modest pay rates proposed for the lower officer grades is necessary to attract and retain the quality and number of officers required to supplement the career corps in the lower ranks.

As a consequence of this analysis of the problem the Cordiner Committee recommended the adoption of:

> A Reserve officers term retention incentive plan to retain adequate numbers of qualified Reserve officers on voluntary active duty following obligatory service, with the following features:
>
> (a) A contract for active service beyond obligated service.
>
> (b) An additional payment at time of release from service equal to 2 months' base pay multiplied by the years of commissioned service creditable for term retention payments, restricted to a maximum payment of 2 years' base pay.

These recommendations are concurred in by the Committee on Armed Services and included in this proposal.

THE PROBLEM

At the present time a Reserve officer, after completion of his obligated service, is continually subject to involuntary release. In event of such release the only compensation he would receive is that afforded by the Readjustment Pay Act of 1956, which amounts to one-half month's basic pay for each year of active service performed as an officer.

Over 70 percent of the officers who complete obligated service return to civilian life immediately. Some of these officers would not choose to serve in the Armed Forces for any incentive. However, many who would like to remain on active duty are deterred because of lack of adequate job security.

As a consequence of this almost complete lack of job security the average junior Reserve officer refuses to remain on extended active duty.

The Department of Defense has pointed out that approximately 40,000 young officers complete their obligated service each year. However, the armed services have been able to induce only 10,000 of this group each year to remain on extended active duty despite the fact that they require approximately 15,000 of these officers to meet their annual need for junior officer personnel.

Furthermore, the Department of Defense has pointed out that at the present time because of the size of our Military Establishment approximately 60 percent of all officer billets must be filled by Reserve officers. Therefore, since junior officers of proven professional competence refuse to remain on extended active duty in sufficient numbers to satisfy

these needs, a critical shortage of experienced Reserve officer personnel has developed in respect to these billets which must be filled by officers with 3 to 12 years of military experience.

Because of the critical need for the services of these officers, the Armed Forces accepted almost all of this group of 10,000 officers and, therefore, were precluded from exercising any degree of selectivity in respect to the quality of the individual Reserve officers retained. It is, therefore, evident that a continuation of this downward spiral in the number, experience, and quality level of junior Reserve officers on extended active duty with the Armed Forces can only result in unacceptable reduction in the overall combat effectiveness of our Armed Forces.

TRAINING COSTS

Another significant consideration relating to the high rate of turnover in junior Reserve officer personnel is the factor of training costs. For example, it is estimated that a newly acquired military pilot represents an investment ranging from a minimum of $80,000 to a maximum of $120,000. Therefore, if 1,000 Reserve officer pilots who would otherwise leave the Armed Forces upon completion of their obligated service were induced to extend their period of active duty another 6 years, it would reduce significantly the requirement for training new pilots, with the consequent savings in training costs.

SUMMARY

The question may arise, Isn't readjustment pay as enacted in 1956 designed to accomplish the same end as the term retention pay provided in H.R. 5132?

The Readjustment Pay Act of 1956 was designed to meet a particular problem which already existed for thousands of Reserve officers serving on active duty without an obligation. A great percentage of these officers faced involuntary release at some time before earning retirement. The readjustment pay provided in 1956 was, therefore, designed to tide over an officer so released until he found civilian employment. As such, it is not so much a positive incentive as it is a kind of financial cushion in time of need.

The term retention payment provided in this bill, however, is designed to attract some of the many high-quality young reservists who leave active duty each year. It must be of sufficient magnitude to encourage them to delay the commencement of their civilian professions. Therefore, the retention pay provided in this bill can be compared to the reenlistment bonus provided enlisted personnel and is primarily designed as a positive inducement to retain an officer who would otherwise leave the service at his first opportunity.

CONCLUSION

In conclusion, it is my firm conviction that the problem of retaining adequate numbers of qualified Reserve officers on extended active duty can best be met by legislative action which incorporates the basic recommendations of the Cordiner Committee and the Department of Defense. I, therefore, urge your support of H.R. 5132, which in fact embodies these recommendations in a manner which provides the statutory incentives necessary to encourage junior Reserve officers to remain on extended active duty and also provides equitably for those Reserve officers presently on active duty who may be denied the opportunity of remaining on active duty until retirement.

Mr. VAN ZANDT. Mr. Chairman, I yield 10 minutes to the gentleman from Indiana [Mr. BRAY].

Mr. BRAY. Mr. Chairman, I want to review here very briefly certain phases of the pending bill. Prior to the military buildup immediately prior to World War II practically all officers in the U.S. armed services on extended active duty were members of the Regular services.

At the present time that situation has changed. A very large majority of the officers in the military services are reservists. There has been over the years a certain protection, and rightfully so, for Regular officers as to retirement and many other features. But the majority of officers on duty today are neither fish nor fowl. They are considered Reserve officers but in every other sense of the word they are Regular officers and have been for a period of many years.

This legislation in no way benefits the Reserve officer who goes on for his 2 or 3 years' active duty, fulfilling his military obligation; in fact, he does not get quite the compensation under this bill that he previously had or will have if this becomes law. The Reserve officer now on duty for his first 2 years receives no severance pay if he only remains for 2 years. Today he would get at the termination of his 2 years, 1 month's extra pay.

Under this legislation he gets nothing. So, this is not trying to change the status of the officer who merely comes in to do his duty for a 2- or 3-year stretch. As I stated earlier, there has been no, what we call, bill of rights, adequate bill of rights, for the Reserve officer on extended active duty. Not only has that been detrimental to him, but it also has been detrimental to the Government, because there are not enough in number of the 2-year officers—I am talking about those who only serve 2 years—remaining in the service to take care of the present needs of our Defense Department. The purpose of this bill is to change that situation and to encourage those whom the Government wants and needs, to sign up for additional duty.

Now, very briefly, I will explain the specific changes this legislation makes. It makes contracts mandatory rather than permissive for Reserve officers on active duty after the first 2 years of commissioned service, but eliminates the present one-half month pay for those first 2 years. Now, if this officer completes a contract, he would receive 2 months' basic pay for each year served under that contract. If he has a contract for 4 years, he would receive 8 months' basic pay when he finished the termination of that contract. That would encourage him to take these contracts if the Government needs him. Under the present law he receives one-half of 1 month's pay for each year served but receives nothing if he leaves the service at his own request. Now, if a Reserve officer who renders satisfactory service is involuntarily released during the term of the contract, whether it be 2, 4, or 6 years or whatever it is, he would be paid 2 months' basic pay for each year he served under the contract plus 1 month's basic pay and allowances for each year of the uncompleted contract. You see, in no way do we intend to make this a WPA project. We do not want the Government to use officers that they do not need, but we do insist—and this legislation, I believe, will help bring that about—that the Government make long-range personnel planning to take care of this situation.

Under this legislation those presently on active duty who have served more than 10 years and are separated involuntarily are entitled to one-half of 1 month's pay for each of those 10 years plus 2 months' pay for each year beyond the 10 years.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BRAY. I yield to the gentleman from Iowa.

Mr. GROSS. Is that consecutive service or may that be broken service?

Mr. BRAY. I believe it could be broken service. The contract itself, however, must be continuous service.

Now, there is another provision in this bill that I believe is quite important. It would require the Government, for every officer who has completed 14 years of satisfactory active duty, to either take that officer into the Regular service, or to provide that officer with a contract which would enable him to complete the necessary additional service to make 20 years or to release him to inactive duty with appropriate severance pay, computed as previously indicated.

Now, we have in this legislation fixed two arbitrary divisions as to length of service. First as to 10 years. We thought that if an officer had served 10 years and the Government after 10 years released him he should get an additional rate of compensation. Also it would cause the Government in the future to take a rather careful look as to whether they want to keep him beyond that time. Also up to 10 years the officer does have a better opportunity to go back into private life. So if the Government keeps the officer beyond 10 years and then discharges him before allowing him to reach retirement the Government is going to pay him 2 months' pay for each of those years beyond 10 years.

Then we pick a time of 14 years. If the Government has kept the officer beyond 14 years, they must either give him a contract to finish his 20 years of duty or take him into the Regular service; or, they could discharge him. Let us say that he served 15 years. Then they would have to give him a contract for the remaining 5 years. If they broke the contract they would have to pay him one-half month's pay for each month of the remaining time for the 20 years plus the termination pay due him for the time served.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BRAY. I yield.

Mr. GROSS. Is this bill retroactive?

Mr. BRAY. It is not, only insofar as a person is already in service at the time the bill becomes effective. He would benefit by it. But the officer who went out yesterday or last month or will go out tomorrow, would not be affected.

Mr. GROSS. It would do nothing for the several thousand officers who were caught in a reduction in force 2 or 3 years ago, is that right?

Mr. BRAY. That is correct. We have not tried to remedy the situation that already existed. There has been great harm done. There has been legislation in the past that took care of that to a certain degree. But we are trying to take care of the situation in the future. We could see nothing that we could do in this legislation to take care of past injustices without endangering our chances of working out a good bill here.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. BRAY. I yield to the gentleman.

Mr. VAN ZANDT. The gentleman knows that under Public Law 676 of the 84th Congress we did take care of many Reserve officers who were separated from active duty.

Mr. BRAY. That is the legislation I was referring to in my discussion with the gentleman from Iowa [Mr. GROSS]. We have in the past attempted to take care of this situation. But we have not taken care of it to the degree that we have in this legislation.

Mr. VAN ZANDT. If this bill is enacted into law the benefits of it will not apply to the reservists who have already been separated from the service?

Mr. BRAY. That is correct.

Mr. GROSS. Mr. Chairman, will the gentleman yield further?

Mr. BRAY. I yield.

Mr. GROSS. I think some legislation in this regard is necessary. I am not fully acquainted with the provisions of this bill, but I do think some legislation is necessary. Will the gentleman give us some idea of the cost?

Mr. BRAY. Yes. Of course, frankly, in legislation of this kind it is difficult to make a very accurate estimate, as the gentleman understands.

Mr. GROSS. Yes.

Mr. BRAY. For the fiscal year 1960 it will cost something over $3 million. For the fiscal year 1961 it will cost something over $7 million. For the fiscal year 1962 it will take almost $10 million. For the fiscal year 1963 it will take about $12.5 million. And beyond that about $12 million a year, assuming that the present planned strength continues.

Mr. GROSS. So it will cost some money?

Mr. BRAY. Yes, it will. The costs will increase, and the best estimate we can get up until the fiscal year 1963 is that it will reach $12.5 million. Then we think it will drop back to $12 million and continue at that rate.

Mr. GROSS. I do not predicate my support for or opposition to bills on whether or not it is supported by the Department of Defense. But I note in the report that the Department of Defense has not indicated its position in regard to this bill. I wonder if the gentleman would comment briefly on that.

Mr. BRAY. Yes; I shall try to explain that situation. We have been trying to get the Department of Defense to send over a recommendation for more than 2 years. Just before adjournment last year they told us they had been working very hard, spending the midnight hours, trying to bring out some plan, but had failed to do so. So then we passed a bill last year which we knew would not have time to get through the Senate, but we did it to show our determination to do something.

This year the Department of Defense brought over a proposal which is materially different from the bill which we have here. I will not have time to go into all that the Department of Defense proposed, but I believe every Member of the House would agree that this bill is fairer than the bill they brought over. However, as far as an official position by the Department of Defense on the matter is concerned, we do not have it.

Mr. GROSS. Since this is going to cost a fairly substantial amount of money, I wonder if I could urge on the Committee on Armed Services that they go thoroughly into flight pay and a few other things that are going on around here and save the money necessary to take care of this expenditure in what I think is a proper direction.

Mr. BRAY. I hope we can find an opportunity to take care of this. I can assure the gentleman we will try.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. BRAY. I yield.

Mr. CURTIS of Missouri. Along the line of thinking the gentleman from Iowa has developed, as I understand this piece of legislation, in following out the recommendations of the Cordiner report, the object is to stop this tremendous turnover of reserves so that we will not lose the money we are presently losing in training. I notice the report states that this would reduce significantly the requirement for training new pilots, with consequent savings in training costs. I wonder if the gentleman will develop that thought.

Mr. BRAY. Frankly, I believe that this bill is an excellent approach to the problem and will save many times the money it will cost. I think any military man will tell you that the one real failure in World War II was the handling of personnel problems. We may as well face the fact that many of the complaints of the Reserve officers are that they have been released in order to make room for the promotion of Regular officers. There is nothing that we can do in regard to that. But the Reserve officer who stays in the service should know exactly where he stands. This legislation is going to encourage the Reserve officers that we need to stay, and it will encourage the military to get rid rapidly of those they do not need. I think it will promote efficiency in the end and save a great amount of money.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. BRAY. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. The Department of Defense told the committee that the annual turnover is around 90,000 officers, and among the 90,000 officers are 40,000 younger officers. We were further told that to train a pilot for our aviation, whether Air Force, Navy, or Army, costs from $80,000 to $120,000 a year. So if we retain 1,000 young officers we can see what we will save. Therefore, it is impossible to establish what we will save and apply it against the cost of this bill.

Mr. BRAY. If it encourages, or really forces the services to make long-term personnel plans, it will be well worth all the effort.

Mr. GROSS. My reference to flight training goes particularly to overaged officers who are not going to be flying the jet planes, who should not be flying jet planes, many of them, particularly lieutenant generals. What business has a lieutenent general drawing flight pay if his work as a lieutenant general does not involve flying.

Mr. BRAY. I have some very strong opinions on that matter myself, and I feel something is going to be accomplished by the committee along that line.

Mr. VAN ZANDT. If the gentleman will yield further, is it not true that the Committee on Armed Services has a subcommittee which has the responsibility of studying the manpower question? I am sure the matter the gentleman from Iowa brings up will have the attention of that subcommittee.

Mr. BRAY. That is correct. I am not on that subcommittee, but I have discussed some problems with members of that subcommittee.

Mr. RIVERS of South Carolina. Mr. Chairman, I yield such time as he may desire to the gentleman from Oklahoma [Mr. MORRIS].

Mr. MORRIS. Mr. Chairman, it is a privilege for me to address the Committee of the Whole in support of H.R. 5132. First, I would like to congratulate my colleagues on the Armed Services Committee and particulary our able and distinguished chairman of our subcommittee, Mr. RIVERS, who have labored long and tirelessly to bring before you today a measure which will be known as the Reserve Officers Incentive Act of 1959.

To supplement the persuasive presentation of my coworkers on this measure I would like to take just a few moments to point out another very important aspect of the bill which has been mentioned briefly but which I believe should be emphasized in greater detail. Some of you undoubtedly are wondering about the additional costs that will be involved. Costs should be an important factor in every measure considered by this body. According to the revised figures supplied to the committee by the Department of Defense for fiscal years 1960 through 1963, estimated expenditures will be modest and certainly justifiable in view of the great benefit which this measure will promote in strengthening our national security. For fiscal year 1960, the costs estimated by the Department of Defense as to original Department of Defense bill, H.R. 3369, are $3,053,000;

for fiscal year 1961, $7,167,000; for fiscal year 1962, $9,833,000; and for fiscal year 1963, $12,509,000. And the committee report indicates there will be no significant increase in cost of enactment of H.R. 5132 over H.R. 3369.

Having in mind these modest cost figures, I would like to discuss a point which impressed the committee. The Department of Defense stated that a Reserve officer on active duty for 2 years spends approximately 1 year in training and 4 months in orienting himself to his several assignments and in travel time. Actually then, his productive time during the first 2 years' active duty amounts to about 8 months. In contrast with this the Department of Defense pointed out graphically that an officer who is retained on active duty for 6 years would have a productive time of 4 years and 8 months. Therefore, the productive time of seven officers serving 2-year periods is required in order to equal the productive time of one officer serving for 6 continuous years. Thus, it can readily be seen that if more young officers remain on active duty after their obligated tours there will be a substantial increase in the productive time of such officers at a lower cost to the taxpayer. Of equal importance will be the greater efficiency and reduction in the training load.

The Armed Forces require approximately 15,000 young officers each year. Only about one-fourth of the 40,000 who complete their 2 years' obligatory service apply for further active duty. Therefore, almost all of those who apply must be utilized. However, witnesses for the Department of Defense pointed out that there is a need for 15,000. Inasmuch as this measure will undoubtedly produce many more applicants for active duty beyond the initial period of 2 years it will result in a more efficient young officer corps than we have at present. The more selectivity we have, the higher will be the efficiency and capability of the officer corps.

Therefore, I am certain you will agree with me that the small increase in the overall defense budget that this bill entails will be more than justified by the resulting benefits to our national defense stature. I also agree with my able colleagues that this bill will be instrumental in establishing a more equitable position for our Reserve officers. Therefore, I urge favorable consideration by this illustrious body.

Mr. RIVERS of South Carolina. Mr. Chairman, we have no further requests for time.

Mr. VAN ZANDT. Mr. Chairman, we have no further requests for time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Reserve Officers' Incentive Act of 1959".

SEC. 2. Section 679 of title 10, United States Code, is amended to read as follows:

"§ 679. Active duty agreements.

"(a) Before ordering a member of an armed force under his jurisdiction to active duty (other than for training) as a reserve officer with his consent for a period of three months or more, or before retaining him on active duty with his consent for such a period, the Secretary concerned shall make a standard written agreement with that member requiring him to serve for a period of active duty that the Secretary considers is necessary to meet the needs of that armed force, but not more than six years. An active duty agreement may not be made in time of war, or of national emergency declared by Congress or the President after July 1, 1953, and an active duty agreement already in effect terminates at the beginning of a war or such an emergency.

"(b) Subsection (a) does not apply—

"(1) to an officer of the Medical Corps or Dental Corps of the Army or Navy;

"(2) to an officer of the Veterinary Corps of the Army;

"(3) to a medical, dental, or veterinary officer of the Air Force;

"(4) to an officer who has not completed at least two years of active duty as an officer;

"(5) to an officer who is hospitalized or under investigation, or against whom proceedings of a courtmartial or board of officers are pending;

"(6) to any officer authorized by the Secretary of Defense or the Secretary concerned subject to such policies as may be prescribed by the Secretary of Defense, to serve on active duty in connection with a special project or special assignment, or to serve on a board;

"(7) when the Coast Guard is not operating as a service in the Navy, to any officer of the Coast Guard authorized by the Secretary of the Treasury to serve on active duty in connection with a special project or special assignment, or to serve on a board; or

"(8) to an officer who has completed the minimum service required for retirement under section 1293, 3911, 6323, 6327, or 8911 of this title, or section 232 of title 14, as the case may be.

Notwithstanding clause (4), a written agreement may be made at any time with a person who agrees to serve on active duty as a reserve officer for a period of at least one year upon completing his first two years of active service as an officer. Such an agreement becomes effective on the first day after he completes those two years of active service.

"(c) Except in the case of an officer who has completed at least 13, but not more than 14, years of active service as an officer, and except as provided in subsection (d), no agreement may be made under subsection (a) for a period of active duty that is less than one year. However, no active duty agreement may be made with an officer who has completed less than 14 years of active service as an officer if that agreement would expire after the officer has completed 14 years of that service.

"(d) Each reserve officer who is eligible for an active duty agreement under subsection (a), and who has completed at least 14 years of active service as an officer, shall, except in time of war or of national emergency declared by Congress or the President after July 1, 1953, be released from active duty unless he is appointed as a regular officer or is offered and accepts an active duty agreement under that subsection. If such an agreement is made with an officer who has not yet completed the minimum service required for retirement under section 1293, 3911, 6323, 6327, or 8911 of this title, or section 232 of title 14, as the case may be, the agreement shall provide that it expires on the earlier of the following dates:

"(1) The date on which he completes the minimum service required for retirement under that section.

"(2) The date on which he is otherwise required by law to be removed from an active status.

"(e) Agreements made under this section are subject to such policies, procedures, and controls as may be prescribed by the Secretary of Defense for the armed forces under his jurisdiction or by the Secretary of the Treasury for the Coast Guard when the Coast Guard is not operating as a service in the Navy. The policies, procedures, and controls prescribed by the Secretary of Defense and the Secretary of the Treasury shall be uniform so far as practicable.

"(f) If an agreement made under this section terminates, under subsection (a), at the beginning of a war or national emergency, the officer concerned may be kept on active duty, without his consent, as otherwise provided by law."

SEC. 3. Section 680(b) of title 10, United States Code, is amended by renumbering clauses (4) and (5) as clauses "(5)" and "(6)", respectively, and by inserting the following new clause after clause (3):

"(4) discharged from his reserve appointment because of failure to achieve the standards of performance prescribed by the Secretary concerned;".

SEC. 4. Section 265 of the Armed Forces Reserve Act of 1952 (50 U.S.C. 1016) is amended—

(1) by striking out the first sentence of subsection (a) and inserting the following in place thereof: "Except for an officer covered by clause (1), (2), or (3), a member of a reserve component who is released from active duty after the enactment of this amended sentence and after having completed immediately prior to such release at least five years of continuous active duty (except for breaks in service of not more than 30 days) as either a commissioned officer, warrant officer, or enlisted person, is entitled to a lump-sum readjustment payment computed on the basis of one-half of one month's basic pay in the grade in which he is serving at the time of release from active duty for each year of active service ending at the close of the eighteenth year and (unless he is discharged from his reserve appointment or enlistment because of failure to achieve the standards of performance prescribed by the Secretary concerned) an additional one and one-half month's basic pay in that grade for each year of active service in excess of 10 years ending at the close of the eighteenth year. An officer who would otherwise be covered by the preceding sentence and who—

"(1) is serving under, or has at any time completed a period of service under, an active duty agreement under section 679 of title 10, United States Code, and is not covered by clause (3), is entitled to—

"(A) two months' basic pay for each year of active service as an officer that he served after June 30, 1959, under such agreement, except an agreement from which he is released at his own request;

"(B) one-half of one month's basic pay for each year of active service, ending at the close of the eighteenth year, that is not covered by clause (A); and

"(C) one and one-half month's basic pay for each year of active service in excess of 10 years, ending at the close of the eighteenth year, that is not covered by clause (A);

"(2) is not serving under, and has at no time completed a period of service under, but who is eligible for, an active duty agreement under that section, is entitled to—

"(A) two months' basic pay for each year of active service as an officer that he served after the first two years of such service and after June 30, 1959, while he was so eligible;

"(B) one-half of one month's basic pay for each year of active service, ending at the close of the eighteenth year that is not covered by clause (A); and

"(C) one and one-half month's basic pay for each year of active service in excess of 10 years, ending at the close of the eighteenth year, that is not covered by clause (A); or

"(3) is discharged from his reserve appointment because of failure to achieve the standards of performance prescribed by the Secretary concerned, is entitled to—

"(A) two months' basic pay for each year of active service as an officer that he served after the first two years of such service and after June 30, 1959, under any agreement under that section that is completed before his discharge;

"(B) one month's basic pay for each such year under the agreement under which he is serving at the time of discharge; and

"(C) one-half of one month's basic pay for each year of service, ending at the close of the eighteenth year, that is not covered by clause (A) or (B).

No person covered by this subsection may be paid a total of more than two years' basic pay in the grade in which he is serving at the time of release.";

(2) by amending subsection (b)(1) to read as follows:

"(1) A person who is released from active duty at his own request, other than an officer who has less than 14 years of active service and who has at any time completed an agreement under section 679 of title 10, United States Code, or any other officer who has completed such an agreement and whose release is approved under regulations to be prescribed by the Secretary of Defense.";

(3) by amending the second sentence of subsection (b)(5) to read as follows: "However, such a person is entitled—

"(A) to receive readjustment pay under this section even though he is also entitled to be paid under section 680 of title 10, United States Code; and

"(B) with respect to severance pay to which he is entitled under any provision of law other than section 680 of that title, to elect either to receive that severance pay or to receive readjustment pay under this section, but not both.";

(4) by amending subsection (c) to read as follows:

"(c) Under regulations to be prescribed by the Secretary concerned or the Administrator of Veterans' Affairs, as the case may be, there shall be deducted—

"(1) from the monthly retired pay of an officer who has received readjustment payments under the second sentence of subsection (a) and who qualifies for retired pay under any provision of title 10, United States Code, except chapter 67 thereof; or

"(2) from the monthly compensation of an officer who has received readjustment payments under the second sentence of subsection (a) and who qualifies for compensation under any law administered by the Veterans' Administration for a disability incurred during a period for which he has received that readjustment payment;

an amount sufficient to recover, during the life expectancy of the officer, that part of the readjustment payment based on service performed after June 30, 1959. However, the deduction may not be more, in any one month, than 25 per centum of the officer's monthly compensation. There shall be deducted from any severance pay to which an officer who has received readjustment payments under the second sentence of subsection (a) is entitled under section 1212, 3303(d)(3); 3786(b), 6382(c), 6383(f), 6384(b), 8303(d)(3), or 8786(b) of title 10, United States Code, an amount equal to that received as readjustment payments. However, in place of the deduction described above, a reserve officer who has received readjustment payments under the second sentence of subsection (a) may elect to have deducted, from the years of service with which he would otherwise be credited in determining his eligibility for retired pay and in computing the amount of his retired pay, all periods for which he received readjustment payments under that sentence."; and

(5) by repealing subsections (e) and (h).

CV——305

SEC. 5. Except with the consent of that member and the Secretary concerned, section 679 of title 10, United States Code, as amended by this Act, does not apply to any member who, on the effective date of this Act, has not served the full term of his agreement, entered into before that date, to serve a specified minimum period of active duty. However, upon completing that period of active duty, he is thereafter subject to that section, as amended by this Act.

SEC. 6. During the one-year period following the date of enactment of this Act, the actions otherwise required by section 679(a) (1st sentence) and (c) of title 10, United States Code, are permissive and not mandatory. However, each reserve officer serving on active duty (other than for training) on that date, and who is determined to be qualified by the Secretary concerned and is otherwise eligible for a contract under that section, shall, if he has at least 14 but less than 18, years of active service as an officer and does not decline to serve under a contract or is not tendered an appointment as a regular officer of the armed force concerned, be considered to have accepted and to be serving under a contract under that section of such duration to enable him to complete the amount of service required to qualify him for retirement under section 1293, 3911, 6323, 6327, or 8911 of title 10, United States Code, or section 232 of title 14, United States Code. Section 680(a)(2) of title 10, United States Code, does not apply to an officer covered by this section if he is twice passed-over for promotion to any grade.

SEC. 7. Section 679(b) of title 10, United States Code, does not require an agreement to be made with a person who, before the date of enactment of this Act, has agreed to serve on active duty as a reserve commissioned officer for a period of at least three years upon being appointed as a commissioned officer. Such a person shall, for the purposes of section 679 and 680 of title 10, United States Code, and section 1016 of title 50, United States Code, be considered as having made an agreement under section 679 of title 10, United States Code, for the period he so agreed to serve in excess of two years.

Mr. RIVERS of South Carolina (during the reading of the bill). Mr. Chairman, I ask unanimous consent that the bill be considered as read and that it be printed in the RECORD, at this point in full and that it be open to amendment.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. BROOKS of Louisiana. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I want to compliment my friend, the gentleman from South Carolina, and his Subcommittee on Armed Services for the action which is theirs in bringing this bill to the floor of the House for consideration at this early date in this session of the Congress. This is a bill which is worthy of the attention of the Congress, and it is a bill which should be enacted at a very early date in this session. This matter is not a new one. It represents the age-old problem between the regulars and the reservists. It represents the problem of the regular who makes a career in the armed services and the problem of the reservist who may be called temporarily to active duty and decides to attempt to make the service a career. In the fluctuations of the personnel of the services up and down, many hardships have occurred. The RIF program developed from this.

It was my privilege and pleasure to work for a long time on this particular problem with these able gentlemen of the subcommittee who are handling this legislation at this time. I can recall some 10 years ago that I assisted in developing the program of offering to the reservists under certain circumstances a contract of employment. At the termination of that contract, the reservist would be released back into civilian life. The idea then was to relieve some of the hardships attendant with the return of the reservist from the military to civilian life. I am sorry to say that after we authorized the use of a contract under certain limited conditions and for a limited period of time—think it was 5 years—that the use of this procedure was discarded to a large extent by military departments and it fell into disuse.

We did not have an aggravated problem until about 2 years ago when there was a great reduction in the personnel of the armed services and the RIF program came into being, as you people will remember. At that time many thousands of very competent and capable Reserve officers were returned almost without notice to civilian life. These Reserve officers in many instances had completely weaned themselves away from civilian life and were not prepared to go back to civilian life and pick up again under the competitive conditions existing in civilian life which some of them had forgone not once but twice and some even three times when they entered our military services.

The purpose of the bill which the gentlemen of the committee have brought in is very simple. It is to relieve these conditions so that when a Reserve officer who has been in for a certain extended period of time wants to remain in the armed services and through no fault of his own he has been riffed and returned to civilian life, you will cushion his return. I think it is a very meritorious proposition and certainly should be passed.

I am not going to go into the details of this bill because the members of the committee know the details as I do, but it does seek to tie the Reserve service closer to the provisions of the Retirement Act so that a Reserve after he has been on active duty for 14 years, with such a contract, will know that he will go through in active service to the retirement to which he is entitled after being on active duty for such a long period of time.

It also seeks to tie the service of the reservist closer to the provisions of Public Law 810 which is our Reserve Retirement Act.

The problem of the young reservist who goes in for 2 years or 3 years as an ROTC officer is somewhat different from that of the career reservist. The latter is the reservist who wants to make a career out of the armed services after a certain period of time.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

(By unanimous consent Mr. BROOKS was allowed to proceed for 2 additional minutes.)

Mr. BROOKS of Louisiana. The services are very anxious to retain these younger officers. They are never going to have a large percentage of applications from them, because many of these Reserve officers are called into active duty because they have no election. The service calls them because they have the ROTC obligation to serve on active duty. If some of the young men can be induced to stay in, however, and make a career of the military it will save this country a great deal of money. That feature should not be overlooked.

All in all, the program is a good one. It should have passed last year. We needled the Pentagon last year every 30 days to get in a bill they would recommend. Finally they came in 5 days before adjournment and handed me a bill that they would recommend, a bill of this kind. Now they come up with more changes. It is time to act, and I certainly think this bill should go through.

The CHAIRMAN. If there are no amendments, under the rule the Committee rises.

Accordingly, the Committee rose, and the Speaker having resumed the chair, Mr. JONES of Missouri, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5132) to amend title 10, United States Code, with respect to active duty agreements for Reserve officers, and for other purposes, pursuant to House Resolution 211, he reported the bill back to the House.

The SPEAKER. Under the rule the previous question is ordered.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EXTEND LOANS OF NAVAL VESSELS TO CERTAIN GOVERNMENTS

Mr. RIVERS of South Carolina. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 3366, to authorize the extension of loans of naval vessels to the Governments of Italy and Turkey.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3366), with Mr. JONES of Missouri in the chair.

The Clerk read the title of the bill.

By unanimous consent the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule the gentleman from South Carolina [Mr. RIVERS] will be recognized for 30 minutes, and the gentleman from Pennsylvania [Mr. VAN ZANDT] for 30 minutes.

Mr. RIVERS of South Carolina. Mr. Chairman, I yield myself 10 minutes.

The CHAIRMAN. The gentleman from South Carolina is recognized.

Mr. RIVERS of South Carolina. Mr. Chairman, this bill, H.R. 3366, would authorize the extension of the loan of two submarines to the Government of Italy and the extension of the loan of two submarines to the Government of Turkey.

The original loans will expire during 1959 and 1960, respectively.

The extension in each instance will be for not to exceed 5 years, and no authority is provided for any extension beyond that date.

Formal agreements similar to the original agreements will be entered into with the Governments and will contain all of the normal limitations and restrictions placed in such agreements.

For example, the agreement will provide for the return of these ships at an earlier date than the normal expiration date of the loan if such return is necessitated by the defense requirements of the United States.

The committee amended the bill to include the extension of the loan of two destroyers to the Republic of China. The requirement for this amendment raised an interesting legal question. The situation with respect to China is as follows:

In the same legislation which authorized the loan of the destroyers to China, authority was also granted for the loan of destroyers to Japan and Korea. In the case of Japan and Korea, the loan agreements were drafted in such form as to permit an original 5-year loan and a 5-year extension. In the case of China, however, through what was apparently a drafting error, the agreement was made for 5 years and without any language relating to the loan being renewed.

The authority of the President to make the actual transfer of these ships expired on December 31, 1956. The question, therefore, arose as to whether the President's authority to lend the ships had been exhausted.

Since it was the intention of the Navy to lend these ships for 5 years and to be able to renew the loan for an additional 5 years, the amendment to the bill merely is making legally certain an authority which is somewhat doubtful.

I know that every Member is aware of the importance of these ship loans in our total defense picture. It is obviously important that our forces be placed at strategic locations prior to the outbreak of hostilities. This bill will accomplish this very thing in that it will continue to keep these ships in operating condition in critical areas.

They will be ready and able to join us in any conflict which may arise and there will be no requirement that they be taken from mothballs, placed in operating condition, and then brought half-way round the world to their operating positions.

The course that is being followed in all of these ship loans has the further advantage of keeping the military personnel of our friends and allies currently informed with respect to operating procedures of our own Navy. Because of this, when they join in exercises with our fleet or join with us in any conflict, their contribution will be greatly increased in effectiveness.

So, in summary, the bill authorizes the extension of three loans—two of them involve two submarines each and the other, two destroyers.

Mr. VAN ZANDT. Mr. Chairman, I yield myself such time as I might require.

Mr. Chairman, the gentleman from South Carolina [Mr. RIVERS] has given a clear and concise description of what this bill will do.

Actually, all the bill will do is repeat what the Congress has already done in the past, and that is, extend loans which Congress has previously authorized.

Although we are, of course, most anxious to assist our friends and allies in any way that we can, I feel I am fully correct in saying that in the last analysis, it is our own defense position which is most assisted by the loaning and strategic positioning of these vessels.

It might be stated analogously that we are handing our friends weapons which they can use to help us if the occasion arises where this is necessary.

We are doing no favor to anyone. We are serving our own self-interest and the interest of all the free world. Quite obviously we have the choice of letting our friends help us with some of our equipment—in this case, ships—or placing our own men in these ships and positioning them in the far corners of the world.

It seems entirely clear to me the better choice here is to let our friends help us while at the same time assisting themselves in their own training of personnel and increasing their own ability to fight on our side.

I would like to draw attention to the report on this bill because it sets out the answers to many questions which might arise. A few of the highlights in the report are as follows:

On page 2, under the heading "Prior Legislation," the specific ships which are involved are described as is the manner in which they became available to the friendly foreign nations.

Just below that heading, are set out the basic considerations—which I have already dealt with in less detail—which dictate the wisdom of lending these vessels.

Further, on page 3, are set out in clear and unmistakable language the many mutual advantages which will flow from the extension of these loans.

On page 4, you will find the manner in which agreements are entered into with the recipient countries and there is even set out a form of typical agreement with the foreign country. In this typical agreement, it is clear that the interests of the United States are well protected in that there is a definite limit to the time of the extension of the loan. It also sets out the fact that the United States may recover these vessels at any time whatsoever if our defense requirements so dictate.

At the top of page 6 are set out some recent laws relating to the loan of vessels to friendly foreign nations and from this, it is clear that we are establishing no precedent in this legislation but merely carrying out, and furthering a matter which has become an essential element of our defense policy.

With respect to costs: the cost of taking these ships from mothballs, readying them for operation, and training the crews has already been paid for years ago. The continuing costs of operating

the vessels come out of mutual security funds which have already been appropriated.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Iowa.

Mr. GROSS. As I remember it, we made an aircraft carrier available to the French. Not long ago the French announced that they were not pooling their naval forces with the NATO naval force. If we continue the lending of these warships, is there anything in the agreement by which they must pool these vessels with NATO, or could the Italians tomorrow withdraw these vessels from the NATO force?

Mr. RIVERS of South Carolina. We can get these battleships back at any time we make a demand on the country for them.

Mr. GROSS. We could withdraw that carrier from the French tomorrow then?

Mr. RIVERS of South Carolina. If our Government so decides, it can get these ships back tomorrow or the next day or the next day after that.

Mr. GROSS. I thank the gentlemen on both sides of the aisle.

Mr. RIVERS of South Carolina. Mr. Chairman, we have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding section 7307 of title 10, United States Code, or any other law, the President may extend the loan of two submarines to the Government of Italy, and may extend the loan of two submarines to the Government of Turkey, on such terms and under such conditions as he deems are appropriate. The President may promulgate such rules and regulations as he deems necessary to carry out the provisions of this Act.

SEC. 2. The extension of the loan to Italy authorized under this Act is an extension of the loan made under the authority granted by the Act of August 5, 1953 (67 Stat. 363). The extension of the loan to Turkey authorized under this Act is an extension of the loan made under the authority granted by the Act of August 7, 1953 (67 Stat. 471).

SEC. 3. Extensions shall be for periods of not to exceed five years and shall be made on the conditions that they may be terminated at an earlier date if necessitated by the defense requirements of the United States.

SEC. 4. No loan may be extended under this Act unless the Secretary of Defense, after consultation with the Joint Chiefs of Staff, determines that such extension is in the best interest of the United States. The Secretary of Defense shall keep the Congress currently advised of all extensions made under authority of this Act.

With the following committee amendments:

Page 1, line 5, insert a comma following the word "Italy" and on lines 5 and 6, strike the words "any may extend".

Page 1, line 6, insert a comma after the word "Turkey" and add the following language: "and the loan of two destroyers to the Government of the Republic of China".

Page 1, line 11, change the word "loan" to "loans"; and on

Line 11, following the word "Italy", insert the words "and the Republic of China".

Page 2, line 1, strike the words "is an" and insert in lieu thereof the word "are"; and on

Line 1, change the word "extension" to "extensions"; and on

Line 1, strike the word "the" where it first appears; and on

Line 1, change the word "loan" to "loans".

The committee amendments were agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. JONES of Missouri, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 3366) to authorize the extension of loans of naval vessels to the Governments of Italy and Turkey, pursuant to House Resolution 213, be reported back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate voted demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

The title was amended so as to read: "A bill to authorize the extension of loans to the Governments of Italy, Turkey, and the Republic of China."

A motion to reconsider was laid on the table.

ADJOURNMENT OVER

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

CALENDAR WEDNESDAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday of next week be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

PROGRAM FOR NEXT WEEK

Mr. ARENDS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ARENDS. Mr. Speaker, I take this time to ask the majority leader if he will kindly announce the program for next week.

Mr. McCORMACK. The program for next week is as follows:

On Monday we will take up the Interior Department appropriation bill for 1960. If that is disposed of in time, we will take up H.R. 2575, authorization, pan-American games at Chicago. If that is not completed on Monday, then it will follow the second supplemental appropriation bill for 1959, which comes up on Tuesday. After the disposition of that bill and the pan-American games bill, that is, if that bill is not disposed of on Monday, the Bretton Woods Agreements Act, increase of funds, and after that a bill relating to the meeting in connection with the International Radio Consultative Committee. Then there is the usual reservation that if there is any further program, it will be announced later, and I will do that as quickly as I can. I want that reservation in case anything should arise. I might say that there are some bills to come up Monday out of the Committee on Ways and Means by unanimous consent. They have cleared the leadership and they are unanimously reported out of the Committee on Ways and Means and the chairman will ask for unanimous consent for consideration of them on Monday.

Mr. ARENDS. I thank the gentleman.

RECONVEYANCE OF CERTAIN LANDS AT THE JOHN H. KERR DAM AND RESERVOIR

Mr. ABBITT. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. ABBITT. Mr. Speaker, on Wednesday, I introduced a bill, H.R. 5775, which provides for the reconveyance of certain lands at the John H. Kerr Dam and Reservoir, in southern Virginia and northern North Carolina. The bill directs the Secretary of the Army to release certain lands there which are excess to the necessary requirements of the project. This is the land above the 320 foot contour line around the reservoir. Preference to purchase this land at fair market value would be given to the former owners and provisions are made for the orderly disposal of the land along well-defined lines of procedure. At the same time, the Government would be protected to the extent of reserving necessary flowage easements over the lands which would be sold under the bill. The former owners could reacquire their land at fair market rates, determined by the Department of the Army, by making application with the proper authorities.

This is a most important matter to many citizens of Mecklenburg County, which is in my congressional district, as well as to other taxpayers in adjoining areas. Not only is it important to those whose land is directly involved but to all citizens of the area concerned. When the Government purchased this land for the construction of the dam, considerably more land was taken than

was necessary for the proper functioning of the project. Experience thus far has shown this to be true and all indications are that the land now in question will not be needed for the fulfillment of the project's purposes.

The John H. Kerr Dam project has been of great benefit to our area and the people of this vicinity are well aware of it. They take pride in this project and feel it is a big asset to them. There is, however, a feeling that the land which the Government acquired in excess to its needs should be returned to the former owners. This excess land is lying idle, of no benefit to anyone, bringing in no revenue to the State and localities and, in my opinion, should be disposed of to private individuals and thus put back on the tax rolls and into effective use.

ANSWER TO KHRUSHCHEV'S CHALLENGE

Mr. FEIGHAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. FEIGHAN. Mr. Speaker, the Associated Press dispatch of yesterday stated that "Khrushchev challenged the West today to come up with concrete ideas for a summit conference to blunt the threat of war over Berlin and Germany."

I have prepared concrete guideposts which I have forwarded to the Department of State, which I strongly suggest as guidance to President Eisenhower in the event that he again participates in a so-called summit meeting.

It appears that the Foreign Ministers will meet in May. The purpose of that meeting should be clearly stated to be (a) exploratory, and (b) to establish in advance an agenda which the heads of state can then take up.

There was no agreed-upon agenda at the so-called summit meeting held in Geneva in 1955. The consequences of that meeting were—that the position of the free world has been weakened, and the Communist leaders have become more aggressive, bold, and demanding.

The Foreign Ministers Conference must be examined and analyzed in the light of our experience with the summit meeting in 1955. If the Russian delegates are unyielding and are willing only to talk on the basis of our surrender, then a summit conference does not make any sense. If, however, they display some good will and agree to discuss really important problems at a summit conference, that will represent before world public opinion an obligation on their part. If the Russians, at the Foreign Ministers Conference, are not willing to consider the causes of the tensions which have created the cold war, there is no necessity for a summit meeting. It would be futile to have a repetition of the clinking of cocktail glasses of 1955.

Subsequent to the brief period of sweetness and light which followed the Geneva Conference, 12 million people in Indonesia were delivered to Communist slavery in North Vietnam.

I strongly suggest the following as guidance if President Eisenhower participates in another summit conference:

First. We must regard such a conference as nothing more than an opportunity for us to spell out for the entire world what we stand for and what we stand against. In this connection, we should make it clear that we stand for the rights of all nations, large and small, to national self-determination, and the natural rights of all people to the basic freedoms. We should make it equally clear that we stand unqualifiedly against any form of colonialism or imperialism and in particular, we will never acquiesce to the new Russian colonialism which is being carried out under the camouflage of Communist imperialism.

Secondly, a logical followup to this first condition, we must demand that the Communist-enslaved non-Russian nations be permitted to determine their own destiny by the use of free elections, including multiple political parties, the secret ballot, together with international supervision to guard these basic requirements. If we fail so to do, the good people of Estonia, Latvia, Lithuania, Poland, Czechia, Slovakia, Hungary, Rumania, Bulgaria, Albania, Ukraine, Byelorussia, Georgia, Turkestan, Idel-Ural, Armenia, Azerbaijan, Cossackia, and Russia will look upon any U.S. participation in a conference at the so-called summit as the failure of the last great hope of mankind and a sellout of all those moral and political principles which the United States has stood for during the 183 years of our national existence.

This also applies to Yugoslavia, which is generally considered as an independent country, but whose Communist rulers are actually pursuing the same domestic policy of ruthless oppression and the same foreign policy of Communist imperialism as Moscow and Peiping.

Thirdly, the Russians must agree to dismantling and completely removing the Iron Curtain which they have constructed from the Baltic Sea to the Pacific Ocean. They must remove the minefields, the barbed wire, the vicious dogs, the special squads of machine-gunners, and all other unnatural barriers which the Russians have concocted in order to divide the world into separate parts.

Fourthly, we must abide by the proven principle of "open covenants openly arrived at." There can be no secret understandings reached at such a conference. To insure against this possibility, the administration should avoid being party to any joint communique being issued from such a conference because the constant Russian demand for unanimity would mean that any joint communique would serve primarily the Kremlin interests. President Eisenhower would be wise to issue his own communique on a day-to-day basis, covering developments and any successes or failures that might come out of such a conference.

If the administration does engage in such a conference as is now contemplated and if it does act within the spirit of these recommendations, I would have no reservations on our entering into such a conference because the possibility of a sellout will have been eliminated. Moreover, such a formula as I have here outlined would assure us an outstanding success in putting across to all the people of the world those principles for which we stand and those evils we are dedicated to fight against. Such a victory as would be ours by pursuing the course of action I strongly urge, would provide a badly needed stimulant and well-deserved encouragement for the forces of freedom which exist in every nation of the world today.

FEDERAL ASSISTANCE FOR AIRPORTS

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. SPRINGER. Mr. Speaker, in the President's budget which came down to this Congress a few weeks ago, the President requested $200 million for Federal assistance to airports for the fiscal year beginning July 1, 1959.

The Senate, a few days after that, passed a bill providing for $465 million for Federal assistance to airports.

The bill which was heard by the House yesterday provides for $297 million in the form of Federal assistance for airports. Mr. Quesada, Administrator of the Federal Aviation Agency, who will have charge of the administration of these funds, has said that the President's request for $200 million is adequate, and that a good job can be done by his Agency with that amount of money.

Mr. Quesada has been the Administrator of the Federal Aviation Agency for almost a year. He is by far the best qualified man in the entire country on the needs of his Agency. Just how ridiculous can we become here in the Congress when we insist that he shall spend more than the $200 million he has requested—that he must spend in addition under the House bill an additional $97 million, or under the Senate bill, if adopted, an additional $265 million.

If we take the Senate bill of $465 million as an example, we are pushing through the budget ceiling by $265 million, or just a little over 2½ times the figure that the President and his Administrator have requested. The Federal budget as set by the President is $77 billion. If every other item in the budget was multiplied proportionately by the Senate figure for Federal assistance to airports, our budget would have to be in excess of $160 billion to meet the needs of the country.

Mr. Speaker, here is an issue squarely of the budget balancers versus the budget busters. How can we expect people back home to believe that we are retaining some kind of financial sanity in Government when we say to an Administrator that he must spend over twice as much as he believes is necessary to carry on the functions of his job? In short,

in this bill adopted yesterday, we are saying "Bust another hole in the budget. The sky is the limit."

We do not build railroad stations, truck warehouses or bus terminals for those forms of transportation. We did subsidize airports in the beginning in order to get the program started. We did the same thing for railroads a hundred years ago, but we did phase out that assistance after a reasonable length of time. I point this out because I believe it is important to the overall picture of transportation today.

However, the overriding issue yesterday was whether we should vote only the $200 million which the Administrator of the Federal Aviation Agency said is necessary, or whether we should cram down his throat additional millions which he says is not needed and he does not want.

The House in adopting H.R. 1011 exceeded budget figures by almost 50 percent in the first balloting between the budget balancers and the budget busters; the budget busters prevailed. I do think they will hear from the people back home when the implications of this bill is fully understood by the ordinary taxpayer.

We still have a long way to go in this session, and those of us who stood for some kind of financial responsibility on this bill can continue to make ourselves heard.

LESS-THAN-HONORABLE DISCHARGES

Mr. DOYLE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks and include a letter from the Veterans of Foreign Wars.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. DOYLE. Mr. Speaker, I take this brief time of the House to report on the subject of less-than-honorable discharges in our military establishments; on which subject, more than 30 Members of this distinguished body have already filed identical bills, and which bills are now in the Pentagon under consideration.

Since most of these bills were filed in this House early in January 1959, and since virtually the same bill as H.R. 88, and companion bills, passed the House during the 85th Congress by the overwhelming vote of 226 to 8, it would appear, would it not, that it should not take very many days longer for the Military Establishment to send its report, either favorable or unfavorable, or with or without suggested amendments, back to the House Armed Services Committee so that said distinguished committee can again have the early opportunity to act upon it and, I anticipate, send it to the floor of the House of Representatives again with approval.

In the 85th Congress it seemed so clear to me that there was unnecessary delay and delay in the Pentagon on this matter that I then told them so, and I now again inform the House that I hope it does not take any real effort to get a timely report from the Pentagon back to the Halls of Congress so that we can act at a very early date upon it. Hardly a day has passed in the last 30 days but that one or more Members of this body have asked me the status of the subject matter.

The bills this session, we believe, are a decided betterment on the same subject. I cannot but feel that the bills are entitled to most cordial and emphatic approval by the Military Establishment. For, Mr. Speaker, it is not legislation which will mean an increase in the budget. It is a distinctly humane bill. It deals with the human destiny of several thousand American young men who committed comparatively minor wrongs, errors or mistakes, or violation of either military regulations or of law during their short stay in the military and then were discharged—too many of them I would say—without courts-martial and without anything but administrative action. Nevertheless, Mr. Speaker, these lads, who were not criminals and who were not found guilty of committing crimes, carry though their lives as result of the type of discharge they received, a stigma and sentence of condemnation in their respective communities in our Nation for their entire lives. If they had committed similar wrongs and errors in civilian life, comparable to those for which they were given less-than-honorable discharges, to which these bills refer, they would have been given a comparatively short sentence or been put on probation for from 1 to 3 years, and then if they made good with exemplary conduct they would have been free of the burden. So, these bills of which I speak today are designed primarily to do two things, to wit, first, to remove at least a little of the stigma and the life sentence which the military type of discharge has stigmatized them for life with; and, second, to help them to some degree at least, to obtain more ready and remunerative employment for themselves and their families.

These bills do not propose a change in the type of discharge. They do not propose any Government benefits for the men. They do provide, however, that lads who make good in civilian life for not less than 3 years by proven exemplary conduct, shall have an opportunity to present adequate proof of that exemplary rehabilitation conduct and reputation in their communities for not less than 3 years to the Military Establishment. Even further, Mr. Speaker, the bills do not make it mandatory on the Military Establishment to issue such applicants anything whatsoever; not even the exemplary rehabilitation certificate proposed in the bills. It leaves it optional with the military. But, the bills and the authors thereof will expect that if the bills are passed again and become the law, that the Military Establishment will in good faith issue to any applicant who adequately proves he has made good by exemplary conduct for not less than 3 years, a certificate of exemplary rehabilitation. The bill last year proposed that applicants be given a general discharge limited. This is the one real difference between the legislation of the 85th Congress and this 86th Congress.

I repeat that this is humane legislation.

Granting that if the legislation becomes law, it will mean an additional amount of clerical work and some investigative effort in some cases by or for the Military Establishment, it would appear crystal clear, would it not, that the application for these exemplary rehabilitation certificates from the lads who undertake to prove they are entitled to them, after living exemplary lives in civilian life for not less than 3 years, should apply to the Military Establishment from which he was fired; in like manner should be entitled to receive the certificate of rehabilitation in civilian life from the Military Establishment. Heretofore I have informed the House of the fact of there being several thousand a year.

On behalf of the 30 or more Members of the House, who have already filed the same bill as H.R. 88, I cordially state that if any other Members of the House have cases in their respective congressional districts, they are welcome to take the same bill and file it in their own names. From my knowledge of the situation last year and this year to date on the subject, it would appear to me we have a right to expect that the Pentagon report, either for or against, should be back to the attention of the Armed Services Committee very, very soon. I repeat, this is a humane bill. It is strictly so. I further state, it is my firm conviction they should also continue to be charged with the responsibility of being definitely interested in rehabilitation of their personnel; not only during the time they are in the military uniform, but in those who make comparatively minor mistakes while in the military and then make manifestly good in their civilian experience so that their minor mistakes will not hang onto them all their lives.

I am fully and gratefully aware that in the last 2 years since the close of the public hearings by the special subcommittee of the House Armed Services Committee on the subject of less-than-honorable discharges the military has made some significant advancements in related fields. I congratulate them upon doing so. But, Mr. Speaker, they have not yet been willing to undertake to assume any responsibility for changing their procedures materially enough so that the rank and file of these lads can be given a definite procedure whereby they can present the facts of their rehabilitation in civilian life to the military, and then receive from the military at least some kind of a paper which will at least clear some of the onus from their life sentence and also help them get a dignified job.

Under the present military policy on such discharges all of these lads who receive a discharge less than honorable, unless the military is shown that it was the one that made the error or mistake, just simply will not change its mind or record. So in effect a lad once fired from the military even for a comparatively minor cause is discarded once and forever by the military because he has gone into civilian life. A theory of these bills

is that these lads are still American citizens; they are still valuable assets to the Nation; they may again be called upon to fight for the security and very existence of our beloved Nation. They are not like so much junk or waste material. No boy who rehabilitates himself for mistakes or errors or minor violations of law is invaluable or worthless.

Furthermore, Mr. Speaker, we believe there is plenty of evidence to the fact that in some percentage of these cases about whom we are concerned the military itself may have made serious mistakes in what they did.

When I was for several days in the Mediterranean Sea on official business for the Armed Services Committee I was a guest of Adm. Charles Brown, commander of the Sixth Fleet in the Mediterranean area and he authorized me to say in public or otherwise that he was for H.R. 88 and the companion bills; that he also, in his early days of naval training at the Academy, made serious enough mistakes there for which he would have been given a less-than-honorable discharge of some type if he had actually then been in the U.S. Navy. But, he authorized me to say he was put on probation for a year and before the year was up he rehabilitated his attitude and actions so that he was kept at the Naval Academy and, of course, we all know how very proud all American citizens are of his great and distinguished service in our U.S. Navy. There are many other Charlie Browns in the United States of America who can make similar adjustments in their own individual rehabilitation. We ask the Military Establishment to consider the principle involved in these bills and to cordially and promptly cooperate in making the principle involved effective in part of our national consciousness, experience, and pride.

Here, Mr. Speaker, follows the list of the Members of the House who have already filed the same bill on this subject:

Bills identical to H.R. 88

Bill No.	Introduced by—	Date
H.R. 88	Mr. Doyle	Jan. 7, 1959
H.R. 2243	Mr. Burns	Jan. 12, 1959
H.R. 2457	Mr. Berry	Jan. 16, 1959
H.R. 2462	Mr. Bosch	Jan. 15, 1959
H.R. 2470	Mr. Dollinger	Do.
H.R. 2478	Mrs. Granahan	Do.
H.R. 2498	Mr. Philbin	Do.
H.R. 2509	Mr. Widnall	Do.
H.R. 2543	Mr. Holifield	Do.
H.R. 2576	Mr. Zelenko	Do.
H.R. 2810	Mr. Wilson	Jan. 19, 1959
H.R. 2968	Mr. Bow	Jan. 21, 1959
H.R. 3023	Mr. Lane	Do.
H.R. 3073	Mr. Saund	Do.
H.R. 3182	Mr. McDonough	Jan. 22, 1959
H.R. 3184	Mr. McFall	Do.
H.R. 3201	Mr. Santangelo	Do.
H.R. 3340	Mr. Metcalf	Jan. 26, 1959
H.R. 3718	Mr. Farbstein	Jan. 29, 1959
H.R. 4281	Mr. Libonati	Feb. 9, 1959
H.R. 4324	Mr. Ashley	Feb. 11, 1959
H.R. 4368	Mr. Healey	Do.
H.R. 4417	Mr. Westland	Do.
H.R. 4503	Mr. Holland	Feb. 16, 1959
H.R. 4532	Mr. Roberts	Do.
H.R. 4998	Mr. Fulton	Feb. 25, 1959
H.R. 5057	Mr. Herlong	Feb. 26, 1959
H.R. 5780	Mr. Celler	Mar. 18, 1959

In closing I am pleased to present the exact text of a letter dated March 17, 1959, signed by the director, national legislative service, Veterans of Foreign Wars of the United States, Washington, D.C.:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Kansas City, Mo., March 17, 1959.

HON. CLYDE DOYLE,
Member of Congress, U.S. House of Representatives, Washington, D.C.

DEAR MR. DOYLE: This is in response to your letter of February 16, 1959, with attached copy of H.R. 88 which proposes to amend present law to provide that the Board for the Correction of Military or Naval Records and the Boards of Review, Discharges and Dismissals which give consideration to satisfactory evidence relating to good character and exemplary conduct in civilian life after discharge and dismissal in determining whether or not to correct certain discharges and dismissals and to authorize the award of an Exemplary Rehabilitation Certificate.

The Veterans of Foreign Wars is on record as having endorsed in principle H.R. 8772 of the 85th Congress and we gave this bill our full support. We shared your keen disappointment when the bill failed to move forward in the Senate and died with the adjournment of the 85th Congress. It is noted that H.R. 88 is almost identical to H.R. 8772, with one major exception: For those meeting the requirements of this legislation an Exemplary Conduct Certificate will be issued rather than a General Discharge Limited as was proposed in H.R. 8772.

The VFW wholeheartedly agrees with the principle of issuing an Exemplary Certificate based solely on the record of rehabilitation after service with no change in discharge—solely because of such rehabilitation. We endorse the proposal that an Exemplary Certificate is much more preferable and appropriate than General Discharge Limited. As has been pointed out this bill is not designed to grant or change Discharge Certificates but rather is intended to remove the stigma that attaches, sometimes for life, to a veteran with a less than honorable discharge certificate.

We certainly will lend our full support to the principles and objectives of H.R. 88. If further hearings should be scheduled with respect to this legislation, the Veterans of Foreign Wars will be deeply appreciative of being advised so that a representative from this office may be present and testify in behalf of our organization.

Thanking you for inviting the views of the VFW concerning this most meritorious legislation, I am,

Respectfully yours,
OMAR B. KETCHUM,
Director.

HON. ALBERT COHN, DECEASED

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. BUCKLEY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. BUCKLEY. Mr. Speaker, I include an address by Presiding Justice Bernard Botein, Appellate Division, Supreme Court, at memorial service for the late Honorable Albert Cohn, at the Hebrew Home for the Aged at Riverdale, N.Y., Sunday, March 1, 1959:

"His life was gentle, and the elements so mix'd in him that Nature might stand up and say to all the world 'This was a man!' "

These lines might have been penned of Albert Cohn, whose life and memory we honor this afternoon.

It is quite appropriate that we speak of him in this home, to which he was so devoted and to whose growth and present enormous stature he had contributed so much, as honorary chairman and in other capacities. And it is also appropriate that a former associate of Judge Cohn on the Appellate Division deliver this address. I daresay that aside from his family no one has had the opportunity to know him, appreciate him and love him as well as the small group of men who served on that court with him for so many years—day in and day out, and most weekends too.

Every Monday morning, over the span of two decades, Albert Cohn and six other judges would assemble in the courthouse conference room. There they would discuss and vote their decisions in the cases they had studied so exhaustively and heard argued the week before. In the fire of passionate but friendly argument, in the cold logic of objective, scholarly analysis, sham and pretense, virtues and vices, could not long be hidden from one's associates. I know I echo the sentiments of every judge who has sat in the Appellate Division for the past twenty years when I say that none has ever been loved more devotedly by his fellows, none more appreciated, respected and reverenced, than Judge Cohn. And these were sentiments faithfully forged in the fire of the most revealing fellowship any group of men has ever enjoyed.

He was unsparingly generous in offering his ripe experience and sound scholarship, his great fund of commonsense and resourcefulness to those less favored. I, who as a neophyte judge sat at his feet, was the recipient of innumerable kindnesses and sage advice—particularly on the many occasions when he graced our bench as the justice presiding.

Despite his devotion to this institution, his preoccupation was not entirely with the elderly. His faith in youth embraced law students, fledgling lawyers, young judges, perplexed young people from every walk of life, who surged through his door—and were never turned away. There is a legion of judges, public officials, and outstanding lawyers who proudly count themselves proteges of Judge Cohn. In a sense he continued throughout his life the teaching career that he followed for a few years after his graduation from City College. Perhaps his early struggles, before he hoisted himself onto the first rung of the ladder of success by dint of sheer willpower and self-sacrifice, gave him such sympathetic and perceptive insights into the problems of the young. He attended New York Law School while teaching in the public schools, practiced law for a few years; and then, in 1917, he was appointed an assistant district attorney in Bronx County, and his brilliant public career was launched. The rest is legal history—county judge, supreme court justice, and then, in 1936, associate justice of the appellate division.

He retired a few years ago because he had reached the chronological age of 70. His unabated mental and physical vigor, his buoyancy and spring make a mockery of the statutory retirement provisions. I have always felt that it was his absorption with young people that kept him so young, that stimulated and regenerated him.

This youthful spirit was reflected in his very outlook on life. He was never one to retreat from the onrush of new generations, or new ideas. He has never one to draw a curtain on the complex problems posed by a modern society—nor to refuse to reconsider old attitudes moulded in a horse-and-buggy era.

He had infinite faith in the law of which he was so superb a craftsman, particularly in the timeless capacity of the common law to cope with ever-changing economic and social conditions without sacrificing by one

jot its essential integrity and values. He brought an eager, inquiring mind into the contemplation of new or novel cases. Also, he was never one to run with the crowd that carried the aloof premise that legal principles are the thing, and not the people whose lives those principles shaped. His first concern was with the people whose destinies hung on the issues presented in the cold print of briefs and records—but never at the sacrifice of sound legal principles and the uniformity required of the law. He was always the champion of the poor and the underprivileged. How often he brought his extraordinary arsenal of learning and resourcefulness into play to convince us that we could do justice, as he saw it, without violating the established legal rules.

And yet, warm and kindly as he was, his judicial efforts never descended to mawkish sentimentality—and certainly never to a bid for personal popularity. Sentimental he was, however, in his personal relationships, although he liked to think of himself as practical and hardheaded even in extra-legal areas. And he was a fiercely loyal friend—for which many persons should thank their lucky stars.

There was a simple, unpretentious but nevertheless very real dignity about the man and his works. This evidently communicated itself to the bar, which clasped him to its bosom with informal delight and undisguised affection. Lawyers felt easy and comfortable in the presence of this soft-spoken, down-to-earth man, in court or in chambers; and yet never transgressed the proprieties because they also sensed the firmness behind the velvet. Best proof of the regard in which he was held is the fact that for many years he was chairman of the judicial and lawyers division of both the United Jewish Appeal and the Federation of Jewish Philanthropies—and the keen, practical gentlemen who direct the destinies of those organizations were obviously seeking the judge most highly esteemed by lawyers and judges. Lawyers and litigants left his courtroom with faith in democracy bolstered, reassured in spirit that a man of his caliber had been selected to sit in judgment on their affairs.

He was learned in the law, although not as one who made a touchstone of technicalities. He could have reaped much greater financial rewards in the practice of the law and rejected many attractive offers to join law firms because his heart and entire way of life were with the bench. Also, a wise, loving wife realized this, and encouraged him to remain where his happiness lay—although this decision meant great sacrifice on her part. When he no longer had any choice in the matter he practiced law brilliantly and successfully in the few years vouchsafed him after his retirement as a judge.

Only in the past few months he won a stunning victory in the case of Schuster against the City of New York. You may recall that 3 weeks after supplying information leading to the arrest of Willie Sutton, one Arnold Schuster was murdered in Brooklyn. Schuster had notified the police that his life had been threatened. Arguing before the court of appeals on behalf of the Schuster family, Judge Cohn secured a decision that the city could be held liable in damages for negligence. This ruling is a most important milestone in the development of the law. But then, his own opinions as a judge, illuminating the pages of scores of volumes of the official "Miscellaneous and Appellate Division Reports," are in themselves eloquent, learned testimony of the progress of the law in this State for the past generation.

He also served his profession well as a trustee of New York Law School, which honored him with a doctorate of laws, as a director of the New York County Lawyers Association, and as chairman of the judiciary committee of the Bronx County Bar Association.

I hesitate to poach on the preserves of the eminent Rabbi Kramer who spoke of Judge Cohn as a Jew. I shall content myself with saying that we worshipped in the same synagogue, and I always knew him as a deeply religious man in the finest sense of the term, without cant or affectation. And I shall not even try to do justice to his relationship with his family. To those who did not know him, I cannot hope to convey the measure of the love and tender devotion he shared with Dora, or his deep pride in his son, Roy, and their profound understanding and attachment. For those who did know Judge Cohn, I need not elaborate upon the warm and simple beauty of the home life enjoyed by this tightly knit family. He gave much to the two mainstreams of his life—his family and the law; and it is comforting to remember how much he in turn received during his lifetime. I kow how he was nourished by the love and devotion of his wife and son.

We who are gathered here this afternoon to do honor to his memory are thankful that we were privileged to know him. As his former associate, I count myself doubly fortunate in having enjoyed a rewarding and lasting experience in personal relationship. We mourn the loss of Albert Cohn, lifelong educator, dedicated public servant, loyal friend, devoted hubsand and father. May his soul rest in peace.

TENNESSEE VALLEY AUTHORITY TURBINE GENERATOR PURCHASE

Mr. MILLIKEN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. MILLIKEN. Mr. Speaker, on February 27, the Tennessee Valley Authority issued a statement in defense of its much-criticized award of a $12 million order to a British firm for the largest steam turbine generator ever purchased for installation in the United States.

I have noted that the General Electric Co. and Westinghouse Electric Corp. have each filed petitions with the Office of Civil and Defense Mobilization asserting that the purchase of this large generator from a foreign company threatens to impair the national security of the United States. Based upon the information in these petitions, I would say this award is the biggest step yet in the steady trend toward making important segments of America's vital electric power network dependent on foreign repairs and maintenance—repairs which might be completely cut off in case of war.

In its defense of this award, TVA makes a number of statements which, if erroneous as some believe, should not be allowed to go unchallenged. Because of my interest in the operation of section 8 of the Trade Agreements Extension Act of 1958, and my interest in fairness to all concerned when public affairs are in controversy, I have inquired regarding the points raised by TVA.

Perhaps most serious of the TVA charges are those implying that the American companies which bid for this contract—Westinghouse and General Electric were the lowest domestic bidders—are seeking exorbitant profits and that cheap foreign labor does not account for the difference in bids between the C. A. Parsons Co. of England and the American companies.

Some people, in fact, have said that all the American firms need to do is cut their prices to meet this foreign competition. I have no interest in defending the pricing or profit policy of any company, but it is very simple indeed to look at the annual reports of these American companies to determine whether they are making exorbitant profits or not. In the case of Westinghouse, evaluated by TVA as the low domestic bidder in this instance, that company's net income in 1957 and 1958 was reported as less than 4 percent. Does this indicate that Westinghouse could cut its prices more than 40 percent to meet these foreign bids?

While TVA did not deny that American electrical manufacturers pay wages at least two and one-half times greater than the English firms, they claim that the difference in labor costs between Parsons and the American companies on this steam turbine job would be only $1.5 million, while the difference in bids amounted to between $5 million and $6 million.

It is apparent here that the TVA people merely took a stated manhours figure which covered just the direct factory labor that would be affected by possible lay-offs and multiplied this portion of a total labor cost by the U.S. electrical industry's average hourly rate of pay.

A further check on this calculation reveals that the stated manhours of work used by TVA included only the time of the people in the factories who would have been directly and exclusively employed on this order—people whose jobs are now jeopardized by the loss of this order. The figure did not include the supporting service people in the factories who would have been assigned only part time to this order, such as crane operators, material handlers, boiler house operators, plant guards, inspectors, production clerks, purchasing, industrial relations, and supervisory personnel.

And the cost of such service personnel in these plants is approximately double the direct labor cost. Consequently the total labor cost in the factory alone is approximately three times the direct labor rate. And the average direct labor rate in these factories for the highly skilled labor involved is well above the electrical industry average which TVA used as its multiplier.

More than this, the manhours of labor stated by TVA obviously did not include the cost of research and development people whose efforts have kept American-made electrical apparatus ahead of its foreign competition in quality and efficiency. Such expense as this, along with many other types, are all true items of labor cost which a manufacturer must recover in price, over and above the labor cost of the people in the factories who are directly involved in producing a specific order.

To pretend that an American firm which is underbid nearly 50 percent need only "shade its prices" to get the order is ridiculous, particularly when competition

is as keen as it is in the American electrical industry.

The TVA statement claims also that the British firm of C. A. Parsons is equipped to provide promptly repair service and replacement parts which may be necessary during the life of the machine. It claims further that Parsons maintains service facilities and personnel in Canada.

The facts just do not support these claims at all.

Parsons has no manufacturing plant in Canada. Parsons stated in their bid that they have only three service engineers in Toronto to service their equipment on the North American continent. A firm like Westinghouse, in contrast, has over 1,000 field service engineers plus many more at a number of factories throughout the United States.

What about this matter of using Canadian facilities for major repairs of steam turbine generators? Actually there is no Canadian plant whatever, capable of satisfactorily performing a major repair on a turbine generator like the one TVA has ordered from Parsons. A major repair job requires the facilities of the mother plant of the builder 9 times out of 10. This means Parsons would have to ship the unit back to England or receive major parts from overseas—if overseas transportation were available, which it might not be in time of war.

TVA asked why GE and Westinghouse did not include in their bids a provision for liquidated damages—a provision whereby the company would pay a large amount for each day that delivery might be late. It seems that this is the first time TVA ever included a liquidated damages clause in a steam turbine generator bid.

The reason the American firms did not include such a clause in their bids is simply that such a provision requires miles of red tape and needless detailed record-keeping just to protect the company from unjust claims of delay. This adds to the cost of production unnecessarily. It is not the normal way of doing business. And it would have been strictly a one-way street. TVA offered no bonus clause for achieving early delivery.

It is significant that the British Central Electricity Authority does not buy foreign-made heavy electrical apparatus because they know they cannot depend on foreign supply for spares and maintenance in time of emergency.

TVA's statement presents some very tortuous reasoning and "assumptions" intended to prove that despite loss of American jobs in this case, the American working man really will benefit through these dollars that will come back to him in the long run from overseas.

Can anyone really believe that awarding $12 million of business to England will create more prosperity at home than to award an $18 million order to an American manufacturer?

And, finally, TVA says the money for the Parsons equipment will not come from taxes. I ask, is there any real difference between payment from taxes than from revenue or profits developed by investing the American public's tax payments?

But these economic arguments are needless. Why not take a leaf from the British book of policy which shows that on the basis of the national security issue alone there is no question but that such heavy electric power apparatus as this should be bought from American manufacturers.

ESTABLISHMENT OF MINUTE MAN NATIONAL HISTORICAL PARK (MASSACHUSETTS)

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include a bill which I am introducing today.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am today introducing a bill to provide for the establishment of Minute Man National Historical Park in Massachusetts, and for other purposes.

Senator SALTONSTALL has introduced a similar bill in the Senate.

I have been asked to introduce this bill in the House and I do so with great pleasure.

In 1955 the Congress created the Boston National Historic Sites Commission and authorized this Commission to undertake a study of historic objects, sites, and buildings in Boston and the surrounding area to determine the advisability of establishing a coordinated program by Federal, State, and local governments and private historical societies for the preservation of the important colonial and Revolutionary properties in that area which form a part of America's historical heritage. In its report to the Congress, the Commission has recommended the establishment of a national historical park to preserve the last relatively unspoiled section, about 4 miles, of the historic Lexington-Concord Battle Road, which was the scene of the opening events of the American Revolution on April 19, 1775.

Mr. Speaker, I believe that the establishment of this park is indeed a fitting way of memorializing and preserving for future generations the site at which the War for American Independence was born. The proposed park to be established under the terms of this bill would consist of two tracts of land in Lexington, Lincoln, and Concord along the route traversed by the British on their march from Boston on the morning of April 19, 1775, and used by the minutemen and Provincial militia to rout the British into a fighting retreat.

The larger part of the proposed park would form a stretch of about 4 miles of the historic Battle Road from Lexington to Meriam's Corner in Concord. Part of this route was covered by Paul Revere in his famous ride to alert the countryside and includes the site of his capture by the British. The smaller part would consist of properties adjacent to the battleground at the North Bridge in Concord, scene of the first attack on the British by the minutemen and Provincial militia and location of the famed minuteman statue. Authority is urgently needed for immediate acquisition of the vacant parcels of land in both parts, as well as for the establishment of a long-range program for acquisition and preservation of other sites in the proposed park area. This area has been undergoing rapid development and is threatened with more. As recently as 1957 the Air Force proposed to use for a military housing project a relatively unspoiled roadside parcel of 8 acres through which the Battle Road passes in Lincoln. The march of the British from Boston to Concord covered a distance of more than 20 miles.

The establishment of this park is indeed a fitting way of memorializing and preserving for future generations the site at which the war for American independence was born. The proposed park to be established under the terms of this bill would consist of two tracts of land in Lexington, Lincoln, and Concord along the route traversed by the British on their march from Boston on the morning of April 19, 1775, and used by minutemen and Provincial militia to rout the British into a fighting retreat. All of these towns are in my congressional district, as are others mentioned in the bills. The larger part of the proposed park would form a stretch of about 4 miles of the historic Battle Road from Lexington to Meriam's Corner in Concord. Part of this route was covered by Paul Revere in his famous ride to alert the countryside and includes the site of his capture by the British. The smaller part would consist of properties adjacent to the battleground at the North Bridge in Concord, scene of the first attack on the British by the minutemen and Provincial militia, and location of the famed minutemen statue. Authority is urgently needed for immediate acquisition of the vacant parcels of land in both parts, as well as for the establishment of a long-range program for acquisition and preservation of other sites in the proposed park area. This area has been undergoing rapid development and is threatened with more. As recently as 1957 the Air Force proposed to use for a military housing project a relatively unspoiled roadside parcel of 8 acres through which the Battle Road passes in Lincoln.

I shall speak to the House again on this vitally important matter.

The bill which I have introduced follows:

A BILL TO PROVIDE FOR THE ESTABLISHMENT OF MINUTE MAN HISTORICAL PARK IN MASSACHUSETTS, AND FOR OTHER PURPOSES

Whereas the outbreak of the War of the American Revolution was essential and prerequisite to the achievement of American independence and the creation of a Federal Government; and

Whereas the events relating to the beginning of Revolutionary hostilities on the 18th and 19th of April 1775, and associated with Paul Revere, the Minute Men, and the British are of great importance in American history; and

Whereas a number of historic properties, buildings, sites, and objects in Boston, Massachusetts, and the vicinity thereof, including the road and roadsites between Lexington and Concord, are intimately connected with the events that opened the war, and conse-

quently merit preservation and interpretation in the public interest as prime examples of the Nation's historical heritage: Therefore

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to preserve for the benefit of the American people certain historic structures and properties of outstanding national significance associated with the opening of the War of the American Revolution, Minute Man National Historical Park is hereby authorized to be established in the Commonwealth of Massachusetts.

The park shall comprise not more than seven hundred and fifty acres as may be designated by the Secretary of the Interior from within the area beginning at Fiske Hill and thence lying along Massachusetts Avenue, Marrett Road and Marrett Street in the town of Lexington, along Nelson Road, Virginia Road, Old Bedford Road, and North Great Road or State Route 2-A in the town of Lincoln, and along Lexington Road, Monument Street, Liberty Street and Lowell Road in the town of Concord to and including the North Bridge and properties on both sides of the Concord River in the vicinity of the North Bridge.

SEC. 2. The Secretary of the Interior is authorized to acquire by donation or with donated funds, or to acquire by purchase with funds hereby authorized to be appropriated, lands and interest in lands within the area designated for the park. Administrative jurisdiction of Federal lands lying within the area designated for the park shall, with the concurrence of the Federal agency involved, be transferred to the Secretary of the Interior for administration as a part of the park.

The park shall be established as Minute Man National Historical Park by notice in the Federal Register when the Secretary of the Interior finds that sufficient lands within the designated area have been acquired to warrant such establishment.

SEC. 3. To provide further for the preservation and interpretation of historic sites, structures, and properties lying along the entire route or routes where significant events occurred on the 18th and 19th of April 1775, in the cities of Boston, Cambridge, Medford, and Somerville, and the towns of Arlington, Brookline, Concord, Lexington, and Lincoln, including the area generally described in section 1 as lying between Fiske Hill and the North Bridge, the Secretary of the Interior is authorized, in accordance with the purposes of this Act, to enter into cooperative agreements with the Commonwealth of Massachusetts, political subdivisions thereof, corporations, associations, or individuals, and to erect and maintain tablets or markers, in accordance with provisions contained in the Act approved August 21, 1935, entitled "An Act to provide for the preservation of historic American sites, buildings, objects, and antiquities of national significance, and for other purposes" (49 Stat. 666).

SEC. 4. The Secretary of the Interior is authorized to appoint an advisory commission of five members to advise him on the development of Minute Man National Historical Park, to consist of one member to be recommended by the selectmen of each of the towns of Concord, Lexington, and Lincoln, Massachusetts; one member to be recommended by the Governor of the Commonwealth of Massachusetts; and one member to be designated by the Secretary.

SEC. 5. When established pursuant to this Act, the park shall be administered, protected, and developed by the Secretary of the Interior in accordance with the provisions of the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C. 1-4), as amended and supplemented, and the Historic Sites Act of August 21, 1935 (49 Stat. 666; U.S.C. 461-467).

GALLUP POLL ON SCHOOL INTEGRATION

The SPEAKER. Under previous order of the House, the gentleman from Georgia [Mr. FORRESTER] is recognized for 10 minutes.

Mr. FORRESTER. Mr. Speaker, on March 13, 1959, the Gallup poll released the results of its survey in the North and South to determine the attitude of white parents in both sections regarding school integration.

Mr. Gallup says the northern parents had very little objection to integration "as long as only a few of the children are Negro." However, "the proportion of northern white parents who would have no objection to sending their children to a school where more than half of the children are colored is only about one in three," according to the poll.

I commend this survey as a thought-provoking document for honest people everywhere. As long as the mixing of races is token mixing, very little objection is heard in the North, but when these northern parents come to grips with cold facts presented by integration on a 50-50 basis, they react exactly the same as white southerners. Mr. Gallup refers to the reaction by the northern parents as prejudice. I think Mr. Gallup is wrong there. The objections are not based on prejudice but on intensely real evils that they now know integration brings. The more experience our northern friends have with this problem, the more united they will be in their objection to integration and the more they will be satisfied that God Almighty was right when he segregated us in the first place.

The Gallup Poll result is no surprise to me. It is reliable information. It is information that public servants need to know because segregation is getting quite popular wherever real integration has had the opportunity to prove itself wrong. Candidates for office in the North are waking up to the fact that segregation is becoming more popular than integration.

The article released by Gallup reads as follows:

THE GALLUP POLL: PROPORTIONS ALTER VIEWS ON SCHOOL INTEGRATION

(By George Gallup)

PRINCETON, N.J., March 13.—Despite the collapse of Virginia's policy of "massive resistance" to comply with the court's ruling on integration, survey evidence shows that Southern white parents of school-age children are still not basically sold on the idea.

Nor is prejudice limited to the South. Many northern parents, if faced with a similar problem to that which exists in the deep South, express misgivings over integration.

Their attitudes on integration are greatly influenced by the proportion of Negro children to white children, in a school, the survey finds.

Sentiment among northern whites is overwhelmingly on the side of integrated schools as long as only a few of the children are Negro. But the proportion of northern white parents who would have no objection to sending their children to a school where more than half of the children are colored is only about one in three.

Gallup poll reporters put this series of questions to an accurate sample of white parents of school children in all areas of the country—both North and South:

1. "Would you, yourself, have any objection to sending your children to a school where a few of the children are colored?"

The replies of white parents:

NORTH	Percent
Yes, would object	7
No, would not	92
No opinion	1
SOUTH	
Yes, would object	72
No, would not	25
No opinion	3

Of interest is the fact that although sentiment among southern white parents on this question shows virtually no change from a survey in September of last year, there has been a change of sentiment among northern white parents.

The number of northern whites who say they would object to sending their children to a school where a few of the children are colored has dropped about half—from 13 percent in September to 7 percent today.

The next question:

2. "Would you have any objection to sending your children to a school where half of the children are colored?"

NORTH	Percent
Yes, would object	34
No, would not	63
No opinion	3
SOUTH	
Yes, would object	83
No, would not	12
No opinion	5

The September survey showed 39 percent of northern white parents objecting, compared to 81 percent of southern white parents.

The third question:

3. "Would you have any objection to sending your children to a school where more than half of the children are colored?"

NORTH	Percent
Yes, would object	58
No, would not	35
No opinion	7
SOUTH	
Yes, would object	86
No, would not	8
No opinion	6

The September survey showed the same proportion, 58 percent, of white parents in the North objecting as today, while sentiment among southern white parents was 84 percent opposed in September, compared with 86 percent today.

MANDATORY QUOTAS ON OIL IMPORTS

Mr. STRATTON. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. BOLAND] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BOLAND. Mr. Speaker, I was extremely disappointed this morning with the reply I received from the White House rejecting my plea of last Monday to President Eisenhower that

he reconsider his March 10 decision imposing mandatory quotas on oil imports of crude unfinished and finished oil products, including residual oil.

OIL PRICE INCREASES WILL COST NEW ENGLAND DEARLY

I had asked the President to exempt New England from these import quotas, which, it is estimated, will result in increased oil costs for New England consumers of approximately $100 million yearly. This is the reply I received from the White House today, signed by Mr. Gerald D. Morgan, the Deputy Assistant to the President:

DEAR MR. BOLAND: The President asked me to acknowledge and thank you for your telegram on the oil import matter. After the most careful consideration, the President decided that he had no alternative but to put into effect a system of mandatory controls, being convinced that the present level of imports was threatening to impair the national security. A copy of the Proclamation and Statement which the President issued on March 10 are enclosed for your information. The President appreciated your wiring.

With kind regards.

Sincerely,

GERALD D. MORGAN,
The Deputy Assistant to the President.

BLOW TO NEW ENGLAND ECONOMY

Mr. Speaker, New Englanders are suffering enough due to the recession and its consequent unemployment, and the loss of industries that have been moving to other sections of the country for the last 15 years, without having this further discrimination imposed upon them. New England depends upon imports if it is to maintain a healthy and competitive economy. The President's mandatory oil import edict imposes a 400,000 barrel a day quota for residual oil which is so much in demand by New England industries, power plants, colleges, schools, and the State and municipal institutions and buildings. By placing a ceiling on the quantity of foreign residual oil that may enter this country, New Englanders will be forced to buy domestic oil at higher prices.

OIL IMPORTS DO NOT IMPAIR NATIONAL SECURITY

Mr. Speaker, I disagree with the administration when it says that the present level of oil imports "was threatening to impair the national security." On the contrary, as the respected Senator AIKEN, of Vermont pointed out yesterday, the imposition of mandatory oil import quotas will result in a drain on the limited American oil supplies that would be useful to this country in time of war.

I agree with Senator AIKEN when he says that these mandatory oil quotas will not only encourage domestic oil price increases, but will harm our relations with neighboring Canada and friendly oil producer nations, and will work to the disadvantage of American industry competing in world markets.

Mr. Speaker, under animous consent I include with my remarks an editorial that appeared in the Washington Post and Times Herald this morning:

MR. AIKEN INDICTS

Senator AIKEN has delivered a courageous and comprehensive indictment of the administration's recent clamp-down on oil imports to which, by their ineffectual replies, the President's defenders in Congress have conceded there is no good answer except politics. As Senator AIKEN noted in his devastating critique, the import quotas discriminate against regions of the country dependent upon imports, encourage price increases, harm our relations with Canada and other friendly producer nations, disadvantage American industry in world markets and drain limited domestic oil supplies that would be useful in event of war.

To this, Minority Leader DIRKSEN was able to say only that President Eisenhower's decision was a considered one and that the quotas for lead and zinc, imposed last year, had established a precedent. These were, in our judgment, similarly ill advised. For the United States to preach freer trade when it doesn't affect a politically powerful home industry and practice flagrant protectionism when the interests of the strategically represented producer States like Texas are involved is the worst kind of foreign policy. It is not only narrowly nationalistic but inconsistent. It is not only a policy in aid of one particular industry but a policy that harms other American business and the consumer. Senator AIKEN has spoken well and wisely, and his counsel should be heeded.

ASSISTANCE TO RAILROAD AND FERRY COMMUTERS

Mr. STRATTON. Mr. Speaker, I ask unanimous consent that the gentleman from New Jersey [Mr. DANIELS] may address the House for 1 minute and revise and extend his remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. DANIELS. Mr. Speaker, today I have introduced a bill to amend section 13a(1) of the Interstate Commerce Act which would prohibit carriers—ferry or train—from discontinuance of service until a hearing is completed and the Interstate Commerce Commission comes to a decision, no matter how long it may be. It would also do the following:

First. Investigation and hearing made mandatory.

Second. Thirty days' notice prior to hearing required to be made by ICC to Governors.

Third. Time limitation, in which ICC must dispose of application, is stricken.

Fourth. Seven days' notice instead of 10 days' notice prior to time of discontinuance of service would be given the railroads by the ICC that service must be continued.

Fifth. Service shall be continued during the period of investigation and hearing.

The enactment of this bill would assure that the commuter groups and other interested agencies have a hearing in every instance of a discontinuance or change. It would also assure that the service be continued until the hearing is completed and the Commission comes to a decision, however long that may take.

The bill was prompted by the continuing problem of train and ferry discontinuance and how it affects commuters in New Jersey and other parts of the country.

A bill has also been introduced in the Senate by Hon. HARRISON A. WILLIAMS, JR., Democratic Senator from New Jersey, to attain the same result.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. ASPINALL, for the week of March 23, 1959, on account of illness.

Mrs. KEE (at the request of Mr. ALBERT), for March 20 to 23, on account of official business in West Virginia.

Mr. MULTER (at the request of Mr. ADDONIZIO), for Friday, March 20, 1959, on account of illness.

Mr. FOLEY (at the request of Mr. FALLON), for today, on account of official business.

SPECIAL ORDER GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to Mr. FORRESTER, for 10 minutes today, and to revise and extend his remarks.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks was granted to:

Mr. DIXON.

Mr. LINDSAY (at the request of Mr. ARENDS) and to include extraneous matter.

Mr. WALTER.

Mrs. KEE and include a newsletter.

Mr. MCCORMACK and to include extraneous matter.

(At the request of Mr. STRATTON, and to include extraneous matter, the following:)

Mr. BOWLES.

Mr. GALLAGHER.

Mr. HOLTZMAN.

BILL AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill and a joint resolution of the House of the following titles:

H.R. 2294. An act for the relief of the Ellis Timber Co.; and

H.J. Res. 198. Joint resolution to provide for the reappointment of Robert V. Fleming as citizen regent of the Board of Regents of the Smithsonian Institution.

ADJOURNMENT

Mr. STRATTON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 46 minutes p.m.), under its previous order, the House adjourned until Monday, March 23, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

747. A letter from the Chairman, Federal Communications Commission, transmitting

a draft of proposed legislation entitled "a bill to repeal the honorarium provision in subsection (b) of section 4 of the Communications Act of 1934, as amended"; to the Committee on Interstate and Foreign Commerce.

748. A letter from the Chairman, Federal Communications Commission, transmitting a draft of proposed legislation entitled "a bill to amend section 409(c) of the Communications Act of 1934, as amended, with respect to presentations in any case of adjudication which has been designated for a hearing by the Federal Communications Commission"; to the Committee on Interstate and Foreign Commerce.

749. A letter from the Assistant Secretary of the Interior, transmitting a report on the activities of, expenditures by, and donations to the Lignite Research Laboratory, Grand Forks, N. Dak., for the calendar year 1958, pursuant to the act of March 25, 1948 (62 Stat. 85); to the Committee on Interior and Insular Affairs.

750. A letter from the Director, Administrative Office, U.S. Courts, transmitting a draft of proposed legislation entitled "a bill to provide for the appointment of additional circuit and district judges, and for other purposes"; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DAWSON: Committee on Government Operations. H.R. 1321. A bill to amend Reorganization Plan No. 2 of 1953; with amendment (Rept. No. 235). Referred to the Committee of the Whole House on the State of the Union.

Mr. MORGAN: Committee on Foreign Affairs. House Joint Resolution 300. Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic games in the United States; without amendment (Rept. No. 236). Referred to the House Calendar.

Mr. KIRWAN: Committee on Appropriations. H.R. 5915. A bill making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1960, and for other purposes; without amendment (Rept. No. 237). Referred to the Committee of the Whole House on the State of the Union.

Mr. THOMAS: Committee on Appropriations. H.R. 5916. A bill making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes; without amendment (Rept. No. 238). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ABBITT:

H.R. 5881. A bill to provide that the Secretary of the Army shall make certain payments to the counties of Mecklenburg, Halifax, and Charlotte, State of Virginia, from the proceeds of sales of timber located on that portion of the land within the John H. Kerr Reservoir, Va. and N.C., situated in the State of Virginia; to the Committee on Public Works.

H.R. 5882. A bill to provide that the Secretary of the Army shall make certain payments from the proceeds of sales of timber cut from land acquired by the United States within a State for flood control, navigation, and allied purposes, to the counties in which such land is situated; to the Committee on Public Works.

H.R. 5883. A bill to provide that the Secretary of the Treasury shall make certain payments to the counties of Dinwiddie, Nottoway, and Brunswick, State of Virginia, based upon the proceeds of sales of timber located on land within Camp Pickett, Va.; to the Committee on Armed Services.

By Mr. BROCK:

H.R. 5884. A bill to provide economic assistance to the American Indians; to the Committee on Interior and Insular Affairs.

By Mr. DORN of New York:

H.R. 5885. A bill declaring Good Friday in each year to be a legal public holiday; to the Committee on the Judiciary.

By Mr. HAGEN:

H.R. 5886. A bill to amend the act of June 5, 1948, relating to the Meat Inspection Service of the Department of Agriculture and to permit recognition of the meat inspection services of the various States; to the Committee on Agriculture.

By Mr. KEITH:

H.R. 5887. A bill to amend the Tariff Act of 1930 to place ground, powdered, or granulated seaweeds on the free list; to the Committee on Ways and Means.

By Mr. McCORMACK:

H.R. 5888. A bill to authorize the Secretary of the Navy to transfer to the Massachusetts Port Authority, an instrumentality of the Commonwealth of Massachusetts, certain lands and improvements thereon comprising a portion of the so-called E Street Annex, South Boston Annex, Boston Naval Shipyard, in South Boston, Mass., in exchange for certain other lands; to the Committee on Armed Services.

By Mr. McMILLAN:

H.R. 5889. A bill to provide for the representation of indigents in judicial proceedings in the District of Columbia; to the Committee on the District of Columbia.

By Mr. MAGNUSON:

H.R. 5890. A bill to amend the Internal Revenue Code of 1954 to make it clear that the tax on transportation of persons does not apply to ferry service provided by State-operated ferryboats; to the Committee on Ways and Means.

By Mr. PHILBIN:

H.R. 5891. A bill to provide for the recognition of the Polish Legion of American Veterans by the Secretary of Defense and the Administrator of Veterans' Affairs; to the Committee on Veterans' Affairs.

By Mrs. ROGERS of Massachusetts:

H.R. 5892. A bill to provide for the establishment of Minute Man National Historical Park in Massachusetts, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. RUTHERFORD:

H.R. 5893. A bill to provide for the acquisition of sites and the construction of buildings for a training school and other facilities for the Immigration and Naturalization Service, and for other purposes; to the Committee on Public Works.

By Mr. SIMPSON of Pennsylvania:

H.R. 5894. A bill to clarify the application of section 7(c) of the Trade Agreements Extension Act of 1951; to the Committee on Ways and Means.

H.R. 5895. A bill relating to the treatment for income tax purposes of certain redemptions of paid-for preferred stock; to the Committee on Ways and Means.

By Mr. WALTER:

H.R. 5896. A bill to provide for the entry of certain relatives of U.S. citizens and lawfully resident aliens; to the Committee on the Judiciary.

By Mr. WIDNALL:

H.R. 5897. A bill to amend section 13a(1) of the Interstate Commerce Act, as amended, relative to the discontinuance or change of the operation of certain trains or ferries; to the Committee on Interstate and Foreign Commerce.

By Mr. DANIELS:

H.R. 5898. A bill to amend section 13a(1) of the Interstate Commerce Act, as amended, relative to the discontinuance or change of the operation of certain trains or ferries; to the Committee on Interstate and Foreign Commerce.

By Mr. FLYNN:

H.R. 5899. A bill relating to the observance of holidays occurring on Saturday; to the Committee on Post Office and Civil Service.

By Mr. FORAND:

H.R. 5900. A bill to correct injustice by providing for the payment of certain amounts of compensation to officers who were found under the provisions of the Army and Air Force Vitalization and Retirement Equalization Act of 1948 to have been removed from the active list of the Army without justification and who were subsequently restored to the active list; to the Committee on Armed Services.

H.R. 5901. A bill to amend the Internal Revenue Code of 1954 to exempt nonprofit hospitals from certain excise taxes; to the Committee on Ways and Means.

By Mr. FULTON:

H.R. 5902. A bill to amend the Internal Revenue Code of 1954 to provide that employment taxes paid under the Federal Insurance Contributions Act by two or more employers with respect to the same individual shall constitute overpayments to the extent that the aggregate compensation paid to such individual during any one calendar year exceeds $4,800, and for other purposes; to the Committee on Ways and Means.

By Mr. GRANT:

H.R. 5903. A bill to control the preparation, distribution, importation and exportation of virulent hog cholera virus, and for other purposes; to the Committee on Agriculture.

By Mr. GUBSER:

H.R. 5904. A bill to amend section 3914 of title 10 of the United States Code to provide for the granting of retired pay to certain former enlisted members of the Armed Forces discharged after having served 20 or more years on active duty; to the Committee on Armed Services.

By Mr. HOLTZMAN:

H.R. 5905. A bill to grant civil-service employees retirement after 30 years' service; to the Committee on Post Office and Civil Service.

By Mr. McDOWELL:

H.R. 5906. A bill to amend section 13 of the Fair Labor Standards Act of 1938, as amended, to provide an exemption from the minimum wages, maximum hours, and child labor provisions of such act with respect to homeworkers engaged in the making of natural holly, pine, cedar, or other evergreen wreaths; to the Committee on Education and Labor.

By Mr. MACDONALD:

H.R. 5907. A bill to amend the Federal Property and Administrative Services Act of 1949 to provide for making payments in lieu of taxes with respect to certain industrial manufacturing plants owned by the United States; to the Committee on Government Operations.

By Mr. SCOTT:

H.R. 5908. A bill to provide for the disposition of certain lands above the 320-foot contour of the John H. Kerr Dam and Reservoir to the former owners, and for other purposes; to the Committee on Public Works.

By Mr. KIRWAN:

H.R. 5915. A bill making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1960, and for other purposes.

By Mr. THOMAS:

H.R. 5916. A bill making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes.

By Mr. FULTON:

H. Res. 219. Resolution creating a select committee to conduct an investigation and study of the feasibility of relating the office allowances of Members to the workload of their offices; to the Committee on Rules.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States relative to requesting passage of legislation that will admit Hawaii to the Union on an equal footing with the other States; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Utah, memorializing the President and the Congress of the United States to remove the limitation on the number of acres of public lands which the State may acquire; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Utah, memorializing the President and the Congress of the United States relative to objecting to limitation of public lands; to the Committee on Interior and Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. FULTON:

H.R. 5909. A bill for the relief of Charles H. Stype; to the Committee on the Judiciary.

H.R. 5910. A bill for the relief of Zelda Glick; to the Committee on the Judiciary.

By Mr. KEITH:

H.R. 5911. A bill for the relief of Omer W. Guay; to the Committee on the Judiciary.

By Mr. ZELENKO:

H.R. 5912. A bill for the relief of Henry Y. C. Huang; to the Committee on the Judiciary.

H.R. 5913. A bill for the relief of Florence May Cox; to the Committee on the Judiciary.

By Mr. WALTER:

H.R. 5914. A bill for the relief of Dr. Radboud Louwrens Beukenkamp; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

122. The SPEAKER presented a petition of James O'Leary, Wellsboro, Pa., relative to a redress of grievance relating to a World War I pension, which was referred to the Committee on Veterans' Affairs.

EXTENSIONS OF REMARKS

The Works of Peace

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 20, 1959

Mr. HUMPHREY. Mr. President, it was my privilege to address the National Council of Jewish Women here in Washington on March 10, 1959. I ask unanimous consent that my address, entitled, "The Works of Peace," be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS BY SENATOR HUBERT H. HUMPHREY BEFORE THE NATIONAL COUNCIL OF JEWISH WOMEN, MARCH 10, 1959, WASHINGTON, D.C.

Even as we demonstrate to the world that we are utterly determined to resist Communist aggression, in this latest Soviet-precipitated crisis over Berlin we must be alert to the opportunities to wage peace—consistently, vigorously, and dramatically.

We must constantly seek to express the American dedication to people, peace, and progress throughout the world—not only in the words of peace, but in the very deeds and works of peace.

American foreign policy must recapture the initiative. And it must be reoriented to make better use of America's natural advantages.

With our magnificent food and fiber production in a hungry world, with our leadership in medicine in a world filled with disease and suffering, we are in a magnificent position to spearhead an international drive to feed the hungry, clothe the naked, heal the sick, and to teach the illiterate.

The works of peace: Food for peace, health for peace, education for peace, science for peace, atoms for peace.

The works of peace ought to be as conspicuous in American foreign policy as the Washington Monument in our Capital City.

We must hammer away on this theme unrelentingly—and develop a whole series of specific, concrete programs to implement—generalities are not enough.

The Senate will shortly take favorable action on one such concrete program—the proposal by LISTER HILL, myself, and others, to establish an International Medical Research Institute.

Here again is an example of constructive programing, with dramatic impact—the kind of action and program that cannot be effectively disparaged or destroyed by the most virulent Communist propaganda attacks.

As another example of how we could dramatically underline a constructive American foreign policy founded on health and education and food for peace, we could develop with a small expenditure of funds a new American white fleet of hospital ships and disaster relief vessels—as a dramatic symbol of American intentions and American concern with the well-being of other peoples.

I intend shortly to introduce legislation to provide two such white fleet task groups of presently mothballed U.S. Navy ships—designed to be operated partially by Government and partially by voluntary agencies—as disaster relief and technical assistance units along the coasts of Africa and Asia.

For a maximum cost of between $10 million and $15 million per year, the United States could provide effective—and vivid, easily recognized—relief to coastal areas which are the victim of earthquakes, floods, hurricanes, famine or disease epidemics; and in between they could carry on a dramatic program of medical and public health training and technical assistance.

Each of these white fleet task groups—composed perhaps of one 800-bed hospital ship, two cargo vessels for emergency supplies and food, and a converted electrical power ship, could throw into an emergency situation 800 to 1,000 hospital beds, operating facilities and laboratories, power for a good-sized city, and emergency rations for 300,000 to 500,000 people for a full week.

An earlier American White Fleet was used by President Theodore Roosevelt to dramatize to the world the emergence of the United States as a world power. Today a white fleet of mercy, armed with food, clothing, and medicine, literally stretching out the hand of friendship and compassion to other peoples, would do more to bring home to the peoples of Asia and Africa the real spirit of the American people than 10 years of broadcasting of American good intentions. Outstanding progress of health and medicine in Israel is one of the great achievements of the Jewish culture—a vivid example of what can be done through the works of peace, a dramatic beacon light to encourage similar achievement throughout Asia and Africa.

OUR SENATE WORLD HEALTH STUDY

As you know, it is my privilege to serve as chairman of a Senate subcommittee which is making a study of international health. We have invited judgment of the great medical leaders of the world.

Included in the responses have been many messages from outstanding medical leaders of Israel, including, of course, from the famed Weizman Institute and other facilities.

Israel has, as you know, perhaps the greatest and most favorable ratio of doctors to population anywhere in the world. It has a reservoir of scientific talent which is proportionately unmatched in almost any other country.

I know that Israel is going to play a great role, therefore, in expanding international medical research. Expansion of research was my topic in testifying this very morning on our farsighted bill to create a new International Institute of Medical Research. I know, too, that in the International Public Health and Medical Research Year, commencing in mid-1961, Israel can become a great radiating center of health works of peace.

SEPTEMBER 1959 CANCER MEETING IN ISRAEL

Let me cite a specific illustration. In September of this year, there will be held an International Symposium on Cancer Causation. The International Union Against Cancer has an International Cancer Research Commission which is the sponsor of this meeting. This commission selected the Weizmann Institute as the site for the symposium. Eleven countries will be represented, including: Canada, Great Britain, France, Finland, India, West Germany, Holland, New Zealand, U.S.S.R., Israel, and ourselves.

A moving figure in the plans for the symposium is the distinguished head of the experimental biology department of the institute, Prof. Issac Berenblum.

I cite this symposium as one excellent illustration of what the United States and Israel can and should do to multiply the works of peace.

Here in the United States, cancer wipes out a quarter of a million lives a year. In the Soviet Union, as I pointed out in Moscow to the Soviet authorities in December 1958, another quarter of a million lives are snuffed out by cancer. In the State of

Israel, a somewhat proportionate toll is taken. And the Arab States as well, are hardly immune to cancer.

What I am saying, in effect, is that Israel can spearhead international medical research.

It can also spearhead international medical assistance. Why? Because it is one of the few nations which has a relative surplus of doctors which it can make available to other less fortunate countries.

You are all familiar with Israel's technical assistance program which is already under way—ranging from its agricultural help to Burma, to its maritime help to Ghana.

I would like to see Israel's medical technicians working throughout the developing world. And I envision the day when its medical know-how will become available throughout the Arab countries as well. You and I are aware that today the Arab population within Israel receives the benefit of Israel's high health standards. This should become just as true within the Arab countries themselves.

But this is more than a matter for Israel itself; it is a matter for action throughout the free world.

PHILANTHROPIC TRADITION IN JEWISH FAITH

Welfare work is a special tradition of the Jewish people and of Jewish women, in particular.

I need not remind you of the hundreds of hospitals, homes for the aged, organizations for the orphaned, for the blind which Americans of Jewish faith, yes, which you of this audience serve in your respective communities.

The dedication to philanthropy is a deep tradition among the Jewish people, and I say that the world is in great need of further like-minded efforts among all faiths.

From the standpoint of American foreign policy, however, it is absolutely essential that we make available more of the scientific, medical, educational talent from the free countries to the underdeveloped world.

You and I read each day of riots sweeping Africa, Nyasaland, the Belgian Congo, and other areas.

The answer to riots and rioters is not clubs and police; the answer is housing and doctors and schools and jobs and equality and basically freedom.

I want the U.S. Government to help make available this answer to Africa and south Asia.

HOW TO AVOID MORE DYNAMITE IN AFRICA

Colonial Africa will explode in more violence unless the fuse is put out and unless the TNT of bitterness and frustration and fear are converted into a new and more stable type "chemical."

I refer to the chemistry of hope and growth, fulfillment and pride. This is the social chemistry from which will come not explosions, but peaceful development and building.

I point out, therefore, to the colonial powers that they may keep the lid on temporarily if they fly in more armed troops and tear gas and if they fly out into exile more native leaders.

But this is not the answer to statesmanship. It is not a permanent answer, nor one compatible with the Judaeo-Christian heritage.

Colonial Africa needs more point 4, not pointblank fire of water hoses or rifles. It needs additional responsible leaders, and not to be deprived of the few native leaders which it already has.

It needs the spirit of Tom Jefferson and Abe Lincoln and Chaim Weizmann—builders, creators, men of uplift and inspiration, not overseers of downgrading and repression.

This, then, is the challenge to the United States and to all like-minded nations.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 20, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD I include copy of my newsletter for this week:

KEENOTES

(By Representative ELIZABETH KEE)

What is it like to dine on surplus agricultural commodities—the sole source of food supply for about 300,000 unfortunate West Virginians?

Members of the West Virginia congressional delegation found out at its weekly delegation breakfast in the Vandenburg Room of the Capitol recently. The meal was prepared exclusively from the food items which are now available to recipients of surplus commodities.

Each breakfast consisted of 1¾ ounces of flour, three-quarters ounce of meal, two-thirds ounce of powdered milk, one-third ounce butter and one-third ounce of rice. But the breakfast served to each of the two Senators and six Members of the House was equivalent to a one-meal ration for an entire family up to three persons.

As I ate the breakfast I could not help but think of the thousands of families who have nothing more to look forward to each day than the skimpy meal which can be prepared with available commodities. And I was further reminded of how tragic it must be for a family of three to have to make an entire meal from the amount which I was eating for breakfast.

The diet of surplus commodities is wholly inadequate, especially for growing children. It provides only 26 percent of the needed calories, 36 percent of the necessary protein, and 46 percent of the necessary calcium.

Yet, many families have to depend entirely upon the commodities made available to them from Government warehouses. They do not have the means to supplement them in any way.

Members of the delegation hoped, by dining on the surplus commodities, to dramatize the plight of so many of our people. It is a part of our campaign to convince leaders in the executive branch of our Government and in the Congress of the need to start a coordinated program to provide both immediate and long-range help to West Virginia.

We have hammered away at this one thing ever since Congress reconvened. We are working as a team to bring flood control and other public works projects to the State to create desperately needed jobs. We are demanding that other commodities be added to the list which is now available to our unfortunate families. And more importantly, we want an economic redevelopment program under which West Virginia can attract new industries and businesses to provide permanent jobs for our people.

It is tragic that with warehouses literally bulging with surplus commodities of all kinds a more adequate diet cannot be provided to people who are unable to find employment. This is not a problem confined to West Virginia. Other States, in all sections of the country, are also suffering from substantial and persistent unemployment.

In West Virginia able-bodied men simply cannot find work. At the end of January 67,928 active applications for employment were on file. Regular State unemployment benefits had been exhausted by 47,432 of our people, and 19,468 unemployed had exhausted benefits under the temporary extension program. Thousands of others have joined them in the last 3 months.

People should not be permitted to go hungry in this land of plenty. I am more convinced than ever now that people who must live on the skimpy diet surplus foods provide are hungry citizens. And I am afraid that their children will carry through life the effects of the insufficient diet they are now forced to eat.

Lt. Gen. Joseph M. Swing, Commissioner of Immigration and Naturalization

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 20, 1959

Mr. LINDSAY. Mr. Speaker, Lt. Gen. Joseph M. Swing is a man to whom the country owes a vote of thanks. For the past 6 years Joseph Swing has held one of the most difficult posts in Government—Commissioner of Immigration and Naturalization. This is a job in which there are only heartaches, headaches and brickbats. It takes a man with a tough skin and a steady hand. Such a man is Gen. Joseph M. Swing.

What is little known about this man, however, is that he has a heart as big as an elephant and has administered a difficult law liberally, fairly, and with as much compassion as the law will allow. He showed his toughness and his ability to get a job done when he took by the horns an appalling situation along the Mexican border where the so-called wetback invasion had assumed unbelievable proportions. The Commissioner, acting swiftly but carefully, and without additional cost to the taxpayers, reversed this avalanche and not only stopped a tide that was daily in the thousands, but made it possible for Mexicans here illegally to return to Mexico of their own accord and without penalty. In the summer of 1954 about 65,000 illegal aliens returned to Mexico of their own accord. This was a situation which nobody liked and which demanded correction and control. The Mexican and the U.S. Governments both have been grateful to General Swing for bringing this unhealthy situation under control.

This man is responsible, probably more than anyone in Government, for taking action at all levels to facilitate travel—all to the advantage not only of the United States but also commerce and industry, including, of course, the transportation industry.

There is much left to be done in this regard and I assure my colleagues, Mr. Speaker, that Commissioner Swing is not resting on the improvements thus far achieved. Within the executive branch of the Government he has fought to eliminate redtape and senseless procedures which have proven so embarrassing and annoying to international travelers. His efforts contributed to a change in the law permitting a

waiver of the fingerprinting requirement of people coming temporarily to or through the United States. He is presently seeking to obtain a waiver of the visa requirements for tourists and visitors coming to the United States, as permitted by law in certain cases with respect to neighboring countries and contiguous islands. He lent support to legislation enacted by the 85th Congress which corrected a number of hardships that had been encountered in the administration of the immigration laws.

When the October revolt broke out in Hungary, General Swing was among those in the forefront pressing for the immediate participation of the United States in a crash program designed to relieve the misery of anti-Communist refugees and escapees from Hungary and pressures on Austria. He was quickly on the spot in Austria and Germany and took extraordinary measures to expedite the processing of emergency admission of 30,000 deserving Hungarians to this country.

General Swing is a West Point classmate of President. Eisenhower. Although he was the youngest member of this distinguished class he achieved in his career preeminence and excellence in his chosen profession. It would take far too long, Mr. Speaker, for me to recount to this Chamber the whole history of General Swing's professional achievements. It is enough to point out that he achieved distinction as one of the foremost experts in this country on airborne tactics. In December 1943, he planned and conducted the first airlift by planes and gliders of an entire division. Thereafter, in the Pacific theater, General Swing proved himself one of the most skillful, effective, and courageous combat officers of World War II.

General Swing has been awarded the Distinguished Service Cross; Distinguished Service Medal; Silver Star with two oak leaf clusters; Legion of Merit; Bronze Star Medal with one cluster; Air Medal with one cluster; French Legion of Honor; and Chief Commander, Philippine Legion of Honor.

I had the pleasure of working with Commissioner Swing in my capacity as executive assistant to the Attorney General of the United States in 1955 and 1956. He is a devoted and effective public servant. All who strive toward the improvement and betterment of the public service can look to men like Joseph M. Swing for inspiration and leadership.

Connecticut's Stake in Area Redevelopment Legislation

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 20, 1959

Mr. BOWLES. Mr. Speaker, there is a growing interest in Connecticut over the area redevelopment legislation now under consideration in the House Banking and Currency Committee.

This morning the Connecticut General Assembly's Joint Committee on State Development held public hearings on a resolution relating to the legislation. I prepared the following statement for that hearing. It deals with the general aspects of area redevelopment legislation, the situation in Connecticut, and how our State would benefit from the proposed legislation.

This statement expands the testimony I gave to Subcommittee No. 3 of the House Banking and Currency Committee yesterday and includes up-to-date statistics on Connecticut unemployment.

STATEMENT BY CHESTER BOWLES ON AREA REDEVELOPMENT LEGISLATION TO CONNECTICUT JOINT COMMITTEE ON STATE DEVELOPMENT IN HARTFORD, MARCH 20, 1959

I am very glad that the Joint Committee on State Development is undertaking a study of area redevelopment legislation at a time when hearings are being held in Washington with widespread interest in the legislation developing here in Connecticut.

Because of its great importance to us in Connecticut, I shall go into the legislation in some detail.

I shall describe what I believe are the broad merits of my bill, H.R. 3450, what the situation is here in Connecticut and how it would benefit from the legislation. I shall also take up some of the questions and objections that have been raised concerning the legislation.

A FEDERAL RESPONSIBILITY

The extent of our recovery from last year's recession is a debatable point. For the nearly 5 million people still unemployed, the recovery has been very slight, indeed.

This bring us back to one of the main pieces of legislation passed since World War II—the Employment Act of 1946. This legislation recognized the responsibility of the Federal Government to help assure maximum full employment.

This new area redevelopment legislation—which Senator PAUL DOUGLAS introduced in the Senate and which I and others introduced in the House—recognizes our responsibility to alleviate unemployment of a persistent and chronic nature wherever it exists.

The President, too, has given verbal support to this responsibility in his economic reports to the last three Congresses. The administration bills that have been offered to Congress have accepted the principle, though the effort to make the principle an actuality is a very limited one.

Very simply the motivation of this legislation springs from a natural instinct to help eliminate innocent suffering.

In my mind, there is a close analogy between the reasons for extending Federal aid to communities stricken by the sudden disaster of a flood or tornado and the reasons for extending aid to communities stricken by a more gradual disaster—whether it be the exhaustion of a coal mine that had previously been a primary source of employment, or the closing of a railroad line or the transfer of a textile mill hundreds of miles away.

In both situations, the men and women in these communities are faced with suffering and hardship through no fault of their own.

In eastern Connecticut and in other parts of the State, many people have lost their jobs because a textile mill closed down.

These are people who have worked for many years, who have developed very high skills. They have sunk deep roots into their communities. Their children are in school, their homes are paid for, their friends and relatives live nearby.

Yet all of a sudden they find themselves out of work. And they wonder what happened to the opportunity and bright future they had dreamed about.

Sometimes you hear the statement that in time these problems will work themselves out, that the people will sooner or later move elsewhere and find work.

I reject that philosophy. I think we have moved far beyond the harsh laws of economics reflected in statements of this sort. Such an answer to our problems would not only inflict great hardship on the individuals involved and uproot their lives, but it would also foster a costly and totally unnecessary wasting of human and material resources that have been built up over the years. It would be a waste of the potential and skills of the people, and it would be a waste of the schools, stores, hospitals, banks, office buildings, homes and churches.

THE ECONOMIC ADVANTAGES

When you look at the economic side of this situation, the reasons for area redevelopment legislation become even more compelling.

With the threat to our security from the Soviet Union growing more critical and with the needs for schools, roads, hospitals in this country becoming increasingly great, we cannot afford the continued wasting of our vital human and material resources.

By attacking this problem of chronic unemployment head on wherever it exists, we can greatly increase our national productivity and job opportunities.

At the same time, by putting our idle plant and human capacity to work, we can greatly increase the tax revenue needed to keep our economy on an even keel. Consider how much revenue we are losing by allowing 10 percent of our plant capacity and 6 percent of our human capacity to lie idle.

By putting these wasted resources to work, we can also cut down on the amounts that the Federal, State and local governments now have to spend in providing unemployment compensation and other relief measures.

CONNECTICUT CONDITIONS

Now let me briefly sketch the situation here in Connecticut.

This is, of course, a highly industrialized State with one of the most progressive administrations in the country. Under the dynamic and farsighted leadership of Gov. Abraham A. Ribicoff, we have made tremendous strides in improving our living and working conditions which, in turn, have attracted many new industries to the State.

Our roadbuilding, slum clearance, law enforcement, and unemployment compensation programs are among the most progressive in the country, and the citizens of Connecticut can be justly proud of their accomplishments.

Yet, like many other States, we have problems that require Federal assistance to bolster our vigorous State and local efforts.

One of the most pressing of these problems is that of alleviating the chronic unemployment that has been caused by our hard-pressed textile and related industries.

At present, the three areas having the most serious difficulties are those of Danielson, Norwich, and Bristol, including the surrounding communities. Danielson, which is in my own district, has been the hardest hit of all for the longest period of time.

In 1955 the population of the Danielson area—which includes Putnam, Brooklyn, Canterbury, Eastford, Killingly, Plainfield, Pomfret, Sterling, Thompson, and Woodstock—was a little more than 47,000. The textile industry provided more than 40 percent of the total manufacturing employment of 11,460.

Since 1955, however, the area has been practically denuded of this vital industry with the closing of more than 18 textile plants.

As a result, the per capita income has dropped in this area to the lowest in the

State and this has caused a decline in business generally throughout the area. Fewer new homes are being built and fewer cars are being bought. Unemployment, as of this last January, was twice as high as the national average.

The people of Norwich, many of whom I know very well, have had similar though less severe difficulties.

In 1954 the textile industry accounted for more than half of the manufacturing employment in that area—which includes Bozrah, Colchester, Franklin, Griswold, Lisbon, Preston, Sprague, and Voluntown.

In the last 10 years, the textile employment declined from 6,500 to 2,200. Here too the total unemployment is nearly twice the national average.

Bristol has been hard hit by the decline in the nonelectrical machinery, brass, instruments, and clock industries. By last January its unemployment had risen to almost three times the national average, with 16.7 of the labor force out of work.

Other areas are also suffering similar difficulties. The Thompsonville area, for instance, lost nearly 1,000 jobs with the closing of the wool, yarn, and velvet carpet mills of the Bigelow-Sanford Carpet Co.

BENEFIT TO CONNECTICUT

Now how would this area redevelopment legislation help us?

There has been some talk that Connecticut cities and towns would benefit very little from the legislation.

This depends on which bill is passed.

Under the administration bill, only two areas—Danielson and Bristol—would qualify.

However, under my own bill, which is similar to the one introduced by Senator DOUGLAS, Connecticut would be eligible for much greater assistance.

If this bill is passed and signed, more than half of those now unemployed—48,400 people—would be included in the cities and towns that would be eligible for assistance by this July unless there is a marked upturn in employment between now and then.

Looking at it another way, Connecticut is made up of 18 labor market areas. By July 14 of them would be eligible for assistance.

Right now, according to the Connecticut Development Commission, 55 Connecticut cities and towns are eligible under my bill. These communities are included in 8 labor market areas designated by the Department of Labor as: Ansonia, Bridgeport, Bristol, Danielson, Meriden, New Britain, Norwich, and Torrington.

Unless employment improves by July, 78 more communities will have been added. These are the communities surrounding the labor market areas designated as Danbury, Middletown, New Haven, Thompsonville, Waterbury, and Willimantic.

From this standpoint, Connecticut's stake in the program makes the legislation a matter of vital State interest.

PROVISIONS OF THE BILL

Briefly, this is what the legislation would provide:

Loans of $100 million for the construction and expansion of factories and other industrial projects in the eligible urban areas.

Loans of another $100 million to communities for the construction of public facilities. This would help these communities with land acquisition and the development of such facilities as access roads and sewer and industrial water supply systems to make the communities more attractive to new industries.

Loans of $100 million for the development of rural areas.

An additional $75 million in grants for the construction of public facilities.

Grants of $4.5 million for technical assistance to help communities and businessmen plan for coordinated development and growth.

Finally, it would provide $10 million in subsistence payments for 13 weeks to those undergoing vocational retraining.

At this point, I would like to call attention to a provision which I have also introduced and which I believe is of the utmost importance in speeding the development and revitalization of our hard-pressed areas.

This is a provision which would give tax relief to those manufacturers in the eligible areas who are willing to invest their own capital in expanding their facilities.

It would allow them to amortize the cost of expanding and constructing new facilities over a period of 5 years rather than over the useful life of the building, which may run to 40 or 50 years.

This rapid tax amortization provision is similar to the incentive now available to defense industries.

I have talked with a number of industrial leaders from my district and all of them have told me that of all the suggested methods of help, tax incentives would be the most effective.

Such a provision, it seems to me, would greatly encourage the investment of private capital. It would give the manufacturers greater flexibility. I believe we would get much quicker results and, in the long run, we would be more than compensated by steadily increasing tax revenues. Therefore, I plan to press for the inclusion of this provision in the final bill as hard as I can.

These, then, are the main provisions, and they are substantially greater than those provided by the administration bill.

At the same time, three quarters of the money that would be expended under the provisions of my bill are in the form of loans. These loans would be fully repaid over a period of 30 years with interest.

In other words, the bill is not a dole; it is an investment in the future.

It would go a long way toward helping these communities to help themselves to a brighter future in an economy that is constantly expanding with a population that is increasing by nearly 3 million a year.

QUESTIONS ABOUT THE BILL

This brings me to some of the fears and questions that have been raised concerning this legislation.

Some people have expressed a belief that aid to one community will only hurt some other community.

I think this is a baseless fear. It seems to me that we should be worrying whether these people who have been capriciously thrown out of work will be able to fully share in the expanding opportunities that lie ahead.

They have worked hard, and so have the local and State governments, to adapt to changing economic conditions. Area redevelopment legislation would help them realize their full potential, which might otherwise go to waste.

Second, it has also been said that many of our local communities which would be eligible for help are not now prepared to participate in the program under the formula stipulating that the State and local governments must contribute a share to any loan that is made.

This is, of course, no reason to oppose the legislation. Certainly our Connecticut communities are just as well prepared to take advantage of the program as the communities in any other State. What we should be doing is making plans to get prepared, rather than spending our time fretting about the difficulty.

Third, there is a suspicion that Connecticut might not get as much aid as the other States, so that any Federal assistance would work to our disadvantage.

I covered this point earlier with the fact that 14 of our 18 labor market areas would probably be eligible for assistance by July. You couldn't ask for much more. It is obvious that Connecticut would be as eligible for as much aid for urban industrial development as any other Northern State, and far more than any Southern State.

Finally we come to an argument that apparently has caused some confusion here in Connecticut.

ANTIPIRACY PROVISION

This has to do with the so-called antipirating provision of the legislation. Very simply, it is argued that if we pass this bill, other States, particularly those in the South, will use the Federal assistance to steal industry away from Connecticut.

I must say here that this is a completely irrelevant concern.

In the first place, all the proposed area redevelopment bills, including my own, contain antipirating provisions which would prohibit the use of Federal funds to assist industries in relocating when such assistance would result in a detriment to the original area by increasing unemployment.

Now there have been some semantic arguments over exactly how this provision should be worded. Many of the proponents of the bill are worried that some of the amendments that have been proposed would invite a lawsuit each and every time someone makes an application for a loan. If this happened, the whole program might be wrecked.

But the worry that the bill would allow other States to steal industry from Connecticut is groundless on the face of it.

Of course, there are going to be a certain number of transfers of industry from one State to another. There always have been in this competitive world of ours, and there probably always will be.

But the allocation of funds under this area redevelopment program is not going to encourage industries to leave New England or Connecticut one bit. On the contrary, the bill can only work to our advantage.

In the first place, our State has more to offer than any other I can think of. We have progressive and friendly State and local governments. We have many cities with excellent facilities, many beautiful communities to live in, and an abundance of every kind of skilled labor. For these reasons alone, there is every reason to face the future with confidence.

The provisions of the area redevelopment bill would only enhance the prospects of a bright future for us in Connecticut.

The whole purpose of the bill is to help us restore and revitalize industrial and public facilities in certain handicapped communities, to make them once more attractive places in which to live and work.

By so doing, we will encourage, not discourage, the location of new industries in Connecticut. By improving our community conditions, the bill would also provide an incentive for our existing industries to stay and expand their operations.

Looking at it from another angle, I mentioned before that $100 million would be available for the development of urban areas. Another $100 million would be available for the development of rural areas.

Now almost all the eligible urban areas are located in the Northern States, and I have already pointed out that Connecticut would participate as fully as any other Northern State. Only a very few eligible urban areas are located in the Southern States.

On the other hand, most of the eligible rural areas are located in the South, with only a few in the North. So that the South, of course, would receive most of the $100 million for rural development, to enable them to form farm cooperatives, or develop timber resources, or limestone quarries, or what have you.

The important fact, however, is that almost all of the funds for industrial development would go to the Northern States.

With this being so, how can anyone say that the area redevelopment program would help the South in an effort to steal industry away from Connecticut? It just isn't so.

I hope this clears up some of the misunderstandings and questions that may have arisen over area redevelopment.

The legislation is perfectly sound in its conception, generous and sympathetic in its motivation, and fair in its application.

Last year the legislation received broad bipartisan support in Congress and from our Connecticut Representatives. It would be deeply unfortunate if such support should be lost through political division.

Connecticut has too much to gain from this legislation to let this happen.

Following is a list of the Connecticut cities and towns which are, or may be, eligible for area redevelopment assistance, and three tables showing the unemployment in the major labor market areas:

The labor market areas now eligible, according to the Connecticut Development Commission, are: Ansonia, Bridgeport, Bristol, Danielson, Meriden, New Britain, Norwich, and Torrington.

These areas include the following surrounding communities:

Shelton, Derby, Oxford, and Seymour in the Ansonia area; Easton, Fairfield, Monroe, Stratford, and Trumbull in the Bridgeport area; Plymouth in the Bristol area; Brooklyn, Canterbury, Eastford, Killingly, Plainfield, Pomfret, Putnam, Sterling, Thompson, and Woodstock in the Danielson area; Southington and Wallingford in the Meriden area; Berlin and Plainville in the New Britain area; Colchester, Franklin, Griswold, Lisbon, Preston, Sprague, and Voluntown in the Norwich area; and Burlington, Hartland, Barkamsted, Canaan, Colebrook, Cornwall, Goshen, Harwinton, Litchfield, Morris, New Hartford, Norfolk, North Canaan, Salisbury, Sharon, and Winchester in the Torrington area.

The following areas will have become eligible by next July if unemployment does not improve: Danbury, Middletown, New Haven, Thompsonville, Waterbury, and Willimantic.

These areas include the following surrounding communities:

Bethel, Brookfield, New Fairfield, Newtown, Redding, Ridgefield, Sherman, Bridgewater, Kent, New Milford, Roxbury, Warren, and Washington in the Danbury area; Chester, Clinton, Cromwell, Deep River, Durham, East Haddam, East Hampton, Essex, Haddam, Killingworth, Middlefield, Old Saybrook, Portland, Westbrook, and Marlborough in the Middletown area.

Bethany, Branford, East Haven, Guilford, Hamden, Madison, North Branford, North Haven, Orange, West Haven and Woodbridge in the New Haven area; East Windsor, Enfield, Suffield, Windsor Locks, Ellington, Somers, Stafford, Tolland, Union, Vernon, and Willington in the Thompsonville area; Bethlehem, Thomaston, Watertown, Woodbury, Beacon Falls, Chesire, Middlebury, Naugatuck, Prospect, Southbury and Wolcott, in the Waterbury area; and Lebanon, Andover, Columbia, Coventry, Hebron, Mansfield, Ashford, Chaplin, Hampton, Scotland, and Windham in the Willimantic area.

Congratulations to the Allentown Morning Call, Allentown, Pa.

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 20, 1959

Mr. WALTER. Mr. Speaker, at a time, in our history and the affairs of the world when it was never more important that the American people be well informed, it is regrettable that the number of daily newspapers in the United States has been declining.

As the result of high costs of production and newsprint, as well as competition for the advertisers' dollar from other media of communication, many newspapers have ceased publication or been merged with others, in spite of the country's increasing population.

In view of this situation, Mr. Speaker, it is particularly heartening to note a landmark in the history of the Morning Call and Evening Chronicle, of Allentown, Pa.

The Call-Chronicle newspapers have just passed a mark of 100,000 in their daily net paid circulation—a position achieved by less than 10 percent of all daily newspapers in the Nation, either individually or in combination.

This puts Allentown with Philadelphia, Pittsburgh, and Harrisburg as the only communities in Pennsylvania, with newspapers that reach more than 100,000 homes.

The paper is subscribed to by thousands in the Lehigh Valley. We have many common interests in the welfare of the entire Lehigh Valley and I am happy to congratulate the management of the Call-Chronicle upon its achievement.

May it continue to prosper and serve the people of this area for many long years to come.

Speech by Congressman Carl Albert, Democratic Whip, Third District, Oklahoma, at Grover Cleveland Democratic Club, Bethlehem, Pa., March 17, 1959

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 20, 1959

Mr. McCORMACK. Mr. Speaker, on the evening of March 17, 1959, at Bethlehem, Pa., in the district represented by our outstanding and distinguished colleague from Pennsylvania [Mr. WALTER], the Grover Cleveland Democratic Club held a banquet at which the distinguished Democratic whip, the gentleman from Oklahoma, made a truly great address.

In my extension of remarks I include the address made by our friend, the gentleman from Oklahoma [Mr. ALBERT].

SPEECH BY CONGRESSMAN CARL ALBERT, DEMOCRATIC WHIP, THIRD DISTRICT, OKLAHOMA, AT GROVER CLEVELAND DEMOCRATIC CLUB, BETHLEHEM, PA., MARCH 17, 1959

Ladies and gentlemen, I am honored to be here tonight.

I am honored to be a part of this meeting in a great Democratic community in a great Democratic State.

I am happy because we are meeting on the feast day of St. Patrick, the great patron saint of Ireland. No segment of our population has contributed more to the spirit and vitality and life of our country, or more to the leadership of the Democratic Party, than the sons of St. Patrick.

I am happy to be here, too, because this is a great club honoring the name of Grover Cleveland, and meeting on the eve of his birthday.

I am happy to be here because this is the congressional district of my distinguished colleague, your great Congressman FRANCIS WALTER.

You people of Pennsylvania's 15th District know as well as his colleagues in the Congress the quality of this man who has spent 26 years in your service.

You have recognized the mettle of a man who spotlighted the Communist Party as an international conspiracy designed to overthrow democratic government.

You have recognized the compassion of a man who fought for quota-free entrance of alien wives, husbands, and children of United States citizens.

You know the intellectual stature of a man who fused into a single statute the 200 existing laws dealing with immigration.

You know the tolerance of a man whose determination broke down the final barriers of discrimination against admission of Asiatics to the United States.

As chairman of the great Committee on Un-American Activities, and ranking Democrat of the powerful Committee on the Judiciary, your Congressman is one of the great leaders in the House of Representatives.

Author of the Administrative Procedures Act of 1946, the Internal Security Act of 1950, and the Immigration and Nationality Act of 1952, he has given this country some of its most monumental landmarks of statutory law.

Big enough and strong enough to hold any position in the Congress, or in any other branch of the Government, your Congressman is not only an outstanding legislator, he is one of the great Americans of our time.

We meet on the eve of the birthday of one of our greatest Presidents, Grover Cleveland, author of modern American democracy. Cleveland applied Jeffersonian principles to new problems. It was he who bridged the gap between the agrarian democracy of Jefferson and Jackson and the industrial democracy of Wilson, Roosevelt, and Truman. His policies are current policies. His influence transcends his time and is manifest in the dominant position of the Democratic Party in the statecraft of this country today.

The success of a political party in the final analysis depends upon the extent to which it serves the interests of the people. That means you and you and you and your families.

The 86th Congress has the largest Democratic majority of any Congress in more than 20 years because the 85th Congress wrote the finest legislative record for you and you and you than any Congress in more than 20 years.

The 85th Congress has been heralded editorially across the country as a do-something Congress, and indeed it was.

It passed the first Department of Defense reorganization bill in more than 10 years.

It admitted a new State to the Union for the first time in more than 40 years.

It passed the first civil rights bill since reconstruction days.

It created a new science agency and a new space agency.

It passed the first general aid-to-education bill in all history.

It passed a new social security bill, a new atomic energy bill, a new public works bill.

It appropriated more money for national defense than any Congress since the Korean war and more money for public roads and highways than any Congress in history.

Another page in this record of constructive service for you and you and you is being written in the 86th Congress. The job is under way. The Hawaiian statehood bill has already passed. The 50th star will be added to Old Glory before the 49th star is an official part of the American flag.

A new and far-reaching airport bill may well become law by Easter.

A new gigantic omnibus housing bill will be sent to President Eisenhower in a matter of weeks if not, indeed, of days.

In the 86th Congress we are going to extend unemployment benefits.

We are going to enact an area redevelopment bill.

We are going to pass a labor reform bill and not a labor persecution bill such as Republican spokesmen are demanding.

We are going to pass a new school bill.

We are going to pass a new civil rights bill.

We are going to provide adequate funds for both the development and the defense of our country.

These things and many more we are going to do in the 86th Congress, and we are going to do them in spite of the Eisenhower administration and the Republican leadership in Congress.

Ladies and gentlemen, while the 86th Congress is thus engaged in a constructive program on behalf of the American people, what is the Republican Party offering? What is the Eisenhower administration doing? Let's look at the facts:

On the home front the administration has been blind to the problems of unemployment and to the growing crises which now exist in many depressed areas. With nearly 5 million unemployed, and with over 400,000 jobless workers facing the loss of their unemployment benefits by April 1, this administration has not even attempted to offer a solution.

The gray specter of hunger and deprivation persists in many States. What has President Eisenhower done about it? He vetoed the area redevelopment bill by a pocket veto in September 1958. Although the depression has deepened in many areas in almost every State in the Union, his administration has not offered one single recommendation to cope with this economic blight. In many communities people are out of work. Their needs are not satisfied by the administration's claim that we are on a curve of rising prosperity. These words smack of Hoover days. They remind us of the days when prosperity was just around the corner. They bespeak a callousness to the welfare of human beings, American men, women, and children, unbecoming to the role of any administration charged with the responsibility of governing this great Republic.

This lack of leadership pervades every facet of the Eisenhower administration. It enfeebles our military posture. It cripples our diplomatic leadership. When President Truman was in the White House he met the Communist threat with vigor and imagination on every front. Not one important new idea has been added in over 6 years of the Eisenhower administration.

Herein lies our great problem, our principal difficulty. Our trouble at home and abroad is not with our scientists or military leaders. Our trouble is at the summit. It is the lack of effective leadership at the top management level of the Government.

The experts tell us that defensewise we are in mortal danger. Yet defense since World War II has cost us over $441 billion. Our strength or lack of it cannot be measured in terms of dollars spent. The only realistic way to measure our defense is in terms of the power of our potential enemy. During the last 3 or 4 years warnings have been sounded by scientists, military men, and congressional investigating committees that we were falling behind Russia in the race for ballistic missiles. These warnings failed to jolt the White House or the Secretary of Defense into action.

In 1952 the combined military strength of the United States was greater than that of any other nation. Today we are winning the race for second place. On every single day during the Truman administration the lead time of American arms over Russia was maintained on the side of our own safety. Every day since the Eisenhower administration took over, Russia has been closing the gap.

The Roosevelt and Truman administrations developed the A bomb, the H bomb, the atomic cannon, the jetplane, sonar, radar, and proximity fuses. They developed guided missiles and atomic submarines. They made outstanding advances in landing craft and in aircraft carriers.

In 1952 the United States was the undisputed leader of the world in scientific knowledge. Today we find ourselves wearing an international dunce cap, while the rest of the world concludes that our shortsighted policies have almost given the game to the Kremlin.

The mounting crisis in Berlin reemphasizes the importance of our military preparedness or the lack of it. We agree with President Eisenhower that this country must stand firm and united in this crisis. We insist, however, that our firmness must be predicated upon strength and not upon weakness. In the Berlin exchanges, Khrushchev has displayed a cool confidence and singlemindedness which did not characterize his past dealings. It may be that he has mistaken debate for division. We make this unmistakably clear to Mr. Khrushchev that Democrats in Congress will cooperate with the President in resisting Kremlin ultimatums anywhere in the world. Where we differ from this administration is in our conviction that firmness should be supported by preparedness.

Our position is the position of the Senate Armed Services Committee which has recommended that we put more emphasis on the missile program and on increasing the strength of the Strategic Air Command by adding more B–52's, B–58's, and tanker planes. Our position is the position of our military leaders who believe that our Army, Navy, and Marine Corps should not be reduced. Our position is that an ounce of prevention is worth a pound of confidence to the Western Powers in their discussions on Berlin and in other clashes between the free world and the Kremlin.

Ladies and gentlemen, meeting in these perilous times as we do tonight on the eve of the birthday of a great American President of another day, we cannot help but be reminded that the age-old differences between the two major political parties still exist. The same differences still distinguish the followers of Jefferson on the one side and of Hamilton on the other. It is the never-ending struggle between action and reaction—between government devoted to the few and government dedicated to the many. Our party since its foundation has been the party which, in each succeeding generation, has adopted the principle of positive action on behalf of the American people. It was the Democratic Party in the time of Thomas Jefferson that gave us our Bill of Rights. The Hamiltonians opposed the Bill of Rights. Had it not been for Thomas Jefferson you would have had no habeas corpus or trial by jury. You would have had no right to freedom of speech or to freedom of the press. You would have had no right to petition Congress, no right to religious freedom.

It was the Democratic Party in the time of Andrew Jackson that rescued control of the Government from the banking interests and gave it back to the people to whom it belonged.

Let me say to the members of this great Grover Cleveland Democratic Club that it was the Democratic Party in the time of Grover Cleveland that gave us our first antitrust laws, the forerunners of the great social and economic reforms of the generations that were to follow.

It was the Democratic Party in the time of Woodrow Wilson that carried this country through World War I and with the League of Nations gave us the chance to avoid World War II.

It was the Democratic Party in the time of Roosevelt and Truman that brought this country out of the deepest, darkest depression in history, strong enough to win World War II. From soup lines to production lines, from relief rolls to pay rolls, from closed banks to guaranteed deposits, was the indisputable record of the Roosevelt-Truman administration.

This country needs Democrats in public office throughout the land. This country needs a Democratic President in 1960. This is the answer to Republican ineptitude. The Democratic Party and the Democratic Party alone can supply the leadership, the formula, and the program that will make this country strong and will keep this country free, prosperous, and at peace.

Address by Hon. Lyndon B. Johnson, of Texas, at Jefferson-Jackson Dinner, Hartford, Conn.

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, March 20, 1959

Mr. DODD. Mr. President, last night in Hartford, Conn., our great majority leader, LYNDON JOHNSON, was the principal speaker at the annual Jefferson-Jackson dinner of the Democratic Party in Connecticut. This was his first public appearance in New England, and the reception which he reecived there must have cheered him greatly because it was further evidence of the esteem in which he is held all over the country.

From the moment of the announcement that Senator JOHNSON would appear, the success of this important fundraising dinner was assured. The Democrats of Connecticut stood in line to pay $100 to hear LYNDON JOHNSON speak.

More than 1,600 persons crammed into every nook and cranny of the great ballroom of the Statler-Hilton and overflowed into all other dining rooms. This crowd surpassed by far any dinner attendance in the history of either party of Connecticut, and the hotel management announced that it was the greatest turnout of any kind in its history.

From the moment the Senator from Texas entered the banquet hall, the reception accorded him was tumultuous. Hundreds crowded close to the head table to shake his hand and wish him well.

Connecticut newspapers report this morning that Senator JOHNSON captivated with his warm personality the largest political gathering of this kind ever assembled in Connecticut, and that he then moved and inspired it with a masterful address. His speech was perhaps the most eloquent statement of principle and policy that I have heard. In it he sets forth, in words which will not be forgotten, the goals of our country and our party.

I ask unanimous consent that Senator JOHNSON'S compelling address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WAY OF STRENGTH

(Address by Senate Democratic Leader LYNDON B. JOHNSON at Jefferson-Jackson Dinner, Hartford, Conn., March 19, 1959)

Governor Ribicoff, Senator Dodd, Chairman Bailey, fellow Democrats, Thomas Jefferson was a partisan. So was Andy Jackson. The world barely remembers what they were against. The world will never forget what they were for.

This lesson is eternal. History measures men by what they support, not merely by what they oppose. It is by this standard that we should measure what we do—and what we say.

RESPONSIBLE PARTISANSHIP

This is a partisan gathering. I come with a partisan title. It has always been my be-

lief—and my guide—that the first rule of responsible partisanship is responsible citizenship. By this rule the Democratic Party has served and by this rule we now shall abide.

No one man speaks for the Democratic Party.

One man does speak for the United States.

In those concerns of war and peace—addressed to other nations—his voice is our voice and the voice of all Americans.

We want neither our friends to misunderstand this nor our enemies to misinterpret this.

For those vital meetings under way now, our President has our support as Democrats, Mr. Macmillan has our warm welcome as Americans, and the statesmen of the free world have our prayers as free men.

FREEDOM'S DEADLINES

Tonight the world is little concerned with Democratic headlines.

The world is much concerned with freedom's deadlines.

It is to this concern we speak, for there is before us all a fundamental decision of our times:

Shall free men live their lives under deadlines?

This is not complex or complicated.

The choice it presents is simple.

Which do we value most?

Western freedom or Khrushchev peace?

THE ROAD TO BUDAPEST

Like all tyrants before him, Khrushchev offers the peace of darkness. We know that to accept it we would have to put out the candles men have lighted through centuries past—and stumble blindly down whatever road Khrushchev might lead.

That road would not be the road to Berlin.

It would be the road to Budapest.

This is not a road down which free men of the free alliance will ever turn. I say it is not a road down which we are forced to turn.

THE WAY OF STRENGTH

There is another way—a way more worthy of the West.

That is the way of strength. I speak not alone of the strength of arms but, in a greater sense, of the strength of freedom unbound.

Men speak of lost initiative, of new approaches, of flexibility. These would seem to be the consuming anxieties of Western freedom today. I do not believe this needs to be—if we face squarely the basic fundamentals.

Freedom has no flexibility when it has no strength.

Give freedom strength and it will make again the approach no tyranny has ever successfully resisted.

Give freedom strength and it will have again the initiative that has remade and reshaped the world.

The point is this: When we add strength to our freedom, most of the anxieties which consume us disappear.

This is the way the West must choose. This is the way we must walk once more—proudly and uprightly—with confidence in ourselves and faith in our cause.

BERLIN: OUR IMMEDIATE CONCERN

Our immediate concern is Berlin. None can know and none can presume to say what will be the ultimate consequences of the trial we face. I will say what we have learned from the expert witnesses who have testified before our Senate Preparedness Subcommittee.

Our best military minds believe we now have in the Armed Forces of the United States the strength that will be necessary to meet any situation in Berlin.

The Commander of NATO wants more of our strength deployed to his command. If he wants such strength, I believe it is the will of the American people that he should have it.

It is a fundamental beyond debate that freedom is going to remain in Berlin.

Finally, we are going to maintain the men, equipment, supplies, and, above all, the will to support the foreign policy of the United States.

These points relate to the present. They deal with Berlin.

But I would emphasize the point that is often overlooked.

BEYOND BERLIN

Free men—if they are to respect their freedom—must think and plan beyond Berlin. If we do not, the drama being enacted now will become the continuing serial of the world stage.

We have now the capacity for one Berlin. But the Communist nations have the capacity to impose upon us a dozen Berlins—or more.

We can respond, and will respond, with strength at Berlin. As we do so, we leave the position of freedom at its other outposts exposed and freedom stands at those points not by the strength of its defenders but the grace of its foes.

Neither freedom, nor free men, can long live in such a world. There are limits to the advantages prudent men can afford to concede to their enemies, and there are limits to the concessions proud men will ever make against their freedom.

I do not believe that the people of the West, and most certainly the people of America, are prepared to concede first place in strength to the Communist powers.

I will say to the Communists, and I will say to our own allies, that whatever the race, Americans reject second place as our goal.

Most assuredly in the building of missiles, and the maintaining of strength, we reject the conception that for a decade or for a day second place can be the place of freedom.

FIRST PLACE IS OUR GOAL

The fundamental truth, beyond Berlin, is that the sights of America and the sights of the free world must be raised.

What is first in our hearts must be first in our policy.

Freedom is first in our hearts. The strength of freedom must be first in our policy always.

This raises a basic point. The strength of tyranny is always, and only, the strength of arms. With freedom this is not so, for freedom draws on many sources for its strength. This we must never forget.

We and our allies are partisans of freedom. As such we must remember that history will measure us by what we support, not merely by what we oppose.

We talk now at length of what we oppose. At home we are against recession and depression, against inflation, against unbalanced budgets, and unsound dollars. Abroad, all members of the free alliance are against war and aggression, and beyond question against retreat and surrender.

Of these things there has never been doubt and there is none now. Of all issues we might choose to debate, these are the least rewarding, for on these there are no differences among us, and our debates in no way delineate what we are for.

The statesmanship of the times is not the reaffirming of what needs no affirmation. The leadership of the West is not to extricate ourselves from the impossible but to involve ourselves in the probable.

NEW DIMENSIONS OF FREEDOM

I say let us willingly and enthusiastically involve ourselves in the probability that freedom is the way the world will choose if free men give to freedom the fullness of its meaning.

We have united against aggression.

Let us unite now as well against poverty, against illiteracy, against disease, against injustice. Let us unite to trade, unite to educate, unite to offer opportunity. Let us add new dimensions of freedom by adding new dimensions to our treaties and make them into treaties of prosperity and compassion and human dignity.

It is with works like this—as well as with armed strength—that we should give our answer to Mr. Khrushchev.

Yes, this is new. This is a new reach. I would call to mind, though, a brief stanza which Dr. Frederick Brown Harris, the Chaplain of the Senate, recently quoted:

"Some men die by shrapnel,
Some come down in flames;
But most men perish inch by inch
Who play at little games."

Free men must not in these times play at Mr. Khrushchev's little games, for if we do we shall perish inch by inch.

The outer limits of human freedom remain unexplored. The challenge there awaits. For our times—beyond Berlin—we must have a sense of adventure to carry us across the threshold of glory—not to leave us standing, wondering if this is the doorstep of bankruptcy.

I say free men must act because they want to act—not merely because they are forced to act. This is the creed by which the West must now live.

WHY SAY THESE THINGS?

Why do I say these things at a party meeting now? There are two reasons. I have tried, first, to speak as an American, not as partisan, because that is the only context in which we should speak tonight.

Secondly, I remember 20 years ago—in 1940—a great American President called me to the White House. He said, "LYNDON, I have accepted an engagement for you—to keynote the convention of Young Democrats at Louisville, Ky. What I want you to tell those young people is this: There will be no danger to freedom in America if young Americans are as fanatical about freedom as Hitler's young Germans are about nazism."

That I believe remains true today. We face a resolute and zealous foe. We and all free men must match that resoluteness and that zeal with a sense of adventure into the new dimensions of freedom.

In these things, there is no party and no partisan concern.

The line we defend is not the line across the heart of Berlin. It is the line across the heart of free men—the eternal line between freedom and serfdom, honor and shame. As we will not retreat a literal inch in Berlin, so we will not retreat a figurative inch from the line across our hearts.

LET US MOBILIZE FOR PEACE

There is no thought of retreat in the minds of free men and no room for retreat in their hearts. We know that and we want the world to know it. But the world must know something more.

Standing against retreat is not the only stance of freedom.

Freedom is more than a fortress. Freedom is the fountainhead of peace—and free men must stand willing and able to carry forward the cause of honorable peace.

This is our cause and this is our calling.

Let the free nations of the world, in this hour of challenge, respond as only they can respond. Let us now mobilize our resources and our strengths and our will in a grand mobilization for peace. Peace is the work of all. Let us make room in this work for all our people—every veteran, every parent, every man, every woman, every child.

That is the real statesmanship of the West in these times.

To a waiting and watching and wondering world, let us—and all free nations—offer the

leadership only we can offer by uniting our forces in a great adventure for peace.

Mobilize for peace—mobilize all that we have, our talents, our minds, our spirit as well as our force—and this generation will be honored in history as responsible partisans of freedom.

DAV Services in New Jersey

EXTENSION OF REMARKS
OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 20, 1959

Mr. GALLAGHER. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of New Jersey citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations which have State departments and local chapters in New Jersey is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer N. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization of full-time trained national service officers—138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration and in its central office in Washington, D.C., They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV national service officers in New Jersey are Mr. John W. Bill, Mr. Alexander M. Zbylut, and Mr. George Gregor, located at the VA regional office, 20 Washington Place, Newark. The department commander is Mr. David W. Smith, 63 Circle Place, Red Bank, and the department adjutant is Mr. William J. Dodd, War Memorial Building, Trenton. The VA hospitals coming under the jurisdiction of the national service office are a 950-bed general medical hospital at East Orange and a 2,009-bed neuropsychiatric hospital at Lyons.

Mr. James F. Patten, 1075 Maurice Avenue, Rahway, is NEC from the second district and Mr. Joseph Burke, 38 East 34th Street, Bayonne, is a past national commander.

During the last fiscal year, the VA paid out $141,671,000 for its veteran program in New Jersey, including disability compensation to its 76,150 service disabled veterans. These Federal expenditures in New Jersey furnish substantial purchasing power in all communities.

Only about 7 percent—4,919—are members of the 67 DAV chapters in New Jersey.

This 7 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of New Jersey veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimated)	118,057
Claims folders reviewed	98,381
Appearances before rating boards	45,752
Compensation increases obtained	6,538
Service connections obtained	2,513
Nonservice pensions	1,252
Death benefits obtained	276
Total monetary benefits obtained	$3,773,424.18

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for New Jersey veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms, and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civic service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 3 percent—0.036—of such discontinuances and reductions have probably occurred as to disabled veterans in New Jersey, with a consequent loss of about $840,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge

every disabled veteran in New Jersey to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54.00 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 428 of whom, during the last 8 years, were New Jersey residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member.

As a DAV life member, I am pleased to enroll as one of the benefactors on the memorial honor roll of the DAV Service Foundation, with the realization that only the interest earnings therefrom will be available for appropriation to the DAV for its use in continuing to maintain its national service officer setup in my State of New Jersey.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in New Jersey by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

Retirement of Federal Civil Service Employees

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 20, 1959

Mr. HOLTZMAN. Mr. Speaker, I am introducing today in the House of Representatives a bill which will provide for retirement for Federal civil service employees after 30 years of service, regardless of age.

Much consideration has been given during the past few years to a liberalization of retirement benefits. However, at the present time an employee must have reached the age of 60 before he can qualify for a full retirement annuity after 30 years of service.

In checking into the situation we find that many employees started their Government careers immediately after completion of their schooling, and would thus actually be eligible for retirement after 30 years' service before they reach the age of 60. Of course, under the present law, they can retire between the ages of 55 and 60 after 30 years' service, but on a reduced annuity. In this day and age, with increased living costs, it is neither practical nor possible to attempt to live comfortably and securely on such an annuity.

In addition, statistics show that the percentage of older citizens is steadily growing, and that within a period of 20 years we will have over 20 million Americans over the age of 65. Another factor to be given serious attention when studying this problem is the increasing labor force in this country. With more young people and women becoming available on the labor market, our industries cannot absorb all these potential workers without the necessity for some adjustments. We hear many suggestions urging early retirement, and our older workers are encouraged to retire from private industry as quickly as possible to make way for the younger employees. The Federal Government could take the lead in setting such an example by permitting retirement of its employees after 30 years' service.

May I urge my colleagues to give this matter serious consideration, with a view toward enacting such legislation in the very near future.

That All May Learn To Survive and Stay Free—Junior Colleges: One Answer to Higher Education for All

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Friday, March 20, 1959

Mr. DIXON. Mr. Speaker, the American Association of Junior Colleges held its 39th annual convention last week in Long Beach, Calif. Representatives from colleges all over the Nation were present at this convention to discuss how to realize the ideal of providing higher education for all and the best methods for accomplishing this.

Junior colleges, registering with the office of education, have grown from 10 in 1920 to 667 today. One out of every four college students is enrolled in a junior college, with the total junior college student body at over a million students.

Considering the practical, economical and varied education the junior college is able to provide, it is easy to understand the reason for this unprecedented growth and why this type of college will be one of our major solutions to providing higher education for the flood of students which will soon converge upon the colleges.

The dream of the ages has been to establish a society of cultural achievement and economic abundance with individual liberty. Our Western civilization has nearly succeeded in converting this

dream into a reality, but only through a series of bold revolutions and hard-won victories over ignorance and autocracy.

WESTERN CIVILIZATION IS IN PERIL

Now Western civilization, so worth saving, faces by far its most perilous challenge—that of communism. We have been able to withstand the Dunkirks and Pearl Harbors of the past, but whether we can withstand disciplined men in a far superior geopolitical position who are armed with the best tools and weapons tyrants have had in the history of the world, will depend on our ability to learn to survive.

In the national monument area near Vernal, Utah, archeologists dig up the fossil remains of the dinosaur. His tragic story is that he was unable to adjust to a new set of conditions and a new environment. He did not learn to survive. He became extinct in spite of an advantage he had in the structure of his central nervous system. The curator at the monument told me years ago that the dinosaur had a brain in his cranium and one at the base of his spinal column, so when an idea missed his first brain he had a saving afterthought.

Many pessimists say that Western civilization, like the dinosaur, is in the Mesozoic Saurian era of man and that centuries from now whatever is left of civilization may be picking over our remains and pondering our downfall.

This is not hard to imagine in light of Communist accomplishments to date and Khrushchev's dramatic threat to the West that, "We will bury you." Since this has been the cry of Communist doctrine for more than a century, it would be a grave error not to take this threat to Western civilization seriously.

THE IDEOLOGICAL CHALLENGE

The lethargy and indifference on the part of many leads me to think there is altogether too much truth in the challenge that one of the Red leaders threw at us, when he said:

> In Christianity you of the Western World have a far better and nobler philosophy than we have in atheistic communism, but we will prevail nonetheless for wherever there is a Communist there is a dedicated ambassador of communism. Western civilization lacks both this vitality and dedication.

With this missionary-like zeal, backed by military force, the Communists have made great strides.

Dr. Daryl Chase, president of Utah State University, recently asked an alumni group:

> What will historians record as the most important world development in the next 50 years? Will it be man's mastering the weather or perhaps learning to reap prodigious quantities of food from the sea?
>
> Neither—

Was his answer.

> It will be whether freemen continue to be free. In only 40 years Communists have taken control of 1 billion of the earth's people. There has never been anything like it.

THE MILITARY CHALLENGE

While Western civilization is in peril, I do not believe we are in imminent danger of a military attack. Our power of mass retaliation is still far too great for that. But we cannot shut our eyes to the Russian military crash program designed to surpass the United States in atomic power or to the fact that they have surpassed us in the thrusting power of their jet engines and are apparently ahead of us in intercontinental ballistic missiles and intermediate range ballistic missiles.

THE CHALLENGE OF ECONOMIC WARFARE

I believe, too, that the Reds still think they can bring us to our knees through other means, such as destroying capitalism and free enterprise through an economic war.

I observed their efforts in this regard first hand a month ago when I went to the Far East as a representative of the House Agriculture Committee at a conference of U.S. agricultural attachés at New Delhi, India.

Most Far East countries secured their independence at one sudden blow within the last 15 years without the century and a half of preparation that America had before we obtained independence. Though they fear communism, they detest even more the colonial nations which kept them in bondage and suspect the motives of Western countries. They have not the widespread literacy, education, technical training, and the capital to step up their productivity and living standards, but their people are demanding these high living standards. So they are restive and the countries are in turmoil.

The Communists exploit this great unrest by promising pie in the sky if the people will accept their political belief. I saw evidence of this wherever I went.

I saw countries in the Soviet orbit dumping products into the Far East markets at prices much lower than we can produce them in the United States just to strangle our trade—determined to capture our markets at any cost.

I saw Russians trading arms to eastern countries. These arms are followed by thousands of Russian technicians who in turn believe in the Soviet doctrine as strongly as men of the Western World believe in their way of life.

I saw evidence that Russia had provided India with 500 trained steel technicians, when at the same time we had promised 700 but could furnish only 100.

I saw American private industry virtually at a standstill in the Orient, whereas it used to be expanding. Soviets will step in where our firms fear to tread. They will risk heavy economic loss for strategic political gains, whereas our private industry cannot take such losses. If the Reds are selling at a loss, all they need do is to make their people, virtually in servitude already, work longer hours, accept less food and fewer of the necessities of life. They can cut the costs of production in ways that our private industry could not and would not do.

I saw Red China playing with Hong Kong as a cat toys with a mouse. Red China is the source of nearly all Hong Kong wood for fuel. China cut off the source completely without warning. In desperation Hong Kong business people ordered shipments of wood from Borneo and other places. Upon the arrival of this wood, the Red Chinese flooded the market at prices so low that it bankrupted many of the Hong Kong merchants who had come to the rescue of their people.

I saw Chinese textile workers slaving 12 hours a day, 7 days a week, every day of the year except two holidays for Chinese new year's, in textile mills every bit as modern and mechanized as the best we have in America and for a smaller weekly wage than we pay for a single day. At the same time our labor leaders are calling for a 35-hour week and vastly higher minimum wage laws.

EDUCATIONAL CHALLENGE

We are far ahead of Russia educationally. However, her program is moving ahead at a faster rate than ours, especially with respect to producing exactly the sort of trained men her rulers want for achieving scientific and technological supremacy.

Rickover says our educational perils are as follows:

First. Russia has virtually wiped out illiteracy in 20 years. Twenty years ago her educational system was in ruins and at the time of the revolution 70 percent of the country was illiterate.

Second. Russia puts a larger percentage of her smaller income into education than does America. We spend 3.5 percent, while Russia spends 6 percent.

Third. The European high school graduate has learned more fundamentals than most of our college graduates. An hour at school means an hour of uninterrupted serious work; here there are assemblies, errands, play, short school year, and the teacher spends too much time helping dullards and neglecting the capable.

Fourth. Russia has made the rewards of scholarship so attractive that her children are working their heads off to keep up with an extraordinary tough curriculum—often at the cost of their health.

Fifth. Russia has few substandard teachers. Their standards are high. Their load is heavy. Their honors and pay are high. In America the beginning salary of the college teacher is the same as a factory worker. In Russia it is eight times as great. In America a full college professor averages twice as much as the beginning teacher. In Russia a successful professor can be paid 15 times as much as a beginner.

Sixth. In America the major share of research has gone into making life pleasant and comfortable and increasing the material well-being of the individual. In Russia research goes into physics, chemistry, astronomy, and missiles. Chemists are diverted from research to cure diseases to studies which can improve metals.

Seventh. In America we discourage young men from scholarly pursuits by calling scholars "egg heads, "long hairs," and "little men with the beards." In Russia scholars are the best paid and most revered men in the community.

I could go on at great length on the Communist challenge, pointing out for instance the fact that in the 40 years since the revolution Russian production

has doubled 22 times, but I am sure the facts presented prove that the peril to Western civilization is real.

WE CAN LEARN TO SURVIVE AND STAY FREE

As Shakespeare says, "We are living, we are walking in an age of awful time. But to be living is sublime." In facing the Communist threat we must not lose our heads. We must learn to live with the danger and overcome it.

Our situation calls to my mind a conversation between two Negroes in a Nashville, Tenn., barbershop during World War II when I was teaching at Peabody College. One of them said, "We sho am in a crisis." The other replied, "This ain't no crisis, it's only a crissis."

"Well, what's the difference?" asked the first.

"Here's the difference," said the second. "A crisis is when yo' all loses yo' heads—a crissis is when yo' all puts yo' heads togedder."

In the last great war our armed services had to teach men how to live in new circumstances and under extreme conditions. Aviators had to be taught how to live if shot down at sea. Soldiers had to be taught survival techniques in the jungle, in Alaska and in the Arctic.

We can take to heart some of the survival instructions given to our boys in desperate situations in World War II. I recently gleaned a few cryptic statements from these little survival pamphlets:

First. Read this booklet—it may save your life.

Second. Size up the situation and plan your course of action. Avoid panic and use your head.

Third. If they can do it, you can too.

Fourth. Take inventory yourself, don't let George do it. It is you who may be cold and hungry.

They learned to survive, and I have the unshaken conviction that Western civilization can learn to survive if we are willing to pay the price. The desperation of the Japanese threat in World War II forced industrial and military miracles; the Russian threat might well stimulate miracles, too.

SLOWNESS OF DEMOCRATIC ACTION

In sizing up the situation and planning our course of action in America we face the anomaly where the slowness of democratic action is possibly a hazard to freedom in time of stress and crisis. Yet, at the same time, this slowness is a protection to our freedom.

One of our great historians has said:

A totalitarian state is like a full-rigged ship which moves with great speed majestically out of the harbor, but if it hits a rock it sinks. Democracy is like a raft. It doesn't move so fast, but neither does it sink. But—darn it—your feet are always wet.

For instance, America's public schools are in the hands of local school boards where the State has slight control and Federal help is mistrusted. When I was in the schools, there were some States that had from 1,000 to 3,000 school districts and almost as many school board members as teachers. It is almost impossible to get through these thousands of boards and administrators anything like a national policy to meet an emergency.

Admiral Rickover says that Russia does not have this problem of ponderous slow-moving action.

One man can institute a crash program for his government—

He said—

and force the immediate support of the schools, the public and the scientists. The cost in time and money of congressional government is eliminated * * *. Authoritarian control and the low standard of living make the running of the civilian sector simple and cheap. There is no need for attractive stores, service industries, advertising—no chain of service stations, garages, auto dealers—only a few cars for the elite.

Such a government presents a real challenge to a free people who nurture the individual not alone for the contribution he may make to the national welfare but for the realization of his own potentialities and desires as well.

Since a free society cannot commandeer action, our fate rests on how well we can educate the people to act of their own accord. All groups must work together in informing citizens of the gravity of the Communist threat to Western civilization, in inspiring them with a sense of common purpose and in influencing them to subordinate individual desires temporarily to the welfare of the Nation.

CULT OF EASINESS

It has been frequently stated in recent months that some of our most discerning critics are uneasy about current aspirations and values of Americans.

The president of Notre Dame has said:

I think we have a kind of cult of easiness today. There is an easy way to cook a meal; there is an easy way to drive a car; there is an easy way to get a vacation; there is an easy way to pay your bills; there is an easy way to save your soul.

Recently the editor of Life magazine stated:

Leaders in the United States are worried about Americans—undereducated, overentertained, tossing uneasily in sophisticated vulgarity.

He infers that we have forms of a free society but maybe the spirit is dying and wonders if a nation that consumes more drink and tranquilizers than any nation in history and a nation glued to television is not simply at a disadvantage before the iron pioneers of the new collective society.

The Reds cannot stay glued to radio or television, because they must work 12 hours a day. Even if they could stay glued to these instruments, they would have blasted in their ears over the radio and television the importance of the 7-year program, winning the war for scientific and economic supremacy and crushing capitalism.

How does this cult of easiness handicap the schools? Principal Edwin Anderson of the Prosser, Washington, High School recently made a survey after a lot of parents had complained because of the failing marks their children were getting.

His findings—an educational mixture too rich with gasoline. Of seniors with A and B grades, only 11 percent owned cars or had the use of them regularly. Among C grade seniors 33 percent had cars, and 62 percent of the C-minus to failing seniors were motorized. Cars owned by juniors with A and B grades, none; with C grades, 31 percent; and with C-minus to failing grades, 39 percent. The University of Virginia faculty is grounding 77 percent of last year's car-owning students.

This cult of easiness, combined with the small group consciousness of the segments of our economic society and the greedy habits of individuals and groups whose major question too frequently is what can they get out of our country instead of what can they give constitutes a serious threat. This must be altered if we are to survive and stay free.

BETTER TO LIGHT A CANDLE

Secretary Flemming of Health, Education, and Welfare tells about leaving their children with a babysitter. When they arrived home, the babysitter appeared disturbed because the power had gone off, leaving the place in darkness and frightening the smaller children.

One small boy came downstairs and screamed:

There is too much dark here.

The older children, however, scurried about looking for candles and flashlights. The old Chinese proverb says:

It is better to light a candle than to curse in the darkness.

The Psalmist said:

I will lift my eyes unto the hills from whence cometh my help. My help cometh from the Lord who made heaven and earth.

The Lord has not failed this Nation. Neither will he ever fail it if we look to him. And how does the Lord give us help? It is through Christian education and Christian living which made men free and will keep men free. I have unbounded faith that the candle of Christion education definitely will dispel the gloom caused by the perils which threaten our free society.

For this reason in this crisis it is to the teachers, more than any group, that we look to light the candle of the Lord to help us learn to survive. It is in the classrooms, home, and churches that the future of the world is largely going to be determined.

This is why we must look our times and our school system searchingly in the face. This is why we must reexamine our objectives, our methods, and our facilities in light of the crucial role teachers are called upon to play.

Let us define specifically what the objectives of education in a democratic society should be. A statement which appeared in the May 1957 issue of the Junior College Journal defines it very beautifuly, I believe:

It is to teach the people to understand. It is to teach the people the real meaning of freedom, for it is a complex concept to master, not a simple one. It is to equip the people to govern themselves, for govern they must. It is to charge them, at least at the college level where the most significant learning must occur, with a meaningful acquaintance with the history of our civilization, with the nature of free government under

law, and with a general knowledge sufficiently broad to induce them to discharge intelligently their responsibilities as free citizens.

People ask me the question:

"Why should we pay taxes to support public education?"

The answer is, briefly, to develop an enlightened citizenry. American schools do not give this aim sufficient priority to make it stand out in letters of gold before the public.

I recall a reliable study in which more than 6,000 high school graduates were asked the question:

What does America mean to you?

The vast majority defined America in terms of its blessings and what they get from the country. Only a very few defined it in terms of what they should give in return. This notion of all getting and little giving to our country is so prevalent even among adults that it imperils our society. It all goes to show that every class period should in some way contribute to a deeper love for our country and a greater willingness to sacrifice to keep it free.

EQUAL EDUCATIONAL OPPORTUNITY

Fortunately for America our concept of equality of educational opportunity is a far cry from the program of European universities which are essentially concerned with preparing youth for the learned professions and whose student bodies are a highly select group. The selection begins toward the close of the elementary school at which time not more than 20 percent of any age group is privileged to attend the pre-university schools and thence to college and the selection is often influenced by the class system. The remaining 80 percent, except for a comparatively few, go to work and complete their full-time education at age 14.

As a result only one out of very five or six European boys and girls attends college, whereas one out of approximately every three American boys and girls attends college.

Dr. James Conant in his splendid book, "The American High School Today," points out the tremendous waste in undeveloped talent in Germany, France, Italy and Switzerland as a result of the selective character of their student population. This is a waste which America cannot afford. In fact we cannot afford the waste of our own present system in which fully one half of the top 25 percent of our high school graduates never attend college.

Equality has come to mean in America not only political equality but equality of educational opportunity as far as the individual can profit from such opportunity.

The story is told about Lincoln stopping on a crowded street to pick up a beetle that was on its back and struggling to get on its feet. When he was chided by his companion for causing such a scene on a crowded street, he said, "I wanted to give that beetle the same opportunity as all other beetles."

This great emancipator not only detested African slavery, but the far commoner bondage—that of ignorance. That same Abe Lincoln during the Civil War in 1862, when the Union defeats were pressing the North, signed the Morrill Act (which Buchanan had vetoed because the Nation could not afford more colleges and because the land grant colleges would compete with the liberal arts colleges) and founded the land grant college for the liberal and practical education of the industrial (as distinguished from the professional) classes.

Dr. John A. Widstoe, former president of Utah State University and the University of Utah, said:

For the first time in the history of the world the common man, to which class we all belong, was given access to the great heritage of learning of the ages, and for the first time an attempt was made to lift the common, necessary pursuits of life to a professional dignity.

The American junior community college program and philosophy conforms very closely to the program and philosophy of the land grant colleges—namely the liberal and practical education of the common man and constitutes the second great legal step in that direction.

THE JUNIOR COLLEGE MEETS THE CHALLENGE

People all over the Nation agree that the junior colleges are destined to grow rapidly both in number and in size. Predictions are that by 1970 they will enroll more than half of the Nation's total freshmen class—even last year they absorbed one out of every four students who entered higher education. In 1920 there were only 10 junior colleges and in 1929, 129. Today there are 667 junior colleges with an enrollment of more than a million students.

The Truman Commission said that the junior college should absorb the bulk of the increased college enrollment during the next decade. At the time the Commission was accused of being starry-eyed and visionary, when it predicted that by 1960 there would be 2.9 million students. It now appears that by 1960 enrollments will exceed 4 million.

The church-supported junior colleges, bless them, are carrying a great share of the load and are doing a most effective job in developing enlightened citizens and furthering Christian education. They, too, are growing.

While in Honolulu recently I visited the $3 million junior college under construction by the Church of Jesus Christ of Latter-day Saints. I was so taken up with the beauty of this institution and the vision of its sponsors that I wrote their commissioner, my former student president, Ernest Wilkinson, for the present enrollment and expenditures of the church's junior colleges and the projected expenditures and enrollment.

At the present time the Mormon church has 1,275 students enrolled in two junior colleges and is spending $991,000. Commissioner Wilkinson estimates that the proposed Ricks College in Idaho, the proposed junior college in Salt Lake City and four junior colleges in areas of large church population will enroll 30,000 students by 1975. He says within the next 5 years the church will probably spend $10 million on the construction of junior colleges and by the year 1975 will likely have spent $30 million on junior colleges.

As a result of their surveys, authorities give five chief reasons why 50 percent of the top 25 percent of the high school graduates never attend college. These reasons are: first, lack of finances; second, lack of motivation; third, distance from college; fourth, ineligibility for matriculation; and, fifth, the nature of the college program.

THE JUNIOR COLLEGE MAKES HIGHER EDUCATION FINANCIALLY AVAILABLE

The present distribution of family income reveals sobering inequalities. Seventy percent of the families of the United States have an income of $5,000 or less and 15 percent have a total income of under $2,000 which you will admit barely covers necessities. How many of their children, I ask you, can they send away to college these days on such a salary?

A U.S. Office of Education study shows that trends in tuition charges and fees increased 89 percent in public colleges and 83 percent in private institutions between 1940 and 1957. For example, tuition costs at Yale have jumped from $645 to $1,250 a year and total cost per student went from $1,557 to $2,300 per year. At Harvard tuition jumped from $400 in 1945 to $1,000 in 1959, with total costs $940 to $2,300 per year. Columbia tuition in 1945 was $380—in 1959, $974, with total costs increased from $1,090 to $2,084.

Student costs are much less in the junior college. W. Hugh Stickler made one of the most reliable studies of student costs, in which he included tuition, fees, room rent, board, books, supplies, clothing, transportation, and miscellaneous expenditures. His results are as follows: Public senior college, $1,304 per year; public junior college, $1,062; private senior college, $1,531; and private junior college, $735.

In other words it costs the student about $242 more per year to attend a public senior college than to attend a public junior college and $800 more per year to attend a private senior college than to attend a private junior college.

Further evidence that the community college makes college available to more people is produced by Coleman Griffiths in his book, "The Junior College of Illinois."

He found that only 19.7 percent of high school graduates went on to college when there was no junior college in their community as against 53.5 percent when the junior college was present. In the latter case also 46.7 percent of the graduates of lower income status families were found to be attending the junior college.

Strayer found that nearly four times as many children of families in the lower income bracket attended college where there was an institution at home as attended when they were required to go away to attend college. By attending college at home the student is also able to find part-time work with his friends and neighbors and combine education and work.

I believe that it costs the public or the church much less money to build and operate a junior college than a senior institution. A considerable por-

tion of the expense of the senior institution is spent in research. The junior college does not have this expense. Again the senior institutions must spend huge sums to build dormitories and dining halls. These on the contrary are not necessary in most junior colleges because the students come from a nearby area and live at home. Journalist Louis Cassel cites Government studies which reveal costs of $6,000 per student for necessary buildings in a senior institution while comparable buildings costs in the community college are $3,000.

TRANSITION FROM HIGH SCHOOL TO JUNIOR COLLEGES MORE EASY

Students do not experience the strangeness and homesickness when they live at home and go to a local institution that they suffer in entering a huge institution away from home.

THE JUNIOR COLLEGE CATERS TO A WIDELY DIVERSIFIED STUDENT POPULATION

It requires an IQ of approximately 115 to get a "C" grade in the professional courses of the senior institutions of the United States. Approximately two thirds of the American college youth have not IQ's that high. That is one reason why one half of the students are eliminated from the universities by the end of the sophomore year.

The Truman Commission found that at least 32 percent of our population has the ability to complete an advanced, liberal or specialized professional education. And, after spending thousands of dollars to calibrate the Army test scores of 10 million servicemen into college aptitude indexes, the Commission said further:

> At least 49 percent of our population has the mental ability to complete 14 years of schooling (the junior college program) with a flexible curriculum of general and vocational studies that should lead either to gainful employment or further study at a more advanced level.

The junior colleges, therefore, offer educational opportunity to about 17 percent more American youth than even our senior institutions.

If the colleges are to educate the great body of our country's youth, they must provide programs for the development of other abilities than those involved in academic aptitude and they cannot continue to concentrate on students with one type of intelligence to the neglect of youth with other talents.

Special artistic ability, creative genius, mechanical skills and abilities not measured by our verbal tests represent valuable abilities not fully recognized by the traditional university. This is another cause of our large student mortality. The technical curriculum of the junior college on the other hand is designed especially for the semiprofessions and the highly skilled occupations. American industry and our defense plants are crying for these people. We can use five semiprofessional engineers for every graduate engineer.

THE JUNIOR COLLEGE HAS WORKED MIRACLES IN ADULT EDUCATION

The junior college goes into all of the homes that do all of the work of the community and with its diversified program and practical bent teaches the parents, as well as the youth, to do that work better and to live more happily in those homes.

THE JUNIOR COLLEGE HELPS PROVIDE THE WILL TO LEARN

Psychologist Flemming says, "Show me a boy's IQ and I will tell you roughly what he might be able to do. But show me what he wants to do and I'll tell you what he will do." In order that all may learn to survive and stay free we must develop in them the will to learn.

The will to learn is influenced to a considerable extent by family tradition, but family tradition is changing rapidly. Families are finding out now that it requires education beyond the high school to understand the front pages of the newspaper, to understand our international relations, our new hopes, our new fears, our new political developments, and even to get a job.

NEW HELP IS COMING FROM THE FEDERAL GOVERNMENT

Education has always been of uppermost importance in achieving political and moral objectives in Western civilization, but never have we looked upon it quite as we do now in terms of our very survival. So it is not strange that these crucial times have resulted in the Federal Government taking more of an interest in the Nation's schools and playing an increasingly important role.

One good example that the Federal Government has recognized that education, as well as missiles, is essential to our national security was the enactment last session of Public Law 85–864, the National Defense Education Act, authorizing something over $1 billion in Federal aid. In its 10 titles it touches every level of education, public and private, from the elementary school through the graduate programs.

The success of the college student loan plan, which we substituted for a scholarship program, has surprised even educators. Before, many college loan funds had gone begging. In the first 4 months after the bill was passed, 1,230 colleges and universities applied for participation asking for $62 million. Congress had appropriated $6 million to get the program started this year.

Of the 1,227 institutions which have received college loan funds, 224 have been junior colleges, technical institutions or normal schools offering 2, but less than 4, years of work beyond the 12th grade. According to the Office of Education, they have received $354,883.

In addition to the $6 million for the student loan section of the bill $20,350,000 was provided for science, mathematics, and foreign language, $800,000 for national defense fellowships, $7,400,000 for guidance, counseling, and testing, $800,000 for advanced training in foreign areas and languages, $500,000 for educational media research, $3,750,000 for grants to States for area vocational programs and $400,000 for grants to States for statistical services.

Supplemental appropriation requests for $75,300,000 for the National Defense Education Act are now pending before Congress.

Other areas in which the Federal Government is participating or is expecting to participate are school construction, aid to rural libraries, providing surplus commodities—such as tools for technical training—to the schools and Public Law 480 which makes foreign currencies available for such things as the financing of chairs in America studies in foreign universities, exchange of persons, workshops presented by American leaders abroad and assistance to American schools abroad.

Some suggested ways in which we might speed up our educational efforts and at the same time develop more enlightened citizens are:

First. Decide now to have a far superior school system and declare our willingness to pay the price. The sacrifice would be small in proportion to the returns. For example, the automobile industry spends $1½ billion every year to bring in its new models with different colored paint and styling so the American people will be enticed to spend 10 percent of their entire income for cars. If the money saved by bringing out a new model every second year, instead of every year, were given the public colleges and universities, it would increase their income by three-fourths.

Second. Reorganize and streamline the present slow moving, ponderous school system. The further consolidation of small, inefficient, expensive school districts would be a good beginning. Encourage American education to join together to form large research institutes and coordinate their research efforts. Also, State coordinated programs of higher education which will save money, help prevent wasteful competition, and keep higher education better aware of its aims should be encouraged.

I hope that Congress will soon pass H.R. 5467, which I have introduced, to stimulate State action to meet burgeoning needs in higher education by appropriating $2½ million to the States to enable them to survey present facilities and make plans for future higher education needs.

Third. Speed up the educational process by lengthening the school year on all levels—as they do in Europe—by using school buildings where necessary for more than one school shift—as they do in Russia—and by inviting gifted teenagers and the unemployed to college adult evening classes.

Fourth. Make the program tougher for the gifted students. While we cannot educate young people by merely scowling at them, I think Rousseau's advice to young Emile is still good advice today. He said:

> Think like a philosopher and work like a peasant.

Fifth. Either improve the present school situation by eliminating some of the more enjoyable and time-consuming offerings in favor of the more demanding mental disciplines or establish institutes which will challenge the gifted.

Sixth. Provide better counseling and guidance on both levels of the secondary school and at the university to screen out and give special encouragement to the diligent and the superior student.

Seventh. Reverse the present trend where teachers and counselors spend an unwarranted amount of their time and the State's money polishing cobblestones and dimming diamonds.

Eighth. Take greater advantage of the ability of the junior college to provide a general and practical education at home for all youth at considerable less expense to the student and the public. Our times demand even more 2-year technically qualified graduates than graduates of the professional schools.

Ninth. Establish more private, industrial and State fellowships, jobs, loans, awards and incentives to attract gifted youth to college and keep them longer in college. If the former are not adequate, Federal help may also be necessary.

Tenth. Exalt the role of the outstanding teacher by according him greater social prestige, better salary and tax deduction on money spent for professional improvement. It took a terrific struggle to get this deduction, but even that encouragement will help to transform many a teacher's attitude.

I have injected in my remarks the element of fear. I have done this to make the challenge more urgent and more purposeful. Extrinsic motivation, such as fear, punishment or rewards, is usually not as abiding as intrinsic motivation which springs from a love of the cause itself. One should act not because he is afraid not to or feels he ought to, but because he wants to.

Western civilization is definitely in peril. Our greatest defense is Christian education. But this system of education has many weaknesses and there is some room for fear that we cannot learn to survive in time to avert disaster. But people adjust to fear very readily. The fear of sputnik was partly displaced by the fear of the recession and the loss of jobs and now by the fear of a conflagration over East Germany. So we cannot place too much reliance upon fear alone causing us to enlist in a crusade to eliminate the weaknesses of our system in order that all might learn what they should learn.

Our school system is not a second rate affair. It is by all odds the best system known anywhere or at any time. The great reason is easy to be found. It is thousands of dedicated people who have made it their first love and the center of their lives.

They didn't teach—

Says Secretary Arthur Flemming—

to become wealthy but for the love of their neighbor and their country. We can be indicted for penalizing our teachers for their loyalty.

Secretary Flemming says further that the great commandment, "Love thy neighbor as thyself," does not mean that we like him or that we even agree with him in all instances. It does mean that we love him enough to help him realize his greatest possibilities.

Jesus of Nazareth was confronted with terrible trials and sorrows; yet he triumphed over far greater obstacles than we ever dream of. He said:

My soul is troubled and what shall I say? Father deliver me from this hour—but for this cause come I unto this hour.

He forgot himself in His great dedication to the cause of His Father.

And a vision appeared unto Paul in the night. There stood a man of Macedonia and praying him saying: "Come over into Macedonia and help us."

That is what Western civilization and its youth are saying to educators today.

SENATE

MONDAY, MARCH 23, 1959

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

God of all grace: Entering this holy week of the passion through the lowly gateway of penitence, we would come, with pilgrims whom no man can number, seeking—with them—light and love and the beauty of holiness. Although joined by a multitude, we know we cannot be lost in the crowd. We stand singly in the white radiance of Thy holiness, to whom every heart is open, and from whom no secrets are hid.

Forbid that we individually should sweep through this searching week in buoyant exultation, as if there were no shame upon us, nothing to repent of, nothing for us to fear.

By some small symbols let us bear witness that we know something of the solemnity of being alive, the dreadfulness of sin, the struggle of repentance.

Even though our symbols may be very feeble, our sackcloth may be lined with silk, and our ashes scented with the perfume of roses, steel our wills to do something that will break the monotony of complacent living.

We ask in the name of the One whose victory makes these days forever holy, as He turned the mocking robe of derision into the crimson garments of sacrifice and into the white vestments of love. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Friday, March 20, 1959, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

REPORT OF RAILROAD RETIREMENT BOARD—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on Labor and Public Welfare:

To the Congress of the United States:

In compliance with the provisions of section 10(b)(4) of the Railroad Retirement Act, approved June 24, 1937, and of section 12(1) of the Railroad Unemployment Insurance Act, approved June 25, 1938, I transmit herewith, for the information of the Congress, the report of the Railroad Retirement Board for the fiscal year ended June 30, 1958.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 23, 1959.*

REPORT OF NATIONAL CAPITAL HOUSING AUTHORITY—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on the District of Columbia:

To the Congress of the United States:

In accordance with the provisions of section 5(a) of Public Law 307, 73d Congress, approved June 12, 1934, I transmit herewith for the information of the Congress the report of the National Capital Housing Authority for the fiscal year ended June 30, 1958.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 23, 1959.*

REPORT ON PROGRAM FOR DISCOVERY OF MINERAL RESERVES—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on Interior and Insular Affairs:

To the Congress of the United States:

I transmit herewith the report of the Secretary of the Interior prescribed by section 5 of the act of August 21, 1958, entitled "To provide a program for the discovery of the mineral reserves of the United States, its Territories, and possessions by encouraging exploration for minerals, and for other purposes."

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 23, 1959.*

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 3366. An act to authorize the extension of loans of naval vessels to the Governments of Italy, Turkey, and the Republic of China;

H.R. 5132. An act to amend title 10, United States Code, with respect to active duty agreements for Reserve officers, and for other purposes; and

H.R. 5805. An act making appropriations for the Treasury and Post Office Departments,

and the Tax Court of the United States for the fiscal year ending June 30, 1960, and for other purposes.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 3366. An act to authorize the extension of loans of naval vessels to the Governments of Italy, Turkey, and the Republic of China; and

H.R. 5132. An act to amend title 10, United States Code, with respect to active duty agreements for Reserve officers, and for other purposes; to the Committee on Armed Services.

H.R. 5805. An act making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1960, and for other purposes; to the Committee on Appropriations.

COMMITTEE MEETING DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Committee on Labor and Public Welfare was authorized to meet during the session of the Senate today.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to consider executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGE REFERRED

The PRESIDENT pro tempore laid before the Senate a message from the President of the United States submitting sundry nominations, which were referred to the Committee on Armed Services.

(For nominations this day received, see the end of Senate proceedings.)

The PRESIDENT pro tempore. If there be no reports of committees, the nomination on the calendar will be stated.

U.S. TARIFF COMMISSION

The Chief Clerk read the nomination of J. Allen Overton, Jr., of West Virginia, to be a member of the Tariff Commission for the remainder of the term expiring June 16, 1962.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of this nomination.

The PRESIDENT pro tempore. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the 18th Ward Unit of the Republican Party of the State of Wisconsin, relating to the efforts of the senior Senator from Wisconsin [Mr. WILEY] to prevent further diversion of the waters of Lake Michigan through the Chicago drainage canal; to the Committee on Public Works.

JOINT RESOLUTION OF ILLINOIS LEGISLATURE

Mr. DIRKSEN. Mr. President, I present a copy of Senate Joint Resolution 9, adopted in the 71st General Assembly of the State of Illinois, as certified by Charles F. Carpenter, secretary of state, memorializing the Congress to take favorable action on proposed legislation to authorize a 1-year trial study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway, for navigation and other purposes.

I ask unanimous consent that the resolution be printed in the RECORD, and appropriately referred.

There being no objection, the joint resolution was referred to the Committee on Public Works, and, under the rule, was ordered to be printed in the RECORD, as follows:

SENATE JOINT RESOLUTION 9

Whereas the effect of diversion of water from Lake Michigan into the Illinois Waterway has long been a source of dispute; and

Whereas House Resolution 1 now pending before the 86th Congress proposes that an additional 1,000 cubic feet per second be permitted for 1 year; and

Whereas such additional flow will permit a proper survey and evaluation to be made by the Secretary of the Army; and

Whereas House Resolution 1 expressly prohibits any diversion during times of flood in the Illinois, Des Plaines, Chicago, or Calumet River; and

Whereas existing facilities at the point of diversion are adequate to control the proposed increased flow, and are beneficial to marine life by reason of providing added oxygen; and

Whereas the preservation of public health is vitally involved in this proposal: Therefore be it

Resolved by the Senate of the 71st General Assembly of the State of Illinois (the House of Representatives concurring herein), That we respectfully request the Congress to pass House Resolution 1; and that a copy of this preamble and resolution be sent by the secretary of state to every member of the 86th Congress from the State of Illinois.

Adopted by the senate, February 26, 1959.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Concurred in by the house of representatives, February 26, 1959.

PAUL POWELL,
Speaker of House of Representatives.
CLARENCE BOYLE,
Clerk of House of Representatives.

FEDERAL AID TO EDUCATION—JOINT RESOLUTION OF MONTANA LEGISLATURE

Mr. MANSFIELD. Mr. President, prior to adjournment of the 36th Legislature of the State of Montana, it went on record in behalf of Federal aid for classroom construction and improvement of teachers' salaries.

I am especially pleased with the action taken by the State legislature, because the two chief sponsors of this proposed legislation in this Congress are my two distinguished colleagues, the senior Senator from Montana [Mr. MURRAY], and the able Representative of the First District, LEE METCALF.

I have cosponsored this measure, as have a number of my colleagues here in the Senate; and I hope it will not be too long before we are able to consider this important proposed legislation on the floor of the Senate.

I ask unanimous consent that senate joint resolution 4 be printed in the CONGRESSIONAL RECORD at the conclusion of my remarks.

There being no objection, the joint resolution was referred to the Committee on Labor and Public Welfare, and, under the rule, was ordered to be printed in the RECORD, as follows:

SENATE JOINT RESOLUTION 4

Joint resolution of the Senate and House of Representatives of the State of Montana to the President of the United States; to the Congress of the United States; to Senators JAMES E. MURRAY and MIKE MANSFIELD, from the State of Montana; to Congressmen LEE METCALF and LEROY ANDERSON, from Montana; requesting the reaffirmation of national policy of Federal financial support for education

Whereas we (the Montana State Legislature) recognize the education of our youth as the most important responsibility of our local, State, and National governments, if our national defense, our system of free enterprise, and our devotion to the ideals of American democracy are to endure; and

Whereas despite earnest efforts on the part of the several school districts of the State of Montana to meet the cost of providing adequate school facilities for an ever expanding enrollment and despite the continued increase in State funds to help meet the cost of supporting public elementary and secondary schools, there continues to be a widening gap between need, and funds to meet the need; and

Whereas the financial resources of the counties and the States are increasingly overburdened by using school costs and enrollments, to the neglect of other essential county and State responsibilities; and

Whereas there continues to be a shortage of qualified teachers, since, despite all efforts to the contrary, teachers' salaries in Montana are inadequate to recruit and retain a sufficient number of good teachers

to serve all the children: Now, therefore, be it

Resolved, That the Montana State Legislature petition the U.S. Congress to provide sufficient funds through the proposed School Support Act of 1959 (sponsored by Senators MURRAY, MANSFIELD, and others, and introduced by Congressman LEE METCALF and others, including Congressman LEROY ANDERSON) in order that local and State control of education may be continued by providing, by means of the more equitable taxing authority of the Federal Government, a share of the Federal income to the several States in amounts sufficient to supplement State and local financial resources for this most important of all State services; and be it further

Resolved, we hereby respectfully petition the Congress of the United States to reaffirm the national policy of Federal financial support for education which has ample precedent in the school land grants given to this and other States nearly 100 years ago and without which even the present inadequate programs of public education could not survive; and be it further

Resolved, That copies of this resolution be submitted by the secretary of state of the State of Montana to the President of the United States; to the Congress of the United States; to Senators JAMES E. MURRAY and MIKE MANSFIELD, from the State of Montana; to Congressmen LEE METCALF and LEROY ANDERSON, from Montana.

PAUL CANNON,
President of the Senate.
JOHN J. MACDONALD,
Speaker of the House.

RESOLUTIONS OF ORGANIZATIONS OF THE STATE OF NEW YORK

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD, resolutions adopted by sundry organizations of the State of New York.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE CITY COUNCIL OF WATERTOWN, N.Y.

Resolved, That—

Whereas there has been introduced in the U.S. Congress a bill (H.R. 5096) which would subject municipal housing authority bonds to Federal taxation; and

Whereas this would constitute a tax on municipal securities: Now, therefore, be it

Resolved, That the City Council of Watertown, N.Y., hereby states its objection to the proposed taxation of municipal housing authority bonds, or, any other municipal securities, and asks its Representatives in Congress to oppose such legislation.

RESOLUTION OF THE NEW YORK YOUNG REPUBLICAN CLUB ADVOCATING REPEAL OF THE CONNALLY AMENDMENT TO THE STATUTE OF THE INTERNATIONAL COURT OF JUSTICE

Whereas the United States, in accepting the jurisdiction of the International Court of Justice, has reserved to itself the right to exclude from the Court's jurisdiction cases which the United States unilaterally determines to be within its domestic jurisdiction; and

Whereas the United States was the first country to adopt such a reservation, and this action has led other countries to adopt similar reservations thus weakening the effectiveness of the Court in peacefully resolving international disputes; and

Whereas the reservation adopted by the United States can work to its detriment, because any country sued by the United States is entitled to invoke the reservation of the United States to prevent the United States from maintaining an action before the Court; and

Whereas amendment by the United States of its declaration to eliminate the right unilaterally to exclude matters from the Court's jurisdiction would demonstrate the United States leadership in promoting peaceful settlement of international disputes and would promote the use of judicial processes to lessen international tensions: Now, therefore, be it

Resolved, That the board of governors of the New York Young Republican Club petition the President and Senate of the United States to amend its declaration accepting the compulsory jurisdiction of the International Court of Justice to eliminate therefrom the reservation (commonly called the Connally amendment) whereby the United States may determine unilaterally that a matter is not within the jurisdiction of the Court because it is within the domestic jurisdiction of the United States, and instead permit the Court to determine whether a matter is excluded from the Court's jurisdiction.

NEW YORK STATE ASSOCIATION OF PLAINTIFFS' TRIAL LAWYERS,
New York, N.Y., March 1, 1959.

The membership of the New York State Association of Plaintiffs' Trial Lawyers, an organization representing about 1,250 practising lawyers, at a meeting on Thursday, February 26, 1959, in the U.S. District Courthouse, Foley Square, New York City, cast an overwhelming vote in favor of the following resolution, upholding the Supreme Court of the United States against current attacks:

"Whereas there have been repeated attacks on the U.S. Supreme Court; and

"Whereas such attacks appear to be growing in virulence, to the detriment of the public and the administration of justice; and

"Whereas it is the sense of this association that the practicing lawyer has great confidence in the Supreme Court as an institution and believes that any limitation of the ambit of its jurisdiction is detrimental to the administration of justice and civil liberties of the public: Now, therefore, it is hereby

"*Resolved,* That this association, the New York State Association of Plaintiffs' Trial Lawyers, hereby record their complete confidence in the Supreme Court of the United States and in the jurisdiction which it now exercises; and it is further

"*Resolved,* That this association is unalterably opposed to any measures seeking to limit the jurisdiction of the Court or to override recent decisions made by it in the field of civil liberties; and it is further

"*Resolved,* That this association take any and all measures to apprise the public and other bar associations of our unfailing purpose to support and protect the Court against unwarranted pressures and attacks."

RESOLUTION 74

Resolution opposing the proposed McDonough amendment, H. R. 5096, to the pending urban renewal, slum clearance, and housing bill which would subject local housing authority bonds to Federal taxation.

Whereas Representative GORDON L. MCDONOUGH has introduced H.R. 5096 in the Congress of the United States which bill would subject municipal housing authority bonds to Federal taxation and has further announced his intention to offer the substance of his bill as an amendment to the urban renewal, slum clearance, and housing measure which has already cleared the Banking and Currency Committee of the Congress of the United States and is now pending before the Rules Committee: and

Whereas the passage of such bill would have a deleterious effect on the various municipalities throughout the United States who are engaged in an urban renewal, slum clearance, and housing program; and

Whereas aside from the aforesaid effects on the municipal slum clearance programs the adoption of such a bill would open the door to Federal taxation on all State and local securities and the question is one of basic constitutional principle and it is the opinion of this council that the proposed bill is inconsistent with the constitutional tax immunity of State and municipal bonds and will affect the salability of such bonds and is an opening wedge in an attempt to destroy the fundamental constitutional principle of immunity of State and municipal bonds and the issue is basic and of tremendous import to the States and municipalities and may seriously affect the future solvency and sovereignty of the States and their political subdivisions: Now, therefore, be it

Resolved, That the Council of the City of New Rochelle declare its opposition to the proposed McDonough amendment—H.R. 5906—to the pending urban renewal, slum clearance, and housing bill which would subject local housing authority bonds to Federal taxation; and be it further

Resolved, That a copy of this resolution be forwarded to Hon. JACOB K. JAVITS, Hon. KENNETH B. KEATING, U.S. Senators representing the State of New York in the Senate of the United States, and to Hon. EDWIN D. DOOLEY, congressional Representative of this congressional district in the Congress of the United States and to the U.S. Conference of Mayors; and be it further

Resolved, That this resolution shall take effect immediately.

Authenticated and certified this 18th day of March 1959.

GEORGE VERGARA,
Mayor.
CHARLES U. COMBES,
City Clerk.

RESOLUTION 16: DAY CARE SERVICES FOR CHILDREN

Whereas day care services for children can provide valuable educational and social experiences, and contribute to healthy physical and emotional development of children; and

Whereas such services are particularly beneficial to and needed by children of working mothers (the Census Bureau estimates that over 2 million mothers of children under 6 years are working; no more than 15 percent of such children are able to receive the benefits of day care centers; approximately 2½ million children, 6 to 11 years old, require after-school care); and

Whereas experience shows that neither voluntary agency funds nor State appropriations are in themselves adequate to meet this need; and

Whereas a bill was introduced in the 85th Congress, entitled S. 4067, to authorize the Secretary of Health, Education, and Welfare to make grants to the States to assist in the provision of facilities and services for the day care of children: Therefore be it

Resolved, That the American Public Health Association endorse the principle of such legislation.

RESOLUTION OF THE AMERICAN LEGION, DEPARTMENT OF NEW YORK, WESTCHESTER COUNTY

Whereas cognizance must be taken of the visit of Anastas Mikoyan, of Soviet Russia, to these United States during January 1959; and

Whereas it seems self-evident that his visit of Anastas Mikoyan, of Soviet Russia, increasing trade with the Soviet Union either on a reciprocal trade basis or a lend-

lease arrangement, or both: Now, therefore, be it

Resolved, That the American Legion of Westchester County, N. Y., go on record as opposing any trade concessions or increase in trade with the Soviet Union and that a copy of this resolution be forwarded to the Department of New York for appropriate action; and that it be further

Resolved, That a copy of this resolution be forwarded to each of the two Senators of the State of New York and to each of the two Representatives of Westchester County.

I hereby certify that the foregoing resolution was duly adopted at the regular monthly meeting of the American Legion, Westchester County, N.Y., held at Charles N. Bajart Junior Post No. 1122, Yonkers, N.Y., on the 11th day of March 1959.

Dated: March 11, 1959.

WILLIAM L. WISE,
Adjutant, Westchester County Organization, the American Legion, Department of New York.

AUTHORIZATION FOR FINANCE COMMITTEE TO SUBMIT REPORT ON HOUSE BILL 5640—SUPPLEMENTAL VIEWS

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that the Committee on Finance be authorized to report, up to midnight tonight, the bill, H.R. 5640, to extend the time during which certain individuals may continue to receive temporary unemployment compensation; and also that any members of the committee who may desire to submit supplemental views, be granted permission to do so.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXTENSION OF TIME FOR FILING REPORTS OF THE COMMITTEE ON THE JUDICIARY

Mr. DOUGLAS. Mr. President, on behalf of the Committee on the Judiciary, I ask unanimous consent that the time for filing reports pursuant to Senate Resolution 230, Senate Resolution 232, and Senate Resolution 237, 85th Congress, as extended, be extended to April 20, 1959.

The PRESIDENT pro tempore. Without objection, it is so ordered.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

S. 264. A bill for the relief of Athena Nicholas Euteriadou (Rept. No. 124);

S. 451. A bill for the relief of Mohammed Ali Halim (Rept. No. 125); and

H.R. 2589. An act for the relief of Elizabeth Lucie Leon (also known as Lucie Noel) (Rept. No. 134).

By Mr. EASTLAND, from the Committee on the Judiciary, with an amendment:

S. 201. A bill for the relief of Chiyoko Korematsu and Aiko Korematsu (Rept. No. 126);

S. 211. A bill for the relief of Aurelia Marija Medvesek-Pozar (Rept. No. 127);

S. 313. A bill for the relief of Collingwood Bruce Brown, Jr. (Rept. No. 128);

S. 449. A bill for the relief of Clarita Martinez (Rept. No. 129);

S. 461. A bill for the relief of Androula Neofitos Stephanon (Androula Kyriacou Stephanou) (Rept. No. 130);

S. 634. A bill for the relief of Grace C. Ream (Rept. No. 131); and

S. 701. A bill for the relief of Arie Abramovich (Rept. No. 132).

By Mr. EASTLAND, from the Committee on the Judiciary with amendments:

S. 1143. A bill for the relief of Harvey Hiroaki Horiuchi (Rept. No. 133).

By Mr. O'MAHONEY, from the Committee on the Judiciary, without amendment:

S.J. Res. 61. Joint resolution to amend Public Law 305 of the 85th Congress relative to the establishment of a commission to commemorate the 100th anniversary of the Civil War, to authorize the manufacture and sale of a Civil War Centennial Medal (Rept. No. 136); and

S. Con. Res. 9. Concurrent resolution extending a welcome to the Inter-American Bar Association (Rept. No. 121).

By Mr. O'MAHONEY, from the Committee on the Judiciary, with an amendment:

S. 949. A bill for the incorporation of the Ladies of the Grand Army of the Republic (Rept. No. 123).

By Mr. BYRD of Virginia, from the Committee on Finance, with an amendment:

H.R. 5640. An act to extend the time during which certain individuals may continue to receive temporary unemployment compensation (Rept. No. 135).

Subsequently, under the authority previously granted, Mr. DOUGLAS (for himself, Mr. GORE, Mr. MCCARTHY, and Mr. HARTKE) submitted supplemental views on House bill 5640, which were ordered to be printed.

REPORT ENTITLED "ACTION BY THE 85TH CONGRESS ON THE SECOND HOOVER COMMISSION REPORTS" (S. REPT. NO. 122)

Mr. HUMPHREY. Mr. President, from the Committee on Government Operations, I submit a report entitled "Action by the 85th Congress on the Second Hoover Commission Reports," prepared by the Subcommittee on Reorganization and International Organizations. I ask that the report may be printed.

The PRESIDENT pro tempore. The report will be received and printed, as requested by the Senator from Minnesota.

REPORT ENTITLED "SCIENCE PROGRAM—86TH CONGRESS" (S. REPT. NO. 120)

Mr. HUMPHREY. Mr. President, from the Committee on Government Operations, I submit a report entitled "Science Program—86th Congress," prepared by the Subcommittee on Reorganization and International Organizations. I ask that the report be printed.

Mr. President, these are two reports of the subcommittee of which I am privileged to be chairman, and I feel that my colleagues will find them to be very helpful.

The PRESIDENT pro tempore. The report will be received and printed, as requested by the Senator from Minnesota.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HOLLAND:

S. 1491. A bill for the relief of Nicholas D. Vergis and his wife, Zafiro Vergis; to the Committee on the Judiciary.

By Mr. KEFAUVER:

S. 1492. A bill authorizing the transfer of certain property of the Holston Ordnance Works (at Kingsport, Tenn.) to the State of Tennessee; to the Committee on Armed Services.

By Mr. GREEN:

S. 1493. A bill to amend title 10 of the United States Code in order to provide for the establishment of certain military bands by law; and

S. 1494. A bill to amend title 10 of the United States Code so as to exempt the leaders of certain military bands from mandatory retirement on account of age; to the Committee on Armed Services.

(See the remarks of Mr. GREEN when he introduced the above bills, which appear under a separate heading.)

By Mr. JOHNSTON of South Carolina:

S. 1495. A bill to consolidate and revise the laws relating to employment of aliens in the several States and the District of Columbia; to the Committee on Post Office and Civil Service.

By Mr. ANDERSON (by request):

S. 1496. A bill to amend the Mineral Leasing Act of February 25, 1920 (41 Stat. 437), as amended; and

S. 1497. A bill to amend the Mineral Leasing Act of February 25, 1920 (41 Stat. 437), as amended; to the Committee on Interior and Insular Affairs.

By Mr. AIKEN:

S. 1498. A bill to amend the Internal Revenue Code of 1954 with respect to the situs of the home, for income tax purposes, of members of State legislatures; to the Committee on Finance.

(See the remarks of Mr. AIKEN when he introduced the above bill, which appear under a separate heading.)

By Mr. MUNDT:

S. 1499. A bill to provide full parity price support for basic agricultural commodities, limit support for basic and nonbasic commodities to $10,000 per producer, and repeal authority for marketing quotas; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. MUNDT when he introduced the above bill, which appear under a separate heading.)

By Mr. GOLDWATER:

S. 1500. A bill for the relief of Yee You Gee; to the Committee on the Judiciary.

By Mr. MCCARTHY:

S. 1501. A bill to permit Federal employees to repay indebtedness to or purchase shares of Federal credit unions through voluntary payroll deductions; to the Committee on Banking and Currency.

By Mr. SPARKMAN:

S. 1502. A bill to provide for adjustments in the annuities under the Foreign Service retirement and disability system; to the Committee on Foreign Relations.

By Mr. LANGER:

S. 1503. A bill for the relief of P. M. Eide; and

S. 1504. A bill for the relief of Junior Dale Lohr; to the Committee on the Judiciary.

S. 1505. A bill to require that provision be made in certain public buildings for the establishment of vending stands to be operated by blind persons, and for other persons; to the Committee on Public Works.

By Mr. SMATHERS:

S. 1506. A bill to provide increases in annuities of certain individuals retired prior to April 1, 1948, under the Civil Service Retirement Act of May 29, 1930, as amended, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MAGNUSON (by request):

S. 1507. A bill to make the Interstate Commerce Act, as amended, applicable to transportation by water between ports in the State of Alaska and other ports in the United States, and for other purposes;

S. 1508. A bill to provide for economic regulation of the Alaska Railroad under the Interstate Commerce Act, and for other purposes; and

S. 1509. A bill to amend the Interstate Commerce Act, as amended, to provide "grandfather" rights for certain motor carriers and freight forwarders operating in interstate or foreign commerce within Alaska and between Alaska and the other States of the United States, and for certain water carriers operating within Alaska, and for other purposes; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the last above-mentioned bill, which appear under a separate heading.)

By Mr. WILEY:

S. 1510. A bill to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. WILEY when he introduced the above bill, which appear under a separate heading.)

By Mr. CHAVEZ (by request):

S. 1511. A bill to provide for the annual audit of bridge commissions and authorities created by act of Congress, for the filling of vacancies in the membership thereof, and for other purposes; to the Committee on Public Works.

By Mr. ELLENDER (for himself and Mr. AIKEN) (by request):

S. 1512. A bill to amend the Federal Farm Loan Act to transfer responsibility for making appraisals from the Farm Credit Administration to the Federal land banks, and for other purposes; and

S. 1513. A bill to clarify the status of the Federal land banks, the Federal intermediate credit banks, and the banks for cooperatives and their officers and employees with respect to certain laws applicable generally to the United States and its officers and employees, and for other purposes; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. ELLENDER when he introduced the above bills, which appear under a separate heading.)

By Mr. BARTLETT (for himself and Mr. GRUENING):

S. 1514. A bill to amend the act of August 9, 1955 (69 Stat. 618); to the Committee on Interior and Insular Affairs.

By Mr. KEATING:

S.J. Res. 80. Joint resolution to invite the Chief Justice of the United States to address a joint session of Congress annually; to the Committee on Rules and Administration.

(See the remarks of Mr. KEATING when he introduced the above joint resolution, which appear under a separate heading.)

AMENDMENT OF TITLE 10, UNITED STATES CODE, RELATING TO CERTAIN MILITARY BANDS AND THEIR LEADERS

Mr. GREEN. Mr. President, I introduce, for appropriate reference, two bills to amend title 10 of the United States Code.

One of these measures would provide for the legal establishment of the U.S. Army Band, the U.S. Army Field Band, and the U.S. Air Force Band. These fine military bands are now established administratively by the Secretaries of the respective services, whereas the U.S. Navy Band and the U.S. Marine Band are established by statute. This bill would provide equal legal standing for all the major bands within the Military Establishment.

The second measure would provide that the band leaders of the major military bands, having attained the mandatory retirement age, may continue their services at the discretion of the President.

The PRESIDENT pro tempore. The bills will be received and appropriately referred.

The bills, introduced by Mr. GREEN, were received, read twice by their titles, and referred to the Committee on Armed Services, as follows:

S. 1493. A bill to amend title 10 of the United States Code in order to provide for the establishment of certain military bands by law; and

S. 1494. A bill to amend title 10 of the United States Code so as to exempt the leaders of certain military bands from mandatory retirement on account of age.

AMENDMENT OF INTERNAL REVENUE CODE, RELATING TO RESIDENCE RULE OF MEMBERS OF STATE LEGISLATURES

Mr. AIKEN. Mr. President, I introduce, for appropriate reference, a bill to amend the Internal Revenue Code so as to provide a realistic residence rule for business expense deductions of members of State legislatures.

The present law permits a member of a State legislature to deduct as business expenses his travel and living costs while away from home on legislative business. However, under the regulations and decisions, "home" is defined as the place where he engages in his regular business or profession, regardless of whether his place of abode is in the same locality. Therefore, if a legislator has no regular business, his service in the legislature is considered his principal business, and the State capital becomes his "home" for business expense deductions on his income tax.

This rule strikes particularly at persons who are in retirement, and directs a double blow at those who are receiving social security benefits. Let me give an example of what is happening in my own State of Vermont. It must be occurring in other States as well. A completely retired person—under age 72—who is receiving social security benefits can stay at home, do nothing, and continue to enjoy those benefits. Because of his standing in the community and his desire to perform a public service, he may be elected to the State legislature. Then his troubles begin. He pays the added living and travel costs as a legislator away from his home town, but cannot claim them as business deductions because the law has moved his "home" to the State capital. Hence the compensation which Vermont pays him as reimbursement for expenses becomes taxable income. Then comes the second blow. Because this compensation—without deductions—exceeds $1,200, though by not very much, the social security laws withdraw his old age benefits for that year.

The net practical result is that his legislative service costs him the amount of his withdrawn old age benefits and the income tax paid on the amounts intended to cover added living and travel costs.

My bill would correct this by placing the retiree-legislator on the same expense deduction basis as his colleagues who maintain business connections in their home towns and, probably, can better afford the costs of public service.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 1498) to amend the Internal Revenue Code of 1954 with respect to the situs of the home, for income tax purposes, of members of State legislatures, introduced by Mr. AIKEN, was received, read twice by its title, and referred to the Committee on Finance.

AMENDMENT OF AGRICULTURAL ACT OF 1949, RELATING TO PARITY PRICE SUPPORT FOR BASIC AGRICULTURAL COMMODITIES

Mr. MUNDT. Mr. President, I introduce, for appropriate reference, a bill which, in my opinion, if approved by the Congress and enacted, will go far toward solving the problems of the farmers of this country in such a fashion as to appeal to both the farmer and the consumer and to help the Government get out of the business of farming.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1499) to provide full parity price support for basic agricultural commodities, limit support for basic and nonbasic commodities to $10,000 per producer, and repeal authority for marketing quotas, introduced by Mr. MUNDT, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title I of the Agricultural Act of 1949 is amended to read as follows:

"TITLE I—BASIC AGRICULTURAL COMMODITIES

"SECTION 1. (a) The Secretary of Agriculture (hereinafter called the 'Secretary') is authorized and directed to make available through loans, purchases, or other operations price support to producers for any crop of any basic agricultural commodity at the parity price of the commodity.

"(b) Beginning with the 1959 crop, price support shall be made available to producers for each crop of oats, rye, barley, and grain sorghums at such level of the parity price therefor as the Secretary of Agriculture determines is fair and reasonable in relation to the level at which price support is made available for corn, taking into consideration the feeding value of such commodity in relation to corn, and the other factors set forth in section 401(b) hereof.

"(c) As a condition of eligibility for price support under this section for any commodity produced on any farm, the acreage on such farm devoted to crops for which price support is available shall be reduced during the calendar year in which such commodity

is harvested below the acreage normally devoted to such crops on such farm by an acreage determined as provided in this subsection. The Secretary shall for each calendar year on the basis of the past production of the farm, crop rotation practices, and other relevant factors, determine—

"(1) the acreage on the farm required to be devoted to crops for which price support will be available if the gross income for the farm from such crops is to equal $10,000; and

"(2) the acreage on the farm which normally would be devoted to such crops.

"The amount of reduction required by this section shall be 10 per centum of the acreage by which the acreage determined under clause (2) of this subsection exceeds the acreage determined under clause (1) of this subsection. The Secretary shall notify the farm operator of the amount of reduction required by this section, the acreages determined under clauses (1) and (2), and the crops for which price support will be available as early as practicable before the planting season. For the purpose of this subsection, acreage determined by the Secretary to have been diverted from the production of any commodity in order to carry out a contract entered into under the conservation reserve program shall be considered (A) acreage normally devoted to that commodity, and (B) acreage diverted from the production of that commodity. If the Secretary does not give notice or announce that price support will be available for a crop prior to the time such crop is planted on the farm, such crop shall not be regarded as one for which price support is available for the purposes of this subsection with respect to such farm."

SEC. 2. Title IV of the Agricultural Act of 1949, as amended, is amended by adding at the end of such title a new section as follows:

"SEC. 421. The total amount of price support made available under this Act to any producer for any year (including any price support made available to any other entity to the extent of such producer's beneficial interest therein as determined by the Secretary) shall not exceed $10,000."

SEC. 3. Subtitles B and C of title III of the Agricultural Adjustment Act of 1938 are repealed.

SEC. 4. This Act shall become effective beginning with commodities produced in 1960.

Mr. MUNDT. Mr. President, we read much in our newspapers and in many national publications these days about our ever-growing surpluses which the Federal Government is storing at the cost of $1.5 million per day. We hear and read much also about recommendations from various individuals and organizations about plans which would solve the problem of the family farmer. I hope this Congress will take the necessary action to face up to this problem and send to the President legislation which will help the family farmer attain the full parity of income to which he is entitled and which will start making realistic progress toward the permanent solution to our farm problem.

I introduce a bill which I feel would achieve these objectives. It will primarily benefit the family farmer and the family-size farmer only, but its overall effect should be helpful to farmers generally. I have long felt that our present and preceding programs, while giving support to all farmers, often made their greatest contribution to the well-being of those large farm operators who needed the least amount of help.

The bill which I am introducing provides price support at full parity on the basic crops, but limits price support on all commodities for any one producer for any one year to $10,000. Any commodities which the farmer sells over that amount would be sold on the open market and without the direct benefit of price supports. In other words, the small family-size operator would receive full parity price supports for $10,000 of his basic commodity production, which I believe is about the average income for what is known as a typical family-size farm operation.

My proposal would also do away with the many rigid rules and regulations on allotments and quotas which have been a source of irritation to our farm operators. In order to participate in the price-support program up to $10,000, the farm operator must agree to take out of production of price-supported crops at least 10 percent of the acreage by which the acreage normally devoted to such crops exceeds that required to produce $10,000. This acreage can be placed in the conservation reserve, or if not in the reserve, it must be diverted to non-price-supported crops. By taking this acreage out of production, there will not be unlimited planting and a continuous increasing of the surplus. By permitting the commodities to be sold on the market after the amount under support is cared for, farmers can expand their income by additional production once they have met their obligation of retiring 10 percent of their acres from production of price-supported crops. This should also aid in building a larger foreign market for American farm products. I hope, Mr. President, that the Senate Committee on Agriculture and Forestry will give consideration to this legislative proposal which, in my opinion, will maintain financial stability for the family farmer and make the bounty of our producers available for consumption instead of for storage. It should reduce the cost of the farm programs to the Government, while at the same time definitely increasing the net income of family-type farmers.

REGULATION OF TRANSPORTATION IN INTERSTATE AND FOREIGN COMMERCE TO, FROM, AND BETWEEN POINTS IN ALASKA

Mr. MAGNUSON. Mr. President, by request I introduce for appropriate reference a bill to amend the Interstate Commerce Act, as amended, to provide "grandfather" rights for certain motor carriers and freight forwarders operating in interstate or foreign commerce within Alaska and between Alaska and the other States of the United States, and for certain water carriers operating within Alaska, and for other purposes. I ask unanimous consent to have printed in the RECORD a letter from the Chairman of the Interstate Commerce Commission requesting the proposed legislation.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 1509) to amend the Interstate Commerce Act, as amended, to provide "grandfather" rights for certain motor carriers and freight forwarders operating in interstate or foreign commerce within Alaska and between Alaska and the other States of the United States, and for certain water carriers operating within Alaska, and for other purposes, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

INTERSTATE COMMERCE COMMISSION,
Washington, D.C., March 6, 1959.

The Honorable WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, U.S. Senate, Washington, D.C.

DEAR CHAIRMAN MAGNUSON: In reply to your letter of July 23, 1958, requesting the Commission's views concerning the regulation of transportation in interstate and foreign commerce to, from, and between points in Alaska upon its becoming a State, former Chairman Freas advised you by letter dated August 7, 1958, that the Commission would be able initially to administer the Interstate Commerce Act, and related acts, without the need for urgent legislation, that it would continue to study the matter, and, at a later date, submit recommendations for legislation which it deems necessary and desirable in the public interest, including a recommendation that the Government-owned Alaska Railroad be made subject to regulation by the Commission with respect to rates, service, and safety of operation. The Commission also stated on page 135 of its 72d annual report that it was keeping itself currently informed of the situation by means of continuing surveys, and that at a later date it would submit its recommendations, together with draft bills, to the Congress for its consideration.

As you may know, in the latter part of August the Commission sent a survey team, headed by Commissioner Walrath, to Alaska where in the principal cities and towns members of the team held conferences and open meetings with public officials, carriers, shippers, and other interested persons. The Commission, on November 1, 1958, also opened a field office in Anchorage to advise carriers, shippers, and interested public officials with respect to Federal regulation of motor transportation. In addition, an information bulletin was issued by the Commission for the guidance of those who would become subject to the Interstate Commerce Act, and related acts, upon the admission of Alaska as a State. A copy of that bulletin was transmitted to you for your information on November 14, 1958.

As a result of our further survey and studies we are convinced more than ever that there can be no effective regulation of surface transportation in interstate and foreign commerce within Alaska and between Alaska and the other States unless such transportation is subject to the same uniform regulation as similar transportation within and between all of the other States. In our previous correspondence and reports on this subject we pointed out that the Government-owned-and-operated Alaska Railroad, the principal transportation facility in Alaska, was not subject to regulation by any regulatory agency and that it would not become subject to the Commission's jurisdiction, nor, presumably, to that of the new State upon its admission into the Union.

We also pointed out in our prior communications that, under the Alaska Statehood Act, the Commission would have no jurisdiction over water transportation between ports in Alaska and other ports in the United States upon the admission of the Territory as a State. It further appears that the Commission also has no jurisdiction over

water transportation in interstate commerce between ports in Alaska over the high seas. Under the Statehood Act water transportation between Alaska and the other States by regular-route common carriers continues to be regulated by the Federal Maritime Board. The Federal Maritime Board does not issue certificates or permits authorizing water carrier operations. In fact, the Board exercises no regulatory jurisdiction over contract carriers by water nor over irregular-route water common carriers. A regulatory void therefore continues to exist with respect to water transportation between Alaska and other U.S. ports, and between Alaskan ports over the high seas, insofar as these carriers are concerned.

During its trip the Commission's survey team was unable to find any trace of freight forwarding or motor-carrier brokerage operations in Alaska. Thus, while one small rail carrier, the White Pass and Yukon Railroad (a Canadian carrier operating about 20 miles in Alaska) and water carriers operating in interstate commerce within Alaska (except over the high seas) are subject to the Commission's jurisdiction, and for all practical purposes motor transportation in interstate and foreign commerce is the only important operation in Alaska which has become subject to the Commission's jurisdiction since its admission to statehood. We believe it also important to point out in this connection that, insofar as we can determine, there are no present plans for the regulation of intrastate transportation by the new State, except possibly the transportation of persons by motor vehicle which was subject to some measure of regulation by the Territorial government.

With the competitive struggle between the Alaska Railroad and the motor carriers for the limited amount of traffic moving in Alaska, it is our view that there can be no effective or equitable regulation of surface transportation in the new State as long as one of the major competitive modes is subjected to a full measure of regulation while its chief competitor remains completely free from any regulatory control, either Federal or State. To allow this situation to persist is not, in our opinion, in the public interest since it will encourage and tend to perpetuate destructive competitive practices, contrary to the national transportation policy, and will have a serious adverse effect on the Alaska economy.

Failure to provide for regulation of a major competitive operation coupled with split or only partial jurisdiction with respect to two other modes is not conducive to simple or uniform regulation. Under the law as it now exists, a number of unusual and complex problems arise in connection with the movement of the bulk of the traffic between Alaska and the other States. On some of the traffic the Commission has jurisdiction over the motor movement at both ends or over the rail movement at the southern end, but none over the intervening water movement. On other traffic it has jurisdiction over the movement by water to ports at the southern end, but none (except to a limited extent over rail-water rates) over the subsequent water movement to Alaska and none over the movement by the major rail facility in Alaska. Within Alaska itself the Commission has jurisdiction over motor movements and water movements (except over the high seas) in interstate and foreign commerce, but none over movements by the Alaska Railroad. Contract carriage and irregular-route common carriage by water between Alaska and the other States, and between ports in Alaska over the high seas, like traffic over the Alaska Railroad is not, as indicated above, subject to economic regulation by any governmental agency.

It is highly doubtful that the public interest will best be served by such a regulatory patchwork. We therefore recommend to the Congress that all forms of surface transportation, and all carriers constituting parts of routes between Alaska and the other States, be brought within the same regulatory scheme under the Interstate Commerce Act. Draft bills designed to give effect to our recommendations in this connection (designated as draft bills A and B respectively) are submitted herewith for your consideration for introduction.

Draft bill A would, in brief, transfer from the Federal Maritime Board to the Commission jurisdiction over regular-route water common carriers operating in interstate commerce between ports in Alaska and other U.S. ports, and between ports in Alaska over the high seas. It would also subject to Commission regulation contract carriers and irregular-route common carriers by water operating between those ports. Since the Maritime Board regulates as water carriers certain persons who do not operate vessels, but who appear to be in the category of freight forwarders as defined in part IV of the Interstate Commerce Act, the proposed amendments are also designed to place each operator in its proper category. "Grandfather" rights are provided for the protection of such carriers and persons.

Draft bill B would amend the so-called Alaska Railroad Act (48 U.S.C., sec. 301) to provide that, effective 180 days after the enactment of the proposed amendment, the Alaska Railroad shall become subject to the provisions of part I of the Interstate Commerce Act, and related acts, except that the Commission's approval would not be required for the extension of its lines or for the issuance of securities. The proposed amendment would also subject the Alaska Railroad to acts relating to the safety of railroad operations and the statute commonly known as the Transportation of Explosives Act (18 U.S.C., secs. 831–835).

Also submitted herewith is draft bill C, in respect of which we particularly urge your early consideration for introduction and for early action by the Congress. This proposed bill would provide grandfather rights for motor carriers and freight forwarders operating to, from, and within Alaska in interstate or foreign commerce, and for water carriers operating in interstate commerce within Alaska, except for water carriers operating between Alaskan ports over the high seas. These are the carriers which became subject to the Interstate Commerce Act and related acts upon the advent of Alaskan statehood. Except for seasonal operations or interruptions in service over which a carrier had no control, the critical date of the grandfather provisions is August 26, 1958, the date on which the people of Alaska voted in favor of statehood.

With the exception of freight forwarders, ever since the enactment of the Motor Carrier Act, 1935, it has been the consistent policy of the Congress to provide grandfather rights to existing carriers whenever the Interstate Commerce Act has been extended to additional carriers. It is our opinion that similar grandfather provisions should be enacted for the protection of those carriers, including freight forwarders, which became subject to the Interstate Commerce Act, and related acts, by reason of the admission of Alaska to statehood.

Draft bill C is also designed to clarify the status of motor carriers operating between points in Alaska and the other States through Canada. In addition, it would amend section 418 of the Interstate Commerce Act to authorize freight forwarders to utilize the services of the Alaska Railroad and water carriers operating between ports in Alaska and other ports in the United States, and between ports in Alaska over the high seas, which they cannot lawfully do under existing law.

The Commission would appreciate your assistance in introducing these bills and giving them early consideration. If there is anything further the Commission can do in this respect, please advise.

Sincerely yours,

KENNETH H. TUGGLE,
Chairman.

INCREASED EXPENDITURES, FISCAL YEAR 1959, UNDER SPECIAL MILK PROGRAM

Mr. WILEY. Mr. President, I introduce, for appropriate reference, a bill to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program.

Mr. President, I have been informed by my colleague from Wisconsin in the House, Representative JOHNSON, that the House has passed H.R. 5247, an identical bill, to increase the maximum expenditure for special milk programs not to exceed $75 million for 2 fiscal years.

Mr. President, I ask unanimous consent that the bill introduced by me and excerpts from the House committee report be printed in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill and excerpts from the House report will be printed in the RECORD.

The bill (S. 1510) to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program, introduced by Mr. WILEY, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first sentence of Public Law 85–478 (72 Stat. 276) is amended to read as follows: "That for the fiscal year beginning July 1, 1958, not to exceed $78,000,000, and for each of the two fiscal years thereafter, not to exceed $75,000,000 of the funds of the Commodity Credit Corporation shall be used to increase the consumption of fluid milk by children (1) in nonprofit schools of high school grade and under; and (2) in nonprofit nursery schools, child-care centers, settlement houses, summer camps, and similar nonprofit institutions devoted to the care and training of children."

The excerpts from the House report presented by Mr. WILEY are as follows:

PURPOSE

The purpose of this bill is to increase by $3 million the maximum amount of money which may be used by the Secretary of Agriculture during the current fiscal year for the special school milk program authorized by section 201(c) of the Agricultural Act of 1949 and Public Law 85–478. The law now authorizes the use of not to exceed $75 million of CCC funds for this program during the current fiscal year. From a survey just completed by the Department of Agriculture, it appears that somewhat more money will be required to continue the program at its present level for the remainder of the fiscal year. This bill, accordingly, authorizes the Secretary to use up to $78 million of CCC funds for the program during this fiscal year. It is to be noted that the authorization is permissive. The Secretary will use the additional funds only to the extent necessary to continue the program at its prevent level.

HISTORY OF THE PROGRAM

The special milk program was first authorized in the revised dairy price support pro-

visions of the Agricultural Act of 1954 which was enacted into law in August of that year. The details of the program were announced by the Department in early September, as schools were about to open for the fall term. Despite the short time available to State educational agencies and individual schools to lay plans for a new or enlarged milk service, over 41,000 schools entered the program that first year. Almost 450 million half pints were distributed under the program and expenditures totaled $17.1 million.

The original program was limited to schools, and after consultation with both dairy and school officials, major modifications were made in the program for its second year of operation. These modifications were undertaken, first, to permit a more effective use of CCC funds in reducing prices to children and, second, to provide for additional simplifications in records and reports at the school level.

The modified program was immediately successful and the volume of milk moving under the program increased more than threefold in the second year—to almost 1.4 billion half pints. The number of schools increased from 41,000 to 62,000 and the expenditure of CCC funds rose from $17.1 million to almost $46 million in fiscal year 1956.

The program provisions for schools—where milk is sold as a separately priced item—has continued unchanged since the second year of operation. Within the maximum rates established by the Department, these schools are reimbursed for reducing the selling price to children below the cost of the milk and for the expenses they incur in distributing the milk (such as the purchase of milk service equipment, labor, straws, etc.). From the outset the maximum rate of reimbursement has been 4 cents per half pint for schools participating in the national school lunch program, but they do not receive any payment for the half pint of milk that is served as part of a type-A lunch. Schools not participating in the national school lunch program can receive up to 3 cents per half pint for the milk served to children.

The legislation passed in 1956, which continued the program through June 30, 1958, also extended it to nonprofit summer camps, settlement houses, and other child-care institutions. About 3,000 camps participated in the program last summer and reimbursements totaled about $650,000. Although camp and institutional operations are small in relation to the school program, the program has made it possible for these groups to provide a much more adequate milk service for children.

The following table shows the growth of the program from its inception through fiscal year 1958. It is estimated that there are approximately 80,000 schools and other outlets participating in the program in the current (1959) fiscal year.

It is the belief of the committee that some States may not use quite all the funds available to them so that there will be some small amount which can be allocated to other States, thus permitting the full program to be carried out with the $3 million additional authorization contained in the bill as amended, although the State estimates add up to a deficit of approximately $380,000 more than that amount.

The committee emphasizes that the additional $3 million is merely an increase in the authorization and will be used only to the extent that the Secretary finds it necessary in order to carry out the program as presently scheduled.

DEPARTMENTAL POSITION

Witnesses for the Department of Agriculture appeared at the hearing on this matter and frankly outlined the rapid growth of the special milk program and the apparent need for more funds than presently provided to carry out this year's program. They did not request the additional authorization contained in this bill but held out the hope that the program could be contained within the present maximum authorization by adjustment or, if necessary, curtailment of the State programs.

CHANGES IN EXISTING LAW

In compliance with clause 3 of rule XIII of the Rules of the House of Representatives, changes in existing law made by the bill are shown as follows (existing law proposed to be omitted is enclosed in black brackets, new matter is printed in italic, and existing law in which no change is proposed is shown in roman):

PUBLIC LAW 85-478, 85TH CONGRESS, S. 3342, JULY 1, 1958

An act to continue the special milk program for children in the interest of improved nutrition by fostering the consumption of fluid milk in the schools

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for [each of the three fiscal years in the period beginning July 1, 1958, and ending June 30, 1961] *the fiscal year beginning July 1, 1958, not to exceed $80,000,000, and for each of the two fiscal years thereafter,* not to exceed $75,000,000 of the funds of the Commodity Credit Corporation shall be used to increase the consumption of fluid milk by children (1) in nonprofit schools of high-school grade and under; and (2) in nonprofit nursery schools, child-care centers, settlement houses, summer camps, and similar nonprofit institutions devoted to the care and training of children. Amounts expended hereunder and under the authority contained in the last sentence of section 201(c) of the Agricultural Act of 1949, as amended, shall not be considered as amounts expended for the purpose of carrying out the price-support program.

PROPOSED LEGISLATION RELATING TO FARM CREDIT

Mr. ELLENDER. Mr. President, on behalf of myself and the senior Senator from Vermont [Mr. AIKEN], I introduce, for appropriate reference, two farm credit bills, one relating to the Federal land bank system and the other to the status of all farm credit banks—Federal land banks, Federal intermediate credit banks, and banks for cooperatives—and their employees under various Federal laws.

The bill relating to the Federal land bank system provides for the transfer of the responsibility for making appraisals for land bank loans from the Farm Credit Administration to the Federal land banks. After more than 40 years experience, it is believed that the land banks are ready to assume this responsibility and that their doing so will improve the efficiency of their lending service. There would also be transferred to to the land banks the staff of appraisers now employed by the Farm Credit Administration, except for a small number who would be retained by the Farm Credit Administration to establish appraisal standards and to see that the bank appraisers follow those standards in making their appraisals. The other bill would simply clarify the status of the farm credit banks and their employees in relation to the various laws relating to the United States and its employees. The need for this has been commented upon by both the Comptroller General and the Civil Service Commission.

The proposed legislation would give the boards of directors and officers of the farm credit banks in each of the 12 districts greater responsibility and authority for the management of the banks, in accordance with the policy of the Farm Credit Act of 1953. The 1953 act established two important objectives for the cooperative Federal farm credit system: First, to encourage and facilitate increased borrower participation in the management, control, and ultimate ownership of the farm credit banks and local associations of the system; and second, to provide means for the retirement of the remaining Government capital in the system. The Farm Credit Acts of 1955 and 1956 provided most of the legislation needed to accomplish those objectives. These two bills are needed fully to carry out the objectives which the Congress set for itself in 1953, to improve the efficiency of the lending service and to clarify the application of certain Federal laws.

With a few exceptions, the appraisers who would be transferred under the land bank bill are now in the competitive civil service and all of them are covered by the civil service retirement program. Upon their transfer to the Federal land banks, the appraisers would be subject to the same employment conditions as other bank employees and would continue under the civil service retirement program as long as they work for the banks. The appraisers involved in the transfer are now located in the field and each would continue to work in the same farm credit district in which he is now located. The appraisers would be transferred at their present salaries and all leave accumulations would be transferred with them. Thus, the bill itself would preserve the rights of those appraisers involved in the transfer.

The second bill would clarify the present uncertain status of the employees of all farm credit banks. They are now regarded as Federal employees for purposes of some Federal laws and not for others. They are presently in schedule A of the excepted civil service and are under the civil service retirement program. Their salaries, however, are paid directly by the banks from their earnings and not from U.S. Treasury funds.

This bill would declare the farm credit bank employees to be non-Federal, except that all those covered by the civil service retirement program on the effective date of the legislation would continue under such retirement program as long as they are employed by the banks. Thus, no employee of these banks would be denied any retirement or related rights under the terms of the bill. On the contrary, their present uncertain status under the civil service retirement program would be resolved so as to assure their continued coverage thereunder.

Under present law, the banks and their employees are federally supervised by the Farm Credit Administration, the Federal agency responsible for overall supervision of the farm credit system. Such responsibility for supervision would continue undiminished under the terms of these bills.

The PRESIDENT pro tempore. The bills will be received and appropriately referred.

The bills, introduced by Mr. ELLENDER (for himself and Mr. AIKEN) (by request), were received, read twice by their titles, and referred to the Committee on Agriculture and Forestry, as follows:

S. 1512. A bill to amend the Federal Farm Loan Act to transfer responsibility for making appraisals from the Farm Credit Administration to the Federal land banks, and for other purposes; and

S. 1513. A bill to clarify the status of the Federal land banks, the Federal intermediate credit banks, and the banks for cooperatives and their officers and employees with respect to certain laws applicable generally to the United States and its officers and employees, and for other purposes.

TEMPORARY UNEMPLOYMENT COMPENSATION ACT OF 1959— AMENDMENT

Mr. MCNAMARA (for himself, Mr. CLARK, Mr. HART, Mr. MURRAY, Mr. MANSFIELD, Mr. MORSE, Mr. NEUBERGER, Mr. GREEN, Mr. GRUENING, Mr. BYRD of West Virginia, Mr. RANDOLPH, Mr. HUMPHREY, Mr. MCCARTHY, Mr. DOUGLAS, Mr. KENNEDY, Mr. WILLIAMS of New Jersey, Mr. PASTORE, and Mr. HARTKE) submitted an amendment, intended to be proposed by them, jointly, to the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation, which was ordered to lie on the table and to be printed.

NEED FOR BETTER STATE PARK SYSTEMS IN PUBLIC LAND STATES—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 16, 1959, the names of Senators BIBLE, CANNON, and ALLOTT were added as additional cosponsors of the bill (S. 1436) to amend section 1 of the act of June 14, 1926, as amended by the act of June 4, 1954 (68 Stat. 173; 43 U.S.C., sec. 869), introduced by Mr. BENNETT on March 16, 1959.

INCORPORATION OF AGRICULTURAL HALL OF FAME—ADDITIONAL COSPONSOR OF BILL

Under authority of the order of the Senate of March 18, 1959, the name of Mr. CASE of South Dakota was added as an additional cosponsor of the bill (S. 1449) to incorporate the Agricultural Hall of Fame, introduced by Mr. CARLSON on March 18, 1959.

STANDING COMMITTEE ON VETERANS' AFFAIRS—ADDITIONAL COSPONSORS OF RESOLUTION

Mr. MORSE. Mr. President, I ask unanimous consent that at such time as the resolution (S. Res. 19) to establish a Standing Committee on Veterans' Affairs in the Senate, submitted by me on January 12, 1959, is reprinted, the names of the Senator from New Jersey [Mr. CASE], and the Senator from New York [Mr. JAVITS] may be added as cosponsors.

The PRESIDENT pro tempore. Without objection, it is so ordered.

CHANGE OF REFERENCE

Mr. DOUGLAS. Mr. President, Senate bill 1188, for the relief of Herman E. Tenzler, Ernest Gallo, and Julio R. Gallo, is now pending before the Committee on the Judiciary. At a recent meeting of the committee this bill was considered and, as a result thereof, the committee authorized and directed the chairman to request that the Committee on the Judiciary be discharged from further consideration of this bill since it involved tax matters and certain specifically named sections of the Internal Revenue Code of 1954, which more properly comes within the jurisdiction of the Committee on Finance.

Mr. President, I ask unanimous consent that the Committee on the Judiciary be discharged from further consideration of S. 1188, a bill for the relief of Herman E. Tenzler, Ernest Gallo, and Julio R. Gallo.

Mr. KEATING. Mr. President, reserving the right to object, that matter has been cleared, I take it, with the committee?

Mr. DOUGLAS. Yes, that is correct.

The PRESIDING OFFICER (Mr. DODD in the chair). Without objection, it is so ordered.

PRINTING AS A SENATE DOCUMENT THE PRELIMINARY REPORT OF PRESIDENT'S COMMITTEE TO STUDY MILITARY ASSISTANCE PROGRAM (S. DOC. NO. 18)

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed as a Senate document, the preliminary report of the President's Committee To Study the Military Assistance Program, together with the letter of transmittal.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRINTING OF REVIEW ON KEWAUNEE HARBOR, WISCONSIN, (S. DOC. NO. 19)

Mr. CHAVEZ. Mr. President, I present a letter from the Secretary of the Army, transmitting a report dated February 2, 1959, from the Chief of Engineers, Department of the Army, together with accompanying papers and an illustration, on a review of report on Kewaunee Harbor, Wisconsin, requested by a resolution of the Committee on Public Works adopted May 24, 1956. I ask unanimous consent that the report be printed as a Senate document, with illustrations, and referred to the Committee on Public Works.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. JOHNSON of Texas:

Letter from Representative JAMES C. WRIGHT, JR., carrying an Easter message.

By Mr. CAPEHART:

Newsletter on four major problems facing the Nation, released by him on March 23, 1959.

By Mr. PROXMIRE:

Press release concerning address delivered by Representative REUSS, of Wisconsin.

SENATOR JAMES E. MURRAY, CHAMPION OF THE AMERICAN INDIAN

Mr. MANSFIELD. Mr. President, many of us here in the United States Senate represent constituencies partially made up of Indian populations. The Indian tribal groups in this country have the greatest heritage of any ethnic group in the United States, yet they are in many instances forced to live under the most impoverished conditions and because of the social strata in which they live they have not had the opportunity to improve themselves.

The present Federal Indian policy has not, in my estimation, done too much to improve this situation; that policy has been one of trying to push termination and relocation too fast and too soon. Too little attention is being given to economic development and improvement of health standards.

In recent months Federal Indian policy appears to have shifted into lower gear. But if Senate Concurrent Resolution 12 can be adopted, the future for the American Indian will become brighter. The leader and undisputed champion of the rights and interests of our Indians is the distinguished senior Senator from Montana and chairman of the Senate Interior and Insular Affairs Committee, JAMES E. MURRAY.

Senator MURRAY has for many years been the counselor and confidant of the Indian Tribes in our State of Montana, as well as the entire West. Under his leadership much has been done to improve living conditions on reservations; and under his continued leadership, with the excellent cooperation of the able chairman of the Senate Interior Subcommittee on Indian Affairs, the junior Senator from Oregon [Mr. NEUBERGER], they will see that greater opportunities are offered to our Indian brothers. The Indian is America's first citizen, and Senator MURRAY will do his utmost to see that the Indian people can assume this role with pride and confidence.

A recent comprehensive study of Indian land sales is only one example of the fine reappraisals of our Federal Indian policy under the guidance of Senator MURRAY.

Mr. President, I ask unanimous consent to have a portion of the February 1959 issue of Indian Affairs, entitled "Senator MURRAY Reports," printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

SENATOR MURRAY REPORTS

Conspicuous among the men who are trying to make Federal Indian policy conform to Indian aspirations are Senator JAMES

MURRAY, of Montana, chairman of the Senate Committee on Interior and Insular Affairs, and Asisstant Secretary of the Interior, Roger L. Ernst. We invited each of them to speak in this newsletter. Senator MURRAY sent us the article which appears as our lead story. We are privileged to print it. Secretary Ernst was in Arizona when we asked his office for a communication for our readers. Through his office we received the statement that we are happy to print on our editorial page.

Individual Indian trust land alienation is passing out of Indian ownership at a potentially disastrous rate.

Under a Federal policy of recognizing and speeding applications for sale of lands allotted to Indians more than 70 years ago, the past 10 years have seen a decrease in individually owned Indian trust land of 3,307,217 acres, while tribal trust land increased by 1,213,307 acres. The net loss of trust land to the American Indian was 2,093,909 acres. More than 1 million acres were lost in the Billings, Mont., and Aberdeen, S. Dak., areas alone. Also, of 529,991 acres set aside for Indians in the United States 140,350 acres are not being used for the benefit of the Indians. During the 10-year period, 1954 was a peak year for sales of individual Indian trust land, when nearly 600,000 acres were removed from all trust status.

These facts emerge from an 800-page report, "Indian Land Transactions: An Analysis of the Problems and Effects of our Diminishing Indian Land Base, 1948–57," published December 1 by the Committee on Interior and Insular Affairs. The report was in the form of a memorandum of the Honorable JAMES E. MURRAY, of Montana, Chairman of the Senate Committee on Interior and Insular Affairs to the whole committee.

Senator MURRAY's statement points out that few studies seem to have been made at the Bureau of Indian Affairs' level on the subject of the effects of its land policy; that bureau field officials do not follow uniform procedures in passing on applications by individual Indians for the sale of their land, and that this situation is not in keeping with the Federal Government's and the Bureau's position as caretakers of Indian trust land. The MURRAY statement also said that Indian tribes should have the benefit of competent advice and competent studies by the Bureau's professional staff.

Twelve pages of charts are included, illustrating removal of land from all trust status in the various area offices of the Bureau of Indian Affairs. Data in tabular form are also available on the answers to the questionnaire on the subject of land sales sent to area directors and superintendents in April last year. For purposes of the questionnaire a moratorium on land sales was granted on May 28 by the Bureau for the balance of the congressional session.

Analysis of committee data was made by the Legislative Reference Service of the Library of Congress.

A STATEMENT BY HON. JAMES E. MURRAY

"To the Members of the Senate Committee on Interior and Insular Affairs:

"During the past 4 or 5 years there has been grave concern over the increasing alienation of Indian lands from trust status. I was keenly aware of the situation in my own State of Montana and was informed that a similar situation existed in other States. The major apprehension is that decreases in the Indian land base will seriously impair the effective use of Indian tribal and individual trust land in terms of economic land units.

"Finding that detailed statistics on the extent of Indian trust land disposals were not available in Washington, I arranged for the formulation of a questionnaire which would provide the committee with the necessary data for more adequate study. On April 17, 1958, the questionnaire was sent to 52 agency offices and the tribual organizations of those agencies.

"On May 13, 1958, I requested the Secretary of the Interior to declare a moratorium on Indian trust land sales until such time as this committee might complete its investigation of the situation and initiate recommendations for legislation or other measures. On May 28, 1958, Acting Secretary of the Interior Hatfield Chilson informed me that the requested moratorium would be in effect for the balance of the congressional session. The moratorium would not apply to the Klamath Reservation of Oregon because the trust status of all allotted lands would terminate there on August 13, 1958, and the termination law specifically provides for departmental assistance to these Indians in the sale of their heirship lands.

"The preliminary committee study elicited some of the most detailed statistical data that has been collected in recent years concerning Indian trust land. Tribal trust land increased by 1,213,307.41 acres during the 10 years studied (1948–57), while individual trust land decreased by 3,307,217.38 acres, resulting in a net loss of 2,093,909.97 acres of trust land to our Indian population. The greatest losses took place within the Billings and Aberdeen areas with Billings alone accounting for a loss of over 1 million acres of individual Indian trust land.

"The study did not stop at this point but showed the various means by which the land was removed from trust status. Total acreage removed from individual trust (3,307,217.38) included lands that were sold to the tribes and presumably remained in trust status, thus not representing a direct loss to our Indian population. The prime objective of this study concerned the individual acreage removed from all trust status, so the statistics were refined to include only 'sales to fee' and 'fee patent,' indicating complete removal from trust. Lands in these categories are individually owned trust lands. Under 'sales to fee' the land is sold directly from trust status with the fee patent issued to the buyer. On the other hand, lands categorized as 'fee patent' are those for which the Indian owner was issued a fee patent. In both cases the Bureau of Indian Affairs' responsibility ceases with issuance of the patent. During the 10-year period studied (1948–57), 2,595,413.66 acres of individual trust land were completely removed from all trust status. After subtracting the land acreage in the category of 'takings for public purposes,' the figure emerges as 2,174,517.85 acres removed from individual trust status through actions or approvals of the Bureau of Indian Affairs. Therefore, at the outset the questionnaire verified two major points: (1) An alarming acreage of individual Indian trust land has been removed from that category during the 10-year period and (2) 'takings for public purposes' and 'sales to tribes' were not the major areas of removal. After dividing the period under study into two 5-year segments I found that while 804,763.84 acres were removed from 1948 to 1952, inclusive, the period from 1953 to 1957 alone shows 1,790,649.82 acres were removed. This shows that my concern at the outset of this study was well founded—individual Indian trust land alienation is climbing at a potentially disastrous rate. The statistics by year for Indian trust land removed from that status are as follows:

"1948	99,121.36
1949	152,175.11
1950	100,546.84
1951	295,000.64
1952	157,919.89
1953	302,650.44
1954	575,778.41
1955	388,777.89
1956	235,627.72
1957	287,815.36

"The magnitude of these removals raises a question as to whether the Indian Bureau has exercised its authority wisely in granting so many applications for sales and patents. Has the Bureau fully considered the possible adverse effects on both the tribe and individuals in each case? I feel this question can only be satisfactorily answered by further investigation of the committee.

"One of the important aspects of the Indian land problem concerns key tracts generally considered Indian trust lands, which, if sold, would reduce the value and use of surrounding Indian trust land. In view of the fact that sale of key tracts has a direct and important bearing on the entire Indian land problem, the inadequacy of the Bureau returns were quite discouraging. Major problems encountered on this point were: (1) Lack of clarity in the Bureau returns, (2) varied understanding as to the meaning of the term 'key tract' by Bureau officials, (3) lack of sufficient returns from the tribes, and (4) confusion over the responsibilities of Bureau versus tribal personnel. Answers to various questions on the subject such as '* * * since 1953 there were not very many,' are impossible of interpretation. However, as stated in the Library of Congress analyses '* * * a much clearer picture is needed of the problem and methods of ascertaining accurate data from which a more conclusive analysis can be made.' I suggest the committee use this information as the basis for future consideration of the problem.

"Another aspect concerning the general land problems of our Indians concerns those Federal lands acquired since 1930 for the use and benefit of our Indian population. As you know, part of our questionnaire was intended to develop not only the total acreage of such lands still in Federal ownership but how much is actually being used for the benefit of Indians at this time. There are 529,991.17 acres of such land now set aside for the Indians, and of this acreage 389,640.80 acres are currently being used by our Indian population, leaving a balance of 140,350.37 acres not being used expressly for the Indians' benefit.

"Bureau of Indian Affairs

"Applications for sale to fee status or patents-in-fee filed by individual Indians are a source of concern not only to the various tribes, but to fellow Indians owning nearby trust land. It is at this stage that our problems of tribal land acquisition programs and key tracts enter the picture. It is at this point also that the effectiveness of Bureau operations is most felt, since its decision is so all important to other Indian owners of trust land. Reforms to our questionnaire show that the Bureau field officials do not follow the uniform procedures in passing on an application for sale or fee patent. In some cases a fairly detailed study is made, while in others the application is simply brought to the attention of the tribe. This is not in keeping with the position of the Federal Government, and the Bureau of Indian Affairs in particular, as guardians and caretakers of Indian trust land. Primary responsibility for decisions in this area resides with the Bureau of Indian Affairs, and while the tribes should certainly be made aware of all such action they should also have the benefit of advice and competent studies of the Bureau's professional staff. The committee might consider recommendations to the Commissioner of Indian Affairs concerning more specific instruction and regulations for the guidance of field officials. Such regulations would help to bring about a more adequate assumption of their guardianship responsibilities by Bureau field officials and would undoubtedly be of assistance to the tribes.

"While the Bureau's stated policy has been to study the 'key tract' problem, our material indicates a very confused situation among

Bureau field officials who seem to have varying interpretations of what is meant by the term. It is my thought that the committee consider suggesting to the Commissioner of Indian Affairs that a much more specific definition of the term is needed for the guidance of field officials. Such definition might take into consideration tracts *that may be 'key'* to (1) tribal land acquisition programs, (2) surrounding tribal trust land, and (3) adjacent individual Indian trust land. It would seem appropriate that such a definition would be formulated with the most beneficial utilization of surrounding tribal and individual Indian trust land in mind.

"I might bring it to the committee's attention that the study shows Bureau field officials and employees are diligently striving to assist the Indians, but are operating under somewhat of a handicap for lack of more specific direction from both the area and central offices. While I understand that regulations cannot be so stringent as to leave the field official entirely without necessary flexibility, nevertheless, they should not be so vague that various agencies are operating by entirely different methods and standards. Perhaps the committee should consider recommendations to the Commissioner which would lead to more specific regulations concerning Indian land sales activities of the Bureau. Such a coordination of Bureau activities would undoubtedly assist in creating a closer cooperation between tribal and Bureau officials at the agency level.

"Tribal councils

"While I found that some tribes had organized land acquisition programs and active real-estate committees, many others had not. The committee might consider the possibility of recommending that tribal councils organize such activities and also make a study of individual trust lands in their area. These actions could serve several purposes: (1) The Congress would have adequate up-to-date information concerning tribal land problems and planning, (2) the Bureau of Indian Affairs would have a guide indicating the objectives of the tribe in rounding out their land base, (3) the tribe and the Bureau would profit by agreeing on key tracts before individuals apply for fee patents or sales to fee status, (4) a closer cooperation and understanding of each other's problems would result between tribal and Bureau officials. It is hoped that should the committee make such a recommendation the Bureau of Indian Affairs will assist the various tribes in their planning and also cooperate with them in all future transactions.

"Committee

"I strongly recommend that the committee continue this valuable study and develop more fully the problem areas that have been brought to light.

"JAMES E. MURRAY,
"Chairman."

FEDERAL POLICY IN LOWER GEAR

With a hardly perceptible whirring of bureaucratic machinery, the Bureau of Indian Affairs by January of this year was obviously being shifted to a new, lower gear in its movement toward termination of Federal protection of Indian tribes.

A softening of its regulations on credit to tribes seeking to consolidate land programs to improve cattle operations, and to develop other economic opportunities for themselves was one indication of a Federal stay of a paternal hand which had been pushing the tribes so rapidly toward pseudosolutions of their economic problems that it was doubtful Indian communities could continue to survive.

Indian-interests organizations, and some reservation officials of the Indian Bureau still hoped for a comprehensive, down-the-line enunciation of the Bureau's new overall goal. As it was, they were still having to depend upon recent isolated evidences of an Indian policy change as confirmation of Interior Secretary Fred A. Seaton's statement last September that:

"No Indian tribe or group should end its relationship with the Federal Government unless such a tribe or group has clearly demonstrated, first, that it understands the plan under which such a program would go forward; and, second, that the tribe or group affected concurs in and supports the plan proposed."

The evidences of policy softening were discernible in a December grant of $500,000 from the Indian Bureau's revolving loan fund to the Rosebud Sioux Tribe of South Dakota for their land consolidation program, and a similar grant promised soon thereafter to the Oglala Sioux at Pine Ridge. Then, on December 17 came announcement of an increased loan program to help Alaska natives modernize their fishing fleets, followed on December 31 by word from the Secretary of the Interior that protection of Indian land would be extended for an additional 5 years. Since 1951 such extensions had been limited to 1 year.

The Bureau of Indian Affairs had made plain in a statement on May 15 by Commissioner Glenn L. Emmons that that agency was aware of the poverty of many tribes which makes it impossible for them, unaided, to use their land and other resources to the fullest extent possible, and this statement said, explicitly.

"Many, perhaps most of the tribes, do not now have the financial resources needed for a substantial land purchase program. The Department and Bureau are now working to develop legislative proposals which we believe will go a long way toward eliminating these deterrents."

This policy statement on regulations governing the sale of Indian lands was one of the first indications that a modification was in process of the Interior Department's 5-year-old contention that it had no responsibility to help the tribes preserve the land base of their communities by buying up land that poverty was forcing individual Indians to sell. As recently as this spring the Department had told one destitute tribe which applied for such help that the Government could not solve the problem of individual Indian land sales, and had advised the tribal leaders to persuade their needy people to be public-spirited and not convert land into cash.

At that time there was no public evidence that the Department was coming to accept the idea that loans from the revolving loan fund could be used to help tribes preserve land in Indian ownership without violating the right of individual Indians to sell it.

In that same month of May 1958 Senator JAMES E. MURRAY, of Montana, had asked for and received from the Department of the Interior a moratorium on sales of Indian lands in order to circularize the tribes and Indian Bureau superintendents with a questionnaire on the effects of the sales of reservation land over a 10-year period, from 1948 to 1957, upon the economy of the Indian reservations. The results of the questionnaire, published elsewhere in this newsletter, have just been released. Unquestionably, even the fact that the study was under way has had the effect of making the Department of the Interior top echelon officials look more closely at the interpretation of Government Indian policy by its Bureau of Indian Affairs.

The association had already expressed hope after the September policy enunciation of Interior Secretary Fred A. Seaton, that subsequent events would prove him to be master in his own house, but warned that the policy would have to be tested. In the latest Interior Department pronouncement (Dec. 31) on the subject of termination, extending trust restrictions from 1 to 5 years, a release from the Department points out:

"Secretary Seaton said the new order reemphasizes the Department's recent reiterated policy of taking all precautions against ending Federal supervision over Indians before they are competent to end their status as Federal wards."

As Senator MURRAY's new report, "Indian Land Transactions" to the Senate Committee on Interior and Insular Affairs revealed, there was, in his opinion, good cause to question the judgment of the Indian Bureau in permitting so much of the land base of the Indian tribes to be dissipated, or to lie idle and unproductive for the Indian economy. Possibly stemming from that criticism, the December release of the $500,000 grant to the Rosebud Sioux from the Bureau's revolving loan fund pointed up the fact that ability to obtain credit for land, cattle, and other business operations is crucial to the success of any Indian endeavor to plan for a community future, and that the Government recognizes this fact.

Avenues of credit open to the reliable non-Indian are closed to many Indian land and cattle operators, particularly if expansion of their enterprises threatens to compete with that of a neighboring non-Indian operator.

The Bureau of Indian Affairs' order on December 31, extending for 5 years the period of trust over Indian lands, gave to Indians a long-wished-for surcease from the fear which has mounted at each year's end in the hearts of the tribes under executive control, when the question of continuation of their previous 1-year renewal of restrictions against immediate alienation of their lands came up for review. Lands protected by the Indian Reorganization Act were already under trust restrictions, but for allotted Indian lands on which restrictions were scheduled to expire in 1959, the order was an unexpected reprieve from the fall of the bureaucratic ax.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Montana yield to me?

Mr. MANSFIELD. I am glad to yield.

Mr. JOHNSON of Texas. Mr. President, I wish to associate myself with everything the distinguished junior Senator from Montana has said. One of the really enjoyable things about serving in the Senate is to observe the relationship between the very able, progressive senior Senator from Montana [Mr. MURRAY] and the delightful, intelligent junior Senator from Montana [Mr. MANSFIELD].

As all of us know, no person who serves in this body is more beloved than JIM MURRAY; and it always pleases me to see his junior colleague [Mr. MANSFIELD] recognize the great contributions that JIM MURRAY makes to the Senate as an institution and to the country as a nation.

Mr. MANSFIELD. Mr. President, I wish to express my thanks to the distinguished majority leader for his remarks, and also to thank him for his recognition of the talents, ability, and leadership shown by my distinguished colleague, the senior Senator from Montana [Mr. MURRAY].

Mr. MURRAY. Mr. President, I wish to thank the junior Senator from Montana [Mr. MANSFIELD] for his generous remarks regarding my efforts on behalf of the rights and interests of our Indians. I also thank our leader, the Senator from Texas [Mr. JOHNSON], for the very kind remarks he has made concerning my efforts on behalf of our Indian citizens. I

feel quite overcome by the generosity of his statement.

I assure him that I am merely trying to do what is right and fair and just, and in this effort I have the fine cooperation and support of my colleague [Mr. MANSFIELD]. I am sure he approved of everything I have tried to do for the Indians; and I thank him for the able advice and help he has contributed in this field.

THE WILDERNESS ACT AND INDEPENDENCE OF THE MONTANA CHAMBER OF COMMERCE FROM THE CHAMBER OF COMMERCE OF THE UNITED STATES

Mr. MURRAY. Mr. President, I rise to salute the Montana Chamber of Commerce for declaring its independence from the U.S. Chamber of Commerce.

A letter I have just received from the executive vice president of the Montana Chamber of Commerce states the following:

> Regarding the U.S. chamber references showing their statements on the Wilderness Act and outdoor resources study, I will again clarify our position in relation to this national organization. The Montana Chamber of Commerce is not dominated by the U.S. Chamber of Commerce and does not give them a blanket endorsement of their policies. In fact, we have written them to the effect not to include a mention of us only as we authorize a statement. On many issues we may agree. On quite a few, however, we have disagreed with the national chamber. Our own policies are set by our own board or membership on each issue as we are able to study it. We have taken no position as yet on the Wilderness Act. I review this so you will not associate us with any statement made by the U.S. Chamber of Commerce except as authorized by us. They do not express our policy on the outdoor resources study.

I know for a fact that many of the fine members of local and State chambers of commerce do not realize that the U.S. chamber sometimes expresses views which the local and State leaders do not endorse. Perhaps other Members of Congress may wish to ascertain whether the U.S. Chamber of Commerce speaks also for their State chambers.

A SOUND U.S. ECONOMY IS THE BULWARK FOR THE DEFENSE OF THE FREE WORLD—ADDRESS BY SENATOR BUTLER

Mr. BUTLER. Mr. President, the Amen Corner of Pittsburgh includes in its membership many of the leading business and professional men in the tri-State area of which Pittsburgh is the center.

It was my privilege to address its annual dinner on Saturday, March 21. My remarks included some discussion of the Federal taxes paid in 1957 by the 44 largest industrial corporations, which were ranked by sales in the July 1958 issue of Fortune magazine, as these taxes related to the financing of our mutual security program.

Since 1957 there has been a marked decline in the tax liabilities of American business; and perhaps today it would require a great many more than 44 of our larger corporations to meet these costs.

I ask unanimous consent to have printed at this point in the body of the RECORD the speech which I had the pleasure to deliver before this distinguished gathering, and immediately thereafter the tabulations upon which my comments with respect to the taxes to finance mutual security expenditures are based.

There being no objection, the address and tabulations were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR BUTLER

It is a great honor for me to address this distinguished gathering representing the business and professional leaders in the tri-State area centering on Pittsburgh.

I take great satisfaction in coming here to participate in your annual program, since you have demonstrated what private enterprise can accomplish through its own efforts in the redevelopment of a community. The magnificent new buildings which have been erected in Pittsburgh in recent years and the great plans which you have made for the future are a tribute to the leadership and foresight of your industrialists, citizens, and the Government administrators of both political parties.

There are many proposals before the Congress to establish programs involving huge grants for urban renewal which would call for large expenditures by the Government with a minimum of local participation. Your achievement in eliminating blighted areas and in the reestablishment of your municipal tax base shows that urban renewal must begin at home rather than in Washington. To be sure, there are some contributions which can properly be made by the Federal Government, but they are limited. The planning and the initiative must be provided at the local level if real progress is to be made.

The United States, for the first time in its history, is confronted with competition by a foreign power admittedly dedicated to the destruction of everything we hold dear. Khrushchev has made the blunt statement that he will bury us.

During recent weeks the President has submitted a budget which provides for appropriations approximating $77 billions to operate the Federal Government during the coming fiscal year. By any standards, $77 billion is a fantastic sum of money; yet there are those who describe this budget as penny-pinching and utterly unrealistic in relation to the threats which confront us.

May I remind you that in 1930 the total national income was less than $77 billion. The gross national product last year was less than $438 billion. So in effect, a $77 billion budget represents more than 17 percent of our entire output of goods and services. However, the budget as submitted by the President does not begin to measure the cash outflow of the Federal Government. Because of trust fund operations for highways, social security and other programs, during the 1959 fiscal year, the President estimates that payments by the Federal Government to the public will total approximately $95 billion. This is almost 22 percent of our gross national product.

Then we must face the fact that every one of our State and local communities must meet its own budgetary expenditures which impose additional demands upon all of us. The crisis in Michigan is now well known. That great State has ceased paying its vendors and is barely meeting its payrolls. The State of New York has just increased income taxes as well as excise taxes.

It would be difficult for me to begin to compute the portion of our total production which is now devoted to government in one form or another. In other words, we have rapidly reached the point where, rather than provide for the needs of the future in an expanding economy, we are committing large portions of our future income to meet the needs of government on a pay-as-you-go basis far into the future and in the case of Michigan, unfortunately, on a pay-as-you-have-gone basis. This perhaps provides a lesson for other States to ponder.

Every Federal project for highways, schools, housing, and similar purposes based on a Federal-State matching program not only increases the Federal budget but encourages the States and local communities to either go into debt or to increase their own taxes in order to receive their share of the supposed Federal bounty.

It is obvious that every dollar which is returned to the States from the Federal Treasury is taken from the States and is returned less the overhead costs of collection and transmission.

On Friday, March 13, President Eisenhower requested the Congress to approve $4 billion in additional funds for the mutual security program. I believe that it is essential for us to assist our allies in strengthening their defenses to meet the onslaughts of atheistic communism; however, very few of our citizens comprehend the magnitude of the President's request.

Fortune magazine in its July 1958 issue ranked America's leading industrial corporations in terms of their sales. On the basis of this list, I find that the taxes paid in 1957 by 44 of our largest industrial corporations do not equal $4 billion. In fact, they paid taxes to the Federal Government in the amount of $3,811 million. These taxes in turn were predicated on sales of $91 billion worth of products. The production of these goods required the use of assets costing $73 billion. The production to furnish these taxes required the employment of more than 4 million employees. These taxes merely support the foreign-aid program. Remember, this leaves nothing for our own defense expenditures, interest on the public debt, veterans, agriculture, reclamation, education, slum clearances, public housing, urban renewal, and the countless other programs suggested for our own economic development.

I might add that the 44 corporations I have listed obviously include many whose headquarters are centered in Pittsburgh, such as the United States Steel Corp., Westinghouse, the Aluminum Co. of America, the Jones & Laughlin Steel Co., and Gulf Oil, as well as other leading firms such as General Motors, Ford, Chrysler, General Electric, Du Pont, and the major oil companies.

I fear that too few people realize that the taxes from the so-called giant corporations cannot support new welfare programs, since they are inadequate to even meet the mutual security program.

It is ironic that at a time when the Government is the principal participant in industry's profits, attacks are being made on bigness in business, although those who decry it are constantly proposing an even larger sphere for the Federal Government.

If we are again forced into armed conflict, the Defense Department will have to look to these same large companies, whose profits are financing the mutual security program, to provide the materiel for the defense of the free world.

Within a few short months the industrial leaders of Pittsburgh will be confronted with one of the major economic decisions of our time—namely, the negotiation of a new contract with the steelworkers' union, which will set the pattern not only in steel but in aluminum and many other industries as well.

Ever since World War II, wage increase has followed wage increase with little regard for the consequences in terms of inflation and our position in world markets. Throughout the postwar period, European political leaders, including those generally identified with labor, have realized that the stability and the very existence of their countries demanded some restraint in preventing inflationary cost and price increases, since they were operating on a relatively tight gold and dollar

balance which required that their products be competitive in world markets. During this same period with a large domestic demand, American labor leaders pressed for wage increases which in many cases were granted because the domestic market could absorb them. All the while our costs and price structure in relation to that of the world has become increasingly less competitive.

President Eisenhower, in this press conference statement, on Wednesday, February 25, said:

"Now, ideally, we know that * * * in each country in the world * * * the country ought to produce that thing for which itself is best suited and where its market is the most available. And then, it should buy those things it doesn't produce so well and sell these things in which it has great efficiency."

Let me quote the President's punch line—which should be ours:

"I believe that above everything else the United States should keep its cost down and try to liberalize trade. I believe that the reason we are having so much trouble competing with the other countries, other producing countries, not only within the neutral markets but right here at home, we can't compete with them. Our costs are just too high. We cannot continue to increase these costs and have the kind of foreign trade that will make our own country prosperous."

This indicates a recognition of this problem at the highest possible level of Government.

American labor leaders in formulating their wage demands have become increasingly concerned with take-home pay. Yet, the actual wages which must be factored into the costs and prices of all goods and services must include the cost of Government.

There is only one way that these costs can be met, namely, through taxation which ultimately must be reflected in the price of every product as well as in the wages and salaries of all our employees. Insofar as the United States is forced to assume a disproportionate share of the effort to preserve the free world, its prices are less competitive than they otherwise might be.

Until recently Western Germany has had no sizable military budget, and this has been an important factor in enabling her producers to operate with lower costs and hence quote lower prices in the world's competitive markets.

It is apparent to any observer of the Washington scene that it will be a miracle if the President's proposed budget for the 1960 fiscal year, which starts July 1, will survive the onslaughts of those who are determined to authorize public works programs, public housing, and many other desirable projects, without any consideration as to how we are to pay for them without destroying our economic base.

For years to come it will be necessary for American producers to be far more productive than their foreign competitors merely to maintain their share of our own market, while we undertake the many tasks to which we are committed in the world struggle against communism.

There is only one way whereby we can raise living standards and assume the burdens which have been placed upon our generation—namely, to increase the physical product, and I use the word "physical," advisedly. We have been so bemused with monetary symbols that many of us have forgotten that improved living standards are based on a greater production of goods and services rather than the receipt of more paper dollars. Such increased production, in turn, is predicated on workers being provided with better tools and equipment, which in turn necessitates increased capital investment, on better methods and managerial techniques, on more advanced research, and in the last analysis, a greater dedication to hard work by everyone in the community.

During the course of recent hearings before the Joint Economic Committee, I have listened to economic theorists suggest that we must strive for a rate of growth approximating 5 percent a year in order that we might maintain our position in the competitive struggle with the Russians. I do not pretend to know whether the rate of growth should be 2 percent, 5 percent, or 10 percent. I do know that it must be measured in physical units of production and not in dollars. I know that if we continue to grant inflationary wage increases, which in turn must generate inflationary price increases, the Communists will have achieved their expressed ambition—to conquer the world without having fired a shot.

In his book entitled "The Economic Consequences of the Peace," the widely-known British economist, John Maynard Keynes, commented: "Lenin is said to have declared that the best way to destroy the capitalist system was to debauch its currency." Then after detailing some of the harmful effects of currency debasement, Keynes added: "Lenin was certainly right. There is no subtler, no surer means of overturning a society than to debauch the currency. The process engages all the hidden forces of economic law on the side of destruction, and does it in a manner which one man in a million is able to diagnose."

Some of Keynes' economic theories are highly unacceptable to me, but it would be extremely difficult for anyone to put up a valid argument against this thesis.

Last December my colleague the senior Senator from Minnesota, Mr. HUMPHREY, had an 8-hour interview with Mr. Khrushchev. He described his experience in an article which appeared in the January 12 issue of Life magazine. Senator HUMPHREY asked Mr. Khrushchev about Red China's experiments with the new compulsory communal living that Mao Tse-tung was forcing upon Red China. Mr. Khrushchev, according to Senator HUMPHREY, said:

"They are old-fashioned, they are reactionary. We tried that right after the revolution. It just doesn't work.

"You know, Senator, what those communes are based on? They are based on that principle, 'From each according to his abilities, to each according to his needs.' You know that won't work. You can't get production without incentive."

The tables are slowly being turned. The Russians are adopting our capitalistic concepts while we are slowly embracing Marxism.

The Joint Economic Committee is about to embark on an extensive study of inflation. The Subcommittee on Antitrust and Monopoly of the Senate Judiciary Committee is also reviewing this field, and is attempting to attribute inflation to the exorbitant profits of large industrial firms.

During the past week I have read with a great deal of interest the 1958 Annual Report of the United States Steel Corp., which was released on Wednesday, March 18. The following statement from that report is significant to all of us. It said:

"The fact is that over the past decade there has been a sharp downward trend in the relative position of profit in the American economy. This trend has already cut the profit incentive approximately in half. Thus corporate profits just before and shortly after World War II ranged from about 12 to 14 percent of the Nation's employee compensation. Since then the percentage has shrunk to about 7 percent. Most employees realize that the only true job security they have is that their employers can make profits and so continue to hire them. In terms of this measurement the margin for job security has been cut about in half.

"Almost everybody 'believes in' our competitive enterprise system. But many have misconceptions of its nature and function and so lend at least passive encouragement to those who would either bargain away, tax away or regulate away profits, all of which efforts have something to do with the undermining of the profit incentive which has taken place."

Economic Indicators, a publication by the President's Council of Economic Advisers, shows the national income for each year from 1948 through 1958. During that decade the national income increased from $224 billion in 1948 to $361 billion in 1958, an increase of $137 billion. Without any great knowledge of economics, it is not difficult to find where this increased national income went. Compensation to employees rose from $141 billion in 1948 to $254 billion in 1958, an increase of $113 billion, or 82 percent of the increase in national income. A comparison of corporate profits, before taxes, over this same period is even more revealing. In 1948 they totaled $33 billion, and in 1958 only $36.4 billion, an increase of $3.4 billion or less than 2½ percent of the total increase in national income. But remember, that 52 percent of this increase of $3.4 billion, or $1.8 billion, was paid to the Federal Govrenment in income taxes.

The statistics I have just quoted clearly show that if prices had not been increased industries would be bankrupt and our economy would have been destroyed.

As an aside, let me also mention that high interest rates, or the so-called tight-money policy can hardly account for inflation.

In 1948 net interest totaled $4.2 billion. In 1958 it totaled $13.2 billion, an increase of $9 billion, or only 7 percent of the increase in the national income.

We cannot meet the Communist challenge by devising ways to raise our economy by our bootstraps and produce higher monetary incomes while we shorten hours and enjoy more leisure.

We also cannot continue to assist the underdeveloped countries in raising their living standards through continued grants from the Public Treasury. The present American economy was built by the savings of individuals and corporations over many generations. There can be no short cuts to this process. Again, using the economic indicators prepared by the President's Council of Economic Advisers I find that in 1958 the total gross private domestic investment in the United States totaled $54.4 billion. This investment was added to an already well-developed industrial plant. Yet, we have visionaries who suggest that by spending a few billion dollars annually through the United Nations we can provide improved living standards for the teeming millions of Asia and Africa. This is a cruel hoax.

There are, roughly speaking, about 400 million people in Western Europe, North America, Australia, and New Zealand who have an average income of around $1,000. In the so-called underdeveloped countries, excluding Red China, there are about a billion people with an average per capita income of about $60 a year.

Many believe that the living standards of the world's people can be improved if the Congress appropriates sufficient funds. They fail to realize that higher living standards can only result from the more effective use of materials and energy.

The advancement of a people's welfare requires an increase in their productivity. Our high productivity and standard of living are closely related to a high per capita consumption of energy. In the United States we have substituted inanimate energy, chiefly mineral energy, for the muscular power of humans and animals. In many parts of the globe much of the world's work is still dependent on muscular power.

In the last 100 years our per capita use of energy to provide motive power in economic production has increased sixfold. As late as 1850, 65 percent of all energy consumed in the United States was contributed by animals and humans. By 1950, over 98 percent of all energy employed was inanimate.

We take pride in the fact that with only 7 percent of the world's population and 6 percent of its area, we are responsible for 50 percent of its total production. We generate 46 percent of its electrical power, have 55 percent of all telephones in use, and 70 percent of all the automobiles in the world. The corollary to these facts is that the rest of the world with 93 percent of its population has much lower living standards than our own.

The extent of a country's industrial development can be measured in terms of its per capita consumption of steel. According to the United Nations, in 1954 the per capita consumption in the United States was 1,052 pounds. In Egypt it was 23; in Peru, 22; in India, 13; and in Indonesia, less than 7. If these countries industrialize, this per capita consumption must be raised, and again I need not tell industrialists that this process cannot occur in a short space of time. A balanced economic development requires a concurrent expansion in the usage of nonferrous metals and energy sources.

The economic advancement of underdeveloped countries presents one of the greatest tasks which will confront industry's technical personnel for years to come. Some idea of the magnitude of this problem is again available from a United Nations' study where it has been calculated that to supply all Asians wih $2,000 worth of machinery and tools per worker would cost three times the U.S. national income or to express the problem in another way, to give all Asians the same capital per worker as the Japanese were using prior to World War II would require 150 percent of our national income.

The industrialization of underdeveloped countries will produce tremendous demands upon the world's resources. While today we are concerned with apparent surpluses of many commodities, in the long run, there can be no question that we shall have to use all of our ingenuity to utilize more effectively the resources available to us.

A permanent U.S. mutual security program or a United Nations' program based on grants and soft loans from the United States will not solve the needs of these people. They can only be met by the development of a sound, indigenous free enterprise economy which provides incentives for savings and hard work by the people who live in these countries.

American free enterprise can play an important part in this development through private investment, but such investment will not take place unless there is favorable climate which is predicated on a realization of the need for economic, political and social stability.

The so-called backward nations cannot be catapulted into the 20th century by magic, and all of the financial mumbo jumbo will not accomplish the building of plants and modern facilities.

The Russians know this. Their economy, in spite of their propaganda, has been devised to use all of the incentives of capitalism. The building of steel mills and other productive facilities takes precedence over consumer goods. There are no free markets. The state determines what shall be built and provides incentives for managers and technicians who can accomplish what is required. Only a limited amount of money is set aside in wages to pay for consumer goods produced by the state—thus inflation is controlled. We certainly do not want to emulate such a system, but we can return to the precepts which have made Western civilization great. Basically they are very simple—thrift and hard work.

Our tax system deters thrift. In these days, when the Government requires the maximum possible revenue, progressive tax rates which exceed the point of diminishing returns represent fiscal irresponsibility at its worst. What is not generally recognized is the fact that our progressive income taxes apply particularly to investment income from the private sector of our economy. Anyone can readily secure a yield of 3 percent through the purchase of tax-exempt bonds which finance State and local enterprises of many kinds.

An investment in a corporate enterprise must produce at least 7.8 percent before taxes to provide an equivalent yield to a person with a taxable income of only $2,000. If the income of an individual is $10,000 the yield from a private corporate venture must exceed 10 percent before taxes to equal the 3-percent yield he can obtain from a tax-exempt security. If he happens to be in the top Federal tax bracket the equivalent yield from a private corporate investment must be more than 69 percent. This is an absurdity.

I do not have to belabor the point with this audience that there are few individuals in the upper-income brackets who are interested in financing new risk enterprises under such conditions. I hope, as a member of the Senate Finance Committee, to make a contribution toward the restoration of some sense to this utterly unrealistic progressive tax structure which was designed to punish success rather than to raise revenue. Mr. Khrushchev would not have made this mistake.

American citizens are not permitted to convert paper dollars into gold; however, foreigners have this opportunity. In recent years we have been providing them with dollar resources to enable them to draw on our gold balances. Unless we maintain competitive prices in world markets and bring about a balance in terms of our international payments our economy is headed for serious trouble.

In 1948 U.S. gold stocks reached a postwar high of $24.6 billions. At the end of last year they stood at $20.6 billions, a decline of $4 billions. The reduction in 1958 alone totaled $2.3 billions. In fact, the monthly figures show a falling gold stock for every month since January 1958. While a $20 billion gold stock provides an adequate base for our currency, it must be self-evident that a decline of about 10 percent a year can no longer continue without completely destroying our own economic system. This, perhaps, is the best way for us to fully appreciate the impact of unsound economic policies, since an excess of demands for dollar payments abroad over purchases from us will sooner or later be reflected in our monetary reserves.

Our country has faced and met great problems in the past. I have every confidence that our leaders in industry, labor, and Government are capable of meeting the difficulties which confront us today. They can, and will be met by a rededication by each of us to those ideals which guided our Founding Fathers in writing the Constitution and our Bill of Rights.

We must reinstill these virtues in our youth, because it is quite apparent that our opponents behind the Iron and Bamboo Curtains are developing the willingness to sacrifice immediate pleasures in order to achieve their objectives. We must meet this challenge while retaining freedom. It is more difficult for us to impose self-discipline upon ourselves than to permit dictation by the State, but if we are true to our heritage, this is what we shall do.

The table ordered to be printed in the RECORD is as follows:

Federal taxes paid by the 44 largest industrial corporations, ranked by sales, are required to finance 1959 expenditures for international affairs and finance

[Dollar amounts in thousands]

Company	U.S. income taxes paid in 1957	Sales	Assets	Invested capital	Employees
General Motors	703,221	10,989,813	7,498,008	4,905,108	508,160
Standard Oil (New Jersey)	*53,000	7,830,250	8,712,387	5,755,611	160,000

[1] Includes U.S. and foreign income taxes.

NOTE.—All data from July 1958 Fortune Directory of the 500 Largest U.S. Industrial Corporations except U.S. income taxes which was taken from Moody's 1958 Industrial Manual (asterisks indicate data was taken from corporation's annual report). Western Electric, which ranked No. 11, was omitted as its data are consolidated with American Telephone & Telegraph, a public utility. Armour, which ranked No. 16, was omitted since it paid no Federal income taxes.

ADMINISTERED PRICES ARE NOT INFLATIONARY

Mr. BUTLER. Mr. President, during the 86th Congress it will be my privilege to participate in studying what is undoubtedly the Nation's most important domestic problem—namely, the maintenance of a competitive price structure—through my membership on the Senate Finance Committee and the Joint Economic Committee.

During the last session of the Congress, I devoted considerable effort to this problem, particularly with reference to examining the views expressed by some economists who attributed the increase in our cost and price structure to so-called administered prices. These prices have been defined as those having two characteristics: First, that they are set by administered action; and, second, that they are maintained for a period of time.

Such pricing methods of necessity are today employed in large segments of our economy. In fact, the economists who appeared before the Senate Antitrust and Monopoly Subcommittee during its 1957 hearings freely stated that administered prices were essential. Dr. Gardiner C. Means, the originator of the term "administered prices," testified as follows:

> Administered prices should not be confused with monopoly. The presence of administered prices does not indicate the presence of monopoly nor do market prices indicate the absence of monopoly.
>
> If administered prices are present in a major part of our economy and since they exist in a great many areas which are not monopolized but in which there is active competition between a few units, it is clear that they do not necessarily reflect monopoly conditions but something more widespread—namely the reduction in the number of competing units in many industries.

Dr. Edwin G. Nourse, former Chairman of the President's Council of Economic Advisers, stated:

> It is my considered opinion that the economic institutions and business practices described as "administered pricing" grow naturally and properly out of the conditions of modern industrialism and that they may be so used as to promote both economic growth and business stability vigorously and consistently.

Prof. J. Kenneth Galbraith, professor of economics at Harvard University, and who, incidentally, is a member of the Democratic advisory committee, stated:

> The analysis of the effect of this ability to administer the prices of an industry has been greatly handicapped by the conviction that it is somehow improper. Actually, such administration is not only possible but also inevitable when an industry is in the hands of a relatively small number of firms.
>
> And it is equally inevitable that a great many industries will be conducted by a comparatively small number of large firms. That is the nature of capitalism wherever it is found. A large amount of price administration by private firms is thus part of the system. Those who deplore it are wasting their breath. The problem is to understand it and to live with it.

I have been interested in the fact that in recent months a number of major firms whose prices would fit the definition of administered prices have announced that they would protect the consumer against price increases for an extended period of time. This protection would undoubtedly continue even further were it not for the fact that costs may rise later this year in these particular industries when wage agreements are reopened.

On November 2, 1958, the American Can Co. announced a new pricing policy. A newspaper item which appeared in the New York Times said:

> The American Can Co. announced yesterday a new pricing policy, which it said would result in lower can prices for most of its customers. William C. Stolk, president, estimated the saving to consumers at more than $9 million.
>
> Effective January 1 the company will establish a separate f.o.b. (free on board) price at each of its 68 plants. At present it is the industry practice to have two general pricing areas for east and west of the Rocky Mountains. The prices do not reflect actual transportation costs.
>
> Under the new policy, American Can's prices will be based on actual transportation costs of steel and tin plate delivered to the company's plants, as well as the cost of delivery to the company's customers. Mr. Stolk said American Can would hold the line on its new prices until October 1, 1959, "except for adjustments that may be necessary to reflect any increases the steel companies might make in their tin plate prices."

On December 5, 1958, the Aluminum Co. of America announced that its published prices as of that date would apply to all products ordered or shipped prior to July 1, 1959. Mr. Donovan Wilmot, vice president of the Aluminum Co. of America, said by assuring customers of today's published prices on all products shipped before next July 1, Alcoa makes it unnecessary for them to hurriedly place large blanket orders, the specifications of which continually would have to be changed. The latter course, he said, could not fail to result in confusion and disorder in the necessary administrative procedures. It also could create price discrimination as between customers in the event of subsequent price changes.

Customers have been told that Alcoa will invoice, on the basis of today's published prices, all new and existing orders for products covered by its published price schedules against which shipment is made prior to July 1, 1959. The company already has in effect, through July 31, 1959, a similar policy covering electrical conductor products.

Shipments made against new or existing orders on or after next July 1 will be invoiced at the price in effect at the time of shipment.

These actions by two firms with administered prices should dispel some of the confusion which has arisen that such pricing methods tend to be inflationary.

It is apparent that economic writers who have reviewed Congressional hearings on this subject are aware of the fact that there is no reason to link inflation to administered prices. Mr. President, I ask unanimous consent that three articles by nationally recognized commentators may be printed in the RECORD at this point. The first is by Ted Lewis, and was published in the New York Daily News of January 22, 1959. The remaining two articles were written by the eminent and distinguished business and financial editor of the New York Herald Tribune, Mr. Donald I. Rogers, and were published in the January 23 and January 25 issues of that newspaper.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Daily News, Jan. 22, 1959]

CAPITAL CIRCUS

(By Ted Lewis)

WASHINGTON, January 21.—ESTES KEFAUVER, Democrat, of Tennessee, is about to kick off a series of Senate hearings which Democratic Party leaders hope will nail down the "party of the people" label for the duration of the 1960 presidential campaign.

This political design does not, to be sure, show on the surface. The hearings, starting Friday by KEFAUVER's antimonopoly subcommittee, will simply lay the groundwork for the thesis that big business is the villain in the battle against inflation. The investigation will then concentrate on such consumer-interest matters as the price of bread, milk and vitamin tablets in New York and other big cities.

Soon after last November's election, those politicians who really run the Democratic Party decided that the line in the new 86th Congress should be concentrated on the KEFAUVER kind of committee investigation, and that the continuing probes of labor racketeering and Communist infiltration should be pushed quietly into the shadows.

After all, every one of the Nation's 175 million people is a consumer—so let's go after the consumer vote in a big way.

This is really important political planning on a broad vote-seeking basis. It is certainly wiser than the nonsensical debate out in Des Moines, Ia., where Republican leaders today were trying to determine whether their party needs a face-lifting or simply a few more vitamins.

How do you appeal for this consumer vote? Well, you simply blame big business for inflation, get a few economists to go along with you and tell the consumer how much he suffers because of what he has to pay for essentials.

A favored example in this cheap political game is the increase in bread and milk prices; a pound loaf of bread up 3 cents since 1953, a quart of milk up about 2 cents.

IT'S A SLICK, IF SLIMY, SIMPLIFICATION

Then you leave the impression that these hikes are due to bigger profits by the bakery trust and the milk combine—bigger profits condoned by the Ike administration which is thereby put in the corner of the coupon clippers and industrialists.

This is a very elegant, if basically slimy way of simplifying the most complicated problem in the world today—how to halt the wage-price cycle.

ESTES KEFAUVER, with his instinct for fairness, simply says that "the high cost of living which represents the No. 1 domestic problem to the American consumer is due in no small part to the upward manipulation of prices by big companies in administered price industries."

This is a form of gobbledygook, for KEFAUVER's idea is that no industry which tends to follow the price level of the top dog in the industry—United States Steel for example—will sacrifice a big profit for a smaller one.

THERE'S A BOOMERANG TO LOOK OUT FOR

ESTES is, of course, hipped on this subject, especially in view of the fact that no one disputes that in last year's recession it was the tendency of prices in concentrated industries to rise, while production and employment fell.

The Democratic Party leaders have given KEFAUVER a green light on this probe but they had better be warned right now that a boomerang is possible. What we guess is that they have accepted at face value ESTES' refusal to count himself out of the 1960 presidential race.

But, once dreamed of, the dream becomes your master. After all, there is now talk of Adlai Stevenson, two time loser, and ESTES was Adlai's running mate only once. Probably no one in America has ever shaken so many hands and yet produced so few votes.

WANTS A CABINET POST FOR CONSUMERS

And KEFAUVER, always willing to try, try, try again, is smarter than he sometimes appears. For example, he is anxious to be the champion of the American consumer right down the line.

He has a bill to set up a Federal Department of Consumers, Cabinet level. His idea is that the Interior Department, the Commerce Department, along with the Labor and Agriculture Departments represent segments of the American people in their capacity as producers—so why not a Cabinet setup representing all the people in their capacity as consumers?

In his quiet folksy way he packs a wallop. He is the favored hillbilly type of speaker when it comes to acquainting the public with certain partisan beliefs and he is hard to answer. We can point out it is strange that while tax levels have remained the same for both individuals and corporations, the take from individuals has risen 33 percent since 1953 while the take from corporations remains the same despite mighty good profits.

IT'S STILL HARD TO PLACE THE BLAME

But even KEFAUVER'S colloquial type of talk cannot convince many Americans that any single segment of our economy should take the rap for inflation. This business about the wage-price cycle—which comes first in the inflation spiral—is something always to be argued about.

All we know is that President Eisenhower at his press conference today refused to blame inflation and the continued threat of more inflation on anybody. And his honest statement ought to be considered by everyone. Here is what he said about inflation:

"You cannot excuse anybody in Government from responsibility. You cannot excuse the business leader, the labor leader. Indeed, scarcely can you excuse any citizen. All of us have a problem to meet and to help solve."

[From the New York Herald Tribune, Jan. 23, 1959]

PACKED INFLATION JURY

(By Donald I. Rogers)

The powerful Senate Antitrust and Monopoly Subcommittee today will start 3 days of hearings and proposals to combat price inflation as part of its investigation of administered prices—prices used universally throughout business which do not change from transaction to transaction. The witnesses to appear (by invitation of the subcommittee) have been hand-picked because they share the subcommittee's notion that there is something insidious about this commonplace way of pricing goods. America's public interest, in other words, is being represented by a packed jury.

The man behind this movement—an activity which should be scrutinized by other Senators who are not associated with the committee—is not even a lawmaker. He is the chief economist of the subcommittee, favorite of its chairman, Senator ESTES KEFAUVER, and disciple of the avant garde economist, Dr. Gardiner C. Means, the fellow who invented the term "administered prices." He is Dr. John M. Blair, the same man who foretold the collapse of the American enterprise system in his book "Seeds of Destruction," (Corvici-Friede, $4). It is Blair who selected the hearing's witnesses and asked them to appear and express their views.

In May 1957, this writer performed what he considered a public service by revealing in a series of five columns that Dr. John M. Blair, by his own writings, is a mistruster of big business and a man who believes that, if allowed to grow larger, business will reduce employment and lower wages.

Dr. Blair is entitled to his opinions. He is not entitled as an economist working for Senator KEFAUVER to rig a public hearing to display his beliefs in solitary splendor to the detriment if not the exclusion of opposing views.

HANDPICKED WITNESSES

It was Blair who singled out the witnesses to appear, starting today. He picked them after attending the annual meetings of the Joint Allied Social Science Association (where he also spoke) in Chicago, December 27 through December 30. Curiously, four of the five witnesses were present at the program in Chicago.

Other noted economists spoke at the Chicago meetings. They either were not invited or elected not to appear at these hearings. Their views are divergent. They have not expressed undue concern about administered prices.

Scheduled to speak as witnesses today are Dr. Edwin Nourse, former chairman of the Council of Economic Advisers, and Dr. Ben Lewis, of Oberlin College, Oberlin, Ohio. Tomorrow the witnesses will be Dr. Gardiner C. Means, of Washington, and Dr. Walter S. Adams, of Michigan State University, Lansing. Monday the subcommittee has scheduled Dr. Corwin Edwards, of the University of Chicago.

These witnesses all share the same view on prices. Gardiner Means is one of the pioneers in the effort to abolish administered prices. Nourse has something close to a phobia on the subject of management and prices. (He believes that management has a social responsibility to reduce prices whenever sales turn down.)

LEWIS PREDICTS

Dr. Lewis, of Oberlin, said just last month: "My own prediction (and I stress that I am predicting, not prescribing) is that the years ahead will see a great increase in conscious, collective, governmental controls and of governmental enterprise; and that bigness will be a major focal point of the development. The development will reflect a growing, intensified concern over the private possession of economic power so vast that even its possessors are frightened by the implications of their holdings."

And so on. * * *

Last year the Blair-Kefauver combine made the mistake of inviting Prof. Richard Ruggles, of Yale University, to be a witness at similar hearings. Prof. Ruggles made out a strong case against the theory that administered prices cause inflation. He was not invited back this year.

Nor were any other economists who have an opposing point of view.

More on these farcical hearings and of the attack on administered prices on Sunday.

[From the New York Herald Tribune, Jan. 25, 1959]

HEARING OR WITCH HUNT?

(By Donald I. Rogers)

A majority of those who study the quasi-science of economics are agreed that an administered price—a price set by a producer which does not vary from transaction to transaction—is the most sensible and economical way of doing business and is, in the main, fairest to the consumer. The few who object to this system are working through John M. Blair, chief economist of the Senate Antitrust and Monopoly Subcommittee, thence through its chairman, Senator ESTES KEFAUVER, to stimulate some legislation against administered prices.

There is the lingering suspicion in all such activities of the Blair-Kefauver combine that it is part of a campaign directed not so much against administered prices themselves as against big business in general. For it is the big businesses, the automobile manufacturers, appliance producers, clothing makers and such, who most frequently use the device of administering the prices of their products.

Dr. Blair and Senator KEFAUVER are certainly entitled to their opinions, but, as pointed out in this space Friday, they have rigged their public hearings in Washington so that those economists who are outspoken against administered prices are appearing as witnesses before the subcommittee. Their utterances will become part of the public record to be pumped through the congressional system—a flanking attack against big business.

There is another angle here. Both members of the Blair-Kefauver operation say they are intent on scouting out the causes of inflation. That's the announced purpose of their hearings. What they're actually trying to do, however, is prove that bigness in business causes inflation.

This, any qualified economist will tell you, will be might hard to prove, though with rigged hearings such as the kind going on in Washington now (they'll continue tomorrow) Dr. Blair and Senator KEFAUVER are making it easier for themselves to present a case to the people.

Inflation is the transcending economic problem facing America. Its causes are clear, though its solutions are not. Neither Dr. Blair nor Senator KEFAUVER is contributing an iota of help in defining the solution to the Nation's foremost economic problem. Rather, it seems to this writer, they are beclouding the issues in their efforts to press their own interests—Dr. Blair to further his attack against big business, and Senator KEFAUVER to advance his unflagging political ambitions.

Dr. Blair has lined up five economists to speak at these hearings. All five have in the past made some declarations which express some doubts about the value of administered prices. Four of them participated with Dr. Blair in the annual meetings of the Joint Allied Social Science Associations in Chicago last month. It might be suspected that it was at those meetings that Dr. Blair invited them to appear as witnesses at the hearings, so-called.

John Blair is a clever writer and speaker. He is also, it can be assumed, a sincere man. He has sincere reservations about the function of the free enterprise system as it exists. He has sincere desires to invoke some changes in that system.

This is his right as an American.

However, he holds a position of considerable power, not alone because of his job as chief economist to the subcommittee, but because of the implicit faith Senator KEFAUVER places in him and the latitude the Senator allows him in the conduct of the subcommittee's affairs.

Thus John Blair's rights as an American citizen concern all Americans.

If I were a Senator, whether a member of the subcommittee or not, I'd like to know a great deal more about the moves of this KEFAUVER probe into antitrust and monopolistic practices.

It might not be an objective investigation these fellows are conducting. Indeed, scrutiny might show that they're hell-bent on proving an untried and generally discredited theory.

CONVENTIONAL WARFARE VIS-A-VIS PUSHBUTTON WARFARE

Mr. BUTLER. Mr. President, "some of our planners are so hipped on pushbutton war that they are prone to overlook the fact that the international Communists with vast manpower and raw material resources are actually continuing preparations for a 'modernized' conventional warfare."

This awesome conclusion by the distinguished journalist, Constantine Brown, so impressed me that I request unanimous consent that his article entitled " 'Conventional War' Capability," as appearing in The Washington Star on March 11, 1959, be printed at this point in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Mar. 11, 1959]

"CONVENTIONAL WAR" CAPABILITY—U.S. ANTI-SUBMARINE BUREAU CURBED ON FUNDS IN FACE OF RED FLEET OF 475

(By Contantine Brown)

The sooner some our our policymakers get over the idea that the next worldwide conflict—if it ever occurs—will be fought by pushbutton machines, the better it will be for all.

The best post-World War II military minds who have been studying the preparations of the free world's enemies point out that while much noise and spectacular headlines center around the "massive" advantages of the Russians in guided missiles, the Communist would-be aggressors are working overtime to increase and improve their conventional warfare capabilities.

In the face of this, the administration is advocating further important cuts in the strength of our ground forces and in the Navy which may have to bear an important part of the brunt in any future conflict.

The Russians are known to have at least 475 submarines—the bulk of them ocean-going. Hitler almost won the last war in its early stages with fewer than 50 ocean submarines. Our best naval minds are sure the Russians are not building these submarines because they like to play with them. They are intended to cut off the United States, in the event of a major conflict, from both our Pacific and Atlantic allies. They are intended to interrupt the flow of essential raw materials and all seaborne communications with Asia and Europe.

The antidote to the long-range Soviet underseas fleets is, of course, antisubmarine preparedness by the U.S. Navy. Studies have been made and important new devices discovered to offset the likely efficiency of the Russian submarines. Yet the antisubmarine bureau in the Navy Department can hardly function because of lack of funds. The Budget Bureau in its great wisdom apparently has recommended that the funds for such developments were a luxury for the Navy. It believes, apparently, that the old type cans dropped overboard from a destroyer proved pretty effective in two world wars and sees no reason why they should not be effective in a possible new conflict.

If international communism decides to unleash another world conflict, the U.S. Navy will have a burdensome role, principally because the navies of our allies have been reduced. The powerful British Navy is being cut down drastically, compared to what it was at the end of the last war. The French Navy is increasing in strength, but is still far from being an important adjunct in the event of an early world conflagration. The other navies are token forces which would not face alone the power of the Soviet fleets.

The Baltic Sea has become of real importance in the strategy of another world war. The NATO members—Germany, Denmark, and Norway—are supposed to prevent the Russian submarine and surface forces from breaking out through the Skaggerak and Kattegat Straits into the Atlantic. The naval forces of these 3 countries consist of 37 destroyers, 14 submarines, 107 minesweepers, 53 motor torpedo boats, and a few other minor auxiliaries. These forces, regardless of how efficient and self-sacrificing they may be, can hardly be more than a small bite for the Soviet Baltic fleet commanded by 53-year-old Admiral Charmalov, whose high competence as a naval commander is matched only by his ruthlessness.

Charmalov, who has under his orders 40 Red admirals, commands the most powerful of Soviet fleets. The Baltic squadron is composed of 6 heavy cruisers of the *Sverdlov* or *Frunze* class, 150 submarines, 70 destroyers, and upward of 450 auxiliaries. An air force of 1,200 craft is always in readiness to support these naval forces. There is no doubt that, should a major conflict break out, American carriers and other naval vessels would be compelled to reinforce the present NATO Baltic forces whose mission, besides that of interdicting an outbreak of the Soviet submarines into the Atlantic, also is to "restrict Soviet supply operations by sea above small-craft transport for Red ground forces and to neutralize enemy operations on land, by sea, and in the air directed against Danish islands."

There are no effective naval forces available to put into effect the NATO high command directions except the U.S. Navy. In the event of war, units will have to be sent from our Atlantic bases, and they will have to go through the submarine barrage of the Russians.

The problem could be licked by our highly advanced (but still in blueprint) antisubmarine operations and devices. These are working now at less than 20 percent preparedness efficiency because of lack of necessary funds.

Some of our planners are so hipped on pushbutton war that they are prone to overlook the fact that the international Communists with vast manpower and raw material resources are actually continuing preparations for a modernized conventional warfare.

INFLATION, THE NATION'S NO. 1 PROBLEM

Mr. BUTLER. Mr. President, for a few years after the end of World War II, the demands of the American market were so great that it was possible to raise costs and prices and still sell all the products our industry could produce.

Today, it is becoming increasingly clear that foreign competition is not only invading our overseas markets but is becoming an increasingly important factor in our domestic markets.

President Eisenhower in his "Economic Report" said:

It is not the function of Government in our society to establish the terms of contracts between labor and management; yet it must be recognized that the public has a vital interest in these agreements. Increases in money wages and other compensation not justified by the productivity performance of the economy are inevitably inflationary. They impose severe hardships on those whose incomes are not enlarged. They jeopardize the capacity of the economy to create jobs for the expanding labor force. They endanger present jobs by limiting markets at home and impairing our capacity to compete in markets abroad. In short, they are, in the end, self-defeating.

Self-discipline and restraint are essential if agreements consistent with a reasonable stability of prices are to be reached within the framework of the free competitive institutions on which we rely heavily for the improvement of our material welfare. If the desired results cannot be achieved under our arrangements for determining wages and prices, the alternatives are either inflation, which would damage our economy and work hardships on millions of Americans, or controls, which are alien to our traditional way of life and which would be an obstacle to the Nation's economic growth and improvement.

In these statements when the President refers to productivity, he is referring to the productivity of the economy as a whole and not to the productivity of any particular firm or industry.

However, in recent weeks, it has been disturbing to note the same "rocking chair" economists have urged wage increases which they allege would generate purchasing power for other industries. In effect, they suggest that we attempt to raise ourselves by our bootstraps.

More and more we are face to face with the fact that our price and wage structure is becoming less competitive in terms of world markets. Before this year is over the steel industry, for example, will once again negotiate a new contract with its employees. Two editorials from the American Metal Market are therefore worthy of the attention of my colleagues, and I ask unanimous consent that they may be printed in the body of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From American Metal Market, Jan. 29, 1959]

FRUSTRATING AND DISTURBING

There is something utterly frustrating and disturbing about the reaction in the highest echelons of organized labor to the President's Economic Message. With racketeers ensconced in high labor offices openly defying public indignation and arrogantly daring the Congress to do its damndest, and with demands for stratospheric wages and for basic hours that constitute little less than subsidized idleness, running almost rampant, one might have hoped for a different response to the President's urgent recommendations, from the more respected officials of the labor movement. The integrity of these latter officials is deservedly undisputed, but the irresponsibility of their criticism strongly suggests that the country may have more to fear from their sophistry than from the palpably unsavory elements who almost unfailingly overreach themselves.

All during the postwar years the country has heard business admonished on prices with as much or greater severity than labor has been urged to be temperate in its demands. In fact, the usual pattern has been for our highest officials to plead with business and labor to be moderate—after labor has exacted concessions from business. This appearance of impartiality has inevitably misled millions to blame business alone for price increases. Among this unsuspecting multitude, labor has escaped even contributory responsibility for price increases, because labor has already got theirs before officialdom in Washington has expressed its concern, whereas the price increases forced by cost increases have followed the appeals.

A conspicuous example of a congressional contribution to this deceptive practice was the hearings held last spring in anticipation of steel price increases after last July 1. The investigators carefully ignored the scheduled substantial wage increase that was automatically to go into effect on that date, pursuant to the agreement of July–August, 1956. They also piously refused to consider the possible effects of the already-demanded wage increases in the automobile industry (which had not by then been granted) and which, if denied, would have deprived the industry of justification for the price increases of last fall that followed the ultimate granting of the uninvestigated wage demands.

This seeming immunity of labor to accountability for the effect of higher wage costs on the national economy would appear to have led the leaders of the labor movement to expect continuing exemption from official comment in advance of their obtaining current demands. Restrained as the President's admonition was, it has been bitterly resented, not only because it would obviously forestall the additional demands on industry that are clearly in the making but because, at long last and for once, the President has sought to brake the inflation at its source, before the spiral is launched.

There will be virtually no one, outside the small circle of labor leaders and the advocates of some constant inflation, to dispute the fact that, in the effort to stop the corrosion of the dollar and the destruction of savings, "leaders of labor have a particularly critical role to play, in view of the great power lodged in their hands." Nor is it to be doubted by any impartial observer, that "the terms of agreements * * * will have a critical bearing * * * in attaining * * * economic growth with stable prices." Nor will any informed person be likely to dispute the assertion that "increases * * * not justified by the productivity performance of the economy are inevitably inflationary."

Yet the leadership of our most powerful unions declares that stable prices mean stagnation and perhaps depression and that the unions' drives for wage increases will go forward. Mr. McDonald, president of the United Steel Workers, has publicly appealed to the automobile industry to support his forthcoming demands, so as to provide his membership with $1 billion to buy automobiles. Yet, if the past is any guide to the future, Mr. McDonald will hold that the steel industry will have no excuse to raise prices if it raises wages by $1 billion. One marvels at the mental process which can conceive of an industry supplying another with $1 billion of undiluted purchasing power without first having to earn it. Obviously, the application of this logic, by which wages would be arbitrarily raised in industry after industry to provide purchasing power for the goods of other industries, would soon reduce the value of the dollar to that of trading stamps. In its arrogance, labor leadership has come to the stage where it preempts the right to tell management and industry to augment productivity by whatever margin is needed to compensate for the demands it chooses to impose from year to year. It not only assumes the capacity of management to accomplish this miracle, but it takes for granted labor's exclusive right to all the fruits of increased productivity (in practice it demands even more), and denies the right of management, of ownership and of consumers to any share in the greater abundance brought about by the greater efficiency of industry, in which greater efficiency labor, per se, plays so infinitesimal a part in a modern plant. If this is not a very clear indication of the great power lodged in the hands of labor leadership, there is no explaining it. And it is frustrating and disturbing that this great power should be exercised with such irresponsibility, in defiance of all known methods for operating a solvent economy, by those from whom the public have a right to expect enlightened and responsible leadership.

[From American Metal Market, Feb. 27, 1959]

THAT BILLION DOLLAR BUNDLE

The contract between the steel industry and the 1¼ million employees marshaled under the banners of the United Steel Workers still has another 4 months to run. In these changeable times, it would be hazardous this far in advance, to attempt to say just what the issues will have proved to be when the contract is extended. But it is certain that the billion dollar bundle will loom large in the negotiations, because Mr. McDonald and his associates have deliberately put it "on the line" already.

In costly and widely distributed full-page newspaper advertisements, the USW has been propagandizing other industries, the ranks of labor and the general public to support its demand for this additional purchasing power from the steel industry. They have painted alluring pictures of what they would do with this new income, buying automobiles, building new homes, buying groceries, patronizing moving picture houses and generally administering a blood transfusion to the U.S. economy. There will, unfortunately, be many who will think it a good idea—and not necessarily only those who would benefit directly. But, of course, as has already been asked, if this is a sound idea, why should Mr. McDonald and his partners want to keep it to themselves? Isn't this being a bit selfish? Why shouldn't all of us workers get in on this so-simply created prosperity? Why not, as the chairman of the United States Steel Corp. asked the other day, cut everybody in, take care of all 65 million gainfully employed workers on the same basis, and create not $1 billion of new money, but $52 billion so all might enjoy the good times?

These are questions well worth asking. It would be a mighty good idea if they were asked of every Tom, Dick, and Harry that thinks the "picayune" $1 billion proposition is a good idea. Possibly, in that way, some of the effects of this proposal might be brought home to those who still think that it is, and should be, only necessary for labor to demand in order to receive. It cannot be expected that those who swallow the specious arguments behind the demand will be impressed with orthodox refutations, based on the time-proven economic principles which have confirmed again and again, since time immemorial, that you can't get something for nothing. But there are a couple of other relevant points that we would like to bring up at this time.

The first is to ask just what have the steelworkers done to justify an increase of $1 billion a year in wages and benefits? Isn't that a fair question? Or has money become so inconsequential that a group leader is entitled to ask for a handout of any figure that first comes into his head—particularly if it has a lilting sound to the ear, like a billion dollars? When he has done so, are we not to anticipate that the next step—possibly following a diffident hesitation by industry, instead of yielding with alacrity—will be to accuse industry of endangering industrial peace by being unreasonable? Where have we seen such tactics worked by others in a different field of negotiation? They are identical with the practices of another group also having power that is much too great for their own good, in international affairs. Time was, of course, that most people felt they had to perform some useful service to justify better recognition. Is this billion-dollar bundle not suggestive of the idea that industry is no longer built up and conducted with some consideration for those who have directed and financed an operation, but that it exists primarily to meet the demands—whatever they may be—of those who control the working staff? Have we arrived at this concept of what industry really is?

Secondly, Mr. McDonald and his friends are not looking for any token or symbolic advantages. They want something substantial—something that will buy automobiles, build houses, and provide their members with genuine purchasing power. Although one would never think it to be the case from USW propaganda, this implies that the steel industry has this additional $1 billion current purchasing power available for distribution—for the asking. Now it so happens that automobiles are made mostly of steel and that in order to get what it takes to make the cars Mr. McDonald says his boys will buy, the automobile makers will have to come to the steel mills for supplies (just as the steel mills have to go to the coal mines, the iron mines, the limestone quarries, the railroads, and many other sources for raw materials to make steel).

The question naturally arises as to whether, after providing Mr. McDonald's boys with $1 billion in new money, the steel mills are to supply steel to the auto companies at old prices, so that the boys will not find a higher cost of steel reflected in the price they pay for all those new cars? Or does he expect the steel companies to get the $1 billion from the auto companies, without having them include the higher steel cost in the price of the cars the boys buy?

If it is one case or the other, what he is asking is that his boys be given the billion dollars, at the expense of others. That is, if he sincerely believes that the $1 billion (or the $52 billion, if all the workers are counted in) can be magically produced from the ether without impairing the purchasing power of everybody's dollar and without ultimately bankrupting industry. We are quite confident that everyone knows that every one of the USW leaders knows better.

THE SALTONSTALL FAMILY TREE

Mr. CHAVEZ. Mr. President, the Constitution of the United States does not have anything to say about racial background or national background in connection with American citizenship. It happens that my colleague, the senior Senator from Massachusetts [Mr. SALTONSTALL], is a descendant of a family which originated in England. It happens that I am descended from one who served Ferdinand and Isabella, of Spain. But both the Senator from Massachusetts and I are Americans, by the grace of God.

Mr. President, a very fine resident of my State, Stella Dysart, who happens to be a descendant of the Saltonstall family, has sent to me a beautifully prepared chart of the Saltonstall family in the United States.

On the chart, we find that the first entry is for Sir Richard Saltonstall, 1586–1661, who first lived in England, and later lived in Watertown, Mass. In 1609, he married Grace Kaye. Of that marriage was born Richard—1610–94—of England and Ipswich, Mass., who married Muriel Gordon. Of that marriage was born Nathaniel Saltonstall—1639–1707—of Haverhill, Mass. Nathaniel married Elizabeth Ward, also of Haverhill, Mass.

One of the children of that marriage, Richard, married a Miss Wainwright, also of Haverhill, Mass. When we follow down that branch of the family, eventually we come to LEVERETT SALTONSTALL,

the present senior Senator from Massachusetts, who married Alice Wesselhoeft.

Mr. President, the young woman in my State who belongs to the Saltonstall family is Stella Dysart. She has sent me the tree of the Saltonstall family. I ask unanimous consent of the Senate to present it to our good friend, the senior Senator from Massachusetts, so he may know that we in New Mexico also have a great deal of fondness and respect for the Saltonstalls of England and Massachusetts.

Mr. SALTONSTALL. Mr. President, I shall not delay the Senate, except to say to the Senator from New Mexico that I appreciate very much his giving me this family chart, which was prepared by a lady in New Mexico. I thank my colleague very much.

THE KORKOSZ BROTHERS AND THE MUSEUM OF SCIENCE HAYDEN PLANETARIUM

Mr. SALTONSTALL. Mr. President, the people of Massachusetts are proud and the people of Greater Boston are grateful for the work done by the Korkosz brothers, Frank and John, in building the planetarium projector now in operation in the Museum of Science Hayden Planetarium in Boston, Mass. This planetarium projector has involved the personal efforts of the Korkosz brothers for several years. In it there are many new developments. One is that brighter stars show as such. This has made possible more advanced teaching of the astronautical sciences in this planetarium than is available elsewhere. In a national emergency, this planetarium would be available for the training of our navigators and scientists. In peacetime it is available to instruct the youth of Boston and of Massachusetts in the wonders of our physical world.

The city of Chicopee has good reason to be proud of the Korkosz brothers and it gives me great pleasure to inform the Senate, Mr. President, that I share this pride.

CLARE BOOTHE LUCE—AMBASSADOR TO BRAZIL

Mr. BUSH. Mr. President, there recently appeared in the press articles and translations regarding Mrs. Clare Boothe Luce, of Connecticut, recently appointed Ambassador of the United States to Brazil. I ask unanimous consent that the originals and the translations be printed in the body of the RECORD.

There being no objection, the articles and translations were ordered to be printed in the RECORD, as follows:

[From O Globo, Mar. 9, 1959]

A NOVA EMBAIXADORA DOS ESTADOS UNIDOS

Seria muito lamentável que a vinda da Sra. Claire Booth Luce, como embaixadora dos Estados Unidos no Rio de Janeiro, pudesse ser prejudicada pelos recentes episódios relacionados com a divulgação, pela revista "Time," de uma reportagem de graves repercussões na Bolivia. Figura marcante de intelectual, a antiga embaixadora norte-Americana na Itália teve a sua designaçào acolhida com calor e simpatia, tão pronto se tornou o ato conhecido. As manifestações de aprêço ocorridas nos setores mais diversos da vida brasileira deixam claro que a Sra. Claire Luce logrou, antes mesmo de chegar ao Brasil, um ambiente de amizade que certamente muito há de contribuir para o êxito de sua missão.

Telegramas chegados dos Estados Unidos fazem referência à possibilidade de não vir a nomeação a efetivar-se. E, embora não seja o fato dito de maneira expressa, a razão seria o receio de que a embaixadora viesse a sofrer os reflexos da atitude desastrada da popular revista. Desde logo, não procedem tais receios. Mesmo admitindo que a versão de "Time" sôbre a situação na Bolivia represente uma deturpação e assim haja justificado a reação dos bolivianos, não há como aceitar a pretendida vinculação. Até aqui, ninguém ousou pretender que a Sra. Claire Luce tivesse qualquer responsabilidade na desastrada publicação. Por isso mesmo, não é de admitir que o fato possa, de qualquer maneira, impedir ou retardar a vinda da diplomata.

[Translation from O Globo, Mar. 9, 1959]

THE NEW AMBASSADRESS OF THE UNITED STATES

It would indeed be lamentable if the appointment of Mrs. Clare Boothe Luce as Ambassadress of the United States in Rio de Janeiro should be prejudiced by the recent episodes related to the divulgation by the review Time of a report which had grave repercussions in Bolivia. An exceptionally intelligent person, the late Ambassadress to Italy, as soon as her appointment was known, found that this was welcomed with warmth and sympathy. The manifestations of appreciation which took place in the most varied sections of Brazilian life made it clear that Mrs. Luce, even before her arrival in Brazil, has managed to create a friendly feeling, which will certainly contribute greatly to the success of her mission.

Telegrams which have arrived from the United States refer to the possibility of the nomination not being made effective. Furthermore, although the fact is not expressly stated, the reason would be the fear that the Ambassadress might suffer the reactions of the unfortunate attitude of the popular review. Such fears have absolutely no basis. Even admitting that the version presented by Time regarding the situation in Bolivia is a deturpation and that, for this reason, there is justification for the reaction of the Bolivians, the pretended connection between the two things cannot be accepted. Up to now nobody has dared to presume that Mrs. Clare Luce had the slightest responsibility for the disastrous publication. For this reason it cannot be admitted that the fact should, in any way, impede or delay the coming of the diplomat.

[From O Cruzeiro, Mar. 21, 1959]

CLARE: UMA DAMA PARA O BRASIL

Os Estados Unidos têm novo Embaixador no Brasil: Clare Booth Luce. Essa designação, que permitirá ao atual Embaixador Ellis Briggs partir para Londres via Washington, teve excelente ressonância tanto lá quanto cá. Clare será a primeira dama já enviada por Washington a um país latino-americano. Jornalista (foi diretora de "Vanity Fair" aos 29 anos de idade), espôsa de jornalista (seu marido, Henry Luce, é o diretor-geral da emprêsa de "Life", "Time" e "Fortune"), escritora (produziu "The Women" para o teatro e "Come to the Stable" para o cinema) e católica (convertida do protestantismo), Clare Booth Luce já foi também parlamentar e diplomata. Representou Connecticut em Washington de 1943 a 1947 e representou os EE.UU. na Itália de 1953 a 1956. Embaixador, teve erros de início, "falhas de julgamento." Mas seu poder de reação foi tão grande, as lições tão bem aprendidas, que só saiu de Roma por motivo de doença—envenenamento causado por tinta na Embaixada que ela própria mandara pintar—e deixou o importante pôsto diplomático com o respeito, a admiração e as homenagens de tôda a Itália. Disse "Washington Post" confiar em que "os brasileiros considerem uma deferência a nomeação dessa personalidade vivaz." Consideramos, sim. E afirmou Clare à imprensa americana: "Sinto-me particularmente feliz por ir ao Brasil." Nós também nos sentimos, Clare. Seja bem-vinda.

[Translation from O Cruzeiro, Mar. 21, 1959]

CLARE: A LADY FOR BRAZIL

The United States has a new Ambassador in Brazil: Clare Boothe Luce. This appointment which will permit the actual Ambassador Ellis Briggs to leave for London via Washington, has had an excellent reecho, both there and here. Clare will become the first woman ever sent by Washington to a Latin-American country. A journalist (she was the director of "Vanity Fair" at 29 years of age), wife of a journalist (her husband, Henry Luce, is the director-general of the enterprise which owns "Life," "Time" and "Fortune"), an authoress (she produced "The Women" for the theater and "Come to the Stable" for the cinema), she is a Catholic (converted from Protestantism), Clare Boothe Luce has already been a Congresswoman and a diplomat. She represented Connecticut in Washington from 1943 to 1947 and represented the United States in Italy from 1953 to 1956. As an ambassadress she committed a few initial errors, "faulty judgment." But her ability for reaction was so great, the lessons were so well learned, that she only left Rome because of illness—poisoning caused by the paint in the embassy which she had herself—and she left the important diplomatic post with the respect, admiration and homage of the whole of Italy. The Washington Post said that it trusted that "the Brazilians would consider the appointment of this lovely person as a deference." We do consider this to be so. Clare stated to the American press. "I feel particularly happy to go to Brazil." We also feel this, Clare. Welcome.

APPROPRIATIONS FOR THE JOINT ECONOMIC COMMITTEE

Mr. BUSH. Mr. President, I received a message that the majority leader wished to bring up immediately the appropriations for the Joint Economic Committee.

Mr. JOHNSON of Texas. I said that at the conclusion of the morning hour, we would bring it up by motion.

Mr. BUSH. I am sorry I misunderstood; my message was that the Senator from Texas wished to bring it up during the morning hour.

Mr. JOHNSON of Texas. The minority leader needed to be away. I told him that, without objection, we would take it up after he had gone.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

ADDITIONAL FUNDS FOR JOINT ECONOMIC COMMITTEE

Mr. JOHNSON of Texas. Mr. President, has morning business been concluded?

The PRESIDING OFFICER. Morning business has been concluded.

Mr. JOHNSON of Texas. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of order No. 107, Senate Concurrent Resolution 13.

The PRESIDING OFFICER. The concurrent resolution will be stated by title, for the information of the Senate.

The LEGISLATIVE CLERK. Senate Concurrent Resolution 13, to provide additional funds for special study by the Joint Economic Committee.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution? The Chair hears none.

There being no objection, the Senate proceeded to consider the concurrent resolution.

Mr. JOHNSON of Texas. Mr. President, this resolution is one of the most important that will come before this Congress during this session.

For some time, experts and laymen alike have realized that there are trends in our economy which are very disturbing. They are trends which are not really understood—even though they are discussed heatedly and passionately.

This resolution represents an effort to lift an issue from the realm of conversation to the area of meaningful discussion. It is the first step in attempting to resolve an issue—the step of finding out just what is happening and what can be done.

We are living in a period which presents a strange spectacle of inflation and recession at the same time. Prices rise constantly, even though more than 4½ million of our people cannot find jobs.

Mr. GORE. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. GORE. Some prices rise constantly.

Mr. JOHNSON of Texas. I agree with the Senator.

This resolution would provide the tools with which our experts can probe this enigma. The resolution represents a modest investment from which we can anticipate fruitful returns.

Inflation has imposed a cruel burden upon our people, particularly those who must depend for their livelihood upon fixed incomes. This has led to arguments which have generated a great deal of heat, but have shed little light.

There are some who blame inflation on so-called deficit spending. But the history of our country over the past 40 years casts grave doubts upon this theory.

In the 1920's we had Federal surpluses and stable prices ending in a crash.

In the 1930's we had Federal deficits and low prices.

In the early forties we had Federal deficits and rising prices.

In the late forties we had Federal surpluses and stable prices.

In the early fifties we had Federal deficits and rising prices.

In the middle fifties we had Federal deficits and stable prices.

And now in the late fifties we had had both Federal surpluses and Federal deficits—accompanied by rising prices.

I do not suggest that there is no relationship between the Federal budget and the price level. But I do believe that we do not understand that relationship, and we must find out what it is if we are to act intelligently.

Some people claim that inflation can be blamed upon labor. But labor insists it is merely trying to keep up with inflation.

Some people blame rising prices upon business. But business insists that it is merely trying to keep abreast of the times.

Because of our lack of knowledge, our only Federal policy is to drift with the economic currents. This has been demonstrated most sharply in one cost increase which has struck at every small business man and every farmer in America and every worker—the rising cost of money.

Instead of taking strong steps to keep interest rates down, the Government's policy has been to pull them up piecemeal—a step at a time.

We are told that the interest rates on REA loans must be raised to meet prevailing interest rates.

We are told that interest rates on housing must be increased to meet the general level of interest rates.

We are told that interest rates on farm loans must be increased to meet the general level of interest rates.

To my mind, this philosophy represents surrender without a struggle.

I have never believed in pouring gasoline upon a burning house just because no water was available. It has been my experience that if intelligent, reasonable men think through a problem, intelligent, reasonable men can come up with a solution.

We have the opportunity in this resolution to take the steps that will bring us the answer. We can display the same type of economic statesmanship that was displayed in the work of the temporary national economic committee.

The TNEC—as it was known popularly—was a monument created by the distinguished senior Senator from Wyoming [Mr. O'MAHONEY]. It represented an inventory of our economic system—an inventory which supplied us with information that we are using to this day.

But it has been 18 years since that Committee concluded its work. We have fought two wars in that period. We have seen the spread of aggressive communism. Trade patterns have changed on a global basis.

It is time for another national inventory.

We are fortunate in having available to conduct that inventory one of the distinguished economists of our time, the senior Senator from Illinois [Mr. DOUGLAS] Chairman of the Joint Economic Committee. He and his able colleagues from both the House and the Senate will be presented with the task of inquiring into every aspect of our economic situation and reporting to us reasoned and reasonable conclusions which I hope can serve as a basis for action by this Congress.

The issue of inflation is second only to the issue of national survival. It arises in the work of this Congress at every turn. It is a factor in almost every decision we make, and in almost every legislative matter that comes before us.

The scope of this resolution embraces all current aspects of the economic policy of the Federal Government. It includes interest rate policies, it includes money supply, it includes financing the activities of the Government.

It is a resolution which is badly needed, and I hope it will be approved quickly so that we can proceed to an urgent task.

Mr. BUSH. Mr. President, I rise to support the concurrent resolution. I shall speak very briefly with regard to it.

Mr. President, I have listened with interest to the comments of the distinguished majority leader regarding the resolution for the appropriation for the Joint Economic Committee hearings and general investigation. The Senator has correctly outlined some of the major problems which are before the committee.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD a newspaper clipping from the New York Times of March 21, under the headline "Economist Urges a Budget Deficit," and, following that, an article from the Washington Post and Times Herald, by Roscoe Drummond, entitled "Budget Blur," which was published this morning. I ask unanimous consent that the two articles be printed at the conclusion of my remarks.

The PRESIDING OFFICER (Mr. DODD in the chair). Is there objection to the request of the Senator from Connecticut? The Chair hears none, and it is so ordered.

(See exhibit No. 1.)

Mr. BUSH. Mr. President, I also ask unanimous consent to have printed in the RECORD, following the other insertion, pages 115 and 116 of the transcript of the hearings before the Joint Economic Committee of March 20.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Connecticut? The Chair hears none, and it is so ordered.

(See exhibit No. 2.)

Mr. BUSH. Mr. President, these latter items relate to the testimony of Dr. Slichter before the committee, and to his description of inflation as a tax.

I support the report of the Committee on Rules and Administration regarding the special study by the Joint Economic Committee, which calls for an authorized expenditure of $200,000. We discussed this matter in some detail in the committee, and while there was a considerable body of opinion in the committee that the sum was too large, the committee members pledged themselves to work together with the thought that we probably would turn back a substantial part of the authorization. That is not a new practice among the committees of the Senate, and there were Senators present at the meeting

who referred to previous examples where such action had been taken.

It is very difficult, Mr. President, to budget for this kind of a committee procedure. It is likely that the hearings will continue throughout the present session of the 86th Congress, and may very well continue after the Congress adjourns sine die in the summer, if indeed it does adjourn—and I hope it will. For that reason, the committee was unanimous in agreeing that the appropriation of $200,000 was a legitimate and proper request, and Senators will observe on page 3 of the committee report an estimate as to how the money may possibly be spent. The committee will not be held to spending the money in exactly those ways, but this is an estimate of how perhaps the money may be spent in connection with the hearings during the months ahead.

We have in the Joint Economic Committee what we regard as a very capable staff. Most of the staff members are professional economists, and we believe we should use the staff to the fullest in connection with the investigation. We will do that, but it is not unlikely—in fact, it is almost certain—that we will need additional members of the staff during the months ahead, so that is provided for in the table Senators will observe on page 3 of the report of the Committee on Rules and Administration.

Mr. President, I recommend to the Senate that it adopt the concurrent resolution.

EXHIBIT No. 1

[From the New York Times, Mar. 21, 1959]

ECONOMIST URGES A BUDGET DEFICIT—SLICHTER ALSO TELLS INQUIRY UNIONS ARE MAJOR CAUSE OF INFLATION TODAY

WASHINGTON, March 20.—A congressional investigation into the problems of the economy opened today with a witness whose position sharply contradicted pet theories of both liberals and conservatives.

The witness was Prof. Sumner H. Slichter, a Harvard University economist. After 2 hours of his testimony the chairman of the Joint Economic Committee, Senator PAUL H. DOUGLAS, Democrat, of Illinois, called it refreshing, and continued:

"I don't think there was a single sacred cow that was not kicked at one time or another, on both sides of the aisle and all sections of the country."

Dr. Slichter took these iconoclastic stands today:

The budget in the next fiscal year beginning July 1 ought to be unbalanced by about $3 billion, not balanced.

Labor unions are much the most important cause of modern-day inflation, but a general wage increase is just the right medicine for the economy in its present state.

A slow inflation is an inescapable cost of a desirable rate of economic growth, and it is nonsense to contend such an inflation will eventually turn into a galloping inflation.

The Federal Reserve's monetary policy is too tight at the moment.

Nonetheless, the interest ceiling of 4¼ percent on Government bonds should be raised to enable the Government to compete for investment funds.

While it is probably impossible to stop slow inflation, the biggest single step the Government could take to halt it would be to abolish all tariffs and import quotas over a 10-year period.

SUBSIDIES DENOUNCED

In the course of his testimony Dr. Slichter also took swipes at shipping subsidies (perfectly ridiculous) and the present policy of tolerating high unemployment (wasteful and inhuman).

Dr. Slichter's basic theme in his prepared paper was that a high rate of economic growth was urgent for a number of reasons; that a slow rise in the price level is an inescapable cost of the maximum rate of growth; and that the effects of a slow inflation are by no means as disastrous as they are frequently described.

He noted, for example, that Federal old-age pensions had risen far faster than the cost of living since the end of World War II. He also denied that the United States was pricing itself out of world markets, denied that slow inflation discouraged saving, and argued from experience in this and other countries that creeping inflation had in no case turned into a gallop.

The immediate problem of getting greater economic growth is different from the long-run problem, he said. The immediate problem is inadequate demand to put the resources of the economy back to work, he argued.

After examining all possible sources of greater demand, he concluded that the most hopeful was higher wages, though he contended that the Federal Government should supply some additional demand by spending more and unbalancing the budget.

Representative HENRY S. REUSS, Democrat, of Wisconsin, said he was confident that Dr. Slichter did not favor a deficit as such.

"I think I do," the professor replied, to a burst of laughter in the committee room.

BUDGET BLUR: DEMOCRATS AREN'T MEETING ISSUE HEAD ON

(By Roscoe Drummond)

Are the Democratic leaders going to be willing to face the Eisenhower balance-the-budget issue head on, and soon, in order that the voters may have some say in the outcome?

They are not doing it so far.

The effect of Democratic speeches and Democratic maneuver is to blur the issue, confuse the issue, and so delay the issue that it will be difficult to determine who has unbalanced the budget, where, and for what reason. And it will come so late in the session that public opinion will have little chance to make itself felt one way or the other.

If the Democrats are going to meet the Eisenhower hold-the-line budget issue and give the voters a chance to support or reject an alternative policy, they must do two things:

1. They must quit jiggering the budget piecemeal, adding a hunk here, chipping off a corner there, and, instead, offer Congress and the country a coherent, total spending program which they can look at whole and decide whether they want it.

2. Do it soon enough so that the consequences of the Democrats' national budget—good or bad—can be seen and judged in comparison with the Eisenhower national budget.

When the President sent his budget to Congress—precariously balanced, but still balanced, with an estimated $70 million surplus—he was beginning to point up a real, fundamental, and philosophical difference between the Democratic and Republican Parties.

Mr. Eisenhower, even in the face of a $40 billion defense program was proposing to hold the line on a great deal of Federal spending; he was freezing some programs, cutting others, and proposing little in the way of new or increased public services. He emphasized balancing the budget as a vital end in itself and as a measure to hold inflation. If he could get a surplus, his priority was to use it either to reduce the debt or cut taxes.

Here, at last, there appeared to be in the making a basic party divergence of both principle and practice. Most of the Democrats said they wanted to spend more for defense, more for housing, health, aid to education, airports, roads, and aid to distressed areas where unemployment is still high. At the same time many Democrats argued that more Federal spending would promote economic growth and that an unbalanced budget might even be beneficial.

There is no doubt, I think, that a pretty sizable gulf spreads out between the two parties on this budget-spending issue. But so far it is being fogged by a piecemeal approach and the prospect is that it will be cleared so late in the session that neither Congress nor the country will quite know what's happening before it is too late.

Either by default or by design, the Democrats are tending to conceal the issue rather than clarify it.

Obviously the very methods of congressional operation contribute to blurring the issue. By long habit and by the jealously guarded division of authority between committees, Congress always considers and acts upon the spending side of the budget item by item—and never in total and never in relationship to revenue.

The appropriation committees and the tax revenue committees consider spending and revenue separately—never together.

This means that in the upcoming airport and housing bills, which the Democrats have somewhat cut back under White House pressure, the Democratic majority is already in process of unbalancing the budget—but no one will know for sure until Congress is nearing adjournment. The reasons will be blurred, responsibility will be blurred.

The only way Congress and the country can intelligently choose a Democratic Party alternative to the Eisenhower budget is to have a chance to look at it whole soon.

It seems to me that the Democratic majority—or the Democratic advisory council—owes it to the country to show openly what they want the public to approve rather than to remake the budget piecemeal behind the curtains.

EXHIBIT No. 2

Senator BUSH. Dr. Slichter, I just want to go back briefly to the question of inflation and then I want to move over for a few moments about your argument in favor of reducing tariff barriers. First on this question of inflation, I confess I find it very difficult to follow your logic or your reasoning on this, although I recognize the integrity of your views thoroughly. I want to read you a little short paragraph by Kenneth Galbraith, who I believe is a colleague of yours at Harvard University, a man who is certainly recognized as being as able as you are, who said this about inflation. I am reading about your advocacy not only before this committee, but elsewhere, of the so-called creeping inflation philosophy: He says:

"Inflation, progressive, unremitting, and unending inflation, is not a pleasant prospect. It undermines all the arrangements that civilized man makes and maintains with the greatest difficulty. Schools, hospitals, churches, public services, law and order, care of the sick and the aged, all suffer. By contrast, speculators, promoters, all who are knowledgeable about making money, do well."

This is from an article by Galbraith which appeared in the Atlantic Monthly on February 1957.

Do you and he ever discuss these matters together? Do you disagree with what I just read?

Mr. SLICHTER. Yes; I disagree.

Senator BUSH. You disagree?

Mr. SLICHTER. Yes. I disagree that inflation causes problems for a lot of institutions such as educational institutions, hospitals, individuals, but these problems are not new problems. We have been living under inflation most of the time for the last several centuries. We must not suddenly say that we are confronted with insurmountable problems. I don't think that slow creeping inflation is an encouragement to speculation so much as an encouragement to enterprise. One good thing about creeping inflation to be said over against the problems it causes is that it is a tax, and it is a tax that falls on everyone. It is not a bad kind of tax in many respects. One thing I like about it is that there are no exemptions. Under our present income tax, 30 percent of the adjusted personal income reported is tax free because of exemptions. Another 12 to 15 percent is tax free because of deductions. I don't object to the deductions because they go to charity. Exempting 30 percent seems to me to be wrong. With a $600 exemption a family of three children, man and wife, pays nothing on the first $3,000 of income. Fortunately under inflation they pay a little tax on everything. Nobody puts any exemptions in there to please this, that or the other group.

Mr. KEFAUVER. Mr. President, I join with the majority leader and other Senators in expressing gratification that a concurrent resolution has been submitted to authorize the Joint Economic Committee to make a study of the problem of inflation. I have been stating for some time that to my mind inflation is our No. 1 domestic problem at the present time, and undoubtedly any investigation conducted and any light which can be thrown on the subject will do much good. It will at least inform the people, so that public opinion can exert its influence. It will inform the Congress, so that any proposed legislation in Congress can be considered, and, I hope, passed. It will also inform the executive branch of the Government, which has an important part to play with respect to solving the problem of inflation.

I think the study will be very helpful. I invite the attention of the Senate—and I am sorry the chairman of the Joint Economic Committee is not present in the Chamber—to the fact that many of the seven specific suggestions as to what the committee is to investigate have been the subject matter of study by the Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary over a period of the past several years. We began a study some years ago of the effect of monopolistic and quasi-monopolistic practices upon prices, profits, production, and employment.

That is item 3, which the Joint Economic Committee will consider.

Two and one-half years ago we began a study, which is continued at the present time, of the effect of increases in wages, salaries, and the prices of personal services, together with union and professional practices, upon prices, profits, production, and employment.

There is no harm, of course, in duplicating any of these studies. We have conducted specific studies in connection with steel, automobiles, petroleum, milk, and a number of other specific commodities. Such studies have been in line with the proposed studies. We shall conduct other studies of specific industries in addition to hearing from witnesses generally as to the effects of monopolistic and quasi-monopolistic practices. We are continuing a study of the effect of administered prices and wages in connection with the subject of inflation. We have been making a study, particularly so far as the oil business is concerned, of point 6 as set forth in the resolution—"international influences affecting prices, production, trade, and employment."

It is our hope that there may be the closest cooperation between the Joint Committee and the Antitrust and Monopoly Subcommittee in repect to subjects in which both committees have an interest, and will both be making studies.

It is my opinion that the hearings and staff reports of the Antitrust and Monopoly Subcommittee may be of considerable benefit to the staff and members of the Joint Economic Committee. We have been engaged in the general study of the question of monopolistic influences on prices for a period of 5 or 6 years. More specifically, for the past 2½ years we have been studying the problem of administered prices.

Our hearings and our reports during the past 2½ years have been largely directed at the problem of inflation, to determine what kind of inflation we have, why we have it, and what we can do about it.

We welcome the entry of the Joint Economic Committee into the very field we have been studying; and I express the hope that there will be the fullest exchange of information, and that we will work in cooperation with one another.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield.

Mr. AIKEN. Would the Senator agree that the recent mandatory restrictions on oil imports are likely to have a highly inflationary effect on the U.S. economy?

Mr. KEFAUVER. I have been in favor of substantial importation of fuel and residual oil. Undoubtedly there will be an inflationary effect. I do not think the picture is all black or all white. It is necessary for the economy that we have a good, sound coal industry. I think a happy balance should be struck; but undoubtedly in many parts of the country further restriction of importations will be inflationary.

Mr. AIKEN. Is the Senator aware that as the result of such restrictions the price of crude oil to manufacturing countries other than the United States has been reduced, thereby putting our industries and our farm population in the position of being victims of a double-edged sword—one edge increasing costs of production at home, while the other edge will have the effect of decreasing costs of production in competing countries?

Mr. KEFAUVER. I have seen that statement, and I am aware that that is happening to some extent. As to the extent and importance of it, as related to our overall economy, I am unable to say, because I have not studied the subject sufficiently. But basically what we have been having has been a situation in which prices have been fixed by the administrators and by the leaders in certain concentrated businesses.

Prices are also fixed by the leaders of unions in certain industries. We have been on a merry-go-round of price-wage increases. I should say that the price increases have been more than sufficient to take care of the wage increases—sometimes several times as much as has been necessary.

But whether the cause is prices, whether it is business, or whether it is labor, the way things are going now is not doing anyone any good.

That is what is at the bottom of the administered price study we have been making. I believe that the lack of action, and in some cases, the kindling of the fire by governmental policies, have played an important part.

This is a wide field, in which many committees can operate effectively and in the public interest. I certainly shall support the pending resolution, but I wish to make a record of the legislative history of what we are doing, so that there may be coordination between the two committees in this field.

Mr. DOUGLAS subsequently said: Mr. President, earlier today the Senate passed Senate Concurrent Resolution 13 unanimously. At this time I want to say that I appreciate the remarks made on behalf of the resolution by the majority leader [Mr. JOHNSON] and by the ranking minority member of the committee in the Senate, the Senator from Connecticut [Mr. BUSH.]

I believe that the American people desire that our economy meet three tests; namely, providing maximum employment, an adequate rate of growth, and maintaining relative price stability and preventing both inflation and deflation.

There are some who would either openly or secretly subordinate maximum employment and growth to the maintenance of price stability, and there are others who openly or secretly would be willing for us to suffer instability in the price level, and hence inflation, if it would bring full employment and a more rapid rate of growth.

I believe that the real purpose of this study is to attempt to rationalize these three goals of our economy and to find ways and means by which we can achieve maximum employment, an adequate rate of growth, and relatively stable prices. I do not believe that we must subordinate one goal in order to achieve the others.

In this connection we shall go into the following subjects:

First. Historical and comparative rates of unemployment, production, and prices;

Second. Inflation and deflation caused by increases and decreases in the effective supply of money and credit and the effects of these and of interest rates on growth, employment, and economic stability;

Third. The effect of monopolistic and quasi-monopolistic practices upon prices, profits, production, and employment;

Fourth. The effect of increases in wages, salaries, and the prices of personal services, together with union and professional practices, upon prices, profits, production, and employment;

Fifth: The effect of governmental expenditures, taxation, and budgetary surpluses and deficits and of monetary and debt management policies upon price levels, production, and employment.

Sixth. International influences affecting prices, production, trade, and employment; and

Seventh. Constructive suggestions for reconciling and simultaneously obtaining the three objectives of maximum employment, and adequate rate of growth, and substantial stability of the price level.

I think that these subjects can be pursued in an objective manner. I believe that no partisanship will prevent our committee from agreeing on the procedures to be followed and a statement of the facts, even though it may follow that we may disagree to some extent on the meaning and analysis of the facts. However, if we do no more than agree to the facts and develop them thoroughly, we shall have made considerable headway.

However, I believe that we shall do a great deal more than that, and I can say that the committee is united in the spirit in which this study is to be undertaken.

I appreciate the support of the majority leader, the minority spokesman, and of the Senate, in both urging and agreeing to this study. We shall try to be both objective and frugal, and to produce reports, hearings, and recommendations which will make a contribution to our knowledge and to our economy.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution (S. Con. Res. 13) was agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the Joint Economic Committee, or any duly authorized subcommittee thereof, as authorized by the Employment Act of 1946, as amended, is authorized and directed to conduct a full and complete study of and investigation into the problems of providing maximum employment and an adequate rate of economic growth, as well as maintaining price stability and preventing inflation, including, among others, the following subjects.

(1) Historical and comparative rates of unemployment, production, and prices;

(2) Inflation and deflation caused by increases and decreases in the effective supply of money and credit and the effects of these and of interest rates on growth, employment, and economic stability;

(3) The effect of monopolistic and quasi-monopolistic practices upon prices, profits, production, and employment;

(4) The effect of increases in wages, salaries, and the prices of personal services, together with union and professional practices, upon prices, profits, production, and employment;

(5) The effect of governmental expenditures, taxation, and budgetary surpluses and deficits and of monetary and debt management policies upon price levels, production, and employment;

(6) International influences affecting prices, production, trade, and employment; and

(7) Constructive suggestions for reconciling and simultaneously obtaining the three objectives of maximum employment, an adequate rate of growth, and substantial stability of the price level.

SEC. 2. For the purposes of this resolution, the joint committee, or any duly authorized subcommittee thereof, is authorized through January 31, 1960 (1) to appoint and fix the compensation of such experts, consultants, or organizations thereof, and clerical and stenographic assistants as it deems necessary and advisable; and (2) to hold such hearing, to sit and act at such times and places, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures, as it deems advisable. Subpenas shall be issued under the signature of the chairman or vice chairman of the joint committee and shall be served by any person designated by them.

SEC. 3. The joint committee shall from time to time report its findings and recommendations to the Senate and the House of Representatives and shall make its final report at the earliest practicable date but not later than January 31, 1960.

SEC. 4. The expenses of the joint committee under this resolution, which shall not exceed $200,000, through January 31, 1960, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the joint committee.

Mr. JOHNSON of Texas. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. BUSH. Mr. President, I move to lay that motion on the table.

The motion to reconsider was laid on the table.

Mr. JOHNSON of Texas. Mr. President, I ask that the unfinished business be laid before the Senate.

UNEMPLOYMENT IN DEPRESSED AREAS

The PRESIDING OFFICER. Under the unanimous-consent agreement heretofore entered, the Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

Mr. BUSH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BUSH. At what time does the unanimous-consent agreement become effective?

Mr. JOHNSON of Texas. It is in effect now. I am prepared to yield time to Senators for insertions in the RECORD. Morning business was concluded before the Senate proceeded to consider Senate Concurrent Resolution 13, the inflation resolution. It was taken up by unanimous consent.

Mr. WILLIAMS of Delaware. Mr. President——

Mr. JOHNSON of Texas. Mr. President, I yield 2 minutes to the Senator from Delaware.

THE EXPENSIVE FARM PROGRAM

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks an editorial entitled "Millions for Growing What No One Needs: The Expensive Story of the Farm Scandal," published in the Charleston, W. Va., Gazette of March 10, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MILLIONS FOR GROWING WHAT NO ONE NEEDS: THE EXPENSIVE STORY OF THE FARM SCANDAL

It was Senator WILLIAMS, Republican, of Delaware, whose patient kindling finally built a fire under the Internal Revenue Service. It was a model investigation and produced the evidence which sent a number of embarrassed officials to jail.

Using much the same methods—the painstaking addition of fact to fact—Senator WILLIAMS has now taken on the farm program. His theme is that the farm program, as it is loosely called, does not do what it is supposed to do. That is to say that it does not protect the small, family-type farm. And in it the lavish expenditure of funds serves as little more than a governmental guarantee on the operation of corporate type farming.

What Senator WILLIAMS means is this: Last year the Delta and Pine Land Co., of Scott, Miss., received $1,167,000 in farm subsidies on its cotton crop.

Delta and Pine led the list, but not by much. Producer's Farms, Inc., of Stuttgart, Ark., drew $1,460,000 on its rice crop, and Westlake Farms, Inc., Stratford, Calif., walked off with $854,450 in cotton subsidies.

These three corporations, says Senator WILLIAMS, received in support payments more than the total amount received in all crops produced in 1957 by all farmers in Delaware, Maryland, Pennsylvania, and New Jersey.

And just to clinch the point Senator WILLIAMS entered in the CONGRESSIONAL RECORD the names of 51 other farms and farmers who received in excess of $100,000, mostly in support of cotton, corn, rice and wheat.

These are not, as many people believe, the small, independent family-type farms which support American citizenship at its historical best. They are vast and efficient operations which cultivate the Government's support program as industriously as they cultivate the soil.

This does not mean that the corporate farm is an evil. It does mean that there is no more reason to subsidize them than there is to subsidize General Motors or United States Steel.

TRIBUTE TO WILLIAM H. HILL, OF BINGHAMTON, N.Y.

Mr. KEATING. Mr. President, will the Senator yield 1 minute to me?

Mr. JOHNSON of Texas. I yield 1 minute to the Senator from New York.

Mr. KEATING. Mr. President, today marks the 83d birthday of the elder statesman of New York State Republican politics, former Congressman William H. Hill, of Binghamton. It provides me with a most welcome opportunity to pay tribute to a man who has literally devoted his entire adult life to public service and to helping better the lot of his fellow men.

At the tender age of 21, Billy Hill became president of his home village of Johnson City, N.Y. In the years since then, he has served as a member of the New York State Senate, as a Member of Congress, and as a member of the New York State Parks Commission. He has been a delegate to numerous Republican

National Conventions and has for years stood as the most highly respected and powerful political figure in New York's southern tier.

As publisher of the Binghamton Sun, Billy Hill has turned his energies to community betterment and to the many causes in which he deeply believes.

His activities in all phases of his busy life have consistently been characterized by integrity, vision, and wisdom. He has exemplified the supreme consciousness of public trust which should guide all men in public service. His inspiring career, devoted selflessly to helping other people, has etched his name irrevocably in the history of his area and his State.

Through it all, Billy Hill has gained in stature and respect. The number who call him friend has grown steadily. There can be no higher tribute to the caliber of this man.

Mr. President, I am proud to salute this kind and good man and to join with his many friends, regardless of political persuasion, in wishing him many more years of happiness, health, success, and continued usefulness to his fellow men.

I thank the majority leader.

LEGISLATIVE PROGRAM—EASTER ADJOURNMENT — ACCOMPLISHMENTS OF THE SENATE

Mr. JOHNSON of Texas. Mr. President, I yield myself such time as I may require.

I wish to state for the RECORD that it is planned to adopt a concurrent resolution which will come over from the House. Under the provisions of the concurrent resolution the Senate will not be in session from Thursday of this week until Tuesday, April 7, which is a week after next. It is not planned that there shall be any rollcalls on that Tuesday. The first day upon which it is planned to have any rollcalls is Wednesday, April 8.

I have had a conversation with the minority leader. I believe the House concurrent resolution provides for an adjournment from Thursday of this week, March 26, until a week from following Tuesday, April 7. However, we will have no rollcalls on the Tuesday when we return.

Mr. President, this adjournment has been made possible by the understanding and the diligence and the intelligent cooperation of each Member of the Senate. There are 98 Members of the Senate, and it is rather unique that before Easter we should have been able to pass the volume of legislation which has been handled. It has been made possible because we have cooperated with each other and have reasoned together.

The action on the concurrent resolution just adopted is an example. The distinguished Senator from Connecticut [Mr. BUSH] is present. He is a member of the committee which reported it, and he is interested in it. He cooperated fully. Congress has acted intelligently, I believe.

In addition, we have amended rule XXII of the Senate.

We had been talking about Hawaii becoming a State for 40 years, and we finally admitted Hawaii into the Union, by action of the Congress, after 4 or 5 hours of discussion in the Senate.

We passed a housing bill providing for $2.7 billion. Some persons believed that to be be too small an amount. Some felt it to be too much. The House has yet to act on the housing bill. However, the Senate faced up to the problem and the bill the Senate passed represents the views of a majority of Senators.

We also passed a draft extension act. The President wanted an extension of 4 years. Some persons proposed an extension of 2 years. Some did not want any extension. However, the Senate, by a vote of 90 to 1, passed it exactly as it had been requested by the administration.

The Senate also passed supplemental appropriations for the space program. It was emergency legislation. It was reported exactly as it had been requested, and was passed by the Senate by a vote of 90 to 7.

The Senate also passed the airport bill, providing $465 million over a 4-year period. That was not a Democratic measure, nor a Republican measure. The administration favored one type of measure. The Senate committee went a little further. The Senate did not go quite so far. The Senate passed the bill. The House has acted on the bill, and we will resolve the differences in conference.

Then there was the World Bank bill. There was some discussion as to which fiscal year should be used. The Senate by an overwhelming vote took the leadership and passed that proposed legislation. It was important that we did so.

The Senate also passed a bill amending the Clayton Act and adopted the concurrent resolution to which I have referred.

The depressed-areas bill involves approximately $390 million. It may be amended on the floor, but we will come to a vote on it today.

All this has been made possible by the cooperation of all the Members of the Senate. Therefore, we will be able to go along with the House and take a recess for Easter, and go back home and talk to our constituents. I hope we will come back after the Easter recess enlightened and determined to do what is good for America.

I ask unanimous consent to insert in the body of the RECORD a memorandum on legislation which has been enacted by the Senate since January 7 of this year, the beginning of the session.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LEGISLATIVE ACHIEVEMENTS FROM JANUARY 7, 1959, THROUGH MARCH 23, 1959

Cloture: Liberalized the cloture rule by providing that two-thirds of the Senators voting may close debate on any measure, including rule changes; and affirms the fact that the Senate is a continuing body.

Hawaii: Provides for admission of Hawaii as a State.

Housing: Provides for a $2.7 billion housing program over a 6-year period, emphasizing low-cost housing, urban renewal, and a more realistic building program for the elderly.

Draft: Extended for 4 years, or until July 1, 1963, the induction provisions of universal military training, provisions suspending the personnel strengths of the Armed Forces; and authority to draft physicians and dentists.

NASA: Authorized a supplemental of $48,354,000 for the National Aeronautics and Space Administration for salaries and expenses, research and development earmarked entirely for Project Mercury, and for construction and equipment to develop and test a new rocket engine.

Airports: Authorized $465 million over a 4-year period in Federal aid for airport construction.

World Bank: Increased the resources of the International Monetary Fund by 50% and the capital of the International Bank by 110%.

Clayton Act: Amended the Clayton Act to fill an enforcement void which existed for many years by providing that orders issued by the Federal Trade Commission and other agencies under section 11 are to be finalized in the same manner as orders issued under Section 5.

Depressed areas: Authorized a new Federal program with an initial authorization of $389,500,000 aimed at alleviating unemployment and underemployment in depressed areas.

Economic: Providing $200,000 for the Joint Economic Committee to use in making an economic inventory of the United States.

Mr. BUSH. As I understand, the depressed areas bill is the pending business before the Senate.

Mr. JOHNSON of Texas. The Senator is correct.

Mr. BUSH. I should like to observe that I agreed to the unanimous-consent agreement to limit debate with the understanding that the bill would be the pending business at the conclusion of the morning hour today, which I envisioned would be at 2 o'clock. I find it exceedingly embarrassing—and this includes the minority leader and other Senators—to have the bill the pending business at this time, because the Senate may come to a vote on it——

Mr. JOHNSON of Texas. No, no.

Mr. BUSH. We may come to a vote on it rather suddenly.

Mr. JOHNSON of Texas. No, no; we are not going to do that.

Mr. BUSH. If there are no speakers, what will we do?

Mr. JOHNSON of Texas. We will have rollcalls. I have assured the minority leader that we would not come to a vote that quickly. I also gave him such assurance before the unanimous-consent agreement was entered into. I assured him that we would not expect to have a vote before 3 o'clock this afternoon.

Mr. BUSH. I thank the majority leader.

Mr. JOHNSON of Texas. I stated to the minority leader earlier in the day that we would have discussion of the bill.

Mr. BUSH. I thank the majority leader.

Mr. JOHNSON of Texas. The unanimous-consent agreement provided that the bill should be taken up at the conclusion of routine morning business.

Mr. BUSH. Yes.

Mr. JOHNSON of Texas. We will protect the minority leader in every sense.

Mr. President, I ask unanimous consent that I may yield such time as the

Senator from Vermont [Mr. AIKEN] may desire, without the time being charged to either side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. JOHNSON of Texas. I make the same request for the Senator from South Dakota [Mr. MUNDT], the Senator from Nebraska [Mr. CURTIS]; 3 minutes for the Senator from New Hampshire [Mr. BRIDGES]; 2 minutes for the Senator from New York [Mr. JAVITS]; and 5 minutes for the Senator from New Mexico [Mr. ANDERSON].

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. JAVITS. Will anything be done about the temporary unemployment compensation bill before the Easter recess?

Mr. JOHNSON of Texas. Yes; it has been reported by the committee, and it will be taken up before the Easter recess. What will be done about it will depend on the wishes of the majority of the Senate.

Mr. JAVITS. I thank the Senator.

Mr. JOHNSON of Texas. I thank the Senator from Vermont, and I express my gratitude to him for his cooperation. He is always courteous.

OIL IMPORTS

Mr. AIKEN. Mr. President, I thank the majority leader for the time he has allowed me, because I am sure he does not agree with the matters I am asking to have placed in the RECORD. I ask unanimous consent to have printed in the body of the RECORD an editorial from the Montpelier Evening Argus of March 21, 1959, entitled "Restraint on Competition"; an editorial published in the Burlington Free Press entitled "Senator AIKEN Opposes Oil Import Quotas"; an editorial published in the Rutland Daily Herald entitled "Oil 'Mess-take' "; and an editorial published in the Boston Globe of March 19, 1959, entitled "How To Alienate Friends."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Montpelier Evening Argus, Mar. 21, 1959]

RESTRAINT ON COMPETITION

From every conceivable standpoint, the Federal Government's imposition of a mandatory system of import quotes on crude oil, gas, and other principal petroleum products is as irresponsible as it is unwise and unnecessary. It is clearly a decision made in homage to a group of special interests—some of the purely domestic oil companies—at the expense of the general welfare.

It will undoubtedly lead to an oil and gasoline price increase, thus furthering the pressures of inflation—which the Federal administration, incidentally, is supposed to be fighting on other fronts.

It can do nothing but harm to our already damaged foreign trade and foreign relations programs, being, as it is, a restraint on free world trade and competition.

It may well lead to further interference by the Government in economic controls, if the administration's promise to "police" the program is carried out.

The Government, which sounded more than a little embarrassed at its own decision, gave off with some sop about this being in the interest of national security. This is red herring nonsense, and smells as such.

That statement completely ignores the fact that the restrictions apply equally to Canada. How, now, could there be any interception on U.S.-bound oil on the sea in this case? Canadian officials had protested the decision even before it was made as another example of breaking down friendly relations between the two countries.

And in neutral countries overseas how does the Government think this decision will be interpreted? How else but a contradiction of our high and mighty sounding phrases about international cooperation and free trade? And, in all honesty, what else is it?

The blow may well hit New England harder than other parts of the country, since the import restrictions apply also to residual oil.

President Eisenhower included this in the compulsory program despite repeated protests from the New England delegations in Congress and from others in this part of the country.

Instead of listening to these entreaties, the Government went ahead with a decision that can only result in increased oil prices in New England and give inflation a further impetus all over the country.

[From the Burlington Free Press, Mar. 20, 1959]

SENATOR AIKEN OPPOSES OIL IMPORT QUOTAS

Senator AIKEN criticizes President Eisenhower for placing mandatory quotas on oil imports. The Senator has a lot on his side.

One of the subjects the British Prime Minister is expected to discuss with the President during his current visit to Washington is trade policy.

There is a great deal of uneasiness in Britain and elsewhere about a U.S. tendency to deny its markets to foreign producers.

Canadians are unhappy about quotas on oil, lead, and zinc. Australia doesn't like the lead and zinc quotas.

As Senator AIKEN notes, tariff barriers and import quotas protect domestic producers from competition and push U.S. consumer prices upward. In other words, they tend to be inflationary.

President Eisenhower's order on oil import recognizes this by saying price increases will be watched closely and that imports of cheaper foreign fuel will be accepted in larger volume to control prices, if necessary. This is a new price-control wrinkle.

A restrictive trade policy works against objectives of the President's foreign aid program when nations who depend on sales of textiles, wood products, foodstuffs, and other items of trade are denied American markets.

Foreign aid is aimed at helping other countries help themselves, but trade barriers prevent them from helping themselves by producing things and selling them in the American market.

The one overriding argument for tariffs and import quotas in maintenance of strong defense industries. America would not want foreign competition to weaken its petroleum industry to the extent that the country would be in a hopeless position if denied foreign supplies.

Employment for American workers, protection of the investments of American stockholders, and general economic stability are other considerations.

It is the President's job to weigh the welfare of foreign friends against national security—to decide whether the preservation of jobs devoted to items of domestic consumption would be offset by loss of jobs for those engaged in production for export—to balance the disruptive effects of foreign competition on one industry against the inflationary effects of eliminating that competition.

The President's decisions regarding oil, lead, and zinc may be sound and they may not be. There is room for argument.

To the extent that these decisions represent a trend toward protecting more and more industries whose labor costs and other costs are pricing them out of markets, we fully share Senator AIKEN's misgivings.

[From the Rutland Daily Herald, Mar. 21, 1959]

OIL MESS "TAKE"

It will be difficult, at least for most New Englanders, to disagree with Senator GEORGE D. AIKEN's charge this week that the Federal order limiting imports of crude oil and its principal products is "a classic in contradictions." It is ever more difficult today than on Wednesday, when the charge was made in a Senate speech, for current figures show oil inventories at a more favorable level than a year ago and on Thursday a leading oilman gave further confirmation to estimates that demand for petroleum and its products is on the rise.

This past winter—it is, technically, past now since spring arrived at 3:55 a.m.—has been one to remind everyone of the part fuels play in determining the cost of living and doing business, especially in this part of the country which lacks mineral fuel resources.

Add the other five points in the Senator's indictment—besides these two of regional discrimination and inflation—and the import restriction order seems definitely a mistake: a "mess-take," one might say.

It won't help employment, even in the oil fields: Texas has just ordered a cut in April's allowable production, below the March level.

It won't help our relations with other oil-producing nations.

It won't help U.S. industry compete in foreign markets.

It won't help our national security.

It won't help stem the trend toward Government controls of industry—all industry—and people.

The reference to national security seems particularly important. Why, in these parlous times, should we use up our not unlimited fuel reserves when distant supplies are readily available and purchase of them actually helps the overall economy of the friendly nations?

[From the Boston Globe, Mar. 19, 1959]

HOW TO ALIENATE FRIENDS

News emphasis on Prime Minister Harold Macmillan's stopover at Ottawa yesterday, on his way to Washington, naturally focused on the Berlin question. But another subject highly important to Canadian-American relations, also occupied the attention of Britain's leader and Premier John Diefenbaker: the worsening relations between Ottawa and Washington.

Few on this side of the border realize the situation created for Canada by the latest jolt to her economy and pride—abrupt imposition of import restrictions on foreign oil by the United States. This step, taken in the overworked name of "national security," makes little sense insofar as Canada is concerned. The result is smouldering anger in Ottawa.

The cutback on Canadian oil exports to the United States is but the latest episode in a lengthening list of grievances which are impairing relationships on this continent. The dumping of our surplus wheat abroad is another. Refusal of our military procurement authorities to grant Canada a significant share in production orders for defense equip-

ment mutually employed, continuing interference with Canadian subsidiaries of American corporations in the trade field, are others.

Last year, when this evolving situation stirred public attention, Washington indicated a desire to order things better. Apparently correctives have made little progress. As a consequence, Canada is in serious trouble in her export trade and her sense of nationalism has been fired anew.

Neglect, snubs, and inattention are bad diplomacy. They should end. Perhaps the Canadian Week seminar in Boston next month (which the Globe is sponsoring), may stimulate greater realism. The real corrective needed is a Canadian-American economic covenant. That is overdue.

PAKISTAN INDEPENDENCE DAY

Mr. BRIDGES. Mr. President, today is Pakistan Day, a day of great significance to one of our stanchest allies in all of Asia.

On this date in 1940 the political ideal of a separate nation on the vast subcontinent of India was born. And on this same date 3 years ago, Pakistan ceased to have the dominion status which it had acquired at the time of partition in 1947, and officially became an independent republic.

It is, therefore, an important day, and a proud day, to the people of this struggling young nation.

I think this might be an appropriate occasion on which to set the record straight on the recent change of government in Pakistan. It appears that the picture may have been deliberately distorted by those who would like nothing more than to see the Government of Pakistan fail.

In this respect, I refer to recent speeches made by the newly appointed Indian Ambassador to the United States.

Mr. M. C. Chagla, the new Ambassador from India, told the India League of America that the United States is—

pouring millions and billions of dollars into India to help her to organize herself industrially. At the same time, by giving arms to countries hostile to us, she is compelling us to spend more and more on our defense and this diverts our resources from being used for the good of our people to building up arms and armaments.

Obviously, in referring to countries "hostile to us" the Ambassador meant Pakistan. He went on to refer to the present governing regime in Pakistan as a naked military dictatorship.

In the first place, it is obvious to anyone who has carefully followed events in Pakistan since Gen. Ayub Khan assumed the Presidency 5 months ago that his temporary regime appears to be nothing of the sort. Since he took over last October, he has bent over backward to avoid any repetition of the revolting spectacle in Iraq or, more recently, the bloody exhibition of drumhead justice in Cuba. Not a single shot has been fired. The transition has been orderly.

Ayub, moreover, has won widespread commendation for the sensible and constructive steps which he has taken to give Pakistan political and economic stability. One of the most recent—and most vital—is a sweeping land reform program in which landlords will receive compensation in the form of interest-bearing bonds and former tenants will be able to purchase their own land on easy terms.

In this respect, I should like to quote from an editorial which appeared in the New York Times, January 26:

As the plans have been outlined, there appears to be a high regard for both human and property rights and an attempt to safeguard them. The reform is needed, and the President is committed to it and has acted boldly. He is deserving of congratulation and of success.

After 11 years of struggling under the burden of a multiparty political system, the people of Pakistan seem to have greeted the administration of Gen. Ayub Khan as a breath of fresh air. Sick of haggling politicians—some of them hoarders and blackmarketeers—Pakistanis were on the verge of total disillusionment when Ayub took over. In his own words, the so-called professional politicians had made a laughing stock of the country.

I point out that our own country struggled for 11 years before it evolved a Constitution to supplant the Articles of Confederation.

Pakistan's struggle has been no less difficult.

Gen. Ayub Khan has given every assurance that once certain urgent reforms have been instituted and a practical and effective constitution has been drafted, he will step down and free elections will ensue. American observers in Pakistan have had no reason to doubt his word.

I also point out that his present provisional cabinet includes eight men drawn from the professions and only three military men. This does not appear to constitute a naked military dictatorship.

Firmly committed to the West through its membership in the Baghdad Pact—as well as by definitely anti-Communist inclination—Pakistan is a genuine friend of the United States.

I believe that in the event the Soviet Union ever made an overt move of aggression in that general area, the United States could rely upon Pakistan to accept the challenge. While the relative armed strength of Pakistan is, of course, minute, I point out that the area which is now west Pakistan traditionally supplied the finest fighting men to be found in the old Indian Army. Pakistan's jet pilots today are rated by our own military observers to be among the best in the world. In the event of war, it seems to me that Pakistan could be counted on to give a valiant account of itself.

The Indian Ambassador claims that by our giving military aid to Pakistan we are compelling India to divert its resources for arms. I should like to state that this may be typical of some of the Indian doubletalk we have had to endure for the last decade.

Nowhere in his speeches does Mr. Chagla point out that the strength of the Indian Army is 280 percent that of Pakistan.

Nowhere does he mention that thousands of well-armed Indian troops are poised on the borders of Pakistan.

Nowhere does he mention that 80,000 Indian troops are stationed in the disputed area of Kashmir alone.

Nowhere does he mention India's arbitrary attitude concerning the canal waters dispute—the end result of which could be much of Pakistan turning into desert.

Neither does the Indian Ambassador refer to the consistent position of the United Nations Security Council as regards a plebiscite in Kashmir.

Mr. President, on the occasion of Pakistan Independence Day, it is well for us to recognize officially in the Senate of the United States this struggling young Republic, which is one of our truer allies. I hope the occasion may have the attention of the people of the Nation.

USE OF NUCLEAR WEAPONS

Mr. BRIDGES. Mr. President, I have been shocked, as have many of my colleagues, at the theory held by many Americans that the United States must never use nuclear weapons unless this country has already been victimized by such a nuclear attack.

On a recent television program, I stated strongly my opposition to this unrealistic thinking. In an editorial which was published in the March 17 edition of the Manchester, N.H., Union Leader, Publisher William Loeb sets forth a striking analysis of this situation. I ask unanimous consent that this penetrating editorial be printed in the RECORD, and I commend it to the attention of all Senators.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FIRST BLOW COULD BE THE LAST

Senator BRIDGES became properly angry in a national television program last Sunday when he criticized the ridiculous idea held by some namby-pamby Americans that the United States must never use hydrogen or atomic bombs first, but must politely wait until the enemy drops a bomb on us and then retaliate.

People who have this let-them-hit-us-first theory are not only immoral, they are also stupid. They don't seem to care that their theory will condemn to death some hundred million Americans who will die in a few moments after the first salvo of Russian hydrogen bombs drop on the United States.

They are back in the horse-and-buggy age with their thinking. In those days you could afford to allow your enemy to hit the first blow, after which you retaliated.

The first blow in a hydrogen bomb war could very well be the last.

The Democratic majority leader of the House of Representatives also has attacked the idea that we should accept the first blow from our enemy.

On the other hand, the Russians aren't so stupid. In 1955 official Russian strategy, through the influence of Nikita Khrushchev, was changed to the idea of attacking a potential enemy first. As David Lawrence, famed Washington correspondent, points out, the Soviet calls such a first blow "preemptive war." Lawrence adds: "This policy has been fully set forth by high military officials of the Soviet Union in its military journals."

As Lawrence says: "Preemptive war should now also be adopted by the United States for its own self-preservation."

Senator BRIDGES deserves great credit for having pointed out the fantastic absurdity of the theory that the United States must always accept the first blow and then attack.

When the history of these days is written, as this newspaper has said before, Senator

BRIDGES will seem to have heen one of the few leaders of the U.S. Government who could see the extent and could fully grasp the nature of the Russian threat to the survival of the United States.

DEVELOPMENT LOAN FUND

Mr. JAVITS. Mr. President, I support the request of the President of the United States to Congress for a supplemental appropriation of $225 million for the development loan fund. This bill is likely to be the first foreign aid test of the 86th Congress. In the other body, the appropriation appears to be traveling a very rocky road. I think it is only fair that the appropriation be supported in the Senate.

I also believe we must consider the importance of this appropriation to the Berlin crisis, for in the Berlin crisis the American people show solid support of the President, as is evidenced by a survey published in the New York Timcs. I ask unanimous consent that the article entitled "A Spot Check: Public Firm on Berlin, but Ill Informed," written by James Reston, and published in the New York Times of today, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SPOT CHECK: PUBLIC FIRM ON BERLIN, BUT ILL INFORMED

(By James Reston)

(This is a report from a New York Times team that made a nationwide spot check of public opinion on the Berlin issue. Team members included Harrison E. Salisbury, Austin C. Wehrwein, Richard J. H. Johnston, Claude Sitton and Gladwin Hill. Part-time correspondents of the Times also assisted in the survey. James Reston summarizes the findings.)

WASHINGTON, March 22.—President Eisenhower's no retreat policy on Berlin has overwhelming popular support in the Nation though many Americans know little about the history of geography of the crisis.

This is the essence of a nationwide spot check of public opinion conducted in the last few days by correspondents of the New York Times.

In interviews with about 470 persons across the United States, the correspondents found general confidence that the Berlin issue would be settled by negotiation rather than by war.

One hundred and eighty-five of those interviewed, or about 39 percent, did not know that Berlin was an enclave in Communist East Germany 110 miles from the West German border. This group was equally uninformed on many other aspects of the problem.

CONCERNED BUT NOT FEARFUL

The spot check, made in urban, suburban, and rural areas, also suggested the following conclusions:

The American people are concerned but not frightened, ill informed but trustful of the administration and particularly of the President, nonpartisan in their approach and confident that somehow this crisis will pass like those in Lebanon, the Suez area and Quemoy and Matsu.

Many believe the Russians are bluffing and will come to terms if the United States stands steady.

Teenagers and college students—those who would have to enter the armed services—are better informed and more concerned than their elders.

There is widespread support for trying to negotiate a settlement at a heads-of-government meeting. (In Los Angeles only about half of those interviewed thought such a meeting would do much good.)

Finally, there seems to be a feeling in the Nation that modern policy issues like Berlin, disarmament, and the state of the Armed Forces are too complicated for popular understanding and therefore must be left to the experts.

The crisis over Berlin arose last November, when the Soviet Union announced it would turn its control of Western Allied access to the city's western sectors over to the East Germans if its proposals for the city's future had not been accepted by the end of May. The Russians called for the establishment of a free city from which the Western occupation forces would have been evacuated.

The West has rejected the Soviet proposals and insisted that it would maintain its rights in the city, by force if need be. Moscow has indicated recently that its May deadline was flexible and that the status quo might remain if East-West talks on Berlin and German issues got underway.

PUBLIC AWARE, PRESIDENT SAID

In his latest news conference, on March 11, President Eisenhower was asked whether "the American public is sufficiently aware of the possibility of war in this situation?" He replied:

"I personally think that the American public is more soberly aware of the true situation than a lot of people around this town.

"This country knows it's a serious situation. They wouldn't be voting this kind of money for defense forces * * * unless they knew it was serious. * * * But what I decry is: Let's not make everything such an hysterical sort of a proposition that we go a little bit off half-cocked. We ought to keep our steadiness."

The Times survey, while turning up much ignorance and misinformation, also found considerable seriousness and steadiness and no hysteria.

"A persuasive gravity marked interviews here," the report from San Francsco said. "No flip answers this time; everyone seemed genuinely concerned. But optimism was quick, sure that all will work out."

This, incidentally, is not much different from the reaction of the experts in Washington who are working on the crisis and on whom the national confidence rests. They, too, are grave and genuinely concerned, and while they do not yet see precisely how the crisis will be resolved, they are confident that in some unforeseen way, some uneasy interim accommodation between East and West will avoid a war.

THE QUESTIONS ASKED

All the questioners in the survey asked the same things: Are you familiar with the Berlin crisis? Do you know whether Berlin is in East Germany or West Germany? Are you interested in the crisis or do you think it is not of great importance? Did you hear or read the President's television speech on Berlin last Monday? If so, do you support his policy? Do you think there will be a war over Berlin?

In general the interviews elicited replies indicating that most people were interested in the crisis and had either watched the President on television or read summaries of his speech on Berlin last Monday, that the speech had made them more familiar with the factors in dispute, but few outside of intellectual or governmental circles claimed any detailed knowledge of politics or strategy involved.

A surprising number—about 75 percent—of those questioned in and around New York did not know that the main strategic problem was that the former German capital was in Communist-controlled territory.

Twenty-three percent of those questioned in the Middle West did not know this, 24 percent in Los Angeles, 56 percent in the San Francisco Bay area, and 58 percent in the Southeastern States.

Following are regional reports in the survey:

EAST—NEW YORK AREA

The public in the metropolitan area betrays no sense of urgent crisis over the Berlin situation.

At all levels of opinion reached, the most common expression was one of generalized concern; rarely were there fears that the situation might produce war. The tension that accompanied previous crises appears to be absent.

Many persons lacked an understanding of the issues involved. Of the 50 to 60 persons interviewed in the area, about 75 percent did not know Berlin's location or precisely the arrangements concerning its status.

The most interested group appeared to be the teenagers and college students. There was an awareness of the problem among college professors, newspaper editors, and those with intellectual pursuits. There appeared to be no great concern in financial circles.

Suburban housewives indicated only vague concern. Taxicab drivers reported no conversations with passengers about Berlin. Tavernkeepers and barbers said they had heard little about the subject.

There appeared to be little interest in Berlin, in Harlem, and in the Puerto Rican segments of the population.

Here are some samples of opinion:

Tony Salvidore, taxicab driver: "No; my fares don't talk about Berlin. Not when they are riding in my cab, they don't. All they talk about is business. Making money. No; I didn't hear the President. I got four kids. All they want to hear on TV is rock 'n roll, rock 'n roll. You think I got a chance to hear the President even I should want to hear him?"

Samuel Silverberg, proprietor of a cigar store in New Canaan, Conn.: "I hear no talk about war. Did they listen to Eisenhower? That's like asking if kids like lollipops. In this community 99 percent of the people are Republican. Of course they listened. But I heard no remarks about the talk. Lots of people are coming back from Europe these days. They say that the United States is the only place they hear this war talk."

Tim Costello, Third Avenue tavern keeper: "Sure, you hear them talking about Berlin, but you can't make much out of it. It's nothing that you are going to understand hanging around a barroom."

Hans Heineman, staff economist: "War could happen, but the general opinion in the financial community is that it will not. People are talking about investments in Europe, making decisions to put large sums of money into European investments. They would not do this if they thought there was real danger of war resulting from Berlin."

James Booker, reporter for the Amsterdam News: "There seems to be very little interest among the people I meet. Much more interest in the Nyasaland situation and Africa than in Berlin. I don't get the impression that anyone thinks there is likely to be a war. I didn't listen to the President. Out of a dozen persons I asked, only one said he heard him. There is great apathy on the question."

About three of every four persons interviewed in the Nation's Capital on the Berlin crisis seemed to be moderately familiar with the problem or more so.

A large part of the 45 persons questioned supported the President's stand in his speech

last Monday. Eleven did not know that Berlin was well inside East Germany.

Most of the persons questioned said the crisis interested them. Somewhat fewer said they had at least mentioned it in discussions with friends or associates.

While the President's declaration that the United States would not forsake West Berlin had the backing of 75 percent of those questioned, others offered a variety of comments, such as the following:

"I think it a misleading statement of the issues."

"That's a nice thought. I'd like to think this is the best policy. Personally, I think peace is the main issue."

Many heard the President

About three-quarters of those interviewed said they had heard or read all of the President's speech.

Questions as to what should be done brought a variety of opinions.

Some persons did not know. Others thought the West should "keep talking and negotiating, whether at the summit or at some other level."

An unemployed typist suggested: "The State Department should straighten that out. They get us into things and they should straighten us out."

Washington's daily newspapers are firm backers of the U.S. policy.

The Evening Star called the President's speech "admirable." The Post and Times Herald found it a "nicely balanced combination of firmness and flexibility."

While the Post had criticized the U.S. position for lack of initiative and imagination, it finds it "grounded on sound principles."

Jack Goulette, a telegrapher, said there was but one thing to do—"Stand pat; don't budge." He thought the issue was not provocative enough to cause war.

Dale Kloat, a Government information officer, suggested: "We should try some fresh approach and be more willing to negotiate than it appears up to date." He did not think the crisis meant war because "people would fear the use of atomic weapons, in which case the world would be pretty much done in and no one would win."

A Democratic Party worker supported the President's statement but noted that he had not offered a concrete solution. She thought that his willingness to negotiate was hopeful but that there was always the possibility of an incident that would cause war.

A worker at the Republican National Committee called for a continuation of "patient negotiation." She foresaw no war, saying: "Already there has been a certain amount of softening in the Soviet attitude."

Summit talks favored

Some other comments:

"Certainly there should be top-level discussions with the Soviet Union. I believe the reason that we are reluctant to talk is that the President doesn't trust his own mental and physical powers in such discussions."

"Don't give in to Soviets. Don't go back on official statements."

"Definitely hold a top-level meeting or meetings."

"Approach a summit conference constructively, but with resolution to do our duty to free world."

"Negotiate a solution consistent with no foresaking of the free people of Berlin and other free peoples of Europe."

"We should begin thinking and should encourage fresh and imaginative approaches by our experts."

"The only conceivable thing is summit proposals. If peace is the criterion, negotiation is the only thing it has on its side."

MIDWEST—CHICAGO

In the great stretch of States from Indiana to the Rockies, the people appeared to be 100 percent behind President Eisenhower in the matter of the Berlin situation. They professed to be ready, if necessary, to go to war over Berlin—even if they were a bit hazy about the diplomatic moves involved.

The general feeling was that Premier Nikita S. Khrushchev was bluffing on the issue and that if the United States refused to back down, perhaps the Berlin crisis could be talked away.

The television speech by President Eisenhower appeared to have clarified the issue for a great many people in the Middle West. His use of a map to illustrate the talk appeared particularly helpful.

In Chicago and in Gary, Ind., 9 persons of 50 interviewed did not know that Berlin was in East Germany. In interviews in Denver; Fargo, N. Dak.; Minneapolis; Madison, Wis.; Indianapolis; Sheboygan, Wis.; Des Moines; Bloomington, Ind.; Salt Lake City; Great Falls, Mont.; and Omaha, 25 of 108 persons did not know how Berlin was situated.

Kansas City views given

Of 46 persons interviewed in the Kansas City area, 32 said that they had watched the Eisenhower telecast and that the speech and map had cleared up whatever vagueness existed about where Berlin lay. The 14 who had not seen the program appeared to have only a vague notion of where the city is in relation to West Germany. Most expressed astonishment that it is more than 100 miles from the West German border.

It appeared that middle westerners had been ahead of their leaders in Washington for some time in their willingness to see a heads-of-government conference.

A Great Falls banker said: "While I agree with the President in part, I think the position taken by certain Senators that we should be willing to be flexible has considerable merit."

Nonetheless there was a certain ambivalence. Many spoke cooly (usually without emotion) in favor of a firm stand and not backing down. At the same time, they favored negotiations and seemed to think that these could be conducted without concessions.

"Bluffnik"

The thought was expressed again and again that the Russians were bluffing. As a woman employee in the Sheboygan City Hall put it: "Bluffnik. That's what I call Russia's threats about Berlin."

A woman business-machine operator in Chicago said: "All we can do is to try to talk them out of it. You have to talk. I think it should be talked out. If we win out in the talking line, we don't have to go to war."

The interviews also brought out the point that because the Berlin crisis was looked upon as a complex diplomatic issue, it was one on which the people were willing to put their complete faith in the President. There were few partisan overtones.

A bartender in Des Moines said 90 percent of his customers backed President Eisenhower "to the hilt." A Des Moines waitress said: "It was the best speech that Ike has made. He should have got tough a long time ago."

In Salt Lake City a German immigrant said: "I feel the President is correct ideologically, that we must not back down lest we have another Munich. But taking account of all the people I still know in Germany, I perhaps feel that we should move very softly. I have great fear of atomic war, which would wipe out all Europe. One thing is certain. The United States must make its intention crystal clear."

A Minneapolis correspondent for the Times reported that Minnesotans stood firmly behind the President, citing as an example, a farm wife who said "I hate the consequences, but I don't believe in appeasement."

Omaha united on issue

In Omaha, a Times correspondent reported that "never have the people of the Omaha area been more united behind President Eisenhower than in his current stand on the Berlin issue."

A housewife there said: "We're morally obligated. We shouldn't appease or give in."

From Denver it was reported that, despite fear of war, residents of Colorado were "almost solidly behind the President's pledge that the United States will make good its obligation to the people of free Berlin even at the cost of war."

A variety of views was expressed in the Kansas City area.

A small businessman remarked: "I guess we'll have to take it as it comes. There has been just one crisis after another since the war ended and there will be more. You just can't keep laying awake at night worrying about these things. You'd go nuts."

A woman from Shawnee, Kans., was skeptical about negotiating with the Soviet Union.

"In the past years," she said, "we have had conferences with Russia. Out of these conferences have come 53 agreements or treaties. Of these 53 agreements the Soviet Union has broken 50. The Indians have a wise maxim: 'Paleface cheat Indian once. Shame on paleface. Paleface cheat Indian twice. Shame on Indian.' "

Optimism is voiced

As for the possibility that war might result from the Berlin crisis, the people of the Middle West were generally optimistic.

The typical comment was along these lines: "I can't really believe that the Russians want to get into an atomic war that probably would destroy both of us. It doesn't make any sense."

Most persons interviewed did not think that there would be a war, but the majority hedged by saying, "I hope there won't be a war."

A lawyer in Great Falls said he hoped war could be avoided and added: "We shouldn't put a chip on our shoulder and taunt the Reds to knock it off. A boner on either side, a reckless challenge, a foolish stand can precipitate a thermonuclear war."

A Chicago working woman said: "I have a feeling war is coming. In the back of my mind it is a nagging thing that keeps bothering."

A young Chicago clerk said he felt war was inevitable. One of his coworkers felt sure there would be a limited, but not an atomic, war over Berlin.

In Omaha a livestock feeder said: "We can't back up forever. Maybe we've waited too long already."

Reader interest held low

The press in the Midwest has given the situation good coverage by local standards. At the Salt Lake Tribune, an editor said, however, that reader interest was "far higher on the issues of taxes and schools and highways."

In an editorial the Denver Post said: "The American people are alarmed about Berlin. They want to know what is expected of them in the crisis."

The editor of the weekly Star Farmer in Kansas said he had not received a single letter on Berlin from his more than 375,000 rural readers since the crisis developed. The editor said there was a lively flow of mail during the Suez and Lebanon crises.

An interview with a Kansas farmer helped explain this lack of interest.

"You just can't keep getting excited every time the Russians start a little hell-raising," the farmer said. "I suppose folks are figuring that the Berlin thing is just another one of these Russians noises."

SOUTH—ATLANTA

Although most persons surveyed in the South thought the Berlin crisis was of grave

importance, there was no widespread understanding of the issues involved.

It was found also that the President had solid backing in the press and among the public for his standfast policy on Berlin. A conference at the summit also met with favor among southerners.

Will war result? Most southerners surveyed thought the Russians were bluffing. Although war was regarded as a possibility, few really believed it would come.

Interviews were conducted with 50 persons, 30 of them city dwellers and the rest rural residents. Eleven States were represented and the occupations of those questioned ranged from utility executive to porter.

Of the 50 persons questioned, only 21 could pinpoint Berlin geographically. The rest had no idea as to its whereabouts or thought it was in West Germany. Many, ashamed of their lack of knowledge, said concern over local problems was responsible.

"That's the trouble with the world today, I suppose," the publisher of the Quitman (Ga.) Free Press said. "We're all so wrapped up in our own little problems that we don't have time to give the big ones the considerations they should have."

A parking-lot attendant in Atlanta said: "I'm a working man. I don't have much time to read about these things."

A Greenville, S.C., waitress said, "If it comes to war, I guess we would be interested."

A major influence

But even those with scant understanding thought the crisis was a matter of grave significance. Only 2 of the 50 said that Berlin and what happened there were of little importance to the United States.

Little Rock's city manager commented: "What is done in Berlin will have a major influence on what happens to peace in the world in the future. It is of very great importance. I feel that it parallels the situation we ran into over Quemoy and Matsu, where a firm stand against possible aggression will pay."

In Mississippi, a regional representative of the national democratic executive committee contended that in Berlin "the future peace of the world is at stake—we'll either be at war by June 1 or we'll have a long period of peace."

S. Walter Martin, president of Emory University in Atlanta, said that a great deal of concern over Berlin had been expressed among young people, both university and high school students.

Of the 50 persons, 40 had either heard or seen President Eisenhower on radio or television or read accounts of his address. Of the 50, 41 said they supported his stand. One was undecided, five were indifferent and three were opposed if such a proposition would lead to war.

The wife of a Canton (Miss.) farmer said that in general she was willing to leave the decisions on Berlin to the President. "That's what he was elected for," she said.

Hungarian crisis recalled

An airline ticket agent in Atlanta was of the opinion that the United States should stand firm on Berlin. "We would lose face if we pulled out," she said, "just like we did in the Hungarian situation."

A Marietta (Ga.) railroad conductor concurred. "We should stand pat and not back up an inch," he said.

Those surveyed thought almost to a man that the answer to the problem lay in negotiations. Sixteen pinned their hopes on a summit conference; a number of such opinions were expressed in areas where local newspapers had favored such a meeting.

With few exception those questioned thought that a withdrawal from Berlin would only postpone a showdown. There was no sympathy for appeasement.

A woman civic leader in Birmingham, Ala., said that every possibility for negotiations should be explored. Like the others she opposed any retreat, however.

"This time," she said, "we've to call Khrushchev's bluff. The talking stage has just about reached the end."

The editor of the Warren Sentinel in Front Royal, Va., said the United States should seek "much closer liaison with our allies toward setting up a strong European policy" and "definitely explore every possibility for talks with Russia."

"Too often in the past we've overlooked chances to explore some means of agreement with Russia," he added.

An Atlanta building porter agreed. "Negotiations," he said, "that's the best thing for all of us."

A Little Rock lawyer made the point that more than Berlin was involved.

"It's not just West Berlin that they're after," he said. "It's a matter of a chess game with an advantage to be pressed wherever possible. If we're forced to relinquish West Berlin, it will give them a wedge to be used to propagandize the so-called softness and fear of the Western Powers."

Face-saving device

A vice president of a Wilkesboro, N.C., bank thought a summit conference "might give the Russians a face-saving way out of this difficulty and perhaps give our crowd more room in which to maneuver."

On the matter of whether the Berlin crisis would result in war, seven persons thought it was either highly likely or would definitely occur. Twenty-one thought there would be no war and 21 said that they did not know.

"I think Russia wants the world, but I don't think it wants it through a war," a Kissimmee, Fla., veterinarian said.

"Khrushchev realized much better than we how unreliable the satellites are," a radio commentator in Thomasville, Ga., said. "Do you think he would start his land armies moving knowing that they would get a burst of machinegun fire in their backs?"

The wife of a university professor at the University of Georgia, in Athens, said, "I think that both sides will be able to talk themselves out of war."

A textile mill spinner from Kannapolis, N.C., expressed the opinion that there would be no war because U.S. defenses were strong.

The survey in the South found that up to the time of the President's speech the press did not give much space to news about Berlin. With the speech, however, the crisis has been featured and has been given more space.

FAR WEST—LOS ANGELES

In the Far West 110 persons were surveyed. Almost all supported the Eisenhower administration's stand on Berlin, favored negotiations, and thought there would be no war.

Broadly the survey indicated that the public is moderately (but not too well) informed on the Berlin situation. In the southern California area, 36 of 60 persons interviewed knew Berlin is in East Germany. In the rest of the areas surveyed, 22 of 50 knew where the city is.

There was virtual unanimity in southern California about standing firm, and about half those interviewed thought that conferences with the Russians were a way toward a solution. Seven thought conferences would be useless.

Of the 60, only 2 said that they had watched the full Eisenhower telecast. Only two suggested the United Nations as an avenue through which the crisis might be resolved.

One person favored a preventive military attack, while another said that even Soviet domination would be preferable to nuclear hostilities.

Only one person, a gasoline station operator, suggested more cultural exchanges as a promising avenue to better relations with the Soviet Union.

"Kept me awake nights"

A public-relations man for a college said that he felt that the situation seemed so critical to him "it has actually kept me awake nights."

Only one person in southern California suggested that the situation had been made to appear more dangerous than it actually was. A suburban city official said: "People are talking like this was Armageddon. I don't think it's nearly as important as junctures like Korea, when we had both sides engaged in actual warfare."

Six persons blamed faulty U.S. foreign policy for the present situation. Five of these blamed the Eisenhower administration and the Truman administration.

Again, six thought the United States should carry out its policy of "standing firm" to the point of using force if necessary.

In the interviews elsewhere on the west coast, a persuasive gravity was noted. No flip answers this time, everyone seemed genuinely concerned. But optimism was general, quite sure, that all would work out.

Here are some samplings of opinions in the San Francisco area.

An attorney: "One side or the other has to back down and this time it will have to be the Russians. I think it will work out all right if our diplomats can accomplish this and make it look like a Soviet victory."

An employee of an automobile rental service: "Ike's speech was really sharp, the best thing he's done in a long spell. We can thank our diplomatic corps for keeping the situation from already boiling over."

A bank clerk: "There's always a crisis. I think it's just to keep the country on its toes."

"That's all it takes, talk"

A liquor store clerk: "This whole thing can be settled by a lot of talk. That's all it takes. Talk."

A curio shop manager: "I agree wtih Mr. Macmillan. I think we need a more open mind. I wish Mr. Eisenhower would listen to Mr. Macmillan's ideas on Berlin."

A hotel owner: "The Russians don't want war any more than we do. I think they'd like to have this whole thing simmer down a bit, and that's why we should have a summit conference."

A barber: "I don't think there'll be a war any time soon—maybe in 2, 3 years. But not now."

Editorially the Los Angeles Times, a Republican newspaper, has commented: "Something is going to happen concerning Berlin and the Germans before the year is out. We are more sure than ever of two things. It won't be: (1) Evacuation of Berlin, and (2) war."

The Phoenix (Ariz.) Republic, another Republican newspaper, said: "As long as the United States stands firm, the Reds will not embark on military adventures."

An independent newspaper, the Albequerque Journal, commented: "The likelihood of any shooting as a result of the Berlin crisis within the foreseeable future [been] greatly diminished [by] President Eisenhower's offer to attend a summit conference."

Mr. JAVITS. Mr. President, the survey shows that the American people feel that the Russians have profound respect for the capabilities of the United States to carry on a cold or a hot war.

The President of the United States himself has equated foreign aid and its maintenance with the military defense of the United States. Certainly it must be equated with what is called a firm posture on the part of the United States.

If Congress indicates that it does not intend to back the President on the Development Loan fund I believe such action will be regarded as evidence of a lack of confidence in foreign aid, whether military or economic, and of a strong position generally in furtherance of the foreign policy of the United States. So I agree with Mr. William H. Draper, Jr., who was chairman of a group which surveyed the foreign aid policies of the United States, and who said it would be a tragedy if the $225 million request were rejected, because the vote on this proposal will be the first vote on the foreign aid picture at this session.

Finally, Mr. President, if we needed anything to buttress our determination in this field, and to show how shortsighted it would be for us to seriously damage the only program which really is an effective American offensive in the foreign field, we learned it from yesterday's newspapers, which informed us that the Soviet Union is now becoming a formidable rival of the United States in the foreign-aid field. The Soviet Union is paying the United States the flattering compliment of imitation.

We now learn that last year the Soviet Union expended more than $1 billion in foreign aid. That represents a vast increase in what the Soviet Union has previously done.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the article to which I have referred.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 22, 1959]

REDS' FOREIGN AID TO 18 COUNTRIES UP BILLION IN 1958—BUT ECONOMIC ASSISTANCE IS FOUND TO LAG BEHIND AID PROVIDED BY THE UNITED STATES

(By E. W. Kenworthy)

WASHINGTON, March 21.—The Communist bloc signed aid agreements with 18 underdeveloped countries last year totaling $1 billion, according to the State Department.

This marked a sharp stepup in the bloc's economic offensive. However, even in the areas in which the Communist concentrated their offensive, their total aid program lagged behind that of the United States.

The Communist drive did not get underway until 1955. Up to the end of 1958, the bloc had signed agreements with 18 underdeveloped countries to provide $2,373 million in grants and credits for military and economic aid.

Of this total, $1.591 million was for economic aid and $782 million for military.

U.S. PROGRAM LARGER

By contrast the United States over the same period extended grants and credits to the same countries amounting to $4,442 million. Of this $3,304 million was in economic aid and $1,138 million for military.

The disparity in the Communist and U.S. programs is greater if account is taken of what the United States has extended since 1948.

Over the 11 years, the United States has extended to these 18 countries loans and grants totaling $8,628 million, of which economic aid amounted to $6,005 million and military $2,623 million.

The Communist bloc is also stepping up its technical assistance program. During the last 6 months of 1958, 2,809 technicians spent at least a month in one or another of 19 countries. This compared with 1,600 a year earlier. In addition, there were 1,200 military technicians serving in these countries.

FIGURES NOT COMPARABLE

Figures for U.S. technicians are not comparable because they do not move in and out as do the Communist advisers. As of December 31, 1958, there were 2,333 U.S. economic aid experts in the same countries.

The Soviet aid program began in 1954 with a $11 million credit to Afghanistan. Since then the yearly aid totals were as follows: 1955, $339 million; 1956, $718 million; 1957, $287 million; 1958, $1,029 million.

Of the nearly $2,400 million extended by the bloc, the Soviet Union has offered $1,600 million, the Eastern European satellite countries $650 million, and Communist China $120 million.

A relatively small amount of the Communist aid has actually been delivered—only about $900 million, of which more than half is military.

Aid has been concentrated in the United Arab Republic (Egypt and Syria), Iraq, Afghanistan, India, Indonesia, Argentina, and Yugoslavia. The aid to Yugoslavia was delivered before Communist Party relations betweed the Soviet bloc and Yugoslavia cooled again in 1957.

The Soviet Union moved into Iraq with offers of aid after last summer's revolution. It granted a military aid credit of $120 million. A few days ago negotiations were completed for economic aid credits of $137 million.

Virtually all Communist aid is in credit form; grants have been negligible.

For the past year, most development aid extended by the United States has been in loans repayable in local currency. Export-Import Bank loans are repayable in dollars. Technical assistance is in grants, and so, usually, is aid extended from special assistance or contingency funds for budgetary support of countries with shaky economies.

U.S. military aid is in grant form, and this is true also of defense support aid to enable countries to maintain larger military forces than they could otherwise afford.

The following table compares Communist bloc commitments and U.S. obligations and authorizations for economic aid from 1955 through 1958 in millions of U.S. dollars:

	Soviet bloc	United States
Afghanistan	$116	$62
Argentina	102	285
Brazil	2	551
Burma	34	58
Cambodia	34	125
Ceylon	58	32
Egypt	311	22
Ethiopia	2	45
Iceland	5	17
India	304	954
Indonesia	194	143
Iran	3	153
Iraq	0	10
Nepal	13	14
Syria	195	0
Turkey	13	431
Yemen	42	0
Yugoslavia	163	402
Total	1,591	3,304

Mr. JAVITS. Mr. President, that amount of foreign aid by the Soviet Union represents a vast increase in what the Soviets previously have done, and tends to rival our own efforts in the same field.

Mr. President, we must bear in mind that, because the Soviet Union is a dictatorship, it has the capability of massing its efforts at any particular point, in the most vexatious possible way—for example, in an area so inflammable as the Middle East—whereas the United States has to spread its foreign aid around through the free world.

Mr. President, the foreign-aid program of the United States, undertaken back in 1947–48, represents the offensive capability of our country to induce especially the underdeveloped areas not to try to improve their economies by the rule of force, secret police, and privation—which is the Communist system—but to proceed by the rule of the development of the individual, investment of savings and of a private economic system and of the working power of free men—which is our system. However, that cannot be done effectively without financing and credit.

The United States is the main source in the entire world of financing and credit. If we threaten to seriously reduce a necessary element of such credit because we are shortsighted and do not see clearly our own interests, I think the world may read into that action the idea that our words about firmness in Berlin do not mean all they seem to say, because we are not ready to back them up fully with deeds. Especially is this so in view of the fact that the Draper group, to which I have referred, asks us to back up our foreign military assistance with $400 million more a year—thus saying, in effect, that our country is not doing enough.

So, Mr. President, let us be sure that we do not design major foreign policies and then do something to imperil our own program.

Mr. GRUENING. Mr. President, let me inquire of the Senator from New York whether the amount requested is to be charged to next year's budget.

Mr. JAVITS. I think it is to be charged to this year's budget, under a supplemental appropriation bill.

Mr. GRUENING. I wonder whether it should be charged to next year's budget.

Mr. JAVITS. This request is properly charged to this year's budget, as a supplemental appropriation item. As a matter of fact, the President has requested $700 million for the same purpose, to be charged against the 1960 budget.

The $225 million is needed, because I believe the Development Loan Fund has received approximately $1,350 million of legitimate requests, but is practically out of money at this time.

So this item is truly and really a supplemental appropriation request, properly applicable to this year's budget.

Mr. GRUENING. I thank the Senator from New York.

THE DANGER OF ATOMIC FALLOUT

Mr. ANDERSON. Mr. President, the problem of fallout and its danger to the peoples of the earth is one which has been with us for a long time.

The members of the Joint Committee on Atomic Energy, in an effort to supply some of the answers to the questions that came pouring to them and to other Members of the Congress, held hearings in June of 1957. The hearings were conducted by the Honorable CHET HOLIFIELD, a Member of the House of Representatives from the State of California and chairman of the special Subcommittee

on Radiation of the Joint Committee on Atomic Energy.

One of the difficulties in those long hearings was that there seemed to be very little agreement among scientists. Some chemists and physicists seemed to discount the importance of fallout and tossed it away with casual comments as if it had no greater hazards to society than do luminous wrist watches.

A group of geneticists was tremendously interested in the possibility that radioactive fallout might result in a serious threat to generations yet unborn. One of them calculated that even though the problems of radioactive fallout might affect only a few people out of every million, yet, when those few were measured against the hundreds of millions who occupy the globe, they represented a substantial number of deaths or deformities each year, and as such they should be taken seriously.

The Joint Committee has continued its interest in this subject, and has scheduled for next May additional hearings, again under the chairmanship of Representative HOLIFIELD.

As is now well known, there seemed to be a disposition to keep any new fallout data from getting into the hands of the public. The Joint Committee released for the Sunday morning newspapers unclassified versions of recent classified correspondence from the Defense Department and the Atomic Energy Commission. At the time of its release, I issued a statement, the text of which ought to be available in connection with the letters. I, therefore, ask unanimous consent that the release be printed at this point in the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

In commenting the other day on the Defense Department leak of classified information on the Argus shots (high altitude shots in the South Atlantic in September 1958), I pointed out that it was curious that the Defense Department at the same time was gagging the Joint Committee on making public some important data on fallout from weapons tests.

The Defense Department and the AEC have now released their fallout correspondence with classified deletions, and it is made public in the attachments. First is a letter to me dated February 19, 1959, by the Defense Department revealing new data from classified sources on the residence time of fallout in the stratosphere, and the areas of maximum drip-out. Next is a letter from the AEC spokesman, Dr. W. F. Libby, commenting on the Defense Department letter and research project on which it was based. Then there is a transmittal letter from AEC stating their official reservations. Finally there is a brief chonology of our attempts to make this information public.

The process of making public the Argus and fallout information is an example of how difficult it is to make available to the public the information it is entitled to have.

The February 19 Defense Department letter states that their measurements indicate that the radioactivity in the stratosphere has a residence half-life of 2 years, instead of 7 years as had previously been assumed by AEC. It also indicates that there is a latitude band of maximum dripout of the fallout from the stratosphere which occurs from 35° to 50° north or south. This area includes the northern part of the United States, and the letter states that "the concentration of strontium 90 on the surface of the earth is greater in the United States than in any other area in the world."

"In layman's language," Senator ANDERSON stated, "it looks like strontium 90 isn't staying up in there as long as AEC told us it would, and the fallout is greatest on the United States. Perhaps this information may account, in part, for the recent high readings of radioactivity in soils and plants.

"This new data appears to further contradict the official doctrine of AEC spokesmen as to residence time of fallout in the stratosphere and the theory that stratospheric fallout tends to drip out uniformly throughout the earth. The AEC letter of February 27, 1959, ought to be checked for consistency with the speech of the same AEC spokesman on March 13, 1959, at Seattle.

"The Joint Committee will look into these matters when it holds its fallout hearings in May of this year under the chairmanship of Congressman CHET HOLIFIELD, of the Special Subcommittee on Radiation."

Mr. ANDERSON. Mr. President, with that statement several letters were released along with a chronology. I ask unanimous consent that the following be printed at this point in the RECORD: First, a letter from Gen. Herbert B. Loper, Assistant to the Secretary of Defense—Atomic Energy, dated February 19, 1959, addressed to the chairman of the Joint Committee on Atomic Energy; second, a letter from Dr. W. F. Libby, Commissioner of the Atomic Energy Commission, to Gen. Herbert B. Loper, indicating the differences which he might have, but also pointing out that he, himself, is "in complete agreement" on many other points of the letter, particularly about the importance of more experimental and collecting programs on the amount of fallout deposited locally from a low height of burst.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

OFFICE OF THE SECRETARY OF DEFENSE,
Washington, D.C., February 19, 1959.

Hon. CLINTON P. ANDERSON,
Chairman, Joint Committee on Atomic Energy.

DEAR MR. CHAIRMAN: The following is a brief status report outlining the present programs for analyzing and evaluating the radiation hazards resulting from atomic detonations.

Fallout reports from Operation Redwing (1956), Plumbbob (1957), and Hardtack (1958) are currently under preparation.

The hazards of local contamination from nuclear weapon detonations have been fairly well delineated. However, the difficulty in accurately predicting the rapidly varying atmospheric condition results in uncertainties as to the area of fallout. Predictions of local fallout contours from enemy bombs must be based on a large number of assumptions such as the type of weapon, height of burst, and yield. These unknowns do not allow accurate prediction of fallout from enemy bursts during wartime. Delineation of contaminated areas by airborne radiac instruments after deposition of the fallout is presently practicable and will be of considerable military and civil value during wartime.

The deposition of worldwide fallout or worldwide surface contamination is now beginning to be accurately measured. [Classified portion deleted.] Recent indications are that the radioactivity in the stratosphere has a residence half-life of 2 years (in contrast to the previously assumed value of about 7 years) and the present amount of strontium 90 in the stratosphere would be maintained by the injection of about 6 megatons of fission products per year. The concentration of the strontium 90 on the surface of the earth is greater in the United States than in any other area of the world. The danger of carbon 14 and cesium 137 has been examined and the immediate probability of any one individual being affected is about 1 in 500,000.

The risk of damage resulting from the testing of weapons is therefore extremely small and much less than other common day occurrences such as X-rays, automobiles, chemical contaminants, household cleaners, etc. However, the probable casualties attributable to radioisotopes from weapons testing when summed over the populations of thousands of years create a moral issue that could be of considerable propaganda importance.

The distribution of the radioactive debris in the stratosphere as a result of detonations to date is not clearly defined as to its altitude and latitude variation. The altitude dependence partially determines the drip-out rate and the latitude dependence influences the extent to which the worldwide fallout is uniform over the earth. Tentative conclusions to date indicate that three-tenths of the quantity of radioactive debris leaves the stratosphere each year, that the north, south diffusion of radioactive particles in the stratosphere does exist, and that in both hemispheres, there is a latitude band of maximum drip-out which is from 35°–50° north or south.

There is a need for more experimental and collecting programs in the following areas of the effects and behavior of fallout from nuclear weapons:

(a) Amount of fallout deposited locally from a low height of burst.

(b) More accurate determination of the drip-out rate of radioactive particles from the stratosphere.

(c) Further define the estimate of the amount of radioactivity formed per KT of fission yield.

(d) The refinement of measuring techniques to account for all radioactivity produced from a nuclear yield.

(e) Advancements in the knowledge of fireball chemistry, physics, and particle behavior.

(f) Response of biological systems to radiation.

Sincerely yours,

HERBERT B. LOPER,
Assistant to the Secretary of Defense (Atomic Energy).

FEBRUARY 27, 1959.

Hon. HERBERT B. LOPER,
Chairman, Military Liaison Committee.

DEAR GENERAL LOPER: In connection with your letter to Senator ANDERSON of February 19, 1959, concerning radiation hazards resulting from atomic detonations, I have just complete a study of data * * * which you kindly made available to us last December. I am sorry that, because of the complexity of the problem and my preoccupation with other duties, I have been so slow in finishing my consideration of the data and in sending on my comments. * * *

I think your letter to Senator ANDERSON is an excellent exposition of the present position we are in. There are, however, one or two points you make on which I believe further words are necessary in order to resolve some questions.

The extensive data that have already been published by Project Sunshine and the United Kingdom study group, together with your beautiful * * * work, still leave us, despite their great volume and complexity in some uncertainty, as you say, as to the distribution of the radioactive debris in the stratosphere to both altitude and latitude variation. Since the altitude variation deter-

mines in part the drip-out rate and thus the residence half-life in the stratosphere, this quantity is left in some doubt. My own present conclusion is in agreement with yours as stated in your letter, in that my previous value of 7 years for this important number is too long and that it should be reduced. In a restudy of this question, being released March 13 in Seattle, a copy of which will be sent you as soon as it is printed, a new value of about 4 years rather than the earlier 7 is arrived at. I find it difficult to push it down to the 2 years you give as an indicative value.

On the amount of strontium 90 in the stratosphere, at the present time there is a somewhat larger difference in our estimates which may be due to your not having included the Russian series of last October which in itself alone, according to my estimates, increased the stratospheric inventory by about 50 percent. * * * You give the present inventory as requiring 6 MT (megatons fission equivalent) per year to be maintained at its present level. For a half-life of 2 years this corresponds to only 17 MT total and appears to leave too little room for the injections from tests before last October, which I estimate still have left some 25 to 30 MT in the stratosphere for a total at present of about 42 MT and a corresponding required rate of injection for steady maintenance of about 7 MT per year. The closeness of this figure to your 6 MT per year number shows how badly we need further information on the actual stratospheric content.

You indicate that the stratospheric fallout occurs at maximum rates in the 30°–50° bands of latitude in both hemispheres. This old argument still is not quite settled, I believe, although the evidence in favor of your conclusion is increasing. My principal difficulties with it at the moment are that we know that a considerable part of the peak in observed fallout in these latitudes in the Northern Hemisphere is due to tropospheric or local fallout which was never in the stratosphere and the evidence for a corresponding peak in the Southern Hemisphere seems to be rather weak.

With respect to the carbon 14 and cesium 137 hazards, the laboratories measuring radiocarbon dates in various parts of this country, in Europe, and New Zealand have sent me data on the present increase in the carbon 14 content of living matter which amounts to about 10 percent of the natural level of carbon 14 from the cosmic rays which in itself corresponds to about 1.5 milliroentgen per year—about 1.5 percent of the average total natural dose rate. Turning to cesium 137, Dr. E. C. Anderson in the Health Division at our Los Alamos laboratory has just reported data on the human level in the United States and Europe for the late summer and early fall of last year which amounts to an average of about 75 micromicrocuries per gram of body potassium for an internal dose rate of about 3 milliroentgens per year. The total cesium 137 fallout in the United States now amounts to about 50 millicuries per square mile. This adds about 1 mr/yr of external dose for a total of about 4 mr/yr due to cesium 137 which is about 3 percent of the natural average radiation dose rate from natural radioactivity and the cosmic rays. I can't tell whether these numbers are in strict keeping with your estimate that the immediate probability of any one individual being affected by bomb test carbon 14 and cesium 137 is about 1 in 500,000 but I think your estimate looks reasonable.

On the many other points in your letter I find myself in complete agreement, particularly about the importance of more experimental and collecting programs on the amount of fallout deposited locally from a low height of burst. Since it may be that we will not again have the opportunity to test devices, at least above ground, it is particularly important to consider whether we may not collect more information on this point from past tests. I believe there are some possibilities of doing this and I suggest that we undertake such a program jointly right away.

Sincerely yours,

W. F. LIBBY,
Commissioner.

Mr. ANDERSON. Mr. President, next I submit a copy of a letter sent by Gen. A. R. Luedecke to the Joint Committee on March 21. His letter was in response to a Joint Committee letter to the Atomic Energy Commission, requesting the Commission's views on the report, and asking to what extent the difference affected previous assumptions and statements. The letter from General Luedecke was a reply; and I ask unanimous consent that it be inserted at this point in the RECORD, together with a brief chronology of action by the Joint Committee on Atomic Energy to make public this important new information. I wish to have the latter also included in the RECORD, as some very interesting items resulted from it.

There being no objection, the letter and the chronology were ordered to be printed in the RECORD, as follows:

(Copy of letter to the Joint Committee, received March 21, 1959, from the AEC)

This is in reply to your letter of March 9, 1959, by which you forwarded a copy of General Loper's letter to Senator ANDERSON dated February 19, 1959, and requested our comments thereon.

Commissioner W. F. Libby has written his comments to General Loper in a letter dated February 27, a copy of which was sent to Senator ANDERSON at that time. For your convenience another copy of Dr. Libby's letter is attached.

The revised estimates of stratospheric burden and the residence time presented by General Loper are consistent both with the data referred to by General Loper and with the "Ash Can" data obtained by the Atomic Energy Commission in its balloon sampling up to 90,000 feet. However, it should be kept in mind that knowledge of the stratospheric content alone is not sufficient to determine retention time. In addition one needs the knowledge of either the stratospheric injection or of total stratospheric fallout as a function of time. Within the range of accuracy with which fallout has been measured, observed fallout to date is not incompatible with General Loper's estimate of the injection rate which would be required to maintain the present stratospheric burden.

The two main reasons for the uncertainty in the stratospheric burden and residence time are (1) that the entire stratosphere has not been adequately surveyed from pole to pole and up to altitudes beyond which the overlying radioactive debris can be confidently neglected and (2) that the data obtained at the higher altitudes by balloon only are subject to sizable sampling errors, uncertainties of collection efficiency of the sampling filters, and radiochemical analysis errors due to the small amounts collected.

As a consequence of these uncertainties we do not consider that the data now available are sufficiently decisive to resolve the differences between the estimates of stratospheric content and retention time made by General Loper and the higher estimates given by Dr. Libby in his letter to General Loper. It may be observed that on the basis of the estimates made by General Loper the total worldwide fallout of long-lived radioactive fission products anticipated from all tests up to date would be roughly two times the total deposition so far and that on the basis of Dr. Libby's estimate the total would be roughly three times.

We concur with General Loper in recognizing the need for further investigations along the lines suggested in his letter. We plan to continue our efforts in all these fields. In particular, we hope to be able to differentiate Operation Hardtack surface-burst debris and high-altitude debris, by analysis of tungsten and rhodium isotopes respectively, and, in turn, to distinguish these from the recent U.S.S.R. debris. In this way it should be possible to obtain a much better picture of the actual patterns and rates of spread of stratospheric debris originating in different latitudes and altitudes.

The information bracketed in red on the first page of the attached copy of Dr. Libby's letter of February 27, 1959, is considered by the originating agencies to be confidential defense information. With these deletions Dr. Libby's letter is declassified.

Sincerely yours,

———— ————,
General Manager.

BRIEF CHRONOLOGY OF ACTION BY JOINT COMMITTEE ON ATOMIC ENERGY TO MAKE PUBLIC DEFENSE DEPARTMENT REPORT ON FALLOUT

December 1958: Dr. Libby furnished new data by Defense Department indicating that the radioactivity in the stratosphere has a residence half-life of 2 years instead of previously assumed value of 7 years.

February 20, 1959: Joint Committee received fallout report by the Department of Defense dated February 19, 1959, classified "confidential—restricted data."

February 27, 1959: Confidential letter sent to Defense Department by Dr. Libby with copy to Joint Committee chairman in which Dr. Libby arrived at new value of 4 years instead of previous 7 years.

March 9, 1959: Joint Committee by letter this date to the Defense Department questioned the reasons for the "confidential" classification of the report and inquired as to what extent the information could be discussed in public without compromising classified information.

A separate letter this date was also sent to the AEC requesting the Commission's views on the report and to what extent the conclusions affected previous assumptions and statements.

March 13, 1959: Restudy by AEC of worldwide stratospheric fallout released at Seattle, Washington, in which no mention of Defense Department study is made and which maintains position of a residence time of 5 to 10 years, selecting 6 years as the mean residence time of stratospheric fallout. Results of another AEC analysis, Project Ash Can which indicated a residence time of 3 years was discounted as being doubtful. No mention was made that the Department of Defense conclusions of residence half-life of 2 years tended to support results of Project Ash Can.

March 18, 1959: By letter, the Defense Department advised the Joint Committee that only one sentence in the report contained classified information and after identifying it went on to state:

"Although the remainder of the letter is unclassified; the Department recommends that it not be discussed in public because there is not full agreement as to the interpretation of the data that has been obtained so far. We believe it would be far better before the data and conclusions are made public that there be a close agreement amongst the investigators concerned. Therefore, we believe that until the results are more than preliminary, the 'confidential' classification should remain on the letter."

March 20, 1959: Letter received by Joint Committee from the Defense Department advising the report could be made public with deletion of the one classified sentence.

March 21, 1959: Letter received from AEC stating what portion of Dr. Libby's confidential letter of Feb. 27, 1959 to the Department of Defense does not contain classified information.

Letter and report released by Joint Committee after deletion of classified information.

Mr. ANDERSON. Mr. President, the New York Times published in full the entire correspondence. I regard its publication as a public service of the highest order. All over the country there are anxious people who have been trying to learn all they can about the question of fallout and the suppression of fallout data. The action of the New York Times in printing the correspondence in full was a splendid step, and I commend that publication for its fidelity to the interests of the public in this regard.

The Washington Star published a very good article on Sunday, also. I do not believe that all of it needs republication, but I ask that a portion of the article by Richard Fryklund be printed at this point in the RECORD.

There being no objection, the excerpt from the article was ordered to be printed in the RECORD, as follows:

ANDERSON SEES FALLOUT REACHING FASTER RATE—BUT NEW DATA DISCLOSED BY SENATOR MAY MEAN TOTAL QUANTITY IS SMALLER

(By Richard Fryklund)

Radioactive strontium 90 may be falling from the stratosphere at a faster rate than the public hitherto has been told, and the fallout may be greatest over the United States, Chairman ANDERSON of the Joint Atomic Energy Committee said yesterday.

But, on the other hand, new data released by Senator ANDERSON also indicates that total future fallout appears to be half what had been expected.

This is another episode in a long dispute between Senator ANDERSON and Atomic Energy Commission policy and Pentagon secrecy. The significance to the public of the new data is still a matter of controversy—a controversy further complicated by admissions by all scientists concerned that they really do not know enough about radioactivity to say positively what the fallout danger is.

Senator ANDERSON's data is in the form of a series of letters to the committee from Maj. Gen. Herbert B. Loper, assistant to the Secretary of Defense for atomic energy; Dr. Willard F. Libby, Atomic Energy Commissioner and the only scientist on the Commission; and A. R. Luedecke, General Manager of the AEC.

With the letters was an interpretation by Senator ANDERSON, who said:

"In layman's language, it looks like strontium 90 isn't staying up in there as long as AEC told us it would, and the fallout is greatest on the United States. Perhaps this information may account, in part, for the recent higher readings of radioactivty in soils and plants.

"This new data appears to further contradict the official doctrine of AEC spokesmen as to residence time of fallout in the stratosphere and to the theory that stratospheric fallout tends to drip out uniformly throughout the earth."

Mr. ANDERSON. Mr. President, the Washington Post has a special science reporter, Edward Gamarekian, whose writings on atomic energy have been unusually competent. It is hard to reduce a scientist's words to a layman's language; but I think Mr. Gamarekian in reporting in that fashion, has done an excellent job. I ask that his article, entitled "Defense and AEC Clash on Fallout Rate" be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFENSE AND AEC CLASH ON FALLOUT RATE

(By Edward Gamarekian)

A sharp disagreement between Defense Department and Atomic Energy Commission experts on the question of fallout was brought to light yesterday by a series of letters made public at the insistence of the Joint Congressional Committee on Atomic Energy.

The controversy involves the manner in which the radioactive atomic bomb debris now in the stratosphere is "dripping" down to earth.

The correct answer will be important since the fallout mechanism will determine the amount of strontium 90 and other radioactive elements that appear in milk and other foods during the next 5 or 10 years.

The first letter, dated February 19, was from the Defense Secretary's atomic energy adviser, Gen. Herbert B. Loper, to the Joint Committee chairman, Senator Clinton P. ANDERSON, Democrat, of New Mexico. In it, Loper informed the Joint Committee that fallout measurements during the past three years indicate the debris in the stratosphere is falling out at a much faster rate than predicted.

He also stated that most of it is concentrating in the Northern Hemisphere between the 35 and 50 degree latitudes—the band in which the northern part of the United States is situated.

The rate of fallout, he added, is such that half of the amount now in the stratosphere will drip out in 2 years, half of the remainder in the next 2 years, and so on.

His conclusions were based on measurements of the Defense Department and differ from the conclusions arrived at by the AEC's leading fallout expert, Commissioner Willard F. Libby.

The second letter, dated February 27 was written by Libby to General Loper, with a copy to the Joint Committee chairman. In his letter the AEC Commissioner admits that his previous estimate of 7 years for 50 percent fallout was too high, and lowers it to 4 years.

"I find it difficult," he said "to push it down to the 2 years you give as an indicative value."

Libby maintained his position that the atomic end products now in the stratosphere are well distributed and are coming down uniformly over the entire surface of the earth. He conceded, however, that there appeared to be increasing evidence in favor of a heavy concentration in the middle latitudes of the Northern Hemisphere.

Although there is no argument over the fact that most of the fallout that has occurred so far has been concentrated in this band, Libby believes that this fallout is mostly from the atomic debris that never reached the stratosphere. He contends that it remained in the lower atmospheric layer, called the troposphere, and came down to earth in a relatively short time—a matter of weeks or a few months at most.

Because winds blow essentially in an easterly or westerly direction, this fallout showed up in the middle latitudes of the northern half of the earth, where most of the tests have been held, the AEC Commissioner contends.

Libby's belief that the debris in the stratosphere takes longer to come down than indicated by Loper follows logically from his assumption that the radioactive material is uniformly distributed in the upper atmosphere. Since the amount of fallout measured in the Southern Hemisphere is low, uniform distribution would lead to the conclusion that less has come down.

If Loper is correct, the strontium 90 that turns up in milk and foods during the next decade will be higher than that anticipated by the Atomic Energy Commission. Neither the AEC nor Defense Department has given any estimates recently, however, on what levels might be reached. Before last year's tests, they estimated that the strontium 90 that had already accumulated in the soil would increase two to three times within the next 5 to 10 years, if no further atomic tests were held above the earth's surface.

The AEC has put Libby's concept forward on a number of occasions, the most recent being March 13, but the Defense Department's findings were kept secret until yesterday.

When Senator ANDERSON attempted to make the Defense Department results known by including the substance of Loper's letter in a speech a few days ago, the military censors deleted one sentence which included some classified material, but then, on the request of Libby, asked that the letter not be used at all.

They wrote the following to the Joint Committee on March 18:

"Although the remainder of the letter is unclassified, the Department recommends that it not be discussed in public because there is not full agreement as to the interpretation of the data that have been obtained so far.

"We believe it would be far better before the data and conclusions are made public that there be a close agreement amongst (sic) the investigators concerned.

"Therefore, we believe that until the results are more than preliminary, the confidential classification should remain on the letter."

When Senator ANDERSON charged the Defense Department with gagging the Joint Committee on data important to the American people and demanded that the confidential classification be removed, Loper's letter was made available. Libby's letter to Loper was also declassified after some deletions were made for security reasons.

The Joint Committee accused the AEC of discounting the measurements of fallout made in its Project Ash Can because they did not confirm the theories of long-term fallout. These measurements showed a 50-percent fallout in 3 years, which tended to support the Defense Department finding, the committee stated.

It pointed out further than neither the "Ash Can" nor Defense Department results were mentioned in Libby's March 13 speech which was very detailed and contained 24 pages of charts and graphs.

Mr. ANDERSON. Mr. President, the above article has one inaccuracy in the very last paragraph which I would like to correct. It mentions that the Joint Committee "pointed out further that neither the 'Ash Can' nor Defense Department results were mentioned in Libby's March 13 speech which was very detailed and contained 24 pages of charts and graphs."

Dr. Libby's March 13 speech did mention the "Ash Can" results but he cast doubt on them and indicated the weight of evidence supported his values. What the Joint Committee pointed out was that although Dr. Libby had the results of the Defense Department report which supports those of Project Ash Can, Dr. Libby made no mention of the Defense Department report in his March 13 speech.

Mr. President, this morning the Washington Post published an article entitled "New Fallout Data Puts AEC's Libby on Spot." This article, by Mr. Gamarekian, is extremely revealing in connection with the other articles; and I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW FALLOUT DATA PUTS AEC'S LIBBY ON SPOT)

(By Edward Gamarekian)

The set of letters and statements on fallout released Saturday through the efforts of the Joint Congressional Committee on Atomic Energy have put the Atomic Energy Commission's leading expert on fallout, Commissioner Willard F. Libby, on the spot.

They show:

First, that Libby's prediction on how fast the radioactive atomic debris in the stratosphere is coming down and where it is coming down were wrong, because they were based on incorrect assumptions.

Second, that Libby attempted to suppress the fallout measurements of the Defense Department until he could revise and publish his own calculations to bring them into better agreement.

DATA RELEASED IN SPEECH

Because the Joint Committee was pressing hard for the release of the Defense Department findings, Libby apparently decided to make his revised calculations public as soon as possible.

His first opportunity was a speaking engagement that was scheduled for March 13. It turned out to be a lecture-concert series at the University of Washington. It was a most unusual speech. It read more like a scientific report, and the prepared text had 24 pages of tables and charts attached to it.

Libby made no mention of the Defense Department findings but dropped his estimate of the time for 50 percent fallout from 7 to 4 years.

He did mention a theory of E. A. Martell, who predicted that the atomic end products from the 1958 Soviet tests would come down in a year. Libby showed that fallout measurements fitted his own predictions more closely but did not make a comparison with the Defense Department estimate of 2 years for the 50 percent fallout.

The speech came none too soon, for only 4 days before the Joint Committee had taken formal action to obtain release of the information. The committee asked the Defense Department in writing why the data had to remain classified and what portions could be made public.

The committee also wrote the AEC asking it to explain and comment on the differences between its calculations and the findings of the military.

ASKED FOR LOPER'S LETTER

After Libby's March 13 speech, Senator CLINTON P. ANDERSON, anxious to make the Defense Department results public as soon as possible, decided not to wait for the official release of all the data. The chairman of the Joint Committee asked for the immediate release of a February 27 letter from Maj. Gen. Herbert B. Loper to the committee in which the Defense Department findings were summarized.

There was again an attempt to suppress the information. Loper, the Defense Secretary's atomic adviser, refused permission to use the letter. He disclosed later that he refused to release it because Libby was opposed to making it public on the grounds that he (Libby) was not in full agreement with the Defense Department findings.

The AEC evidently was unhappy about the extent of disagreement which still existed between Libby's results and those described in Loper's letter.

The AEC General Manager, Alvin R. Luedecke, in a letter to the Joint Committee last Saturday, attempted to cast doubt on the accuracy of the Defense Department measurements.

Incredibly, Luedecke admitted that the AEC results from its own measurements during Project Ash Can were consistent with the results described in Loper's letter. He then proceeded to discredit the AEC data.

On the insistence of Senator ANDERSON, Loper's letter was released last Saturday with one sentence deleted for reasons of security. With it came the publication of the letters of Libby and Luedecke.

DOUBT CAST ON ESTIMATES

Some Congressmen said yesterday that this entire episode may throw considerable doubt on Libby's revised estimates and his predictions of the future fallout pattern. Libby has been the AEC's leading expert and theoretician on fallout.

This episode also throws into confusion previous predictions on the amount of strontium 90 which will be deposited on the United States over the next decade as well as its rate. Both are important, since a faster fallout means it will come down hotter.

Previous estimates indicated the strontium 90 in the soil would increase two to three times during the next 5 to 10 years. These figures are now too low because the Russian tests almost doubled the quantity of atomic debris in the stratosphere and the new Defense Department findings indicate this debris is not being distributed throughout the stratosphere but is coming down in the middle latitudes of the Northern Hemisphere.

Libby agreed with Loper's statement that the effects of this fallout would be small, and that only 1 out of 500,000 would probably be affected by the radioactive cesium 137 and carbon 14. However, both used the curious term "immediate probability" when it is well known that most of the effects will show up only after long periods of time and in succeeding generations. They also talked in terms of external radiation and omitted the internal radiation produced by the ingestion of radioactive atomic end products.

Loper mentioned strontium 90, but gave no figures, saying only that the fallout of this radioactive element is greater in the United States than in any other area of the world. Libby did not refer to it at all.

Mr. ANDERSON. Mr. President, finally, the Washington Post has published today an editorial entitled "Faster Fallout." It is a good statement of the situation that existed, and it is to be commended. I ask unanimous consent that the editorial may be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FASTER FALLOUT

The news that radioactive fallout drops from the stratosphere at a far more rapid rate than previously calculated is hardly a cheerful disclosure. But no less distressing is the fact that once again the Atomic Energy Commission has used a secrecy stamp to try to prevent the public from learning this and other data vital to the health and safety of the Nation. Senator ANDERSON, chairman of the Joint Congressional Atomic Energy Committee, has expressed outrage at this attempt to smother information. The file of correspondence which the committee has released seems fully to support his complaint.

According to the committee's records, the Defense Department furnished AEC Commissioner Libby in December with data showing that half the deadly radioactivity now in the stratosphere comes down in only 2 years rather than the previously assumed 7 years. This faster fallout means that harmful particles descend to earth far more quickly and in a much "hotter" state than previously thought. Surely this is the kind of information that the country has a right to know. But apparently because Dr. Libby disagreed with the findings, the report was filed with the Joint Committee on a classified basis. After repeated prodding, the Defense Department informed the committee that only one sentence in a letter summarizing the report contained classified material. The sentence was deleted and finally the news is out.

Manifestly, the new information should not cause any panic. The Defense Department estimates that the chances of an individual being immediately affected is about 1 in 500,000. Yet the new disclosure clearly affords no grounds for smug proclamations that fallout may possibly be good for everyone. There is also something deeply distressing about a Pentagon spokesman's cool notation to the committee that the long-run damage of fallout creates a "moral issue that could be of considerable propaganda importance." Isn't it conceivable that safeguarding mankind from the malignant effects of fallout might be of more than mere propaganda importance?

Mr. ANDERSON. Mr. President, I have placed these numerous items in the RECORD because I believe the people of the United States are entitled to know what the fallout situation is, insofar as it can be gaged by the scientists. We have no way of measuring what effect fallout will have on generations yet unborn, because we would have to have scientific data based upon a series of births which might occur 50, 75, or 500 years from now.

But we do know that many persons are very seriously worried about this situation. We know that in our own country, as well as in many other countries all over the world, the fallout of strontium 90 is apparently heavier than it is in other areas; and we have a right to know whether that situation poses any unusual problems to the people of the United States.

It is quite significant to have the Department of Defense release a study which states that fallout is dropping from the stratosphere 3½ times faster than had been calculated.

Finally, it is also quite significant to have the admission that it does not fall equally all over the world, as has frequently been asserted, but does fall heaviest on the United States.

That statement is of interest because some person were referring to the fallout in certain South American countries and saying, "If that is all there is there, that is all there is anywhere, because it falls equally all over the earth." That was said despite the fact that in Wales it was discovered there was a fallout of strontium 90 far above what it was in other sections of the earth. We have known that there seems to be a belt in the northern part of the United States that receives more strontium 90 fallout than is received at the equator, for instance. Therefore, it becomes important to have the Defense Department information on record.

I was surprised and disappointed that although the information sent to the Joint Committee on Atomic Energy was unclassified, that there was an admonition that the committee should keep the information to itself and treat it confidentially. I know of no obligation on the part of the Joint Committee on Atomic Energy to withhold the truth about fallout from the people of the United States. So far as it may be my responsibility on the Joint Committee, particularly as chairman of the Joint Committee, I intend to see that the essential facts are made available to the American people for their independent judgment as to their importance.

I regard it as extremely unfortunate that so many statements have been made that seem to indicate fallout is something nobody has to worry about, that people can walk ankle deep in strontium 90 and not be bothered at all. It may be somewhat difficult to prove, but I suggest to the Senate and to the people of the United States that it would be very well indeed to read these reports, and to read them, insofar as possible, in full.

I hope that in the hearings before the Joint Committee on Atomic Energy, which will begin in May, we may have the cooperation of scientists from all over the earth, so that they may help us in making available to the American people information for the protection of the position for which they have stood.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Minnesota [Mr. HUMPHREY] be given 10 minutes, and that it not be charged to either side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. HUMPHREY. Mr. President, I rise to join in the discussion this morning of the very important problem of radioactive fallout, which has been given such thoughtful and constructive consideration by the distinguished Senator from New Mexico [Mr. ANDERSON]. I wish to join with him and to associate myself with him this morning, as I have on other occasions.

During the past few weeks a number of articles have appeared in the press regarding the rising levels of radioactivity in soil, water, milk, and foodstuffs.

I commented on this matter about 2 weeks ago, and assured the Senate I would attempt to collect what limited information was available to the Subcommittee on Disarmament and make it a part of the total record of the Joint Committee on Atomic Energy.

We are beginning to receive reports of studies being made on the amounts of radioactivity in soil, water, milk, and foodstuffs generally. In some cases the studies are only preliminary because heretofore we have not analyzed or tested our foodstuffs very thoroughly. And in the case of most foodstuffs and in most areas the studies have only scratched the surface.

The State of Minnesota, not waiting for action by the Atomic Energy Commission, initiated an analysis of samples of wheat. I may add that the Governor of the State of Minnesota has appointed a statewide atomic energy commission for the purpose of working with the Federal Government in studies of the peaceful uses of atomic energy, as well as keeping a watchful eye on the problems which are inherent in the use of atomic energy.

The result of the analysis in Minnesota was a sobering reminder that our knowledge of the radioactivity problem was woefully incomplete.

In an effort to obtain a better understanding of the question of rising levels of radioactivity I requested that the staff of the Disarmament Subcommittee prepare a summary memorandum of the recent reports that have been discussed of late.

Mr. President, I ask unanimous consent to have printed in the RECORD at the end of my remarks the following:

First. A memorandum from staff of the Disarmament Subcommittee concerning recent data on radioactive fallout.

Second. Letters of February 9, February 28, and March 4, 1959, from Dr. Maurice B. Visscher, of the University of Minnesota.

Third. A statement by Dr. Maurice B. Visscher, February 6, 1959.

Fourth. A statement on strontium 90 in Minnesota wheat made before the Joint Committee on Atomic Energy, February 7, 1959, by Willard F. Libby, member, U.S. Atomic Energy Commission.

Fifth. A Survey of Radioactive Residues in Foods Before and After 1945: Evidence of Possible Fallout Contamination, by Edwin P. Laug and Wendell C. Wallace, Food and Drug Administration. Excerpts from Health and Safety Laboratory Strontium Program Quarterly Summary Report, February 24, 1959, published by Atomic Energy Commission.

Sixth. Excerpt from letter from official in Public Health Service concern-in strontium 90 levels in cistern water.

Seventh. A series of articles in the Washington Post by Edward Gamarekian entitled "Radiation and Cancer," Washington Post, January 21, 1959; "A-Fallout Piling Up in U.S. Soil," Washington Post, March 3, 1959; "Strontium 90 in Diet," Washington Post, March 7, 1959; "Health Service Urges Program to Measure, Control All Radiation," Washington Post, March 11, 1959; and "Peril in 'Acceptable' A-Radiation," Washington Post, March 12, 1959.

These are not the same articles the Senator from New Mexico introduced.

Eighth. An article entitled "Radioactive Fallout Confusion Caused by Lack of Responsibility," by Lillian Levy, from the Washington Sunday Star, March 15, 1959.

Ninth. Release of February 27, 1959, by Public Health Service on Radioactivity in milk.

Tenth. Excerpts from article entitled "The Milk All of Us Drink," Consumer Reports, March 1959.

I ask unanimous consent that these documents may be made a part of the RECORD at the end of my remarks.

The PRESIDING OFFICER (Mr. DOUGLAS in the chair). Without objection, it is so ordered.

(See exhibit 1.)

Mr. ANDERSON. Mr. President, will the Senator yield at that point?

Mr. HUMPHREY. I am happy to yield.

Mr. ANDERSON. I wonder if the Senator from Minnesota would mind my pointing out that the work of the Disarmament Subcommittee, which he heads, and which he has served so effectively, is affected, in a way, by the series of studies made by the Defense Department. For example, if when we talk about disarmament and ignore the hazard from strontium 90 fallout, then we are dealing only with its psychological factors.

Mr. HUMPHREY. Yes.

Mr. ANDERSON. But when we discover that the rate of fallout is three times faster than it was contemplated it would be, and therefore the fallout comes to the earth "hotter," and when we realize the heavier fallout is in the Northern United States, then the question of nuclear testing of weapons takes on a new aspect. Then perhaps what the Senator from Tennessee [Mr. GORE] and the Senator from Idaho [Mr. CHURCH] have suggested should be considered, namely, the testing of atomic weapons either underground or at a very high level, so as to escape the effects of "drip-out" of strontium 90 and other radioactive material.

I think I speak for all the members of the Joint Committee on Atomic Energy when I commend the Senator from Minnesota for trying to keep this question before the American people, in its right frame of reference. We certainly have had proof that it is a subject which should be discussed, and that more discussion of it is needed.

Mr. HUMPHREY. I thank the Senator from New Mexico. I again assure him, as I have on other occasions, that the efforts of the Subcommittee on Disarmament will be closely coordinated with those of the Joint Committee on Atomic Energy. The main responsibility obviously lies with the Joint Committee on Atomic Energy, but the Subcommittee on Disarmament has a role when it comes to the consideration of dangers from fallout resulting from bomb testing and, indeed, from war itself. I think our committee has an interest in that. This subject is important enough to command a great deal of interest. We know the Senator from New Mexico has interested himself in it, and the statements he made 1, 2, and 3 years ago, as to the lack of information made available to the Atomic Energy Committee on this very important subject of fallout, have been vindicated.

Even a preliminary gathering of material on recent studies on radioactivity suggests that certain measures ought to be taken in the immediate future.

I understand that the Joint Atomic Energy Committee is planning to update this spring its studies on radioactive fallout and its effects on man. This will be extremely helpful, because the hear-

ings held by the joint committee in 1957 have given us the best compilation of information and opinion yet on the problem. After these hearings I am sure we will have a better understanding of the measures which should be taken to protect our health and the health of our progeny.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. HUMPHREY. I am happy to yield to my distinguished colleague from Texas.

Mr. YARBOROUGH. I wish to commend the distinguished senior Senator from Minnesota, as well as the distinguished Senator from New Mexico, for the work they have done and for the leadership they have shown in this field of study of the problems of radioactive fallout. We have read many scientific opinions with regard to this new grave danger to the human race—a danger in the unknown incidence of and increase of cancer in young people and children, caused by the increase of strontium 90 in the soil, from fallout from nuclear explosions. I do not think this body should stand idly by, because someone is "trigger-happy" with atomic tests, and fail to do something about the matter. The studies should continue, and information should be given to the people of the entire Nation. What this country needs is executive leadership in administration, leadership in negotiation, and leadership in a move to save the human race, not from sudden extermination by one bomb, but from the slow mass suicide of the race by the constant pollution of the air with materials which scientists say cause cancer in babies, children, and young people.

I again commend these distinguished Senators for the leadership they are showing, and I pledge my support to them in the fight to see that we have accurately determined, by scientific evidence, and have given fairly to the people, a scientific opinion on the extent of the danger. It is time to seek the full facts and the full truth about radioactive fallout, and that we act on that knowledge.

Mr. HUMPHREY. Mr. President, I should like to make some further observations and suggestions, but first a wish to thank the junior Senator from Texas. His remarks were generous, but at the same time they remind us of the gravity of the situation.

On the basis of the information now available, I should like to make the following observations and suggestions:

First. It is becoming apparent that the Atomic Energy Commission, with its important and primary interest in the field of atomic weapons and the production of atomic power, is not the best agency to conduct research on fallout and its effects on human health and heredity. This research should be lodged in another Government agency, one which has adequate funds to do its job and one which can be completely independent in reporting its findings. I suggest that this agency might properly be the U.S. Public Health Service with some assistance from the Food and Drug Administration and the Department of Agriculture. Of course, the valuable data and techniques and talent of the Atomic Energy Commission should not be ignored. The Commission's material and personnel should be called upon but the primary responsibility should rest with the Public Health Service.

I say this, Mr. President, because I am convinced the Atomic Energy Commission has been playing down the dangers of radioactive fallout as it pursued its weapons program. While we need the atomic weapons as a shield of defense, we also need to be considerate of the lives of human beings now on the face of this earth and those yet unborn.

It is very interesting to note that in recent months the Atomic Energy Commission has finally come to recognize that there is a serious problem. I notice that Dr. Libby is a much more concerned man outside the Commission than he is in the Commission. I notice that he is now making many more statements about radioactive fallout.

Second. The Public Health Service obviously does not have sufficient funds to do a thorough job. This year the Health, Education, and Welfare Department had $634,100 for research and control measures in radiation. That is slightly more than a half million dollars to protect the lives of the people of this country and of the world. The request of the Secretary of Health, Education, and Welfare, Arthur S. Flemming, for an increased appropriation of $1,439,100 plus $2 million for radiation studies under the National Institutes of Health should be granted, and a careful examination should be made to determine whether these sums are adequate.

Third. It has been suggested by a fellow citizen from Minnesota, Dr. Maurice B. Visscher, head of the department of physiology of the University of Minnesota Medical School, that the Atomic Energy Commission should contain a biological scientist as a Commissioner in addition to having a nuclear scientist. At the present time the Commission is composed of three businessmen, a lawyer, and a physical scientist. After June 30 there will be two vacancies, including the post now held by Dr. Libby, the physical scientist. These two vacancies present an opportunity for the appointment of a biological scientist as well as a physical scientist. This suggestion has real merit and ought to be given serious consideration by the Commission and the Joint Committee on Atomic Energy.

Fourth. Since the problem of radioactive fallout is a worldwide and not solely a national problem, it is imperative that the United Nations Scientific Committee on the Effects of Atomic Radiation be given complete records on the results of these recent studies. At the present time the Atomic Energy Commission and Department of State screen all material on this subject to decide what would be useful to the U.N. committee.

Mr. President, I am not satisfied with having political bodies of this Government screen materials relating to the lives of the people. I have seen enough of such screening through the so-called censorship apparatus. We are not given the information we need even for our national security, much less for our physical well-being. I rise to protest this kind of self-styled secrecy on the part of agencies of this Government when it involves atomic energy information.

It is important that all relevant material on the health effects of radiation be submitted regardless of whether it confirms or casts doubts on Government statements and conclusions regarding the extent of the danger.

I am of the opinion that a good deal of the material could be held back if it cast doubt on some of the earlier statements of Government officials. I am not willing to let statements of Government officials be considered more important than the lives of my children or the lives of children yet to be born. We find ourselves today with an overwhelming body of evidence coming forth day after day as to the problems involved in bomb testing and as to the dangers of radioactive fallout. There does not seem to be the kind of deep concern in the high councils of this Government that there should be.

Furthermore, it is becoming apparent that an agency like the World Health Organization ought to play a larger role in coordinating research on this problem in many parts of the world.

I talked to the World Health Organization officials about this matter, and I suggested that as one of the topics of advance research on the part of the World Health Organization, a program which is now being designed in the field of research, there should be a special category of research in the field of radioactivity and radiation medicine. I spoke with Dr. Candau about this subject while I was in Geneva.

To date the activities of the World Health Organization related to radiation have been concerned primarily with radiation from peaceful uses of atomic energy. It is clear that the Department of State ought to raise at the next session of the World Health Organization the question of broadening the frame of reference to include the effects of radioactive fallout. This is a phase which I will explore in my capacity as Chairman of the Senate Government Operations Subcommittee which is studying world health.

Fifth and finally, it is one thing to conduct more research so that we know more of the complete effects of radioactivity on man and his environment. It is another thing to try to see that this rising radioactivity does not rise further. This means that the efforts to halt nuclear weapons testing must continue to be pursued vigorously.

The Senator from New Mexico [Mr. ANDERSON] told this body today that the northern parts of the United States happen to fall within an area in which the radioactive fallout seems literally to gush down upon us, and fall all over us. Because of geography, we happen to be the victims of a larger dose of radioactive fallout than other parts of the world.

Mr. President, the five recommendations and suggestions above occur to me as a result of reviewing the memorandum and articles that I have submitted for the RECORD today. I hope that the administration will see fit to act on them. If not, further investigation by committees of the Congress become a vital necessity.

I assure my colleagues today, as I have done before, that I stand ready to do everything in my power, as chairman of two subcommittees, one on disarmament and the other on matters relating to world health, to study the danger of radioactive fallout in meticulous detail. This is something with which we cannot trifle.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. MORSE. I commend my colleague from Minnesota for the leadership he has shown in the Senate with regard to the nuclear testing program.

As he knows, I appeared before his subcommittee several weeks ago and expressed my great concern. I also expressed serious criticisms of officials at the Pentagon and the State Department.

Today I wish to add that in my judgment the President of the United States is not giving the people the leadership to which they are entitled with regard to the serious potential danger involved in the continuation of nuclear tests by my Government.

I have asked for a memorandum on this subject. We are apparently proceeding with the development of one missile which will contain within it material which, if it escapes into this hemisphere, will release a shocking amount of nuclear danger to mankind.

I repeat, as I have stated before the Senator's subcommittee, that it is time that the United States of America, as well as Russia, should be held to some moral standards on this issue. In my judgment, my country, as well as Russia, is guilty of immorality in regard to the matter of continuing nuclear testing. It is about time to lift the ban of secrecy in connection with this subject and tell the people of the country what their Government is doing in regard to the problem of threatening the health of mankind for generations to come by a continuation of nuclear testing. It is about time to call the issue on this administration, and to bring to an end at least our responsibility for a continuation of this immoral conduct.

Mr. HUMPHREY. Mr. President, I conclude by asking my colleagues to read most carefully the staff memorandum which was developed by the very competent staff of the Senate Subcommittee on Disarmament, based upon recent data on radioactive fallout. I shall not take the time of the Senate to read it, because it is a very complicated material, and it would undoubtedly not result in the kind of discussion which would be as helpful as I would wish.

Suffice it to say that from 1954 to 1958 the number of microcuries of strontium 90 deposited per square mile in the soil has doubled, and the cumulative effect is nothing to brush aside as being inconsequential. When my colleagues from the great food-producing areas of America look at what has been happening to some of the foodstuffs, particularly in terms of milk and dairy products, they will see what the problem amounts to, not only in terms of health but also in terms of economics.

EXHIBIT I

MEMORANDUM

U.S. SENATE,
COMMITTEE ON FOREIGN RELATIONS,
March 18, 1959.

To: Senator HUMPHREY.
From: The staff, Subcommittee on Disarmament.
Subject: Recent data on radioactive fallout.

In response to your request for an analysis of the recent data on radioactive fallout, the following summary analysis has been prepared:

There are several reasons for the recent increase in concern over fallout. First, the results of last year's intensive testing by the nuclear powers are beginning to be evident in measurements of many different elements. Second, in some cases monitoring and measuring systems are just getting into full sway so that for the first time we know more precisely how much radioactive material is being absorbed. Finally, since the talks at Geneva have not made rapid progress, many citizens fear that tests may be resumed with a further increase in fallout levels as a result. Even if nuclear tests are not resumed, however, fallout from past tests will continue as well as man-made radiation from other sources such as X-rays. Further study of the effects of fallout and radiation and methods to minimize health damage appears essential.

NEW DATA ON FALLOUT LEVELS IN RECENT WEEKS

In the past few weeks statistics have been published showing not insignificant levels of radioactive material in several elements essential to man's physical well-being including air, water, soil, and milk.

Most of the danger to health appears to stem from the single element, strontium 90, which is long lived and is absorbed like calcium into bones causing such diseases as bone cancer and leukemia.

Not yet apparent in statistics are the effects of this fallout on the genes and chromosomes which determine the characteristics of future generations. However, we do know, in the words of Warren Weaver, chairman of the Committee on Genetic Effects of Atomic Radiation of the Academy of Sciences before the Subcommittee on Disarmament on January 16, 1957: "Radiation produces mutations; mutations are bad; the amount of mutations is proportional to the total accumulated dose. There is no radiation dose which is too small to count from the point of view of genetics."

WHEAT

The substance which has most recently come to attention as being jeopardized by the rising levels of radioactive fallout is wheat. The State of Minnesota has been responsible for gathering important information on this problem. The Minnesota Governor's committee on atomic energy development problems stimulated research on this problem which might otherwise not have been undertaken. Dr. Maurice Visscher, head of the department of physiology of the Medical School of the University of Minnesota, reported that studies of environmental contamination by radioactive materials in the Plains States and the Northwest Central region were initiated by the Governor's committee. Preliminary results of these studies indicated unexpectedly high levels of radioactivity in certain areas, and it was decided that more precise measurements were needed. Subsequently the Atomic Energy Commission agreed to analyze certain materials for the committee. The results of the AEC's wheat analysis have only recently been made public, and it is from this data that the new concern arises.

Samples of wheat from the 1956, 1957, and 1958 crops from 10 different localities were obtained from the Institute of Agriculture of the University of Minnesota and analyzed for strontium 90 content. The average of the amounts of strontium 90 content were 107 micromicrocuries per gram of calcium in 1956, 152 in 1957, and 155 in 1958. In one sample in 1957 a level of 606 micromicrocuries per gram of calcium was found, but this was excluded from the average. However, it is this sample which the AEC considers above the maximum permissible limit. According to Dr. Visscher, "to interpret these figures, it must be pointed out that it is generally agreed that the maximum tolerable level for strontium 90 in food for a population is not more than 100 micromicrocuries per gram of calcium in the diet. Therefore, anyone who derived all of his calcium from whole wheat of the type analyzed would exceed the maximum tolerable limits. Fortunately, however, two factors reduce the hazard to people using wheat. The first is that a majority of the calcium and, therefore, the strontium 90, is in the bran and is milled out of the white flour. The second fortunate circumstance is that we ordinarily get only 5 to 10 percent of our calcium from cereal grain products in the average American diet. Thus, even if there is an excess of strontium 90 in one foodstuff, it need not be hazardous unless one lives on it as one's major food. However, here the problem is complicated by our ignorance. There are not available today adequate figures on the strontium 90 content of other foods."

It is ironical that the removal of the wheat germ to make white flour, long deplored by dieticians because the nutritive value of the wheat germ is taken out, decreases the danger of strontium 90 problems. One mother wrote that after working for years to get her family to eat wheat germ and whole wheat bread, she finally succeeded only to find that she may have increased the amount of strontium 90 going into the bones of her children.

Levels of strontium 90 in foods which furnish the rest of the calcium in our diet are not now known. Recent data covering a wide geographical area and the gamut of foodstuffs which compose the American diet is not available. The studies have either not been made, or have not been completed or published. Only milk has been studied to any significant extent.

MILK

Last month new figures were also released showing rising levels of strontium 90 in milk. The Public Health Service, which has what it calls a pilot study to measure radioactivity in milk, published the results of its analysis of samples from 10 different locations. With the maximum permissible level for strontium 90 in milk for lifetime exposure considered to be 80 micromicrocuries per liter, the December levels ranged as high as 15.6 mmc per liter in St. Louis, and this was a fluctuation downward from 20 in November. In other words, in November in St. Louis the level of strontium 90 in milk was more than a quarter of the maximum permissible limit. In Fargo, N. Dak., the level was 12.3; in Atlanta, Ga., it was 10.2. In 6 of these cities the program has been under way long enough to show 12-month averages, which are considered the most significant figure in interpreting public health effects because of monthly fluctuations. These showed a slow but steady rise everywhere, except Sacramento, Calif., when a slight decline in the yearly average from October to November was noted.

In powdered milk from Mandan, N. Dak., the level of strontium 90 was 26.74 micromicrocuries per gram of calcium in July 1958.

WATER

Radioactivity and strontium 90 levels in rainwater and running water in general appear to vary according to the amount of nuclear tests being conducted at the time. An analysis of strontium 90 in New York City tapwater, which has been measured since 1954, shows a constant fluctuation, with the highest level ever measured in June 1958 of .38 micromicrocuries of strontium 90 per liter. The latest measurement was for November 1958 at which time the level was down to 0.066 micromicrocuries per liter.

The more serious problem apparently concerns collections of water, for example in cisterns or stockponds, which do not have the advantage of certain natural forces to reduce the amount of radioactivity and strontium 90. In these collections the radioactive elements may be accumulated rather than absorbed or evaporated. As a result, in areas where people depend entirely on cistern water and hence could get a significant portion of the strontium they ingest from water, the Public Health Service is monitoring, or advising local authorities to monitor, strontium 90 levels. According to the Public Health Service, it would be possible to take measures to remove the strontium if the levels indicated this was necessary.

MISCELLANEOUS FOODS

In January 1957 the Food and Drug Administration began analyzing various samples of food predating 1945 and comparing it with similar samples of post-1945 foods. The conclusion of this study, published on October 15, 1958, but based largely on food produced prior to the intensive nuclear testing of last year, was that "compared to food samples produced prior to 1945 this survey shows that the great majority of post-1945 samples do not carry significant burdens of radioactivity. Notable exceptions are certain sea foods, dairy products, and tea."

The largest increase noted, according to this study, was in tea. On this item the study said "It could * * * be possible that many of the tea samples examined contain strontium 90 in excess of the present tolerance of 80 micromicrocuries per kilogram, but analyses of strong tea brews revealed that only about 17 percent of the radioactivity was extracted. It can be concluded therefore that the beverage as commonly consumed would not contain overtolerance amounts of strontium 90."

However, this analysis does not appear to be completely up to date.

SOIL

Still another report just issued by the Atomic Energy Commission indicates that strontium 90 is accumulating in the soil of the United States and other countries at an increasingly rapid rate. New York City is the only area which has been measured for a significant length of time. It has been measured since 1954. In 12 other cities it has been measured since the end of 1956. The New York City measurements show in 1954, 7.2 microcuries of strontium 90 were deposited per square mile; 1955, 9.2 microcuries of strontium 90 were deposited per square mile; in 1956, 11.3 microcuries of strontium 90 were deposited per square mile; in 1957, 11.6 microcuries of strontium 90 were deposited per square mile. In first 11 months of 1958, 14.04 microcuries of strontium 90 were deposited per square mile.

Thus the cumulative number of microcuries per square mile has steadily increased to 53.3 in November 1958.

PHILOSOPHY TOWARD RISKS OF ATOMIC AGE

In summary, all the latest results of studies undertaken on the amount of radioactive fallout and the level of radioactive strontium show an upward movement, upward closer and closer to what are currently considered maximum permissible levels. It is important to note the words "currently considered," for as our knowledge of the effect of these levels on our health and heredity increases, these levels may be changed. And the change will probably be downward. Dr. Warren Weaver now sounds prophetic in what he told the Subcommittee on Disarmament about the strontium 90 problem 2 years ago, before this country had undertaken much study of it. He said:

"The limit which one puts down as being tolerable and the concentration which one finds, unfortunately, are moving toward each other. The limit which one accepts as tolerable tends to decrease, and the concentration which we actually find existing, tends to increase."

The gap is narrowing, and when this gap is closed we may be faced, not with a small increase in certain diseases or a few days shortening of our life span which will go unnoticed, which is the current risk, but with health hazards which are significant and noticeable by any standards.

We have been told that we must adopt a new philosophy for the atomic age. For example, Dr. Lauriston S. Taylor, chief of the Atomic and Radiation Division of the National Bureau of Standards, recently said that the establishment of permissible levels of radiation exposure is not basically a scientific problem. He added:

"It is more a matter of philosophy, or morality, and of sheer wisdom. The problem centers about a philosophy to which mankind is well accustomed; it may be called a philosophy of risk."

He stated that there were risks on "virtually any mode of transportation from boat or bicycle to the airplane, but without these, life today would be very different indeed."

However, it is only sensible to make every effort to reduce the risk as much as possible. It would be as foolhardy to ignore blithely potential danger signals in the nuclear age as it would be to ignore oncoming traffic while driving a car. We should reduce the risks of the atomic age just as we work to reduce the hazards of driving.

THE MEDICAL SCHOOL,
Minneapolis, February 9, 1959.

Senator HUBERT HUMPHREY,
Senator EUGENE MCCARTHY,
Senate Office Building,
Washington, D.C.

DEAR HUBERT AND GENE: I have a new job for one of you. I don't know whether either of you is willing to take it on, but I know it needs doing. I am enclosing copies of a statement I prepared for the Governor's committee on atomic energy development problems. From it you will see that we have been greatly misled by the AEC as to the absolute safety of strontium 90 levels in the country. The really shocking thing to me is that the AEC itself has no other significant number of analyses of wheat. This I learned by telephone from Dr. Ira B. Whitney in the New York office of the AEC last Tuesday.

The fact is that the AEC has not done its practical job in the biological and medical area very well. It is not that Congress has not appropriated enough money to do it. The trouble may be that the AEC is run by Commissioners who are primarily in the weapons business and don't really know enough about the biological and medical sides of things to have informed opinions as to policy in those areas.

There is a job for some congressional committee investigation here. The Congress had every right to expect that its appropriations to the AEC would be used to investigate the strontium 90 hazard in soils, plants, animals, and man, and that by now, 10 years after the secret Project Sunshine was started, we would have all the basic facts necessary to meet the hazard that exists today. Actually, we know almost nothing of practical value as to protection on the biological side. Hundreds of millions of dollars, exactly how much I don't know, have been spent on biological research under AEC auspices, but it has gone mainly into things almost totally unrelated to the practical problems. I would not object at all to the fact that many millions of Federal money have gone into basic studies of genetics, metabolism, etc. I only object to the fact that the AEC has not done the job the public thought it was doing and needed to have done.

What I am suggesting is an investigation looking toward congressional action to induce the AEC to do a better job in acquiring the simple facts about radioactivity levels in soil, water, plants, animals, animal products such as milk and eggs, and in man. They should also make greater efforts to get information about the factors that determine the amounts of strontium 90, uranium, plutonium, and other important elements, that are taken up by plants and animals, including man.

The AEC has been so concerned about reassuring the public that there is no harm in what it has been doing in the bomb-testing area that it has failed to devote enough attention to finding out the facts even as to what the levels of radioactivity in foods are.

I should tell you that there are some very competent people now on the AEC Advisory Group for biology and medicine. Harland Wood, Bentley Glass, and James Horsfall are all very sound. They are, I believe, recent appointees. I do not know whether this Advisory Group has actually had much influence, however.

Another thing that should be looked into is why the Plains States and our region should be made to take the brunt of so much fallout burden if we are to continue bomb testing. I think all of the Senators and Congressmen from those areas might get together and get stoppage of further contamination of this region. Some other region might take the brunt if testing must continue. It would be only fair to spread the load.

So much for the job I hope one of you will undertake.

There is another matter that I have been thinking about for some time. You may be able to use the idea some time. I really cannot see that the use of our scarce scientific and technical manpower on bomb development is compatible with achieving our greater need which is to get better ICBM's. Every million dollars we spend on bomb development takes hundreds of men from the pool otherwise available to work at missile development. There are only so many scientists in the country and if you appropriate money to employ them in one area they are not available in another.

Isn't this perhaps our most compelling military reason for stopping the bomb development and testing business? We already have enough bombs, and cleaner or smaller ones are not going to make us less vulnerable to being wiped out by the Russians. I would feel more secure if we had some working ICBM's with which to stand off Russian threats in the next few years. We are not getting them as fast as we could if we were to quit wasting manpower on bomb development and let it work on missiles.

Sincerely yours,

MAURICE B. VISSCHER.

UNIVERSITY OF MINNESOTA,
THE MEDICAL SCHOOL,
MINNEAPOLIS, *February 28, 1959.*

Senator HUBERT HUMPHREY,
Senate Office Building
Washington, D.C.

DEAR SENATOR HUMPHREY: The strontium 90 levels in wheat samples analyzed by the

AEC for the Minnesota Governor's committee on atomic energy problems have created considerable public discussion and some concern. The findings of increasing levels of such radioactivity from averages of 105 in 1956 to 155 strontium units per gram of calcium in 1958 wheat demonstrates a rising level which might become serious.

The AEC has cooperated with the Minnesota committee in these studies, and this cooperation is much appreciated. I find no fault with the general interpretation of the AEC findings as explained by Dr. Willard Libby on February 27. In fact, these interpretations are in large part identical with those I gave in releasing the data in a conference with Gov. Orville L. Freeman on February 6, 1959. I pointed out that the major source of bone mineral for man in the U.S. is milk, and that cereal grains are ordinarily minor sources for the human. It should be noted that for economic animals a quite different situation prevails.

However, I do find several faults in the past, and so far as I know, the present, AEC program. I see no valid excuse for the failure of the AEC to have strontium 90 data on all of the major foodstuffs in the American dietary, on a much more comprehensive scale than has previously been undertaken. Such data should be made fully available to the public.

Second, I am distressed by the fact that estimates as to the rate of rise in strontium 90 contamination in foodstuffs in the United States have been proven by experience to be in error. The rate of rise was considerably underestimated.

Third, I am disappointed that the AEC has not devoted a larger fraction of its research attention to methods of ameliorating potential strontium 90 hazards. Much more attention should be paid to devising methods of decreasing the strontium 90 uptake by plants, and diminishing the proportion of that ingested by man and economic animals which is absorbed into the body itself and stored in the bones.

I congratulate the AEC for devoting attention to numerous other biological problems. Some of the best basic biological research today is being supported by the AEC, but it would surely be an evidence of public irresponsibility if the AEC did not devote energy equal to that which it puts into its offensive weapons program upon research aimed at protection of the American public against the radioactivity which will be present if any of the devices which it or its Russian counterpart are producing should ever be used, or if bomb testing continues in the places and at the pace that has been in practice over the last six years.

Sincerely yours,

MAURICE B. VISSCHER.

UNIVERSITY OF MINNESOTA.
THE MEDICAL SCHOOL,
Minneapolis, March 4, 1959.

Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HUMPHREY: I believe that the composition of the Atomic Energy Commission itself is a grave defect in its ability to operate in the way that the Congress and the American people believed it would operate. It is to be noted that there is no biological scientist among the members of the Commission. This oversight is hard to understand since the hazards of use of nuclear energy are primarily biological. In peace as in war, the blast, the burn, the immediate and the delayed radiation damages to living things are of greatest importance.

It is not enough to have an Advisory Committee on Biology and Medicine, although it is better than nothing. Life would seem to be important enough to the country so that the Commission itself might have at least one, and preferably more, persons appointed to it by the President who have expert scientific knowledge about biological phenomena. The U.S. Senate has a responsibility in this matter because it must confirm any Presidential appointment. I respectfully suggest that no new appointments be confirmed until at least one biological scientist is included on the Commission.

Sincerely yours,

MAURICE B. VISSCHER.

STATEMENT BY MAURICE B. VISSCHER, FEBRUARY 6, 1959

The Governor's committee on atomic energy development problems has initiated studies of environmental contamination by radioactive materials in this general region. In one study in the spring of 1958, soybean plants from various areas were studied for their gross radioactivity levels, and in another, numerous samples of wheat from North and South Dakota and Minnesota were studied. The results showed unexpectedly high levels of radioactivity from various areas, and the range of values was very large. Because these preliminary results indicated that the Plains States and the Northwest central region in particular might have a problem in connection with environmental radioactive contamination of its food supplies, either now or in the future, it was decided to have some more precise measurements made. Since strontium 90 was considered to be in all probability the most serious hazard, it was studied first. The State department of health undertook early last summer to assay strontium 90 in milk, and last spring, the U.S. Atomic Energy Commission agreed to analyze certain other materials for the committee.

Samples of wheat from the 1956, 1957, and 1958 crops from several localities, obtained from the institute of agriculture of the University of Minnesota, were analyzed by the AEC and the results have just been received. The findings indicate that some further action is necessary in connection with atomic energy problems, especially in regard to the establishment of a permanent State commission and in connection with appropriation of funds for its work. There are probably serious economic as well as health implications to the entire North Central and Plains region including Minnesota in the data we are presenting.

The AEC findings on strontium 90 content of wheat in this region are as follows:

Strontium 90 content micromicrocuries per gram of calcium

Location	1956 crop	1957 crop	1958 crop
1	163	150	124
2	169	146	191
3	88	187	184
4	82	200	(1)
5	82	(1)	111
6	74	[2] 606	213
7	94	105	129
8	(1)	124	120
9	(1)	(1)	158
10	(1)	(1)	169
Averages	107	152	155

[1] No sample.
[2] Exclude from averages.

The locations were chosen to obtain as great a variety of soil types as possible. These results are the only ones available in the United States today on wheat from a number of locations over a period of 3 years.

To interpret these figures, it must be pointed out that it is generally agreed that the maximum tolerable level for strontium 90 in food for a population is not more than 100 micromicrocuries per gram of calcium in the diet. Therefore, anyone who derived all of his calcium from whole wheat of the type analyzed would exceed the maximum tolerable limits. Fortunately, however, two factors reduce the hazard to people using wheat. The first is that a majority of the calcium and, therefore, the strontium 90, is in the bran and is milled out of white flour. The second fortunate circumstance is that we ordinarily get only 5–10 percent of our calcium from cereal grain products in the average American diet. Thus, even if there is an excess of strontium 90 in one foodstuff, it need not be hazardous unless one lives on it as one's major food. However, here the problem is complicated by our ignorance. There are not available today adequate figures on the strontium 90 content of other foods. The U.S. Public Health Service has released figures on strontium 90 in milk from the areas of St. Louis, Mo., and Fargo, N. Dak., which show that in the fall of 1958 the values there averaged 14 and 17 micromicrocuries per gram of calcium in the two cities. The values in some other parts of the United States are as low as 2. An "educated guess" as to Minnesota levels is that they are not less than 8 micromicrocuries per gram of calcium. Milk provides more than three-quarters of the calcium in the American dietary, consequently, the amount of strontium 90 contaminating it is of greatest practical importance. However, if plant foods contain as much as 600 micromicrocuries per gram of calcium, they could be very important in raising the average level to the so-called maximum tolerable limit even if they supplied a minor fraction of the total intake.

One further point should be mentioned. It is usually agreed that strontium 90 is more hazardous for children than for adults. No one knows positively what is the minimum amount of strontium 90 that will do damage to growing children. Some recent studies indicate that it may be much less than 100 micromicrocuries per gram of calcium. However, only a very small fraction of a population will sustain any obvious injury from small doses.

Bone cancer and leukmia are believed to be the main diseases which may result in an individual from eating small amounts of strontium 90. These are fortunately relatively uncommon diseases. According to the State board of health, there are about 33 deaths per year in Minnesota from the first and 300 due to the second, out of total deaths of somewhat under 30,000. Increases in the above rates 10 or 20 years from now might be expected to occur as a result of increased radioactivity.

This report is being made because it seems obvious that the State of Minnesota, in common with all its neighboring States, has an interest in doing two things. First, it must learn more about what its strontium 90 and other radioactive contamination problems are. Milk, meat, fish, poultry products, and vegetables require study in all areas. Second, it must be prepared to apply corrective measures since there may be some localities where all the foodstuffs, including milk, are heavily contaminated, and because if bomb testing continues throughout the world, the situation will undoubtedly become progressively worse. It seems essential to be able to protect children now against food containing as much as 600 micromicrocuries per gram of calcium. To do this one must have more analytical information. At least as important as this is to initiate researches on methods of lowering the strontium 90 content of the plants themselves and of diminishing the amount of strontium 90 retained in the human body after food containing it is eaten. Scientists already have some clues as to how these objectives might be attained.

It is the responsibility of the State legislature to decide whether to make a serious effort to minimize these health and economic hazards. It can do so by establishing the commission that Governor Freeman is requesting and by providing it with funds to operate.

It is appropriate to note that Governor Freeman's foresight in setting up a committee to study and report upon these problems is responsible for the fact that Minnesota is the first State in the Union to obtain information of the type reported at this time.

There will be some people who will say that these findings should have been kept secret, so as not to disturb people. Their false logic would be that what people don't know, doesn't hurt them. In any dictatorial society that is the rule that would be followed. It is our philosophy that in a democratic society people not only have a right to know, but must know the facts if they are to act intelligently. The role of the scientist is to provide a sober interpretation of facts, to allow people to take precautionary and preventive measures before it is too late. Fortunately, we have a Governor whose policy it is to give the people the facts so that they may act intelligently through their legislature. The present situation is not one to become panicky about. It is, however, one that requires increased information to avoid a panic situation in the future.

STATEMENT ON STRONTIUM 90 IN MINNESOTA WHEAT MADE BEFORE THE JOINT COMMITTEE ON ATOMIC ENERGY DURING THE AUTHORIZATION HEARINGS, FEBRUARY 27, 1959, BY WILLARD F. LIBBY, MEMBER U.S. ATOMIC ENERGY COMMISSION

The strontium 90 content of wheat is a matter of real concern to us. There is nothing good about radioactive fallout, and it has been our constant effort to reduce it to the minimum in keeping with necessary weapons development programs. We welcome the interest of everyone willing to help us study it and have a system of publication and dissemination of the information which we hope is good. A particularly comprehensive document was issued recently. It is a nearly complete summary of U.S. data up till about last summer and is available through the Department of Commerce Office of Technical Services. It is the Health and Safety Laboratory Report, No. 42, entitled "Environmental Contamination From Weapons Tests."

The high levels found sometimes in wheat and rice and other grasses and vegetables apparently are due to a particular circumstance. These plants apparently pick up more fallout from the rain falling directly on the leaves than from the roots and the soil. As a consequence, their level depends more on the rate of fallout than it does on the total accumulated fallout in the soil, though I hasten to add that there definitely is soil pickup. The soil pickup, however, does not lead to the large fluctuations with seasons of the year that are found in these grasses and lies at lower values than the peaks which direct leaf pickup can attain during a period of intense nuclear weapons testing when the rate of fallout can be particularly high for a short time. In other words, a high value may be followed by lower values if the rate of fallout is lower during the later growing seasons due to the timing of nuclear tests.

We are very concerned, however, by the amount of strontium 90 found in these products and by the fact that occasionally samples are found which exceed the levels which are generally acceptable for a steady diet. Actually, of course, the general average food level is the important matter and we can say that this level is well below the maximum permissible level as given by the National Committee on Radiation Protection.

To summarize, then, the high values in wheat probably are due largely to surface pickups from particular rains and are not expected to show a steady rise, except for the relatively smaller soil pickups, unless rates of testing exceeding the very heavy ones of last year occur again, and I assure you that it is our policy to do everything to keep radioactive fallout outside the test areas to the very minimum.

It will be 2 years in June since your committee held its important hearings on radioactive fallout and we would be pleased to discuss the situation as it exists at present with you at any time you wish.

[Excerpts from Health and Safety Laboratory, Strontium Program, Quarterly Summary Report, Feb. 24, 1959, Published by Atomic Energy Commission]

A SURVEY OF RADIOACTIVE RESIDUES IN FOODS BEFORE AND AFTER 1945; EVIDENCE OF POSSIBLE FALLOUT CONTAMINATION

(By Edwin P. Laug and Wendell C. Wallace, Food and Drug Administration, U.S. Department of Health, Education, and Welfare)

This report covers results of a survey conducted over the past 2 years to determine to what degree foods may have become contaminated with radioactive fallout. It has been assumed that no significant manmade radioactive contamination could have occurred prior to 1945, the year the first experimental and military nuclear devices were exploded. Foods produced before and after this critical date have therefore been examined for total radioactive content adjusted for the presence of potassium 40, a widely distributed naturally occurring radioactive isotope. It is possible that other naturally occurring radioactive substances may contribute to the total. This contribution is extremely small, and while it may vary from food to food there is no reason to expect it to vary with time. Consequently if we consider the radioactive content of all pre-1945 foods as a base line, any increase over this in food produced since 1945 can be interpreted as manmade radioactive contamination. This contamination is presently contributed mainly by fallout from weapons testing, but it can be expected also to reflect the presence of nuclear power plants and other applications.

In January 1957, in response to an appeal by the Food and Drug Administration, nearly a thousand samples of food antedating 1945 were submitted. These foods came from private homes and the food industry; some even from the caches of the Shackleton and Byrd Antarctica expeditions dating back to 1906. In addition, an equal number of post-1945 samples were collected mostly from retail outlets. The program is now current, with certain items under more intensive surveillance than others.

The following categories were examined for total radioactivity: vegetables, fruits, fruit juices, sea foods, dairy products, bread, meat products, wheat, sugars, jams and jellies, cocoa and cocoa beans, tea. Nearly half of the samples analyzed were fruits and vegetables.

RESULTS

I. Vegetables: Analyses of the following number of samples of different vegetables, about half of each of which were produced before 1945, revealed that the post-1945 samples showed no significant increase in total radioactivity: potatoes, 29; corn, 90; beans, 132; peas, 92; beets and turnips, 40; carrots, 30; spinach, 27, and miscellaneous 90.

II. Fruits: Analyses of the following number of samples of different fruits, about half of each of which were produced before 1945, revealed that the post-1945 samples showed no significant increase in total radioactivity: pears, 48; cherries, 61; peaches, 89; apricots, 28; plums, 61; tomatoes and tomato products, 134; berries, 74; fruit juices, 78; and miscellaneous, 57.

III. Seafood: Fifty-one samples of miscellaneous fish varieties and 32 samples of oysters and clams, half of each of which were canned after 1945, exhibited a trend toward higher radioactivity. However, individual shellfish values showed a significent rate of increase when plotted by years since 1944. Other types of seafood such as shrimp, lobster and crabs showed no trend whatsoever.

IV. A number of unrelated items were also examined for total radioactivity. Analyses of the following numbers of samples revealed no increase in total radioactivity: meat products, 26; wheat, 47; sugar and jams, 38. In the case of bread where there were unfortunately no pre-1945 samples available there was no evidence of total radioactivity that could not be accounted for by the potassium content. On the other hand in cocoa and cocoa beans there was a radioactive content greater than could be accounted for by potassium. Without comparison with pre-1945 samples it could of course not be determined whether this excess radioactivity had been caused by fallout contamination.

V. In consonance with the findings of other investigators, the analyses of dairy products consisting chiefly of fresh fluid milk, evaporated milk, milk powder and cheese, show a statistically significant increase in total radioactivity in those products produced since 1945.

VI. The largest increase noted was in tea. While the examination of 36 pre-1945 samples showed no radioactivity on the average in excess of that accountable by potassium, 78 post-1945 samples chiefly from 1956 and 1957 harvests showed radioactivity that averaged about 30 times greater, with 6 individual samples ranging as high as 109 to 135 times greater. In terms of micromicrocuries per kilogram of tea leaves the average value for the 78 samples was 13,500. While no specific isotopes have been identified we may assume that at least 1 percent of this activity could potentially be strontium 90. It could therefore be possible that many of the tea samples examined contain strontium 90 in excess of the present tolerance of 80 micromicrocuries per kilogram, but analyses of strong tea brews revealed that only about 17 percent of the radioactivity was extracted. It can be concluded therefore that the beverage as commonly consumed would not contain over-tolerance amounts of strontium 90.

CONCLUSION

Compared to food samples produced prior to 1945 this survey shows that the great majority of post-1945 samples do not carry significant burdens of radioactivity. Notable exceptions are certain seafoods, dairy products and tea.

EXCERPT FROM LETTER FROM OFFICIAL IN PUBLIC HEALTH SERVICE CONCERNING STRONTIUM 90 LEVELS IN CISTERN WATER

Our interest in total activity and strontium 90 levels in cistern water supplies stems from the fact that rainfall is the major contributor of fallout activity to the environment. As you know, cistern waters are generally collected directly from the roofs into tanks for household use. The levels of activity encountered directly reflect the levels of activity in rainfall inasmuch as there has been little or no opportunity for natural agents to reduce this activity.

When rain falls on the soil or grass some of the material in suspension will be filtered out as the raindrops percolate through the vegetation cover and the soil below. In addition, some of the dissolved material will be exchanged on the soil particles or absorbed by the vegetation. As a result of this, the amounts of activity reaching our surface streams along with normal runoff may be much lower than the levels that we encounter in cistern water supplies.

Another parallel to cistern water supplies would be waters collected from surface stock

ponds or small lakes which have no outlet. Here the activity falling with the rainfall will be collected and retained in this confined basin. There will be some loss of activity due to uptake on biological life normally encountered in such stock ponds or lakes and there will be some loss due to absorption on bottom muds and to deposition of activity associated with particular matter. However, particularly in the case of animals, if they step into the stock pond to drink they can stir up some of this deposited activity thus consuming higher levels of activity than that contained in the water alone.

During periods of low rainfall, the quantities of water in these stock ponds, and also in cisterns, will be reduced and there will be a very significant addition to the total volume with the next large rainfall. Thus there is a constant change in the levels of activity related to the water usage and the activity contained in subsequent rainfalls.

One other point that may be of interest is that activity levels in streams are generally transient; in other words, a given quantity of water remains in a given location for a relatively short period of time. This is of considerable significance because if high levels of activity are encountered, one can suggest that for a day or two no water be taken from this source thus providing time for this activity to go on to some downstream location. Obviously this cannot be done in the case of a stock pond or a cistern unless one goes to some other source, as for example, a well water supply.

We have determined strontium 90 in some cistern water supplies in the Cincinnati area and find strontium 90 levels ranging from approximately 0.3 to 7.5 $\mu\mu$c/l. These levels may be compared with the currently accepted maximum permissible concentration of strontium 90 in water of 80 $\mu\mu$c/l. It must be remembered, however, that where one is consuming water containing this amount of strontium 90, we must also add to his daily intake the strontium 90 coming from all other sources of the environment including air, milk, and foods. As an example, considering the situation in Cincinnati alone, and assuming that a person is consuming cistern water having a strontium 90 content of 7.5 $\mu\mu$c/l, milk with a strontium 90 concentration of 8.5 $\mu\mu$c/l, and food materials containing a concentration of strontium 90 ranging from approximately 0.2 to 12 $\mu\mu$c/kg, the actual intake of strontium 90 per day in micromicrocuries would be: water, 16.5; milk, 8.5; and foods, 7. This would indicate that this person is getting about half of his daily strontium 90 intake through the cistern water supply. If we accept the fact that the daily intake of strontium 90, not to exceed the body burden stipulated by the National Committee on Radiation Protection, amounts to 176 $\mu\mu$c/day (arrived at by multiplying the 80 $\mu\mu$c/l strontium 90 maximum permissible concentration value in water by the daily intake of 2.2 liters of water), it can be seen that the total strontium intake from these three mediums amounts to 32 $\mu\mu$c/day, or approximately 18 percent of the permissible intake.

Cistern water supplies have one additional advantage and that is that comparatively simple devices (for example, ion exchange resins, which are used on many household water supplies at this time for softening water) are quite effective for removing the radioactive material that may be dissolved in water. Our purpose, therefore, in following cistern water supplies is to determine when it would be reasonable to suggest that such supplementary devices be installed on these supplies to reduce the levels of radioactivity in such waters and the exposure of individuals from such supplies.

If we can be of any further assistance to you in providing additional information, please do not hesitate to get in touch with us.

Very sincerely yours,

CONRAD P. STRAUB,
Chief, Radiological Health, Research Activities Division of Radiological Health.

[From the Washington Post and Times Herald, Jan. 21, 1959]

RADIATION AND CANCER: SOME ATTACK PROPOSAL FOR STUDY

(By Edward Gamarekian)

A number of scientists are beginning to attack a recent proposal for a 20-year study of the relationship between natural background radiation and the incidence of leukemia and other cancers in Denver and San Francisco.

Many of them are afraid it may be used to show that radiation from the fallout produced by atomic weapon tests is not harmful and may, in fact, be beneficial. This argument is already being used by some proponents of continued atomic testings.

The study, to cost $15 to $30 million, was proposed a few weeks ago by the Committee on Pathologic Effects of Atomic Radiation, a unit of the National Academy of Science and the National Research Council—two top-level scientific bodies.

It will now be discussed at a meeting set up by the Atomic Energy Commission at the Argonne National Laboratory early next month.

Shields Warren, chairman of the committee which proposed it, told reporters that detailed recommendations would be made within a year to the Public Health Service, the Atomic Energy Commission and the Department of Defense. Either of these organizations might sponsor the project, he stated, although the Public Health Service would be the ideal agency for supervising it.

Warren, a professor of pathology at Harvard University, said such a study would provide valuable data on the effects of low-level radiation on man. The two cities have different background radiation levels, he pointed out, and should show if these levels produce cancer.

Both sides in the developing controversy admit that a study of the effects of background radiation will indicate the effects of the fallout from atomic tests because of the following:

The background level in Denver is reported to be twice that in San Francisco. It is higher in Denver because that city, at an altitude of 1 mile, is not as well protected from cosmic rays. The difference is greater than the external effect now being produced by the radioactive fallout, but is comparable to the internal effect being produced by the strontium 90 in the fallout.

This radioactive substance finds it way into milk and ends up in the bones of people, particularly growing children.

Opponents of the proposed study point out that statistics already indicate how the study may turn out. These figures show that the incidence of leukemia (blood cancer) and bone cancer was lower in Denver than in San Francisco in 1947–48, showing that a little radiation is not harmful and may, indeed, be healthful.

But the argument is phony, they contend, because a comparison of these cities with eight other metropolitan areas covered in the 1947–48 study, shows no such correlation. A comparison of Denver with Pittsburgh, for example, indicates the opposite. It makes background radiation appear harmful.

The unknowns and variables of cancer formation are so great they obscure the small effects produced by differences in altitudes, many scientists contend.

Who is pushing the proposed study? Warren and AEC Commissioner William F. Libby. Both are strongly and outspokenly opposed to the stopping of atomic weapon tests. Both feel that new and improved atomic weapons are needed to prevent an all-out nuclear war that would kill millions.

Warren's announcement came as a surprise to several members of his committee who said it was premature. The idea had been discussed, they stated, but needed further examination by experts in such fields as genetics and epidemiology before it could be put forward as a proposal. In fact, a meeting was set for the first of next month to consider this idea and similar ones.

Why the public announcement of the proposed study? Several scientists in the AEC's Division of Medicine and Biology said it was made to achieve a fait accompli since opposition to the study was building up. They also guessed it was done to win outside support from people who, at first glance, might consider such a study valuable.

One scientist in a high-level position, clearly disturbed, stated: "I am going to fight this thing as much as I know how."

The proposed study, almost everyone agrees, is becoming a hot political issue within the AEC.

AEC Chief John A. McCone said he knew nothing about it. It is undoubtedly impossible for one individual to keep tabs on everything going on in the $2.4 billion-a-year operation.

Several scientists described Libby as one of the chief advocates of the study. Libby, the only one of the five Commissioners with a scientific background, stated last week that he was in favor of it. It might be "difficult" and "perhaps impossible," he said, but "worth trying."

The AEC Commissioner himself has used the San Francisco-Denver figures several times. He gave them in a speech delivered at the University of New Hampshire on April 11, 1957, which he put into the record at a congressional hearing on radioactive fallout a few months later. After citing the numbers he said, "Our data may not be too significant (since the number of cases is small) but these figures do point to a definite tangible evidence of a margin of safety." The figures were later published in a book by Edward Teller, another proponent of continued nuclear testing.

Libby's figures came from the 1947–48 survey of 10 metropolitan areas. When asked why he didn't mention the cancer incidence in other cities, the AEC Commissioner said he did not know they had been covered in the survey.

The wheels were set in motion for the proposed study during the Atoms for Peace Conference in Geneva last fall when Libby asked Warren to look into the idea.

A-FALLOUT PILING UP IN U.S. SOIL—GROWING DEPOSITS OF STRONTIUM 90 REPORTED BY AEC

(By Edward Gamarekian)

A report just issued by the Atomic Energy Commission indicates that the strontium 90 from atomic weapons tests is accumulating in the soil of the United States and other countries at an increasingly rapid rate.

New York City is the only area in which the fallout has been measured over a long enough period to obtain a picture of the buildup, but short-term data from 12 other U.S. cities show a similar pattern.

The strontium 90 deposited in the New York City area since measurements began in early 1954 was 53,310 microcuries per square mile. The rate of fallout in 1958 was double that in 1954.

Richmond, Calif., received a larger short-term dose than any other U.S. city. Two samples collected during the 2-week period beginning last March 20 showed a fallout of 3,000 and 4,470 microcuries per square mile.

The fallout during the Los Angeles scare last October 30 was not given in the AEC report. The latest data for Los Angeles are the August figures.

* * * * *

The maximum permissible concentration of strontium 90 in milk (80 micromicrocuries per liter) is the concentration which will deposit somewhere in the order of 0.1 microcurie in the human skeleton over the long term.

Most of the strontium 90 in milk comes from the fallout deposited directly on the fodder eaten by cows. Studies on the strontium uptake from the soil are now under way in many parts of the world.

Practically all of the strontium 90 in the fallout is retained by the top 6-inch layer of soil. More than half of it is caught in the top inch. As a result, the quantity of this radioactive element in the soil is steadily accumulating. Some scientists feel it is approaching an alarming level even though its effects on human beings cannot be accurately evaluated as yet.

The Atomic Energy Commission did not begin measuring the fallout of strontium 90 in cities other than New York until the end of 1956.

AEC measurements in 15 other countries indicated that the fallout has been higher in the United States than elsewhere. Retiring AEC Commissioner Willard F. Libby pointed this out in a speech last year.

The fallout was even higher in this country than in Japan, which was between the United States and Russian testing grounds.

Measurements in 13 U.S. cities during the past 2 years show that the fallout has been the highest over Westwood, N.J. During the 12-month period ending in October of 1958, 15,030 microcuries of strontium 90 per square mile were deposited on that city.

The other cities in the network which received large amounts of fallout during 1958 were:

New York City: 14,600 for the 12 months ending last November.

Coral Gables, Fla.: 13,400 for the 12 months ending September 6.

Tulsa, Okla.: 12,540 for the first 8 months of 1958.

The fallout in the District of Columbia area is not being measured, but data from the cities around it indicate it is of the same order of magnitude as the figures already cited.

Measurements made in New York during the past five years show the increasing rate of fallout. During 1954, 7,200 microcuries of strontium 90 were deposited per square mile. During 1955, it increased to 9,200; in 1956, it was 11,300, and in 1957, 11,600. The first 11 months of 1958 already show a fallout of 14,040 units.

In Japan, the strontium 90 fallout was 10,860 in Nagasaki and 10,340 in Hiroshima during the 12-month period ending last August.

Figures for Austria were incomplete, but they showed monthly levels as high as 3,510 units last summer.

The fallout in Formosa and Southeast Asia was much lower.

The fallout in the countries below the equator was much lower than that in the countries above because most of the tests have been in the northern hemisphere and wind movements are predominantly easterly and westerly.

AEC officials said yesterday that there was no way of distinguishing the fallout from Russian and U.S. tests.

During the Russian series which apparently began August 22, 1957, and continued to the end of the year, five explosions were detected. During the spring series from February 23 to March 22, 1958, at least nine test shots were detected. The Russians said they would conduct no further tests unless the U.S. did. After the U.S. tests last summer, the Soviet Union exploded at least 16 more bombs. This series was held between September 30 and November 3.

The United States announced 16 test explosions of bombs over 20,000 tons in size (TNT equivalent) in the Pacific between March and August of last year, but the Russians reported they detected at least 32. This figure appeared to be more accurate when U.S. military leaders charged the Russians with spying.

The United States announced 19 tests of bombs under 20,000 tons during September and October at the Nevada test site.

STRONTIUM 90 IN DIET: FIGURES LACKING ON TOTAL INTAKE IN UNITED STATES

(By Edward Gamarekian)

Despite the steady rise in radioactivity in food stuffs, no one seems to be keeping tabs on the amount of strontium 90 that is finding its way into the total diet these days.

In some parts of the country, the strontium 90 in milk has crept up to 20 to 40 percent of the maximum permissible concentration recommended by the National Committee on Radiation Protection, but the Atomic Energy Commission and the Public Health Service continue to assure the public that it is still not dangerous.

They point to the fact that the levels are well below the permissible limit. This limit, however, is based on the premise that no strontium 90 will be taken into the body from other sources.

Last week, reports on the strontium 90 in Minnesota wheat showed that the levels had climbed to the maximum permissible concentration, going 50 percent higher in one batch. The public was again reassured that all was well.

AEC Commissioner Willard F. Libby told the worried Congressional Joint Committee on Atomic Energy that the increase was due to direct fallout on the wheat and not to pickup from the soil, in which strontium 90 is steadily accumulating.

He assured the committee that the radioactive strontium in the wheat would decrease now that the tests were over, "unless rates of testing exceeding the very heavy ones of last year occur again."

"Actually, of course, the general average food level is the important matter," he added, "and we can say that this level is well below the maximum permissible level."

One would have to eat a ton of Minnesota wheat at one sitting to obtain the permissible limit of strontium 90, he declared.

The AEC Commissioner neglected to point out that strontium 90 accumulates in the bones and remains radioactive for a long time. This element has a half-life of about 25 years; that which is taken up by the bones today will still have half its radioactivity 25 years from now. Some of the strontium 90 deposited in the bones will slowly be eliminated by normal biological processes, but the amount is not accurately known yet.

The average person in the United States eats about a ton of cereal products (bread, cake, breakfast foods, and so forth) every 10 years, according to figures published by the Department of Agriculture. A ton of wheat, therefore, is not a very large amount when one doesn't attempt to eat it at one sitting.

How about the additional strontium 90 from milk, fish, vegetables, tea, and all the other foods in which strontium and other radioactive elements are beginning to appear?

The most recent U.S. study of the strontium 90 in the total diet is based on the concentrations measured in foods back in 1956 and 1957. The Lamont Geological Observatory of Columbia University calculated there were about 6.5 strontium units in the total diet. This appears to be a safe level when compared with the maximum permissible concentration of 80 units.

An examination of the Lamont figure shows it is based on a level of 6 strontium units in milk, 15 in cereals, and 10 in vegetables.

The levels today are much higher. Public Health Service and AEC studies show that milk has gone up as high as 40 units in Mandan, N. Dak., and 20 units in St. Louis, with the average levels ranging from one-third to one-half this amount.

A recent Consumers Union report shows the level in Washington, D.C., was 9.8 units last July and August.

The wheat in Minnesota went well over 200 units, far above the 15 figure used by Lamont in its tabulation. (These figures, based on the calcium content of the wheat, do not disagree with figures published last week that were based on the total weight of the wheat.)

A study of 1957 foods by the West German Institute of Milk Research showed mixtures of U.S. and German wheat were up to 80 strontium units, rice was up to 150, and rye was as high as 128.

Vegetables were also well above the figure of 10 strontium units used by Lamont. The West German study showed levels of 45 in asparagus, 40 in potatoes, 80 in tomatoes, and 50 in dried peas.

The Lamont calculations are clearly obsolete. Yet they are being used to assure Americans, and the rest of the world, that there is nothing to worry about.

HEALTH SERVICE URGES PROGRAM TO MEASURE, CONTROL ALL RADIATION

(By Edward Gamarekian)

A broad program to control and measure the total radiation being received from fallout, medical treatment, and industrial atomic devices in this country is being sought by the Public Health Service.

A Public Health Service advisory committee has concluded that the "maximum permissible concentrations" of radiation that are being used by many as "safe" limits are both useless and misleading.

"There is no such thing as a safe radiation level," committee Chairman Russell H. Morgan stated yesterday. Although the effects may be small and acceptable by some, he added, these effects are related to the radiation dose and will increase as the dose increases.

A program of measurement and control should have been started 15 years ago, the Johns Hopkins University professor of radiology declared.

Morgan also disclosed in testimony before the Senate-House Atomic Energy Subcommittee that the Public Health Service control proposal will be publicly recommended in the next few days.

It is "unfortunate," the scientist noted, that the responsibility for health and safety is in the agency which is developing atomic energy—the Atomic Energy Commission.

Morgan appeared with other radiation experts before the Joint Atomic Energy Subcommittee at the first day's hearing on radiation hazards in the atomic energy industry and workmen's compensation in radiation cases.

Representative MELVIN PRICE, Democrat, of Illinois, chairman of the subcommittee, said his group was not only interested in insuring the health and safety of atomic workers but had the complex task of writing laws affecting compensation for injuries which may show up many years after an excessive dose of radiation.

There was some discussion during yesterday's session on the effect of the administered dose of radioactive gold on Secretary of State John Foster Dulles.

Dr. Shields Warren, director of the Cancer Research Institute at the New England Deaconess Hospital in Boston, told the committee that the ability of this radioactive isotope to help in cases of Dulles' type was not yet certain. He confirmed previous reports that the dose was a heavy one which produced enough external radiation to require the restricting of visitors.

The former director of the AEC's Division of Medicine and Biology also indicated there was an extremely slight possibility the Secretary of State may develop leukemia as a result of the radiation from the gold. In cases like this, the total effect is the guiding consideration, he stated.

Members of the committee hammered hard on the meaning of the term "maximum permissible concentration," or MPC, of radiation. Since 1934, the MPC for atomic workers has been drastically reduced from 100 rems per year to 5.

A rem is a dose of radiation that has the same biological effect as an X-ray dose of one roentgen. A diagnostic chest X-ray is about one-tenth of a roentgen. A local dose to check cancer may run into the thousands, although a dose of 1,000 to certain critical organs is enough to be fatal.

The MPC recommended for the general population is now about five-tenths rem per year, one-tenth that for atomic industry personnel.

These levels have been set up by the National Committee on Radiation Protection (NCRP), an independent group of Government and non-Government scientists who are recognized authorities in their fields.

Lauriston Taylor, Chairman of the NCRP, told the Congressmen that the levels have been steadily lowered because of an improved knowledge of the effects of radiation and a more conservative approach.

PERIL IN ACCEPTABLE A-RADIATION

(By Edward Gamarekian)

The American people are led to believe, erroneously, that foods with less than the maximum permissible concentration of radioactivity are not dangerous

Estimates in scientific publications show, however, that if the strontium 90 alone reaches the permissible limit in the human body, it may increase the incidence of leukemia by more than 20 percent—2,600 more cases a year on top of the present annual rate of 11,400.

The effect of strontium 90 and other radioactive atomic products on the incidence of other diseases would be added to this toll.

Although the Atomic Energy Commission and the other agencies involved cannot be charged with concealing these figures, they have made virtually no attempt to make them generally known to the public.

CLIMB EFFECT MINIMIZED

Instead, they have used such expressions as "acceptable," "negligible," "protective," and "statistically unobservable" when the levels of radioactivity climbed in milk, wheat, vegetables, and other foods.

They have pointed out that the permissible concentration of strontium 90 in the bones would produce only about twice the amount of natural radiation that comes from cosmic rays, uranium in the soil, and so on.

Humans have got used to this level, they argue, but they neglect to point out that 10 percent, and perhaps more, of the number of new leukemia cases each year are attributed to the background or natural radiation.

The "maximum permissible concentrations," or MPC's, are recommendations set by the International and U.S. Committees on Radiation Protection. These committees have just revised their handbook of MPC's for the various end products of atomic reactions.

HANDBOOK QUOTED

Although the new values have not yet been released, they are reported to be close to the present ones. The following statement was quoted from the new handbook during the current hearings before the Congressional Joint Committee on Atomic Energy:

"The permissible dose for an individual is that dose * * * which in the light of present knowledge carries a negligible probability of severe somatic or genetic injuries.

"Furthermore, it is such a dose that any effects that ensue more frequently are limited to those of a minor nature that would not be considered unacceptable by the exposed individual and by competent medical authorities."

The words "negligible" and "unacceptable" depend, of course, on the user.

When AEC Commissioner Willard F. Libby testified before the Joint Committee a few weeks ago on the radioactivity of Minnesota wheat, he referred to the MPC's as "levels which are generally acceptable for a steady diet."

DECLARED WORTHLESS

Even the Public Health Service has indicated everything was all right by stating that the MPC's listed were "for the protection of the general public."

Two days ago, however, the Chairman of the Advisory Committee on Radiation of the Public Health Service lowered the boom, declaring the MPC'S worthless, meaningless, and "based on something other than scientific fact."

"Nowhere is there a concerted effort being made to obtain sound scientific data to obtain answers to the problems," he went on. "It is questionable whether we can continue long in this framework." He indicated the Public Health Service would seek to set up an integrated system of measurement and control, taking this function out of the Atomic Energy Commisison.

The Advisory Committee Chairman, Russell H. Morgan, is a radiology professor at Johns Hopkins University and the radiologist in chief at the Johns Hopkins Hospital.

Morgan blasted the theories being put forth by some scientists on the existence of a safe threshold below which there are no radiation effects.

"There is ample evidence that there is no safe level," he said, "and that biological effects begin above zero."

[From the Washington Sunday Star, Mar. 15, 1959]

RADIOACTIVE FALLOUT CONFUSION CAUSED BY LACK OF RESPONSIBILITY

(By Lillian Levy)

There is real fear that division of responsibility will retard the necessary progress in keeping up with the dangers of radioactive fallout on public health and safety.

The need for a unified program for the measurement, evaluation, and control of radiation from manmade atomic sources was stressed last week in testimony before the House-Senate Joint Atomic Energy Research and Development Subcommittee.

What the committee was called to discuss was workmen's compensation growing out of radiation hazards in industry. It went far afield, however, bringing out in the clearest form yet the confusion among Government agencies involved in the radiation problem.

The committee first received a proposal that the Public Health Service of the U.S. Department of Health, Education, and Welfare become the monitor of atomic dangers. The author of this proposal is Russell H. Morgan, professor of radiology at Johns Hopkins University and Chairman of the Advisory Committee on Radiation of the Health Service.

Professor Morgan said monitoring of the fallout should not be left to the Atomic Energy Commission since the Commission is established to develop atomic energy for military and peacetime uses. He said the weapons responsibility of the AEC is in conflict with the responsibility to protect the public from resulting radiation hazards from its testing program.

This conflict was acknowledged by Willard F. Libby, scientist-member of the AEC, who told the committee earlier, "There is nothing good about radioactive fallout and it has been our constant effort to reduce it to the minimum in keeping with the necessary weapons development programs."

Most of the monitoring of atomic fallout in this country has been left to the AEC despite the fact that this agency does not have the official responsibility for protecting the public from radiation hazards. The Atomic Energy Act of 1954 made the AEC responsible only for guarding the health and safety of those employed either on its installations or in plants licensed by the AEC.

The Department of Health, Education, and Welfare is the Federal agency established to promote public health and safety. It also does a share of monitoring fallout through the Public Health Service and the Food and Drug Administration.

Consequently, when the question of food, soil, or air contamination from fallout arises, judgment on the peril to the general public may be pronounced by the AEC, or the Department of Health, Education, and Welfare through the Public Health Service or Food and Drug Administration.

Adding to the confusion is the fact that the judgments pronounced by any Government body are based on standards set up by a National Committee on Radiation Protection and Measurements. This is a semi-official body operating under the Bureau of Standards of the Department of Commerce. And these standards or tolerance levels of which the scientists speak are, at best, estimates rather than tested and proved values.

For example, when Dr. Maurice Visscher, a Minnesota scientist, made public the high strontium 90 content in Minnesota grain crops, the AEC used the estimates set up by the radiation committee as a firm measuring stick to assure Congress and the public that the grain radiation levels presented no peril. They said this level is well below the maximum permissible level.

SCIENTIFIC BUCKPASSING

This scientific passing-the-buck is, perhaps, best illustrated by the case of the *Tancred* cargo of tea.

Not since the Boston Tea Party has a cargo of tea brewed up such a storm of controversy as the 540 chests of Japanese tea brought to the port of New York by the freighter *Tancred* some months ago. This time radiation was the issue.

The controversy began when New York's longshoremen refused to unload the *Tancred* after the U.S. Coast Guard had announced that it found evidence of slight radioactivity in its cargo. Food and Drug Administration inspectors allayed these fears when their field-type Geiger counters failed to reveal any radioactivity. The ship was then unloaded and 160 of the chests of tea were transshipped immediately to Canada.

Subsequently, it was discovered that the type of Geiger counter used was not sensitive enough to detect very slight contamination and the tea was, in fact, radioactive. The FDA so notified Canadian authorities. The remaining chests of tea remained in New York harbor pending a more thorough examination of the cargo by the FDA. The FDA stated that from a public health standpoint the purpose of the examination was to determine primarily the amount of strontium 90 (a known cause of bone-cancer and leukemia) present in the tea.

George P. Larrick, FDA Commissioner, announced that the testing showed that the amount of strontium 90 in the *Tancred* cargo was "well below the established tolerance." The tea was pronounced safe, and by authority of the FDA was released for sale in the United States.

From Commissioner Larrick's statement, it could be assumed that the harmful concentration of strontium 90 had, at last, been fixed with sufficient certainty to be acceptable by this distinguished Government agency charged with the protection of the public against adulterated foods and drugs.

THE TOLERANCE LEVEL

Yet testimony presented to the Joint Atomic Subcommittee underscored the fact that no legally established tolerance level for strontium 90 exists. The established tolerance to which both FDA Commissioner Larrick and Commissioner Libby of the AEC referred is only a standard recommended by the Radiation Committee.

The Committee includes in its membership scientists from Government, industry, and the academic world. It does not use the word "safe" in discussing estimated values that, in its opinion, cause no obvious injury.

Further, there is growing evidence that the present "guesstimate" for strontium 90, as well as other radioactive elements, may be too high. Many competent scientists appearing before the Joint Committee questioned whether there is any value for strontium 90 below which no physical harm would occur.

There is a growing feeling here that one agency should bear the responsibility of coordinating all measurements for fallout, evaluating them and making judgments known. The suggestion that this be done within the framework of the Health, Education, and Welfare Department, whether by the PHS or the FDA, is one that will have the consideration of the Joint Atomic Energy Committee.

The argument is that the AEC could continue to take measurements which it must to discharge its legal and moral responsibility to employees in atomic industries. The PHS could maintain and expand its facilities to measure the radiation in milk, water, and air throughout the United States, which it has initiated. The coordinating agency would have the sole responsibility of collecting this data, evaluating it and judging the danger level to the general population.

EXCERPTS FROM ARTICLE ENTITLED "THE MILK ALL OF US DRINK," CONSUMER REPORTS, MARCH 1959

By testing samples of milk purchased over store counters in 50 widely distributed places in the United States and in Canada, Consumer's Union has sought to extend the work done by the Government agencies. The results serve to check the relatively scant data on milk published by the AEC and the PHS, and to extend their coverage to include many more areas. That a private organization of limited means can carry out such a program suggests that an expanded monitoring network should be economically feasible under Federal, State, or even community or dairy auspices.

Consumer's Union goes further. Though the interest of the PHS in the matter has led it to equip and staff some very competent laboratories, it is still true that the overall problem has remained the province of the AEC. But it is hard to see why judgments on matters of public health should have to depend primarily on the reports of the very agency charged with the responsibility of manufacturing nuclear weapons, rather than on those of an agency whose specific job is to safeguard the public health. Without reflecting in any way on the AEC's competence or integrity, Consumer's Union would support measures which would lead to thorough and independent investigations (as well as routine surveillance) by the Public Health Service on fundamental biological and control problems, wherever there is concern with fallout.

The fact is that fresh clean milk, which looks and tastes just as it always did, nevertheless contains (wherever you get it these days) an unseen contaminant, a toxic substance known to accumulate in human bone.

* * * * *

So far some 200 pounds of strontium 90 have been carried aloft by the churning hot gases of the mushroom explosions. It has spread worldwide. It falls out of the upper atmosphere, in a manner not yet fully understood. It comes down slowly with rain and snow, on river and reservoir, plant leaf, and soil. Some of it is taken up chemically through the roots of plants to become part of grass or seed, and eventually part of the glass of milk or the rice in the bowl. In the United States, about 80 percent of the minute quantity which enters our bodies comes to us in our milk. In Japan more than two-thirds comes from rice. Unpolished or whole wheat, unfiltered rain water, and similar items of diet, such as vegetables, may also contribute a significant amount of strontium 90. If there never are any more explosions, the fallout from tests already made will reach a maximum about 1970, rising to two and a half or three times its present value, and then will decline slowly for a generation or two.

* * * * *

Among all the scores of constituents of fallout, strontium 90 is especially hazardous because it is released in considerable quantity (it forms a few percent of all radioactive products of fission), it seeks the bone, and it stays there a long time. Some of the other radioactive products decay so quickly that they cannot pass through the long chain of ovents to reach the target; some which have a long life do not accumulate in the body; but strontium 90 lasts on the average about 40 years and it accumulates in bones.

What will strontium 90 do in bone? Both general theory and direct animal experiments (with rather heavy doses) suggest that the longer-ranging rays of strontium 90 (and its radioactive decay product yttrium 90) are in fact only one-fifth or one-tenth as damaging as radium rays, energy for energy. On the other hand, the concentration of strontium 90 may show "hot spots," in the same way as does radium. And localized damage will tend to reflect not the average but the maximum insult done to living cells. Prudence dictates that we increase our estimate of damage by a factor of 5 or 10 to take into account the possible effect of the concentrating tendency; that is the practice of both the ICRP and the UN.

It appears that 1 S.U. contributes about one-fifth of a rad in a 70-year residence in bone. Various experiments suggest that children whose bones are being formed from current milk supplies are retaining strontium 90 at a level between one-half and one-fourth of the S.U.'s in their milk. On the basis of these facts we can set a rough maximum "permissible" burden of strontium 90. If we follow the argument already made for radium, which seems the one closest to the real situation, we could allow a burden of nearly 150 S.U. before reaching the 30 rads which we set as a rough "permissible" burden for the bones of an average individual. The use of somewhat arbitrarily selected factors at several stages in such calculations may be viewed as suggesting that a maximum "permissible" dose might lie somewhere in the large range from as little as a fifth of the 150 S.U. to as much as 10 times that.

It does not seem safe, however, to apply to the poorly known and highly variable bone burden, affecting the whole world's people, any smaller safety factor than that used for external radiation. In this case one would again set the limit at something near 30 rads, several times the natural internal burden. This gives us our 150 S.U. again, which agrees well enough with the ICRP limit of 1955, put at 100 S.U.

But it must be emphasized that any permissible level obviously is predicated on the assumption that there is a threshold dose for strontium 90 below which any effects are insignificant. The absence of a threshold would mean that bone damage would be proportional to the dosage in any amount, and the concept of a tolerance dose would then imply accepting as socially tolerable an unknown number of radiation-diseased individuals.

Consumer's Union milk samples were gathered from 48 cities scattered across the United States and from 2 in Canada close to the U.S. border. Several considerations went into the selection of these sites. Foremost of these was the requirement for a good extensive sampling network, with emphasis, wherever feasible, on the larger centers of population. Various distinctive soil regions of the United States, as classified by the Department of Agriculture, were also included since soil conditions may be considered as the integrated end products of climatic, topographical, and geologic effects, all of which are important in affecting the strontium 90 content of soil, which in turn affects the strontium 90 content of pasture, cow, milk, and man.

All areas whose soils had been found by AEC studies to be high in strontium 90 also were included, as well as several sites whose milk had been tested previously by the PHS and the AEC.

At each of the cities selected, Consumer's Union shoppers purchased 8 quarts of fluid milk each week, for a period of 4 weeks. Generally, two separate across-the-counter purchases were made each week of 1 quart from each of four major local dairies. Four-ounce portions from each of the 32 quarts thus purchased were composited to provide a total of 1 gallon of milk for testing from each sampling site. The pooled composite thus obtained represented a major part of the milk supply of each of the cities sampled for the period from mid-July to mid-August 1958. A total of approximately 1,600 quarts were purchased for these tests.

Analyses for strontium 90 were made for Consumer's Union by a consulting laboratory which specializes in such work, and whose reliability had been established by check sample data provided by the AEC as well as by Consumer Union.

In drawing up its program for sampling and testing milk, Consumer's Union consulted the Lamont Geological Observatory, the Atomic Energy Commission, the U.S. Department of Agriculture, and the U.S. Public Health Service, and gratefully acknowledges the suggestions made by these organizations.

RESULTS

The data obtained by Consumer Union, together with some related results from other laboratories, are shown in the table on this page. Consumer's Union data, it should be emphasized, provide breadth rather than depth of coverage. Any trend or variation of strontium 90 content with time or other factors cannot, of course, be noted by a one-period sampling and analysis. The best data available for observing the progressive change in milk's strontium 90 content probably are the monthly figures of the PHS.

From these and other studies, there is incontrovertible evidence that the strontium 90 content of milk has been increasing since 1954. The average rate of increase was estimated by the AEC in 1957 to be between 0.5 to 1.0 S.U. per year for past years. The overall average of 48 U.S. cities sampled by Consumer's Union is 8.0 S.U.; the average of

the 10 cities covered by the Public Health Service for approximately the same period is 7.6 S.U., a figure that is in good agreement with that found by Consumer's Union, considering the differences in the sites sampled and in the nature of the samples. For purposes of noting change, an overall estimate of the strontium 90 content of milk in 1957 may be obtained by averaging figures published by the Public Health Service for five cities sampled that year (4.35 S.U.) or by taking the average which was published by Lamont (6.1 S.U.). It would appear from these figures that the strontium 90 content of milk in mid-1958 was more than 2 S.U. greater than it was in 1957, which is at least double the AEC estimate for the annual rate of increase over the last few years. This more rapid rate of increase must be considered tentative, since data for all of 1958 are not yet available. The summer months, when cows graze on the open range, are more likely to yield milk with a higher strontium 90 content than winter months, when cows are fed on stored hay and fodder. Offsetting to some degree such an anticipated drop in the strontium 90 content of milk for the latter half of 1958 will be the effects of fallout from the stepped-up rate of weapons testing during the period August to November 1958. Because of this testing, it may be assumed reasonably that the average strontium 90 content of milk as currently consumed in the United States is about 8 to 10 S.U., and will likely be closer to the higher figure during the coming summer.

However, an average may be falsely reassuring. Local meteorological conditions and other factors conceivably could create conditions resulting in high concentrations in relatively small areas that embrace large numbers of people. Consumer's Union's tests, a range from about 2 S.U. to almost 16 S.U. was found in the composited samples. It has been estimated that a factor of five applied to the average found would encompass most of the variations that might be expected for all factors. In such hot areas the concentration of strontium 90 in milk might be about 50 S.U.—more than half the currently recommended maximum permissible concentration.

In its tests of samples collected in July and August 1958, Consumer's Union found that the strontium 90 in the milk supplies of several cities was about twice the average of the others. These seven cities were:

	S.U.
New Orleans, La	15.6
Bismarck, N. Dak	14.1
Boston, Mass	13.9
Pittsburgh, Pa	13.7
Memphis, Tenn	13.6
Quebec, Canada	13.6
Chicago, Ill	12.6

Several other cities were well above average, though not so much as those above:

	S.U.
Duluth, Minn	11.5
Rapid City, S. Dak	11.2
St. Louis, Mo	11.1
Norfolk, Va	10.6
Des Moines, Iowa	10.6
New York City	10.5
Seattle, Wash	10.1

As was to be expected, most of these cities are in the northern part of the country; several high-count areas were found in the southern part of the United States, too. Ten of the thirteen U.S. cities just listed are not included in the present PHS test network. It appears to Consumer's Union that the PHS would do well to extend its testing to include at least these 10. Furthermore, it appears to be desirable to investigate the milk supplies of all other areas, which have not been included up to now in any study, in order to locate any other areas whose milk is abnormally high in strontium 90. It is further suggested that the study of milk supplies might profitably include provision for more representative sampling than has been the practice in the past.

INFLATION—THE COLD WAR ON THE DOMESTIC ECONOMIC FRONT

Mr. GOLDWATER. Mr. President, there is much interest today—and rightly so—in the subject of inflation. At the present time the Vice President has a special commission to study this subject.

The Joint Committee on the Economic Report, under the able leadership of the distinguished Senator from Illinois [Mr. DOUGLAS], who now presides over the Senate, is also conducting hearings into this subject.

There are many factors contributing to the present inflation. They are discussed in two articles which I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks. The first, entitled "The Cold War on the Domestic Economic Front," was written by James J. Butler and published in the February 14, 1959, issue of the magazine of Wall Street. The second article touching on the same general subject is entitled "Who Makes Inflation?" and was written by Henry Hazlitt and published in Newsweek for February 9, 1959.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Wall Street magazine, Feb. 14, 1959]

THE COLD WAR ON THE DOMESTIC ECONOMIC FRONT

(By James J. Butler)

The battering ram of strikes is punching gaping holes in the national economy in a cold war which cries out for the attention of Congress but is being temporarily put aside by concentration on how to insure national security within the capacity and willingness of the people to pay.

It should be clear that any labor-management legislation adopted in the reactivated Capitol Hill "crusade" must fall short of the objective unless there first is action to cure an elemental weakness: No one has fully marked out the problem to be overcome; specifically, no one (in Government or industry) has focused the enormous and avoidable economic loss due to strikes.

Since Congress has not used its mechanisms of discovery as fully as it should, and private business doesn't possess the machinery for a full canvass, only public demand upon Washington has the power to stir action. Meanwhile, Congress is launching another "labor law" sortie without the weaponry of fundamental facts: What is the cost, and who bears it? Union dominated legislators who equate the right to strike with the right to destroy, would find upon objective inquiry that the cost and the inconvenience borne by labor and the public outweigh the damage inflicted on the intended target in many situations. What is suggested here is more a bill for labor than a "labor-management bill." With the blindfolds off that fact stands out.

The opportunity, the duty, of Congress to explore is presented in two actions which have been initiated, one in each House. The most publicized of recent strikes, and the ones creating the greatest mischief-laden waste and defiance of the rights of the public, have been against airlines, and newspapers.

PROTECTING LABOR FROM ITS LEADERS

Senator GEORGE SMATHERS of Florida, has a program afoot to put a halt to airline stoppages; Rep. FRANK CHELF of Kentucky, is moving along similar lines to block invasion of the constitutional guaranty of free press which he finds basic in strikes which shut down newspapers.

SMATHERS and CHELF are friends of organized labor. It is in that role that they are moving. Theirs is an effort to save workingmen—union men—from the economic prostration being visited upon them.

An example: Several months ago, 13 web pressmen on Washington, D.C. newspapers walked out in a labor contract disagreement and made more than 1,000 employees of publishing companies jobless. The number of persons adversely affected was multiplied in the distributing trades, the truckers, the newsboys, and the newstand operators. The Nation's Capital, with more than 1 million persons within the circulation area of the papers was left without printed news. Department and other stores felt the impact in sharply curtailed patronage of sales events. Because of 13 strikers.

Many more illustrations are at hand to point up some of the fruitful fields of investigation in which Congress can bestir itself. Take the rash of airline strikes which have just been settled one at a time.

Here are the revenue losses to companies resulting from December strikes of mechanics and pilots: Eastern, $28 million; American, $18 million; TWA, $13 million; Capital, $11 million. Total, $70 million. The question whether other lines may assist the struck carriers (out of added revenue which came their way) has been answered affirmatively.

But there is no appeals board and no recapture possible for working pilots who were mulcted of $500 assessments each month that other pilots were grounded by their own decision. The assessment is payable at the rate of $125 a week.

This reduced the income of the nonstriking pilot, and it left the striker with a fraction of his normal take-home pay. The striker will not repay his benefactor, whose only compensation is the hope that if he strikes later he will be similarly supported. On short rations, to be sure, as pilot salaries go, but supported.

A lesson could have been learned (evidently was not) from the strike against Phelps-Dodge at Bisbee, Douglas, and Morenci, Ariz. About 4,765 employees were idled for 30 working days, losing a total, for the 30-day strike period, of $2,503,050.

Settlement of the strike brought an average increase in wages of 15 cents an hour, but since the employees were offered an averaged increase of 12½ cents an hour before the strike, the actual gain was 2½ cents an hour.

Dividing the total lost wages ($2,503,050) by the daily increase for all 4,765 employees ($935), it appears that the employees must work 2,626 days to make up their lost wages out of their actual gain. If we figure a 5-day week that means 10 years of work just to break even.

PROVISIONS INADEQUATE

Under the provisions of the Taft-Hartley Act, whenever the national health, safety or welfare is imperiled by threat of strike, the Government has the power to take effective action to cope with the situation. But railroad and airline industries are exempt from the provisions of the Taft-Hartley Act. They come within the jurisdiction of the Railway Labor Act, which has no comparable authority to move against stoppages. Under existing law there are no provisions which can assure transport operations during periods of negotiation between management and labor. Yet the airline industry is a quasi-public utility and its employees are per-

forming a service essential to the public welfare. The industry is Government licensed, Government supervised, Government protected and, in some instances, Government subsidized. All of this being true, the Congress has a greater responsibility than it has with respect to ordinary business and industry.

Senator SMATHERS proposes that the utility coloration be taken into consideration that both strikes and lockouts be declared illegal during contract negotiations. The Floridian finds this no substantial extension of existing attitude: "The Government has even limited competition in this field and when it becomes nonoperational a substitute for its activities is not at hand."

Under the Smathers program, this agreement ultimately reached between management and labor could carry retroactive provisions. This is suggested as a means of fulfilling a governmental responsibility to the public while doing equity to both management and labor involved. Unless existing law is revised, Senator SMATHERS sees the public continuing the role of innocent, but victimized, bystander.

GETTING DOWN TO BRASS TACKS

The share-the-grief program of airlines as approved by the Civil Aeronautics Board permits companies which have been struck to be compensated by operating lines in the amount of computable additional revenue diverted to them by the strike. It will apply only in situations where the stoppage was in defiance of recommendations of a Presidential Board, of the Railway Labor Act, or when the union has not exhausted available remedies under the RLA. It is immediately apparent that this arrangement, as approved by CAB, cannot go to the root of the trouble. It is palliative, not cure; it is directed to a labor abuse but it is not preventative, coming into existence after-the-fact—after a strike is in force.

POT CALLS THE KETTLE BLACK

In the voluminous record of testimony, briefs and exhibits filed with CAB, there appears to be no emphasis on the fact that labor unions, as normal practice, assist one another with loans and gifts designed to prolong strikes by relieving the economic pressure on one side—the striking union's. The distinction between this form of aid and the airline agreements was not apparent. One of the objections to the company plan gleaned from the stack of briefs was a possible violation of the antitrust laws. Why unions have seen fit to make this point raises interesting questions. It comes at a time when the business community is pleading with Congress to look to the equities of labor-management affairs and place labor under the Sherman and Clayton Acts. It could be that the laborites have reviewed the past record of Capitol Hill and see nothing to fear from Congress.

If CAB ruled against management and its mutual assistance pact, a telling point would have been scored for making the same principle statutorily applicable to the unions, and in the most practicable way—by inclusion under the antitrust laws.

A FAIR PROPOSAL

Representative CHELF'S thinking on the subject of newspaper strikes meshes with the expressions by Senator SMATHERS. Neither proposes a no-strike bill. Each envisions a cooling-off proposition except that no time limit is specified within which negotiations must culminate in an agreement, or failing that a strike may be called. The circumstances of each case would control. If either side fails to pursue bargaining in good faith, all bets would be off: a strike would be legal if management commits the departure; if the union becomes recalcitrant or evasive and uses its own dereliction as an excuse for strike, it might find itself heavily penalized in money damages, with each day of non-compliance a new offense, adding to the penalties.

How this legal machinery can be made to operate effectively is a lesson John L. Lewis and his Mine Workers learned when they had a multimillion dollar fine slapped on them by Judge T. Alan Goldsborough of the District of Columbia District Court.

The Smathers and Chelf proposals touch identified lines of business, each of which is in a public interest classification not common to labor disputes. But the precedent would be of monumental importance. With refinements to cover all cases such laws might very well represent the most important labor-management legislation of the current session if not, in fact, the only venture into the area of labor laws.

Before going into the circumstance of James Hoffa's contumacious proposal to organize police and firemen in unions with Hoffa-like view toward morality (a type of labor weapon certain to be covered by the Smathers-Chelf recommendations), it might be well to consider the Kentucky Congressman's motivation. Chelf spoke up after the New York City newspaper strike had idled thousands and mounted losses of many millions of dollars, most of it wrung from people who were not even consulted about the strike. He conceded his proposition plays two legal tenets against each other: One, the constitutional guarantee of a free press; the other, the court-upheld right to strike. But Chelf asks:

"If a strike against a newspaper isn't suppressing the press or the news and with it the freedom of thought, I wonder what is?"

Warming to his subject the Kentuckian submitted: "In my judgment it is just as serious to shutdown a newspaper by strike as it is by order or an edict of the roughest dictator. Both methods have the same end result: The newspaper is deprived of expressing itself in its editorial columns because there are none allowed to be printed—if printed, not allowed to be circulated or delivered."

New York City's $50 million newspaper blackout ended December 28, 1958, after 19 days. Involved was a labor contract with the deliverers' union but in spite of openly expressed condemnation by other unions, members of those crafts refused to cross picket lines. Circulation of the struck papers totals 5.5 million daily and 8.5 million on Sundays. Some of the more direct costs have been compiled. They make interesting reading:

The papers lost $25 million in anticipated revenues, based on normal business plus the Christmas advertising emphasis. Merchants associations counted their economic hurts and translated the result into another $25 million, irrevocably lost. Employees furloughed by the publishing companies without pay lost an estimated $5 million—the combined wages of 17,000 payrollers about 90 percent of whom weren't asked whether there should be a strike or on what basis it should be settled.

"The cost outside the newspaper business has been in incalculable millions of dollars," said Chairman Barney G. Cameron, of the Publishers Association of New York. "The effect of the strike has been felt in industry, trade, cultural life, and almost every element of our society."

This does not overstate the case. Theaters unable to publicize their billings suffered a 50-percent cut in box office in greater New York. Print paper manufacturers dropped $820,000 a week. Department stores, especially those relying on heavy telephone business, furloughed most of their telephone operators. No ads; no calls.

To the extent that international unions were called on to contribute, locals all over the Nation paid for a strike in New York City. American Newspaper Guild ladled out $100,000 a week. ANG financial officers protested they were going broke in the process and raised dues to 5 percent of the weekly paychecks of its members.

AND NO GAINS FOR WORKERS

Here is the point that cannot be stressed enough in presenting to the rank and file of union workmen the cost they pay for the arrogant bravado of their chiefs: The offer that ended the strike was the same one that had repeatedly been made by the publishers to the union, and twice formally rejected.

The Reverend William J. Smith, director of St. Patrick's Institute of Labor Relations, Jersey City, N.J., issued a statement that the strike could not be morally justified. An eminent, respected authority in the field of labor, Father Smith placed his finger on the weakness which the Smathers-Chelf proposals and like measures would cure. He said: "To date, no law, board, or code has been established to prevent such strikes." Then he offered a list of five conditions which must be met, he said, if any strike is to have moral justification. The guides are:

1. The cause must be just.
2. The means used in the execution must be morally good.
3. The good anticipated from the strike must be at least equal to or exceed the damage that can be anticipated.
4. There must be a solid hope of success before action is taken.
5. The strike is a last resort to be used only when every other means of peaceful settlement either failed or proved futile.

Point 5 will be recognized as the heart of the bills due to come before Congress.

Before leaving the subject of newspaper strikes in New York City (the most costly one ran for 17 days in 1945), some of the economic damage suffered by unions last December may be examined with interest. The data, more comprehensive than most, is certain to engage the attention of Congress.

UNION TREASURIES EMPTIED BY STRIKE BENEFIT PAYMENTS

While publishers were offsetting against their losses, payroll money which was not disbursed, and $2 million worth of newsprint paper saved, the unions—most of them not involved in the labor dispute—were dipping into their treasuries in painful depth. Some were literally scraping the bottom of the till for money to pay members strike benefits. These are the innocent bystanders SMATHERS and CHELF hope to save from their picket-happy leaders.

The International Typographical Union thinned its bank account for between 2,500 and 3,000 idle members—$88.80 a week for heads of families, $63.50 for single men. The Stereotypers Union distributed about $50,000 a week among 400 members whose union pledge forced them to obey the picket line block. The Photoengravers Union with $126,000 in its treasury when the strike began had to ask the international union to advance $50 a week to each member, making the weekly benefit $87.50. Paper handlers went to their international union and wangled $25 a week in order to pay 350 idled men $50 a week. The Mailers Union members received $72.70—all of it by tapping the international.

HOFFA'S CONTEMPT FOR CONGRESS

Tied in with the economic costs of strikes but inestimably more damaging from the standpoint of national safety was Hoffa's declaration of war on the New York City Police Commissioner's labor policy. This obviously was a gimmick on Hoffa's part to dramatize his announced plan to bring State and municipal workers into the Teamsters Union. But he made a fatal blunder. When he boldly proclaimed that police stations and fire houses would be picketed, essential

supplies would not be delivered by the Teamsters Union, the public awakened to a peril greater than that imposed by the cold war and the conquest of outer space.

If he were to succeed in organizing the policemen and the firemen and placing them under his code, the decision whether property and lives might be saved from destruction would rest with Hoffa. By the single command, "Strike" he would be in a position to turn the United States into a lawless jungle that would make the Cuba of recent days appear idyllic in comparison. The President of the United States and the Armed Forces at his command would be rendered powerless by the expanse of the crisis.

In that situation, Jimmy Hoffa might as well move right into the White House. But he wouldn't; his palatial Teamsters union building is a more modern, better equipped, and a more costly structure than the White House itself. Then, too, it looks down upon the Senate and House Chambers literally, and possibly in other respects.

Has Hoffa taken "one step backward, in order to take two steps forward" in imitation of the Communist formula? Yet it would be grievous error to overstate the extent of this retreat. He backed down on calling a national convention to ratify his dictatorship over the Teamsters Union. That ducked a test of authority between Hoffa and the Federal judicial system. He canceled his challenge to law, order, and public safety which was implicit in the plan to picket the protection departments of New York City. But the simile of the wounded jungle beast is apt, for people of the Hoffa stripe are most dangerous when they have been badly, perhaps mortally hurt.

Congress this time was quick to respond to the threat. While the Smathers-Chelf approach seems made to order to put down Hoffa's ambitious expansion moves as they arise, Senator JOHN MCCLELLAN, of Arkansas, invited his colleagues to join him in seeing to it that they do not arise. The chairman of the Labor Rackets Committee has prepared legislation to prevent the Teamsters from making alliances with any other transport unions, and indicated he looks favorably upon the even stricter proposal that none but teamsters (vehicle drivers and helpers) be permitted to join the union Hoffa now heads. The latter approach was suggested to the Kefauver committee's opening session this year, by Edwin G. Nourse who was chairman of the Council of Economic Advisers in the Truman administration. Its effectiveness is immediately apparent.

Meanwhile Hoffa's purpose is made clear in his call to IBT members to launch public employee organizing campaigns this year: "It is high time that informal understandings, verbal and written, which exist in too many Governmental agreements, be eliminated and replaced by strong, positive union contracts. Our international union negotiates such contracts."

We single out Hoffa because we believe him to be the most dangerous individual in our country today. Dangerous to the sound expansion of our economy—the well-being of the union worker—and to maintaining our free system of Government. All labor excesses seem to be concentrated in the activities of this single union leader. And there is no question that if we clip his wings the entire labor movement will benefit and be reestablished on the sound basis and goals of Samuel Gompers, its founder—for the benefit of the workers—so that they can benefit financially and economically—be subject to no man, and retain the freedoms to which they are entitled as citizens of these United States.

Our country stands at the crossroads economically and politically. That Mr. Hoffa believes this to be so, is clearly evidenced by his hot pursuit of every advantage—his testing of every opening that leads to personal power. And the inadequacies of the labor law are his opportunity.

The struggle against this cold war at home must be resolved, if we are to have the strength needed to win the cold war abroad.

With a large number of major labor contracts expiring in 1959 (negotiations have already begun on several of them) Congress must act with firmness and speed if it is to prevent shutdowns, dislocations and economic problems, already looming on the horizon. And it won't be too soon.

That is the challenge the new Congress faces today. Are they going to bicker and stall? Or will our lawmakers give us the legislation necessary for survival? That is the question of the hour. For history will be made by the 86th Congress, and future generations will know where and upon whom the blame falls if Congress is remiss in this crisis in our affairs—and in stabilizing our ship of state.

Major labor contracts expiring in 1959

Industry and companies	Union	Expiration date	Number of employees
Aircraft:			
Boeing (Washington, Florida)	Machinists	May [1]	37,800
Boeing (Kansas)	do	July [1]	15,000

Dan River	United Textile Workers	May	9,000
American Viscose	do	June	11,000

[1] Contract does not expire this year but can be reopened for wage demands.

THE PRESIDENT'S PROPOSALS FOR LABOR-MANAGEMENT LEGISLATION

1. All unions to file detailed reports with the Department of Labor, to furnish information on their financial operations to their members and such reports to be open to the public.

2. All unions to file with the Labor Department copies of their constitutions, bylaws, and procedures.

3. All unions to be required to keep proper records which are open for examination by Government and union members.

4. Unions and employers to report any payments, transactions or investments which create conflicts of interests or interfere with statutory rights of members and employees.

5. To require that union officers administer union funds and property solely for the benefit of the union members and to make this duty enforceable in any court in a suit for an accounting by the union or by members.

6. Unions to observe minimum standards for election of officers, including periodic elections, secret ballot, the right of any member to run for office and a ban on use of union or employer funds to promote candidates for union office.

7. Union to observe minimum standards in supervision and control of subordinate bodies; such control to be limited to correcting corruption or disregard of democratic procedures.

8. The administration of this legislation to be vested in the Secretary of Labor, with appropriate and adequate authority to compel compliance.

9. Criminal penalties for willful violation of the act, concealment or destruction of records, bribery between employers and employee representatives and embezzlement of union funds.

10. Present remedies under State or Federal law to be preserved for union members.

11. To amend the secondary boycott provisions of the National Labor Relations Act, so as to cover direct coercion of employers to cease doing business with other persons; and inducement of individual employees to refuse to perform services with the object of forcing their employers to stop doing business with others.

12. To make it illegal for a union, by picketing, to coerce an employer to recognize it as bargaining agent, where the employer has recognized another labor organization in accordance with law, or where a representation election has been conducted within the last 12 months or where it cannot be demonstrated that there is sufficient interest on the part of employees in being represented by the picketing unions.

13. To authorize the National Labor Relations Board to decline to take cases where the effect on commerce is insubstantial and to permit State agencies to act in these cases.

14. To eliminate the prohibition barring certain strikers from voting in representation elections, leaving their voting eligibility to the National Labor Relations Board for determination.

15. To authorize the Board under certain conditions to certify building and construction trades unions as bargaining agents without an election.

16. To allow the Board to speed up representation elections without prior hearings, where no substantial objection is made.

17. To extend the non-Communist affidavit to employers as well as unions.

18. To make clear that parties to a collective bargaining agreement need not negotiate during the life of the agreement, unless the agreement so provides.

19. To authorize the President to designate an Acting General Counsel of the Board when vacancies occur.

20. To require that the Board be bipartisan in composition by providing that not more than three members be of the same political party.

[From Newsweek, Feb. 9, 1959]

WHO MAKES INFLATION?

(By Henry Hazlitt)

The Economic Report of the President reflects the same schizophrenic attitude toward spending versus economy, inflation versus dollar integrity, as his budget message. At one point he declares: "An indispensable condition for achieving vigorous and continuing economic growth is firm confidence that the value of the dollar will be reasonably stable in the years ahead." But most of the report endorses policies that would clearly undermine this confidence.

Describing governmental actions that helped "to bring about a prompt and sound recovery" he says: "Monetary and credit policies were employed vigorously to assure ample supplies of credit. Legislation was enacted to lengthen temporarily the period of entitlement to unemployment benefits. Numerous actions were taken to spur building activity. Steps were taken to accelerate Federal construction projects already underway and to speed up projects supported by Federal financial assistance. Activities under a number of Federal credit programs, in addition to those in the housing field, helped counter the recession. And the acceleration of defense procurement * * * exerted an expansive effect."

WHO PRINTS MONEY?

Every one of these policies was inflationary. All of them meant pouring new money and credit into the system, increasing the supply of dollars, reducing their individual purchasing power. In a later part of the report it is admitted that the Federal Reserve policies enabled the commercial banks "to add nearly $10 billion in loans and investments to their assets," largely by "additions to their holdings of U.S. Government securities." This in turn added $13.6 billion to the total money supply (including inflated time deposits), and helped to boost living costs.

Yet the President's report blurs responsibility for inflation and tries to shift it on to consumers, business, and labor. The individual consumer is advised to shop carefully for price and quality—as if he couldn't be depended upon to do that without urging. The Government in effect is saying to consumers: "Here are $10 billion or more additional paper dollars; but don't be reckless enough to spend them, because it will make you responsible for raising prices." Businessmen are told they must wage a ceaseless war against costs—as if self-interest and self-preservation did not insure that. But nothing is said about Federal labor laws (including compulsory exclusive bargaining) which render the employer all but impotent in resisting excessive demands. And leaders of labor unions (after having been granted monopolistic bargaining powers by law) are urged not to ask as much as they can get under these conditions. This means that they would not last very long as labor leaders.

THE REAL CULPRIT

The President goes on to declare: "If the desired results cannot be achieved under our arrangements for determining wages and prices, the alternatives are either inflation, which would damage our economy and work hardships on millions of Americans, or controls, which are alien to our traditional way of life and which would be an obstacle to the Nation's economic growth and improvement." What the President seems to be saying is that it is consumers, businessmen, and labor leaders who threaten to bring inflation by lack of self-discipline and restraint, and that they may force Government controls. But the real culprit is Government. Government must stop deficit spending, stop flooding the country with more paper dollars, and stop encouraging monopoly in the labor field while blaming our free competitive economy for rising wages and prices.

Perhaps the most important recommendation in the Economic Report is that Congress "amend the Employment Act of 1946 to make reasonable price stability an explicit goal of Federal economic policy, coordinate with the goals of maximum production, employment, and purchasing power now specified in that act." Well, if the mischievous Employment Act of 1946 is to be retained, this amendment on net balance would probably make it less mischievous, because the act has been constantly interpreted as a directive to inflate. But an immensely better solution would be to repeal the act altogether.

ROLE OF TELEVISION IN THE AIR AGE

Mr. GOLDWATER. Mr. President, in this anything but pacific age of aviation, radio, and television fill the air, while the pages of newspapers and magazines overflow with reports of missiles, jets, rockets, and all the other assorted, terrifying hardware of pushbutton warfare.

The public is hammered incessantly by the rapidly burgeoning vocabulary of this rapidly changing aeronautical era.

All of this causes me to wonder if we are losing sight of the invaluable human element—the one element that remains constant in this state of scientific flux. So, I ask: Are the American people able to appreciate the contributions made by the men of our Nation's Air Force, who have pioneered and will always continue to blaze the way in the great conquest of sky, space, and outer space?

I am happy to say, Mr. President, that there is currently a project dedicated to our well-deserved appreciation of human deeds in aviation's miraculously short half-century of history. This project is a television film series, entitled "Flight," produced by California National Productions, a subsidiary of the National Broadcasting Co. "Flight" presents in well-documented dramas the aspirations and exploits of the men who are largely responsible for our air progress. Episodes of this brilliant series range from the days of the primitive experiments at Kitty Hawk to today's launchings at Cape Canaveral, with most of their thrilling television half-hours dramatically devoted to the heroic achievements of our military flyers in World War II and the Korean campaign.

Host and narrator for "Flight" is Gen. George C. Kenney, U.S. Air Force, retired, whose own brilliant career closely parallels the development of this country's air strength. He enlisted as an air cadet in World War I, when our military aviation was relegated to a small section of the Army's Signal Corps. In World War II, as Chief of the Allied Air Command in the Pacific, General Kenney masterminded our air offensive against Japan. He later became head of our Strategic Air Command. Although he is now retired from active military affairs, General Kenney continues to serve his country and the cause of aviation by taking part in the "Flight" project—a mission which deserves the gratitude of the American people.

The "Flight" series is being broadcast on television stations throughout the United States to ever-increasing numbers of viewers. Here in the Capital, where it is particularly important for all of us to see it, "Flight" is telecast over Station WRC–TV.

In that connection I invite the attention of my colleagues to the episode which will appear on that station on April 3. It is entitled "The Snark."

I wish to commend all those who have contributed to this splendid program's success: among them, the U.S. Air Force, the Civil Air Patrol, the Air Force Association, General Kenney, and especially California National Productions, for having had the foresight and sense of national dedication to produce such a costly television film series. I am confident that the general public's and advertiser's response will justify its efforts.

Mr. President——

The PRESIDING OFFICER. The Senator from Arizona.

RETIREMENT PAY IN THE ARMED SERVICES

Mr. GOLDWATER. Mr. President, I have one more item to present. Strangely, it touches upon a part of the remarks I have just made, in which I ask the American people if we are not losing sight of the human element in our Military Establishment, forgetting that it requires men to push buttons, forgetting that man's brain is the best computer ever devised.

Last year on this floor, acting upon proposed legislation reported from the Committee on Armed Services, in accordance with the Cordiner report, we enacted legislation which raised servicemen's pay in nearly all categories. Our action took care of most of the Cordiner report, except the important area covered by retirement pay.

Mr. President, I have introduced a bill, S. 269, which has a number of cosponsors. The Senator from Washington [Mr. JACKSON] has introduced an identical bill, with additional cosponsors. We are hopeful that the Committee on Armed Services will see fit in the near future to take up this important oversight in the legislation passed last year.

In relation to this subject, I ask unanimous consent to have printed in the body of the RECORD at this point an editorial published in the Washington Sunday Star of January 25, 1959, entitled "Rank Discrimination."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RANK DISCRIMINATION

There are gratifying indications in Congress that a highly discriminatory provision in the 1958 military pay law will be eliminated at this session. This provision, in effect, set up an "inferior" and a "preferred" retired list for pay purposes. Relegated to the inferior list were all officers who retired prior to June 1, 1958, the day the law became effective. They were limited to a retirement pay increase of 6 percent. All officers retiring after that date are on the preferred list. They are entitled to a much larger increase, based on the traditional relationship between active duty and retired list pay scales.

Among the penalized "inferior" group are many of the combat leaders of two World Wars and the Korean war. They have been cut off arbitrarily from the benefits which they justifiably had expected under a century-old formula. Yet officers retired since last June 1 and those hereafter to be retired are entitled to the full benefits of this formula (50 percent of present base pay of rank for officers with 20 years' service, 75 percent for those with 30 years' service). The unfairness of this so-called "economy" measures may be seen by the fact that a major general or rear admiral with 30 years of service who retired the day after the law became operative receives $1,884 more a year than an officer of like rank and service who had the misfortunate to retire on the previous day.

The storm of protest which has arisen among active as well as retired officers of the three services is based not only on the inequity of the plan but on fear that departure from the established formula last year may set a precedent for future congressional "economy." As the Cordiner report on armed service pay persuasively pointed out, the relationship between active duty and retired pay has been a vital force in stabilizing the military career service over many years. To abandon this relationship is to impair morale by holding over the services the threat of an unstable retirement-pay structure.

Hence, it is encouraging that nearly 30 Senators and numerous Representatives have sponsored identical bills at this session to "equalize the pay of retired members of the uniformed services." This legislation, involving amendment of the 1958 pay law, merits early passage—in the interest of a more stable and stronger Military Establishment.

ORDER OF BUSINESS

Mr. CHURCH addressed the chair.

The PRESIDING OFFICER (Mr. DOUGLAS in the chair). The Chair will inform the Senate that the previous occupant of the Chair ruled that the transaction of morning business had been concluded and that it would be necessary for Senators to ask unanimous consent to proceed to the transaction of further morning business, with the additional request that the time consumed be not charged against either side on the pending business. The Chair will recognize the Senator from Idaho [Mr. CHURCH].

Mr. HUMPHREY. Mr. President, I request on behalf of the Senator from Idaho and myself that we may speak and that the time be not charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE GENEVA CONFERENCE

Mr. CHURCH. Mr. President, on March 2, I made an address on this floor entitled, "The Geneva Conference, A Proposal for the Eleventh Hour." In it, I urged the United States to seek a ban on nuclear weapons tests in the earth's atmosphere only, within the framework of an adequate international detection and control system, should it prove impossible to reach agreement banning all types of nuclear tests. I made this proposal in the hope that it might salvage the conference now deadlocked for many weeks, and produce the ground for a treaty that would both put an end to the accumulating pollution of the air, and take the first step toward establishing international safeguards over atomic power.

I am happy to say that the reaction of the American press, or such part of it as has taken note of my proposal, has been favorable. Last week I placed in the RECORD a number of editorials from American newspapers.

This morning I should like to include in the RECORD an English reaction to the proposal, as published in the Economist, of March 14, 1959. This splendid summation of the fallout hazard as it relates to the Geneva Conference, and synopsis of current thinking in this country regarding the whole problem, is contained in an article by Mr. Brian J. Beedham, captioned "Fallout Falls In."

I ask unanimous consent that the article may appear in the RECORD following these remarks:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Economist, Mar. 14, 1959]

FALLOUT FALLS IN

WASHINGTON, D.C.—The words "eleventh hour" have been heard in Washington in the last couple of weeks not, as might be expected, in connection with Berlin—most Americans remain trustfully Micawberish about that problem—but in connection with the negotiations at Geneva for stopping tests of nuclear weapons. Those who want these talks to succeed have realized that they have reached a deadlock at the stage which is ideal for those who would be happy to see them fail. If the Americans and the British want to point an accusing finger as they walk out of the conference room, now is the best time, when the Russians are at their most mulish about giving the control organization any effective powers to police tests. Mr. Dulles, whose absence from the State Department makes liberals' hearts grow daily fonder of him, is no longer there to whisper "persevere" in one of the President's ears as the Defense Department and the Atomic Energy Commission say "desist" into the other. It was he who overruled the original reluctance of these agencies to enter into the atomic negotiations at all.

As the rumors that the administration is moving toward breaking off the talks revived this week, those who want to forestall such a decision have been rather desperately searching for new ideas to keep the negotiations going, spurred by recent suggestions that portions, at least, of the earth's surface are getting a heavier dusting of dangerous strontium 90 from fallout from tests than can be comfortably ignored. Samples of wheat gathered in Minnesota in the last 2 years have almost all contained more than half of what is usually regarded as the maximum safe amount of strontium 90 and samples from places as far apart as Germany and Chile have exceeded the permissible level. Now the Atomic Energy Commission itself has disclosed that in several American cities the strontium content of milk, which along with its products is the vehicle for three-quarters of the strontium that gets into human bones, has recently been many times above what was assumed to be the national average only 18 months ago; in North Dakota milk has contained up to a third of the maximum acceptable dose.

It is true that, as Dr. Libby of the AEC has pointed out, one meal of an excessively strontium-laden food is no cause for alarm; the maximum permitted levels are those which, if consumed regularly over a long period of years, would result in a risky concentration of strontium in a man's bones. It is also likely that the strontium which has produced the worst of these statistics is that which has fallen directly upon wheat ears or cows' fodder—and has thus had a "one-shot" contaminating effect—rather than that which has settled in the topsoil and may poison successive crops. Nevertheless, the scientists who have been critical of the AEC's complacency feel that the new data have strengthened their argument.

For one thing, since the present system of sampling for strontium content is, to put it mildly, a patchy affair, it is possible that some even more poisonous local concentrations have gone unobserved. Secondly, there are reasons for taking a closer look at the figure which is normally cited as the maximum permissible concentration. At present the custom is to fix this, by what is admittedly pure rule-of-thumb, at one-tenth of the level permitted for industrial workers exposed to hazards from radiation. A substantial number of American scientists think the permissible concentration ought to be cut by, say, a half. With two such areas of doubt, it is not surprising that some observers fear the onset of that "combination of unusual circumstances" in which, according to a report published by the AEC, "it is possible that fairly large numbers of people in some localities may accumulate strontium 90 in their bones * * * above the permissible limit for large populations." A group of scientists is now drafting a proposal to put the Public Health Service in charge of a revised—and closely monitored—code of radiation safety.

Some of those who have talked to the Russians at Geneva believe that it may yet be possible to coax them into signing a treaty to halt all atomic tests. One of the ideas being circulated in Washington is to offer to increase the number of neutral representatives on the control commission in the hope that the Russians will withdraw their demand for a veto; another is to set an annual ration of on-site inspections so as to lull Soviet fears that roving control teams might indulge in indiscriminate prying. This approach assumes that the technical problems raised by the American underground tests last autumn are not as great as the administration has suggested.

These tests, by revealing that underground nuclear explosions produced smaller seismic disturbances than expected, made the skeptics fear that only the bigger bangs—from 15 to 20 kilotons upwards—could be distinguished from earthquakes without recourse to extensive on-site inspection. But new evidence presented to Senator HUMPHREY'S disarmament subcommittee last

month suggests that the problem is not insoluble. By measuring surface waves, for instance, and burying seismographs in holes to reduce the "background noise," it may become easier to distinguish between man-made and natural concussions. If the number of suspicious events calling for on-site inspection is reduced enough, the Russians may be persuaded, some think, to put up with patrols in principle.

Quite possibly, however, they may never accept mobile control teams. It is generally assumed in Washington that the suggestion which Mr. Macmillan put to Mr. Khrushchev in Moscow involved the "threshhold" concept; this, by legalizing underground tests below a certain size, dodges the worst of the problem of on-site inspection. As Mr. Eisenhower has said, there are technical snags in this too. It is difficult for the tester to forecast exactly what the yield of his explosion will be, so that he may violate the "threshold" by accident. The size of the signal recorded on the seismographs also varies according to the kind of rock in which the explosion takes place. The more radical suggestion made last week by young Senator CHURCH of Idaho avoids all these complexities. He would simply confine the ban on tests to explosions in the earth's atmosphere, which could be adequately monitored from fixed observation posts.

The Russians may reply that, for a treaty limited purely to tests in the atmosphere, a gentleman's agreement supervised from outside their borders will be enough. If they do not, this proposal has an attractive simplicity. It would stop the contamination of the air. It would provide the rudiments of an international control system, even if on-site inspection would not be called for. Since underground tests (which have no fallout of radiation) would continue to be free for all, the Atomic Energy Commission would be able to go on with its experiments with "clean" bombs and explosions for peaceful purposes, such as obtaining petroleum from oil shale. The Defense Department would be less happy, since it is more interested in measuring the effect of explosions and in fitting a bigger bang into strategic warheads, both of which seem to require tests above ground. But, if the President decides that the world cannot afford to see the last glimmer of negotiation at Geneva snuffed out, some of the generals—both American and Russian—will have to be disappointed. If it is impossible to agree on full inspection, Senator CHURCH's intelligent idea deserves the State Department's study.

FAMINE IN HAITI AND THE SCHOOL-LUNCH PROGRAM IN THE DISTRICT OF COLUMBIA

Mr. HUMPHREY. Mr. President. in this morning's papers there appeared a most distressing report on a famine in Haiti which is affecting some 45,000 men, women, and children. This present food crisis has been caused by a drought which has lasted for more than a year. A French priest reports that things have become so desperate that the people have lost hope. Even if the rains come, they ask, who has any seed left with which to plant? Who has any animals left to sell to get money to buy seed?

A Baptist minister reports starvation conditions among his parishioners—"potbellied children with spidery legs, sagging skin, and haggard eyes."

Right here in the District of Columbia we find people living lives of terrible poverty. It is estimated that some 7,000 children in our grade schools have inadequate diets. Yet, we have no school-lunch program for such children. Washington citizens have become so alarmed and so frustrated over the refusal of the Congress to act that they have undertaken a private fundraising campaign to help ease the hunger of schoolchildren in some of the lowest income areas of the city.

Mr. President, something is seriously wrong when we have so much food in our land that it is pouring out of our ears, and yet children right here in the District of Columbia are going hungry and famine haunts so many parts of the world.

We cannot be complacent in the face of such tragedy. We have a moral obligation to share our great abundance with the less fortunate.

Some people have called our food abundance a curse. To me, Mr. President, it seems rather a blessing, and it should be treated as a blessing. The present Holy Week is a most appropriate time to reflect upon the words of our Lord that we feed the hungry.

Let us put to full use our surplus foods to aid those both here and abroad who are living on inadequate diets. Public Law 480 is an example of an intelligent and imaginative way in which our huge food surpluses may be used. This program should be expanded and it will be expanded.

I understand that the problem in Haiti is that the food can be put ashore at the port cities, but that there is no transportation available to take the food from the ports to the hinterland, where the food is needed.

Mr. President, there are enough trucks in the surplus depots of the U.S. Army to move this food across Haiti back and forth 10 times. It is about time for the Government of the United States to extend its helping hand to voluntary organizations, in this case the Catholic Welfare Agency, who are attempting to help feed the hungry people of Haiti. I ask the Secretary of Defense to get in touch with the Secretary of Agriculture. There are still telephone lines operating in the District, tapped or untapped. I suggest that the Secretary of Defense call on the Secretary of Agriculture and inform him that the facilities for moving the food supplies will be made available to the organizations which are taking care of it.

In order to meet crises such as that which has arisen in Haiti, I have suggested that we demothball a number of U.S. Navy ships and form them into a task force for peace. I have called this a white fleet which would carry food and supplies to disaster-stricken areas in Asia and Africa. It could be sent to the scenes of famine, earthquake, floods, and epidemics. Such a fleet would serve as a dramatic symbol of our desire to aid in alleviating suffering and deprivation.

This is but one proposal as to how we may more effectively make use of our food surpluses and great wealth in a spirit of brotherhood and to aid in building a better world. I am confident that the Congress will act with intelligence, generosity and imagination to help bridge that gap between poverty and wealth.

I ask unanimous consent that the article on famine in Haiti which appeared in the Washington Post of March 23 be inserted at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 23, 1959]

FORTY-FIVE THOUSAND AFFECTED—FAMINE KILLS 200 IN NORTHERN HAITI AFTER MORE THAN YEAR OF LITTLE RAIN

(By Bernard Diederich)

JEAN RABEL, HAITI, March 22.—Famine is affecting some 45,000 people in this and 2 adjoining districts along the rim of northwest Haiti.

A member of the Catholic Youth Organization, which conducted a house-to-house survey, estimated that famine has caused 200 deaths in the coastal region reaching from Anse Rouge through Baie de Henne to Jean Rabel and in the interior mountains.

Famine is no stranger here. The Haitian farmer of the northwest ekes out a living on an average of a half-acre plot of land. During the dry season it is not uncommon for some areas to be reduced to a diet of green mangoes.

But this is no ordinary dry spell. Little rain has fallen for more than a year. A slight shower wet the ground in December, and farmers hastily scattered seed in their gardens. But it dried up.

The Reverend Marcel Cornet of the Roman Catholic parish here says the most discouraging sign is that people have lost hope. Even if rain comes, who has any seed left? Who has any animals left to sell to get money to buy seed?

The French priest pointed to one family in which four persons died of typhoid. Dispensaries in the area are short of medicines.

Four miles back in the hills from Jean Rabel is the small tin church of the Reverend Wallace Turnbull, the Baptist mission of Poirier.

Pastor Turnbull, who came to Haiti more than a decade ago from Los Angeles, reported starvation conditions when he discovered among his own parishioners potbellied children with spidery legs, sagging skin and haggard eyes.

The Catholic Welfare Organization and the Protestant World Service Organization handle U.S. Government emergency aid. They have 6,000 tons of foodstuffs to distribute in Haiti this year.

The Haiti Government is supposed to pay transportation costs from the port of entry. But appeals from Jean Rabel, isolated by poor or nonexistent roads, appear to have been lost in redtape.

Mr. HUMPHREY. Mr. President, if there is a lack of legal authority for our Government to help feed the needy children in the District of Columbia, Congress, as the city council of the District of Columbia, needs only the recommendation of the Commissioners or the executive branch of the Government to enable it to take action.

If there is a lack of legal authority to aid in the feeding of the people of Haiti, who are only a short distance from the shoreline of the United States, I suggest that the executive branch of the Government send a recommendation to Congress to remedy the situation. Action will take place. It certainly does not look very good to see headlines about a famine in the Caribbean area, in the area of the Americas, when there is $8½ billion worth of food in surplus storage and when, I venture to say, there are several thousand surplus trucks and

moving vans available for the distribution of the food. In this instance the voluntary church organizations are providing the manpower free of charge to take care of it. Their problem is transportation and supplies.

HUMPHREY ON COLLEGE TEACHING

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the junior Senator from Minnesota [Mr. McCARTHY] be permitted to proceed for 1 minute and that the time be not charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an address on the subject "College Teaching in Today's World," delivered by the senior Senator from Minnesota [Mr. HUMPHREY] on March 3, 1959, at the 14th National Conference on Higher Education, held in Chicago, and sponsored by the Association for Higher Education.

I share my colleague's conviction in the importance of education and on the need to resist pressures seeking to weaken our tradition of liberal education in favor of purely scientific and technological training. Of particular interest is the Senator's proposal that we develop an "education for peace" program to take its place beside the "food for peace" and the "health for peace" programs already initiated as a positive and practical effort in American foreign policy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COLLEGE TEACHING IN TODAY'S WORLD

(Address delivered at the banquet session of the 14th National Conference on Higher Education, sponsored by the Association for Higher Education, Chicago, March 3, 1959, by the Honorable HUBERT H. HUMPHREY, U.S. Senator from Minnesota)

Clearly one of the mainstreams of Western thought—cradled in the life of the great Western colleges and universities—has been the principle of balance, of equilibrium, of symmetry.

How vital it is today that this Aristotelian principle should shape American planning and policy.

Yet how far from balanced, how free from distortion many of our national policies are today.

There is, for example, a gross underemphasis on the need for expanded national productivity, particularly in the public-service area.

Domestically, we are currently failing to assign a sufficiently high priority to housing, to school and hospital construction, to basic research, to education in general.

There is a striking dependence today on short-run, makeshift solutions, an unwillingness to program boldly ahead, and a fixed idea that, while corporate planning is somehow good, government programing is invariably bad.

In our foreign policy we have developed a dangerously distorted pattern—a general overemphasis on the importance of preserving the status quo, a habit of overreaction to moves of the Soviet bloc, and in recent years a failure to institute broad but flexible programs to deal with the infinitely complex problems of a world in the process of rapid and often violent change.

A crisis mentality has developed a pattern of drift, crisis, and drift again. Each flareup is met by sudden hasty improvisation, followed almost invariably by an almost total relapse into drift again.

Throughout the vast emergent areas of Asia and Africa, we have too often sought only defensive military alliances. We have, thereby, missed sweeping opportunities to win the cold war by taking the struggle to the higher plane on which we have greatest chance of success—the fight against hunger and disease, the struggle for knowledge and human dignity.

We seem forever on the defensive, forever standing firm, forever reacting to a new Soviet-created crisis.

Standing on the defensive, we have failed to come to grips with the underlying economic and social problems of the world on which communism feeds and grows.

While the emergent peoples of the world are vitally interested in the great East-West struggle, they are primarily engrossed in their own struggle to find a way up—at almost any cost—from the mire of famine and disease, from the filth and rags of native quarters, from degrading ignorance, from their outcaste, almost subhuman status assigned to them by a civilization which stumbled into the industrial revolution two or three centuries before they did.

There are three words—"people, progress, and peace"—that belong to the lexicon of democracy, and that uniquely represent the democratic tradition. They are powerful words—so important and so powerful that the enemies of freedom have attempted to take them to their bosoms—literally to steal them away.

There is a plethora of Communist peoples republics.

The Communists are determined to demonstrate to the new and rising nations that communism means economic and social progress.

And we have permitted the Communists very nearly to appropirate the word "peace"—to pose as the peacemakers and to tag us with the label of "warmongers."

Like it or not, the Communists have been "getting away with" ideological piracy. They have been quicker than some of our own leaders to recognize the real battleground of the world—the struggle for men's minds—and swifter to understand the surging drives that are toppling kings and emperors and colonialist powers throughout Asia and Africa.

But we do not know our own strength. At least we have failed to mobilize it.

We urgently need to design and launch a broad-gaged and affirmative foreign policy on the natural strengths of our Nation—yes, to harness to the plow of foreign policy our tremendous industrial capacity, our dominant capital, our technical knowledge, our agricultural abundance, our wealth of trained educators, agriculturists, administrators, technicians, doctors, and students.

Why have we not done it?

I would suggest that the cause may be found in part in the lack of status of the intellectual in our midst, and in the habit which a nation of producers has developed of judging the worth of a man or of an idea in terms of annual salary or dollar cost.

There appears today to be too narrow a circle from which the political leadership of the country tends to draw its advice and ideas.

Valuable as may be the counsel of financiers and manufacturers and military officers—and the experience of these groups of men is useful and valuable—the Government's fundamental policy decisions might well be predicated upon a wider base. I am convinced that the counsel of men and women broadly representative of agriculture, of labor, of the press, of the scientific community, of the legal and medical professions, of the clergy, of the teaching profession—yes, and of the arts—should be sought out and given intense consideration by the responsible political leaders of the Nation.

Firmer, stronger, more freely flowing lines of communication must be set up to channel the ideas and enthusiasms of intellectual America into the Halls of Congress and into the mind and heart of each man who occupies the Office of the Presidency.

I am not one of those who believe—nor do I think that anyone in this audience believes—that all the problems of the world can be solved by education.

But I am deeply impressed with the value and the power of education—its value as an end in itself, for its key role in the freeing of man's spirit and the enrichment of his life—and its power to shape the destinies of nations.

There is increased public attention to education today—reflected in its most dramatic form in the passage by the Congress of the National Defense Education Act last year. Congress in this act explicitly recognized the worth and the importance of a broad-based educational system—and did not plunge the country into a lopsided effort in behalf of scientific and technical training alone.

We specifically encouraged young people to go into teaching, through a provision permitting the writing off of a portion of the federally guaranteed college student loan. We singled out language training for special emphasis, because of the really appalling gaps in our language abilities. But we made a conscious effort to write legislation which would preserve the essentially balanced and symmetrical character of American education.

Because I am a former college teacher myself, and because I have consciously made an effort to keep open the lines of communication between the community of scholars and the political leadership of the Nation, perhaps you will permit me to make one or two suggestions to you, my respected friends in the colleges and universities.

I would like to put before the House a few ideas for feeding some of the brainpower of the American educational system into the machinery of American foreign policy.

One suggestion which I respectfully advance is that more of our American colleges and universities should encourage searching and frankest discussion and debate of current political, economic, and social problems.

While there is a role for the colleges to play as "islands of contemplation," there is a concurrent responsibility to prepare the individual for the day-to-day participation that the democratic process requires.

Secondly, I would urge you to resist the demands that we cut down on our efforts to provide liberal education, in favor of more training of scientists and engineers. To be sure, we need more scientists and engineers. But I am of the opinion that we can afford an educational establishment great enough to train all the scientists and engineers we can conceivably use, without cutting back on the vital effort toward liberal education. They are not mutually exclusive at all.

I have only one suggestion to make insofar as the college curriculum is concerned. There is a need, I feel as a man in public life, for a much clearer understanding on the part of college graduates of the mainsprings of national power and the motivations of national conduct. Too often a student can emerge from a series of courses in economics and history and government without a real understanding of their interrelationship, without, making the kind of synthesis that will prepare him to face and help to solve the problems of his society and his nation.

These are modest suggestions, and humbly put. For I have profound respect for the character and the achievements of American higher education. Americans take great pride in the vigor, the stability, and the integrity of our colleges and universities.

My principal question tonight is not how we can improve our American educational system—but rather what we can do to more fully utilize the great example and the great strength of American education in a more constructive and affirmative foreign policy.

The work of peace—as well as the words of peace—are imperative in American foreign policy.

Yes, we must broaden and intensify the existing programs for the use and distribution of our vast food abundance. The generous and planned use of food and fiber has already made a historic contribution to the social and economic well-being of many nations. This is the national effort I call food for peace. It can be the foundation for a series of works of peace.

A second and parallel effort is in preparation—health for peace. I have joined with Senator LISTER HILL, of Alabama, in proposing an International Health and Medical Research Act. We are hoping to mobilize the medical and scientific resources of America behind a massive assault on disease, pestilence, malnutrition and pain.

I invite your consideration tonight of a third major work of peace—what I shall call an education-for-peace program.

If education has been one of our cherished American ideals, it is also one of the deepest hopes and needs of people everywhere.

In Sicily there are towns where the farmers after a long day in the fields will go to school for three hours a night, five nights a week, to try to learn to read and write. In India, young children, lacking even paper and pencils, squat for hours in a makeshift schoolroom and never take their eager eyes off the teachers. In Haiti parents have literally sold the fillings out of their teeth to get money for their children to go to school.

Education is a powerful personal ideal to people in the underdeveloped countries. It is also indispensable to their economic progress and national independence. At one time, it was the rather simple belief that the reason some countries were poor and laggard was simply that they lacked necessary capital and know-how. But we are coming to understand that money and techniques are not enough.

The one resource most of the needy countries have in ample quantity is manpower. But it is untrained, unskilled manpower. In fact, unless the have-not countries can develop the men needed to make effective use of the funds and knowledge provided by the more developed countries, much of the aid will inevitably be wasted.

The Communist leadership has recognized this interrelationship very quickly and has taken vigorous steps accordingly. The achievements of Soviet science have a prodigious educational effort behind them. Throughout the Communist nations new universities are cropping up, new buildings, new laboratories, and very large scholarship programs for talented students. In the student dormitories throughout the Sino-Soviet bloc, thousands, in fact tens of thousands, of university students are studying—from families and from remote towns from which until a few years ago no one had ever gone to a university.

It may be that the Communist leaders are creating a force of freedom which may some day tear apart the Communist system by educating masses of people. But for the present they are winning the loyalty and deeply felt gratitude of students and parents.

In too many of the countries of the free world educational systems are impoverished and stagnant. It was in the great countries of the West that the university idea was born and where a great university tradition has been built over the centuries. But some of these schools today are suffering from too much history. They are burdened with traditionalism. In some cases they are still living and thinking in the seventeenth or eighteenth century.

In the newly independent countries the problem is different. There, without a highly developed educational system and lacking in a scientific and academic tradition, they are often building from scratch. Where they do have universities, they are in too many cases poor imitations of the most antiquated models from Western Europe. Their graduates are frequently mistrained in terms of the needs of the country—the result, large numbers of unemployed and unemployable university graduates forming a core of disgruntled, resentful intellectuals.

In both old and new free world countries when it come time to divide up the budget, the Ministry of Education is too frequently put at the end of the line.

To cite just one case in point. In Greece, a country with some seven million people, the Government offers about 350 scholarships a year to excellent graduates of secondary schools to go on to the university. But across the border in Communist Yugoslavia with roughly double the Greek population, that Government offers more than 30,000 scholarships a year for students to go to the university.

It is only a question of time before that educational gap will begin to create an economic, military, and political power gap.

We are, of course, not completely ignoring this educational gap. As you know, on a limited scale the United States has been giving some help to education and educational exchanges internationally. The Fulbright program has been a great act of creative statesmanship. It has brought our academic community into closer contact with the world of foreign scholarship than ever before. Through our atomic energy program we are training foreign scientists in our research institutions. In our economic development programs we are bringing foreign technicians here every year for training. The State Department is bringing over leaders in many fields. And, of course, our great private foundations have been giving assistance to foreign educational institutions and have been assisting educational and scientific exchange for many years. All these efforts are to be applauded.

But all these efforts together fall far short of the need and the opportunity. Their first defect is that they are too small in scale.

Their second defect is that they are focused on only narrow details of the total problem of free world educational development—namely, exchange activity, technical and vocational training. They have not emphasized the general strengthening and expansion of the foreign educational systems themselves—the indigenous schools and universities.

The third defect is that what we have done has been undertaken in a spasmodic, left-handed, and half-hearted manner totally lacking in drama, and impact.

I propose that we launch a broad program of world educational development—a plan of education for peace.

The first step would be for the Congress of the United States to declare to the free world that we share their beliefs in the values of education and that we are ready to work with them in building up their own educational systems to train their own people. We should declare our readiness to support a 10-year, $3 billion effort for worldwide development of democratic education—on condition only that our friends bring to us sound plans for self-help and mutual help.

We do not propose to interfere in the control or direction of their educational systems; they should and must direct their own patterns of educational growth.

The second step should be for us to draw together the many loose ends and separate efforts we are now supporting into one agency in Washington. This body—perhaps in the form of a quasi-independent international educational development foundation—would be responsible for leadership and focus in our international educational efforts. It is important that such an agency stand on its own feet—not as a subordinate part of a propaganda program, nor of a military program, nor even of an economic development program. In its long-term potentiality for American prosperity and security, and for the strength and stability of free nations everywhere, such an education effort would not be second to any of the other assistance programs we are supporting. It should therefore be not only visible but prominent among our international agencies. But what about the money. Where are funds of this magnitude to be found? If it were necessary to propose the appropriation of dollars to this effort, I would still recommend this step, because I am convinced of the importance of education for peace and progress.

But this may not be necessary. As a result of the major programs of assistance in food and materials which the United States has given to friendly nations in the past, we now own considerable balances of foreign currencies abroad. The present total is in the neighborhood of $2 billion, and the total is increasing as our food shipments and other kinds of help continue. By agreement with the recipient countries, these funds can be used only for mutually agreed upon development projects. My recommendation is that we earmark a significant portion of these funds specifically for educational development.

In addition, we now have made several billion dollars worth of loans to allied countries which are repayable in foreign currencies. I recommend that we also earmark a portion of these loan repayments for educational purposes. Such funds may not alone be enough—for there are several countries, particularly in Africa, where such funds are not available. In those cases, consideration should be given to the appropriation of additional dollar funds.

Now it is obvious that all the educational problems in the world cannot be shouldered by the United States. We have huge educational needs of our own, and these should and must come first. The development of foreign educational systems must be a primary responsibility of each country.

But think of the great gain to the United States and to all mankind if we were to become clearly identified in the eyes of the world with physical symbols of friendship and progress like schools, universities, libraries, and laboratories.

The program I propose would involve grants for laboratories and facilities, for the endowment of professorships, institutes, and research projects. Scholarships and fellowships would be granted after annual competitions in every region, every locality of every recipient country. It is difficult to imagine a more penetrating and meaningful way to identify Americans with individual opportunity, social democracy, and international fraternity.

I ask you for your consideration of this proposal. If you will give it your thoughtful criticism and your intelligent support, we may be able to help our country take another long step toward a more balanced and vital foreign policy and eventually a stable, just, and serene peace.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Alabama [Mr. SPARKMAN] be permitted to proceed for such time as he may need, and that the time be not charged to either side.

The PRESIDING OFFICER (Mr. HART in the chair). Without objection, it is so ordered.

FOREIGN PURCHASE OF GENERATING EQUIPMENT FOR TENNESSEE VALLEY AUTHORITY

Mr. SPARKMAN. Mr. President, recently the Tennessee Valley Authority has been criticized for the purchase of some generating equipment outside the United States. Not long ago the Chelsea, Mich., Standard attacked the TVA because of this purchase. The attack was answered by Gen. Herbert D. Vogel, Chairman of the Board of the Tennessee Valley Authority. I ask unanimous consent that the article, published in the Chelsea, Mich., Standard of January 22, 1959, together with the answer by General Vogel, be printed in the RECORD.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

BY CHAIRMAN HERBERT D. VOGEL: RINGING DEFENSE OF TVA IS ANSWER TO MICHIGAN CHARGE

An attack on the Tennessee Valley Authority by the editor of the Chelsea (Mich.) Standard recently met with a ringing defense of the Authority from the pen of Gen. Herbert D. Vogel, Chairman of the TVA Board, which deserves to be read by every American citizen.

Permission to reproduce the correspondence has been granted the Tri-Cities Daily and the Florence Times by General Vogel.

The anti-TVA editorial and General Vogel's answer follow in full:

The Chelsea Standard, Chelsea, Mich., January 22, 1959:

"TVA PURCHASING POLICY INVITES DISASTER IF ALLOWED TO CONTINUE

"TVA, our tax-fed, electric power octupus, has just bough three new 54,000 kilowatt hydroelectric generators at a cost of $2,637,135 U.S. tax dollars—dollars which were bundled up and shipped to a foreign manufacturer in Baden, Switzerland.

"Three American firms who bid on the generator purchase were left out in the cold simply because they pay their workers too well to be able to compete with overseas producers for the business of their own Government.

"If, however, the TVA directors had elected to follow the spirit of the 'Buy American' set—rather than the destructive interpretations imposed by executive order and the council of foreign economic policy—the generator contract would have gone to Allis-Chalmers Manufacturing Co., of Milwaukee, Wis., the lowest U.S. bidder.

"That Allis-Chalmers and Milwaukee needed this business is apparent from the fact that the firm had laid off some 2,300 employees, who might have been restored to the payrolls in the final weeks before Christmas. That these workers felt entitled to consideration is understandable since, in the 25 years of TVA operation, they and their fellow citizens of Wisconsin had contributed nearly $26 million of their tax money to this Federal impediment to free enterprise.

"Both the company and the unions representing these unemployed workers spoke up promptly (even though unsuccessfully) in their behalf: 'We thought,' said Allis-Chalmers, 'that the people of Milwaukee and the citizens of the United States should be aware of what was happening. We felt they had a right to know how their tax money was being used abroad and by so doing, taking work away from our American wage earners * * *. It is quite evident that no American firm can compete in the heavy electrical equipment market with foreign bidders whose labor costs are one-third those in the United States.'

"Union leaders demanded that the TVA directors be fired for being 'calloused and indifferent to the plight of unemployed Milwaukee workers,' and protested TVA's failure to give Congress time to investigate before awarding the contract.

"But nobody heard—any more than they heard the ranting of John L. Lewis against TVA in 1954, when he charged that body with abusing its economic power in purchasing millions of tons of coal 'at starvation prices' and in utter disregard of 'safety standards and health conditions.'

"It is high time that the people, whose authority ranks even that of TVA, demand reversal of a Federal policy that can only destroy one American industry after another—and ultimately, the economic system that is the taproot of national strength and independence."

General Vogel's answer to charges, January 26, 1959:

"Mr. WALTER P. LEONARD,
"*Editor and Publisher,*
"*The Chelsea Standard,*
"*Chelsea, Mich.*

"DEAR MR. LEONARD: I have just received and read my copy of the Chelsea Standard dated January 22, 1959, containing an editorial entitled 'TVA Purchasing Policy Invites Disaster if Allowed To Continue.' Since I am both the Chairman of the Board of TVA and a native of Chelsea, I feel that you deserve a personal answer to that editorial.

"The best way to proceed, I think, is by discussing your editorial paragraph by paragraph, starting with your reference to 'TVA, our tax-fed electric-power octopus.' TVA was indeed built with dollars from the American Government, whether from taxes or borrowings—more than 2 billion of them. Some $1.4 billion have been invested in power, of which $250 million has been offset by payments to the Treasury and bond redemptions from power revenues. The difference between $1.4 and $2 billion has paid for developing the Tennessee River for navigation and flood control and for developing new and more efficient types of fertilizers, some of which are being used on Michigan farms. The improvements for navigation and flood control are similar to those which have been effected in every part of the country.

"In the Nation as a whole we have spent a total of about 17 billion dollars since 1820 in improving our rivers and harbors. These improvements, stretching from east coast to west and from Canada to Mexico, have formed the basis for the development of all our commerce and industry. For the 17 billion dollars I have mentioned, we, as a Nation, built the Panama Canal, many of the great hydro power installations of the West and Northwest, flood control projects for hundreds of cities, including not only small localities but also industrial areas such as Pittsburgh, Dallas, and Los Angeles, together with adjacent farm lands. The Mississippi, Ohio, Allegheny, Monongahela, and dozens of other rivers have not only been brought under control but have also been made navigable—in many cases by locks and dams—to serve the needs of a great and ever-growing national economy. I could go on and on about this, but I think a little reflection on your part will convince you that the 17 billions spent on river and harbor development (which, incidentally, includes all the harbors of the Great Lakes and the locks at the Soo) have yielded returns far in excess of costs. Compare them, if you will, the 17 billions spent since 1820—the bases of our commerce and industry—with the current national budget of 77 billions. Should any American begrudge this?

"But you were talking primarily about power, and I have told you that 1.4 billions of dollars from the Federal Treasury have been expended on the TVA power system for the building of hydro and steam plants and for transmission lines to distributors. TVA, I might add here, is only a producer and wholesaler of electric power. It sells directly to only a few large industries and Government installations, including the Atomic Energy Commission. Individuals in communities and on farms are supplied by 150 organized distributors. At this point I should add further that 50 percent of all power produced by TVA is sold to AEC and other defense installations at prices that result in many millions of dollars saved the taxpayers annually.

"But getting back to the 'tax-fed' idea—the money invested in TVA by appropriations is being repaid at the average rate of 2½ percent per year so that in 40 years from the date each element has gone into service the Government will be fully repaid. We are considerably ahead on those payments.

"Out of our earnings, which average about 4 percent annually of the basic investment, we pay all the costs of maintenance and operation and of depreciation. We pay to States and counties a sum in lieu of taxes which amounts to 5 percent of gross sales in those respective areas, except sales to the Federal Government.

"For the past 5 years we have received no appropriations from Congress, and our construction of new facilities has been from earnings. This is the kind of money we are using to buy the generators that Allis-Chalmers would like to sell—not tax dollars at all.

"You may not have heard, but we have been trying desperately ever since I have been with TVA, which is 4 years, to get authority from Congress to self-finance ourselves by the sale of revenue bonds. These bonds would be obligations against power revenues and would not be backed by credit of the United States, so would not be reflected in the national debt. We would pay interest at going rates on the U.S. investment and would continue to pay off that investment. When paid off, TVA would still remain the property of the United States. Not really a bad deal for the people of the country when you stop to think about it.

"Now as to the word 'octopus' which seems to imply a reaching out for new territory, all I can say on that is that for the past 14 years TVA has not expanded nor do we seek to expand now into new territory. We are growing vertically though at the rate of about 12 percent a year, a similar growth is taking place everywhere. We have to build new generating plants just to meet the growing needs of a region which is vital to the economy and defense of the Nation as a whole.

"There is a lot more I could tell you about TVA, but maybe I can do that by including a brochure on our 25th anniversary and copies of a couple of speeches I made recently.

"What you want to hear about is why we have bought generators from Switzerland instead of from Milwaukee. Through the years we have bought many millions of dollars worth of equipment from Allis-Chalmers, General Electric, Westinghouse, and others so that the case in point represents but a tiny percent of our total purchases. Incidentally, TVA has spent $64 million in Wisconsin, the home State of Allis-Chalmers, and more than $22 million in Michigan. Last year, interestingly, Allis-Chalmers reported huge sales to foreign countries.

"The Buy American Act, as implemented by Executive order, requires that purchases be made from domestic concerns when their bids are within 6 percent of foreign bids, including excise duties and transportation. A recent amendment to the order increased the differential to 12 percent in labor-distressed areas. The bids as received were $4.2 million from Allis-Chalmers (the American low bidder) as against $2.6 million from Brown Boveri. Furthermore, the Allis-Chalmers bid provided for escalation upward which the Brown Boveri bid did not. Also the Brown Boveri bid included all transportation charges and duties. The Federal Government collects the latter.

"Now, with a $1.6 million difference—and perhaps more—between the bids, do you think that the TVA Board could make a decision to award to Allis-Chalmers? I have always felt that I may throw away my own money as I please, but other people's money is a different thing. Whether that money comes from taxpayers or from electrical consumers makes no difference. It is still other people's money, and it is my job to buy as much with it as may be possible.

"I presume you got the information in your editorial from Allis-Chalmers, and no doubt they wanted the business. It would seem to me, however, that they are indulging in doubtful business practices in attacking a good customer, and certainly it is not one designed to produce the best customer relationship.

"Some part of the difference in bids between Allis-Chalmers and Brown Boveri is, no doubt, the result of differences paid to labor. Allis-Chalmers would have you think that it is all the result of the labor differential, but that is not true. Even if it were, however, American industry has a responsibility of resisting labor increases and of devising better engineering methods to offset the increased costs.

"We are moving more and more into the field of international competition, and there is an increasing challenge to American industry. The problem cannot be solved by subsidizing industry or by industry's simply passing on increased costs to the consumer. That is the inevitable pathway to inflation.

"It is true that union leaders—specifically the boilermakers' union—sent a long telegram to a number of Senators demanding that 'TVA directors be fired.' That telegram was based on representations made by Allis-Chalmers. Later we received a letter from the president of the union, copies of which were sent to all who had received the telegram, and in that letter it was stated that the telegram had been sent without knowledge of all the facts. In view of information later received, the union requested that its objections be withdrawn.

"Now let me comment on your reference to John L. Lewis and the coal people. TVA is the largest power utility in the United States and the largest single buyer of coal. We buy all our coal by competitive bidding. and we try to keep prices down. If we did not act conscionably on this, I think you can see what the results would be all over the country. As we let coal prices soar, prices everywhere would go up and the electric utility supplying you would pay more. Now the price of power is directly related to the price of coal because it takes about three-fourths pound of coal in a modern plant to produce a kilowatt-hour of electricity. If we acted carelessly with respect to coal purchases, the cost of your power, even in Michigan, could go up and you yourself would be forced to write a larger check every month.

"The coal producers and John L. Lewis have really been pressing in direction of getting TVA to relax its standards and even indulge in welfare buying to aid particular regions. I cannot subscribe to that, and I know the good people of Chelsea could not. I lived too long as a boy and young man in Chelsea to have any illusions about the way people think who live there.

"I can assure you that my principles with respect to all the things I have talked to you about are the same as I grew up with. I see nothing wrong about trying to operate a business as efficiently and economically as possible in order to pass on the savings and benefits to the consumer. Nor do I see anything wrong with seeking to accomplish that end by employing the principle of seeking competitive bids.

"In effect, that is the American way of doing things; and if we are to establish a reasonably stable economy in the future, all people responsible for the conduct of industry must begin to think of themselves as servants of the consumers, who are also taxpayers.

"As to whether or not the Government should have established TVA as a power utility, I see no point of argument. The fact is that TVA exists, and it exists by virtue of law. It could not be abolished any more than the clock can be turned back to regain time that has been lost.

"In the future this Nation will need electric power in ever-increasing amounts. Both private and public utilities will be required to do the job. Philosophically speaking, there is nothing new or unique in a public utility, nor does it represent a form of socialism. I can well imagine the indignation of my father if anyone had suggested that it was socialistic of him to motivate construction of the old Chelsea powerplant back in the early years of this century. It would be difficult to find a more rugged individualist than my dad, who promoted the plant along with Jabez Bacon, and others; or Pete Boehm, who ran and managed it. Their idea was to provide a service to the community in order that the community might grow. America, fortunately, has always had men who were more interested in service and progress than in the label that might be put on their efforts.

"If you find time to read all this and the other things I am sending you, there may still be questions in your mind. If so, please let me know, and I will give you as straightforward an answer as I can.

"Sincerely,

"HERBERT D. VOGEL,
"Chairman of the Board.

"HDV:PLE:WK

"Enclosures (5)—11–24–58 news release remeeting with Allis-Chalmers officials; 25th anniversary booklet; Tennessee Press Association speech, 1–16–59; Georgia Engineering Society speech, 9–15–58; American Power Conference speech, 3–22–56."

Mr. BENNETT. Mr. President, I ask unanimous consent that the Senator from North Dakota [Mr. LANGER] be permitted, out of order, to present certain material for the RECORD, without the time being charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

EMPLOYMENT AT TURTLE MOUNTAIN, N. DAK.

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an editorial entitled "The Turtle Mountain Situation," published in the Minot, N. Dak., Daily News of March 14, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TURTLE MOUNTAIN SITUATION

As much as anyone we would like to see some brave new start made, with Federal backing, to establish near-home industries which will employ all the Turtle Mountain people able and desiring work.

The jewel plant at Rolla, now operating, is an example. But the payroll there includes only about 100 persons. Estimates vary as to how many people there are on the Turtle Mountain Reservation, one figure being 4,000.

Some knuckle rapping is justified if it is true, and it ought not to be difficult to ascertain whether it is, that the Indian Bureau has failed to provide winter subsistence in realistic amount.

The Turtle Mountain people have been, in some respects, really neglected. A series of news articles and pictures in the News a few years ago pointed up this fact. They have lived, many of them, in such impoverished condition that health and self-respect have been undermined. Besides that, they have developed, quite understandably, a very unhealthy state of mind.

In our opinion about half their trouble stems from the fact that so many poor and unemployed people have been hanging tenaciously to a thin thread of false hope. It is the hope that one day the Federal Government would recognize their claim to millions of dollars for land allegedly taken from them.

If the U.S. Court of Claims eventually does allow some kind of payment to the Indians on the basis of these claims, we see little likelihood that the money is going to help them much. The legal basis for such claims is involved, and it should be recognized as such. It is a matter for the properly constituted courts. Should it happen that some day the claims are recognized as the basis for some kind of payoff by the Federal Government, the relief is likely to be temporary. It is likely to leave the Indians as far from salvation as ever. For these people ought to be working, instead of waiting for remittances.

Al LaFontaine of Minneapolis has whooped up, in an irresponsible way, a new wave of public attention to the plight of the reservation dwellers, though he has told us nothing which had not been brought to light before. Definitely, he does the Turtle Mountain people a disservice to fire their imaginations with claims of tangible title to 9 million acres of North Dakota land. If he supposes he or they can get anywhere by holding such claims over the head of the State of North Dakota as a threat, he is ill advised.

Let the peculiar needs of the Turtle Mountain people for sympathetic understanding and help, and for programs of extraordinary action, be considered on the merits of these needs. Why prejudice the case with imaginary claims to property? The appeal to the American conscience had better be made on humanitarian grounds than on implied accusations of theft.

How far would anyone get, do you think, with a movement to revamp the title to downtown real estate in New York City, with a view to granting an equal share to any and all lineal descendants of the original Dutch settlers?

UNEMPLOYMENT IN DEPRESSED AREAS

The Senate resumed the consideration of the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum, and that the time for the quorum call not be charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CAPEHART. Mr. President——

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Indiana may be allowed to proceed for 1 minute.

Mr. CAPEHART. Mr. President, I believe it will take me a little longer than 1 minute to make my statement. I wish to discuss the pending bill. Is an amendment pending?

The PRESIDING OFFICER. The Chair understands that the Senator from West Virginia [Mr. BYRD] has the floor. The Senate is operating under a time limitation, in connection with its consideration of the area redevelopment bill.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Indiana may proceed for as long as he wishes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CAPEHART. Mr. President, I shall not need more than 5 minutes to make the statement I wish to submit.

Mr. BYRD of West Virginia. In addition, Mr. President, I ask unanimous consent that the time used by the Senator from Indiana not be charged to the time available to either side under the unanimous-consent agreement.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CAPEHART. Mr. President, I thank the Senator from West Virginia for yielding to me.

Mr. President, the provisions of this bill are completely unworkable and inequitable, and the intended benefits will never reach many of the communities which really need them.

In committee, I tried to incorporate in the bill provision for means by which such benefits would reach communities where no job opportunities exist, and never can unless new plants or facilities are built, and where economic conditions warrant possible consideration of outside assistance.

However, the proponents of the bill declined to accept such changes in the provisions of the bill, and preferred to continue with provisions directed toward an end that cannot possibly be attained by means of the provisions now included in the bill.

Mr. President, we have knowledge of small industrial areas with high unemployment due to discontinuance, because of various economic conditions, of industrial operation. These areas are left without any potential job opportunities, because of the lack of sufficient additional industrial activity.

Many of these areas are also left without sufficient investment capital to attract new business.

For example, Mr. President, what I am referring to is this: I want to help this bill, and I would vote for proposed legislation which would assist a town or community which needed aid, provided that such legislation simply applied to a town or community in which one or two, or even a few plants, or in which had a coal mine, or any other kind of mine, had been completely abandoned. I mean that the plant or mine had been closed, and it was obvious even to a 12-year-old child that never again could there be jobs provided in those communities unless new businesses, plants, or facilities were established; or, secondly, that the community was too far away from places of employment so that people living there could not commute back and forth.

If the criteria were so limited, I think the bill would be worthwhile. I would like to help needy communities; but to make an effort to help communities only on the basis of the criterion that there must be unemployment, would never work. An administrator would have imposed upon him a task which he could never perform. In cities where there are many factories, or processing plants, or in communities where there are mines which have not exhausted their minerals, there are periods when employment rises or falls. It might well be that in a 6-month period communities or towns might qualify under the criteria established by the pending bill, but communities could cure the situation themselves, if it were obvious that there were sufficient opportunity for employment or employment in nearby communities, or if there were a population which would support industry.

The Senator from West Virginia [Mr. BYRD], who is on his feet, has, I am sure, a number of towns in West Virginia which would qualify 100 percent under the criteria I have discussed. They are areas where mines have become completely exhausted and the people are going to have to move away because there is no possible source of jobs there.

I should like to help in such cases, but I think it would be unwise to attempt to help cities such as Detroit, New York, Chicago, Milwaukee, Indianapolis, South Bend—I am mentioning towns in my own State—for the reason that there is not enough money in the Federal Treasury to do that sort of thing.

So my position is that if we limit the provisions of the bill to the obvious needs of towns and communities in which it is apparent there are not going to be employment opportunities unless someone builds a new plant or facility, the bill would be workable and worthwhile. However, as it is written, I cannot support it.

There are many other factors about the bill which I think are not good, but which we might correct in time, if the criteria were limited to those I have mentioned.

Some may make the argument that since the criteria, under the provisions of the bill, are based upon unemployment, the towns or communities I have mentioned would be included, because there will have been unemployment in them over a period of years. That assumption might well be correct, but such communities would have continuing unemployment for many months before they might qualify for help. Under my idea, a community might qualify within 10 days, if the factory previously operating within it had closed or if the mine in that area had been abandoned. Such communities would receive immediate help, not help 2 or 3 years later, during which time they might well dry up and rot away, waiting for the terms of the legislation to take effect. Under the pending bill, help could not be obtained in those communities for a period of time. I think perhaps the quickest help might be available under the pending bill would be 2 years.

I think that is the most serious weakness of this proposed legislation. I tried to correct that defect in committee a couple of times. I tried last year, when the bill came before the Senate. I tried again this year.

Now, Mr. President, I wish to complete my statement, and then I shall yield the floor.

This bill will place the small, capital-needing area in competition with the large industrial center, which has great potential investment capital, for the Federal offer of investment capital.

What I mean by that statement is that a small community of the type I have described, which needs help, would be placed in competition with a large city, such as Cleveland, for example. If that were done, the money would be spread too thin. Great as the United States is, there is a limit to the amount of money which can be used for that purpose. Smaller communities would be placed in competition with large cities.

My purpose is to limit the aid provided to small towns and communities such as I have indicated, so that some real good may be accomplished. As the bill is written, in my opinion, the money would be spread so thin that no one would be helped, or possibly very few would be helped.

The onetime thriving coal mining areas and the onetime busy railroad centers where much of the labor force worked for a single industry are now the prime examples of communities in need of investment capital to restore their economies to a proper living level.

They are the people whose hopes are bound to be lost in the race for the investment capital provided in this bill.

The approach to this problem has been wrong in every respect—the legislative approach, the sentimental approach, the economic approach, and the political approach.

Anyone familiar with the manner in which industry determines relocation or expansion will scorn the thought of the bill's sponsors that investment capital is the lone factor in the success of a business enterprise.

It is not. It is possibly the least factor to be considered, if a new business is to be established, because the person going to the location needs other things besides money. He already has the money, or will soon get it.

The bill ignores such important business factors as business climate, proximity of raw materials, marketing areas, and so forth.

I know that every Senator is anxious to extend a helping hand to those communities needing some help in order that they may help themselves, but it should be done on a sound and business-like basis—not by entangling a set of unemployment figures with a mass of discretionary powers in the hands of an agency Administrator.

Let us determine first what the basic causes were that transformed these onetime prosperous communities into depressed areas.

Let us measure the potential of the community to support a new form of

industry and the kind of industry it might support.

Let us consider the raw materials and marketing factors so important to successful business.

The establishment of a business in a depressed area, through the use of Federal investment capital, should be assured of success; else we would be doing the area an injustice rather than a favor.

The fly-by-night approach which is being taken by this bill is raising false hopes of innocent people, who are being led to believe the pending legislation will cure their unemployment problems immediately. If it does at all, it will take many, many months, and possibly years.

I had a telephone call this morning from a man in a town interested in the proposed legislation. He said, "Vote for the bill so that we can immediately get some relief in our town."

First, the town would not qualify under the provisions of the bill.

Second, even if the town did qualify, it would take 5 or 6 months to pass the bill, to have it signed into law by the President—if the President should sign it at all—and to have the organization set up to start work. Then the town would have to qualify under the criteria or under the formula. Of course, it would be necessary to find someone who wanted to invest some capital in that town. The shortest time within which anyone could get any relief under the provisions of the bill would be a year, and in my best judgment it would be 2 years.

I suspect there are no more than 25 communities in the United States—there may be more and there may be less—in the obvious situation I mentioned a moment ago, such a situation that even a 12-year-old child knows that never again will jobs be available in the town or community unless someone establishes a new facility. We should afford help in those situations immediately. I am fearful we will build up in great many people hopes which we will be unable to fulfill.

A limited amount of money is to be provided. While the bill provides for $389 million, I believe only $100 million is provided for loans. That is a small amount when we consider furnishing work for those who are unemployed. I think the average investment today in a job is in the neighborhood of from $12,000 to $20,000 per man.

There is another $100,000 designed for farm relief, and some for other purposes.

Likewise, we would start another scheme for placing the Federal Government into the investment business, into private enterprise. We would set up another bureaucracy in Washington. We would establish more offices under the Government, but we would not accomplish what is desired.

A much better plan would be to study the problem existing in the 25—perhaps a few more or perhaps a few less—communities or towns in the United States I described a moment ago in which there will never be another job, so that we may discover what is the best thing to do with the people in these communities, and how best we may serve them.

Mr. President, I wish I could support the proposed legislation, but I cannot support it in the form in which it is written.

Mr. DOUGLAS. Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc, and that the bill so amended be considered as an original text for the purpose of other amendments.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois?

Mr. DIRKSEN. Mr. President, what was the request?

Mr. DOUGLAS. I ask unanimous consent that the committee amendments be agreed to en bloc, and that the bill as so amended be considered as an original text for the purpose of further amendment.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois? The Chair hears none, and it is so ordered.

The committee amendments agreed to en bloc are as follows:

On page 1, line 3, after the word "Act", to insert "may"; on page 5, line 9, after the word "time", to strike out "There shall be included among the areas so designated any industrial area in which there has existed unemployment of not less than (1) 12 per centum of the labor force during the twelve-month period immediately preceding the date on which an application for assistance is made under this Act, (2) 9 per centum of the labor force during at least fifteen months of the eighteen-month period immediately preceding such date, or (3) 6 per centum of the labor force during at least eighteen months of the twenty-four-month period immediately preceding such date. Any industrial area in which there has existed unemployment of not less than 15 per centum of the labor force during the six-month period immediately preceding the date on which application for assistance is made under this Act may be designated as an industrial redevelopment area if the Administrator determines that the principal causes of such unemployment are not temporary in nature." and insert "There shall be included among the areas so designated any industrial area—

"(1) where the rate of unemployment, excluding unemployment due primarily to temporary or seasonal factors, is currently 6 per centum or more and has averaged at least 6 per centum for the qualifying time periods specified in subparagraph (2) below; and

"(2) where the annual average rate of unemployment shall be included among the areas so designated any industrial area—

"(1) where the rate of unemployment, excluding unemployment due primarily to temporary or seasonal factors, is currently 6 per centum or more and has averaged at least 6 per centum for the qualifying time periods specified in subparagraph (2) below; and

"(2) where the annual average rate of unemployment has been at least—

"(A) 50 per centum above the national average for three of the preceding four calendar years, or

"(B) 75 per centum above the national average for two of the preceding three calendar years, or

"(C) 100 per centum above the national average for one of the preceding two years.

Any industrial area in which a substantial part of the employment is or most recently was in an industry adversely affected by the reduction of trade barriers under the Trade Agreements Extension Act of 1951, as amended, with respect to which the President has reported to the Administrator under subsection (f) of this section, and meeting the standards of unemployment set forth in this section shall be entitled on application to a priority of consideration by the Administrator for designation as an industrial redevelopment area."; on page 7, line 3, after the words "United States", to strike out "in which he determines that there exist the largest number and percentage of low income families, and" and insert "which he determines are among the highest in numbers and percentages of low-income families, and in which there exists"; in line 16, after the word "area", to strike out "and"; in line 18, after the word "employment", to insert a comma and "and the proportion of the population of each such area which has been receiving public assistance from the State or States in which such area is located or from any municipality therein"; on page 8, after line 19, to insert a new subsection, as follows:

"(f) In any case in which the President is required (1) under the provisions of subsection 4(a) of the Trade Agreements Extension Act of 1951 to transmit a message to the Congress identifying an article with respect to which a trade agreement has caused or threatened to cause serious injury to a domestic industry, or (2) under the provisions of subsection 7(c) of such Act to submit a report to the Committee on Ways and Means of the House of Representatives and the Committee on Finance of the Senate stating why he has not made such adjustments in the rates of duties, imposed such quotas, or made such other modifications, as are found and reported by the United States Tariff Commission to be necessary to prevent or remedy serious injury to a domestic industry, he shall notify the Administrator and shall send him a copy of such message or report."

On page 16, after line 21, to insert a new subsection, as follows:

"(e) No financial assistance shall be extended under this section with respect to any public facility which would compete with an existing privately owned public utility rendering a service to the public at rates or charges subject to regulation by a State regulatory body, unless the State regulatory body determines that in the area to be served by the public facility for which the financial assistance is to be extended there is a need for an increase in such service (taking into consideration reasonably foreseeable future needs) which the existing public utility is not able to meet through its existing facilities or through an expansion which it is prepared to undertake."

On page 17, at the beginning of line 10, to strike out "(e)" and insert "(f)"; on page 19, after line 18, to insert a new subsection, as follows:

"(d) No financial assistance shall be extended under this section with respect to any public facility which would compete with an existing privately owned public utility rendering a service to the public at rates or charges subject to regulation by a State regulatory body, unless the State regulatory body determines that in the area to be served by the public facility for which the financial assistance is to be extended there is a need for an increase in such service (taking into consideration reasonably foreseeable future needs) which the existing public utility is not able to meet through its existing facilities or through an expansion which it is prepared to undertake."

On page 20, at the beginning of line 6, to strike out "(d)" and insert "(e)"; on page 31, line 25, after the word "Act", to strike out "Such payments shall be made for a period not exceeding thirteen weeks," and insert "Such payments shall be made only during the period the individual is receiving vocational training or retraining under section 16 of this Act, but not in any event to exceed sixteen weeks,"; on page 34, line 3, after the word "of", to strike out "Expenditures" and insert "Expediters"; at

the top of page 35, to insert a new section, as follows:

"RECORD OF APPLICATIONS

"SEC. 20. The Administrator shall maintain as a permanent part of the records of the Administration a list of applications approved, which shall be kept available for public inspection during the regular business hours of the Administration. The following information shall be posted in such list as soon as each application is approved: (1) the name of the applicant and, in the case of corporate applications, the names of the officers and directors thereof, (2) the amount and duration of the loan for which application is made, (3) the purposes for which the proceeds of the loan are to be used, and (4) a general description of the security offered."

At the beginning of line 14, to change the section number from "20" to "21"; on page 36, at the beginning of line 5, to change the section number from "21" to "22"; at the beginning of line 22, to change the section number from "22" to "23"; on page 37, at the beginning of line 2, to change the section number from "23" to "24"; and, after line 14, to insert a new section, as follows:

"RECORDS AND AUDIT

"SEC. 25. (a) Each recipient of assistance under section 6 or 7 of this Act shall keep such records as the Administrator shall prescribe, including records which fully disclose the amount and the disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance is given or used, and the amount and nature of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

"(b) The Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination to any books, documents, papers, and records of the recipient that are pertinent to assistance received under section 6 or 7 of this Act."

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Area Redevelopment Act".

DECLARATION OF PURPOSE

SEC. 2. The Congress declares that the maintenance of the national economy at a high level is vital to the best interests of the United States, but that some of our communities are suffering substantial and persistent unemployment and underemployment; that such unemployment and underemployment cause hardship to many individuals and their families and detract from the national welfare by wasting vital human resources; that to overcome this problem the Federal Government, in cooperation with the States, should help areas of substantial and persistent unemployment and underemployment to take effective steps in planning and financing their economic redevelopment; that Federal assistance to communities, industries, enterprises, and individuals in areas needing redevelopment should enable such areas to achieve lasting improvement and enhance the domestic prosperity by the establishment of stable and diversified local economies; and that under the provisions of this Act new employment opportunities should be created by developing and expanding new and existing facilities and resources without substantially reducing employment in other areas of the United States.

AREA REDEVELOPMENT ADMINISTRATION

SEC. 3. In order to carry out the purposes of this Act, there is hereby established, within the executive branch of the Government, an Area Redevelopment Administration. Such Administration shall be under the direction and control of an Administrator (hereinafter referred to as the "Administrator") who shall be appointed by the President, by and with the advice and consent of the Senate, and shall be compensated at the rate of $20,000 per annum.

ADVISORY BOARD

SEC. 4. (a) To advise the Administrator in the performance of functions authorized by this Act, there is authorized to be created an Area Redevelopment Advisory Board (hereinafter referred to as the "Board"), which shall consist of the following members, all ex officio: the Administrator as Chairman; the Secretaries of Agriculture; Commerce; Defense; Health, Education, and Welfare; Interior; Labor; and Treasury; the Administrators of the General Services Administration; Housing and Home Finance Agency; and Small Business Administration; and the Director of the Office of Defense Mobilization.

The Chairman may from time to time invite the participation of officials of other agencies of the executive branch interested in the functions herein authorized. Each member of the Board may designate an officer of his agency to act for him as a member of the Board with respect to any matter there considered.

(b) The Administrator shall appoint a National Public Advisory Committee on Area Redevelopment which shall consist of twenty-five members and shall be composed of representatives of labor, management, agriculture, and the public in general. From the members appointed to such Committee the Administrator shall designate a Chairman. Such Committee, or any duly established subcommittee thereof, shall from time to time make recommendations to the Administrator relative to the carrying out of his duties under this Act. Such Committee shall hold not less than two meetings during each calendar year.

(c) The Administrator is authorized from time to time to call together and confer with representatives of the various parties in interest from any industry, including agriculture, which has been a primary source of high levels of unemployment or underemployment in the several areas designated by the Administrator as redevelopment areas. The Administrator may also call upon representatives of interested governmental departments and agencies, together with representatives of transportation and other industries, to participate in any conference convened under authority of this subsection whenever he determines that such participation would contribute to a solution of the problems creating such unemployment or underemployment. The representatives at any such conference shall consider with and may recommend to the Administrator plans and programs to further the objectives of this Act with special reference to the industry with respect to which the conference was convened.

REDEVELOPMENT AREAS

SEC. 5. (a) The Administrator shall designate as "industrial redevelopment areas" those industrial areas within the United States in which he determines that there has existed substantial and persistent unemployment for an extended period of time. There shall be included among the areas so designated any industrial area—

(1) where the rate of unemployment, excluding unemployment due primarily to temporary or seasonal factors, is currently 6 per centum or more and has averaged at least 6 per centum for the qualifying time periods specified in subparagraph (2) below; and

(2) where the annual average rate of unemployment has been at least—

(A) 50 per centum above the national average for three of the preceding four calendar years, or

(B) 75 per centum above the national average for two of the preceding three calendar years, or

(C) 100 per centum above the national average for one of the preceding two years.

Any industrial area in which a substantial part of the employment is or most recently was in an industry adversely affected by the reduction of trade barriers under the Trade Agreements Extension Act of 1951, as amended, with respect to which the President has reported to the Administrator under subsection (f) of this section, and meeting the standards of unemployment set forth in this section shall be entitled on application to a priority of consideration by the Administrator for designation as an industrial redevelopment area.

(b) The Administrator shall also designate as "rural redevelopment areas" those rural areas within the United States which he determines are among the highest in numbers and percentages of low-income families, and in which there exists a condition of substantial and persistent unemployment or underemployment. In making the designations under this subsection, the Administrator shall consider, among other relevant factors, the number of low-income farm families in the various rural areas of the United States, the proportion that such low-income families are to the total farm families of each of such areas, the relationship of the income levels of the families in each such area to the general levels of income in the United States, the current and prospective employment opportunities in each such area, the availability of manpower in each such area for supplemental employment, and the proportion of the population of each such area which has been receiving public assistance from the State or States in which such area is located or from any municipality therein.

(c) In making the determinations provided for in this section, the Administrator shall be guided, but not conclusively governed, by pertinent studies made, and information and data collected or compiled, by (1) departments, agencies, and instrumentalities of the Federal Government, (2) State and local governments, (3) universities and land-grant colleges, and (4) private organizations.

(d) Upon the request of the Administrator, the Secretary of Labor, the Secretary of Agriculture, and the Secretary of Commerce are respectively authorized to conduct such special studies, obtain such information, and compile and furnish to the Administrator such data as the Administrator may deem necessary or proper to enable him to make the determinations provided for in this section. The Administrator shall reimburse, out of any funds appropriated to carry out the purposes of this Act, the foregoing officers for any expenditures incurred by them under this section.

(e) As used in this Act, the term "redevelopment area" refers to any area within the United States which has been designated by the Administrator as an industrial redevelopment area or a rural redevelopment area, and may include one or more counties, or one or more municipalities, or a part of a county or municipality.

(f) In any case in which the President is required (1) under the provisions of subsection 4(a) of the Trade Agreements Extension Act of 1951 to transmit a message to the Congress identifying an article with respect to which a trade agreement has caused or threatened to cause serious injury to a domestic industry, or (2) under the provisions of subsection 7(c) of such Act to submit a report to the Committee on Ways and Means

of the House of Representatives and the Committee on Finance of the Senate stating why he has not made such adjustments in the rates of duties, imposed such quotas, or made such other modifications, as are found and reported by the United States Tariff Commission to be necessary to prevent or remedy serious injury to a domestic industry, he shall notify the Administrator and shall send him a copy of such message or report.

LOANS AND PARTICIPATIONS

SEC. 6. (a) The Administrator is authorize to purchase evidences of indebtedness and to make loans (including immediate participations therein) to aid in fiancing any project within a redevelopment area for the purchase or development of land and facilities (including machinery and equipment) for industrial usage, for the construction of new factory buildings, for rehabilitation of abandoned or unoccupied factory buildings, or for the alteration, conversion, or enlargement of any existing buildings for industrial use. Such financial assistance shall not be extended for working capital, or to assist establishments relocating them one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

(b) Financial assistance under this section shall be on such terms and conditions as the Administrator determines, subject, however, to the following restrictions and limitations:

(1) The total amount of loans and loan participations (including purchased evidences of indebtedness) outstanding at any one time under this section (A) with respect to projects in industrial redevelopment areas shall not exceed $100,000,000, and (B) with respect to projects in rural redevelopment areas shall not exceed $100,000,000;

(2) Except as provided in subsection (c), such assistance shall be extended only to applicants, both private and public (including Indian tribes), which have been approved for such assistance by an agency or instrumentality of the State or political subdivision thereof in which the project to be financed is located, and which agency or instrumentality is directly concerned with problems of economic development in such State or subdivision;

(3) The project for which financial assistance is sought is reasonably calculated to provide more than a temporary alleviation of unemployment or underemployment within the revelopment area wherein it is, or will be, located;

(4) No such assistance shall be extended hereunder unless the financial assistance applied for is not otherwise available from private lenders or other Federal agencies on reasonable terms;

(5) No loans shall be made unless it is determined that an immediate participation is not available;

(6) No evidences of indebtedness shall be purchased and no loans shall be made unless it is determined that there is a reasonable assurance of repayment;

(7) Subject to section 12(5) of this Act, no loan, including renewals or extensions thereof, may be made hereunder for a period of exceeding thirty years and no evidences of indebtedness maturing more than thirty years from date of purchase may be purchased hereunder: *Provided,* That the foregoing restrictions on maturities shall not apply to securities or obligations received by the Administrator as a claimant in bankruptcy or equitable reorganization or as a creditor in other proceedings attendant upon insolvency of the obligor, or if extension or renewal for additional periods, not to exceed, however, a total of ten years, will aid in the orderly liquidation of such loan or of such evidence of indebtedness;

(8) Such loans shall bear interest at a rate equal to the rate of interest paid by the Administrator on funds obtained from the Secretary of the Treasury as provided in section 9 of this Act, plus one-half of 1 per centum per annum: *Provided,* That an amount equal to one-fourth of 1 per centum per annum of the outstanding principal amount of any loan made under this section shall be allocated from the payments received by the Administrator in the form of interest on such loan to a sinking fund to cover losses on loans under this section;

(9) Such assistance shall not exceed 65 per centum of the aggregate cost to the applicant (excluding all other Federal aid in connection with the undertaking) of acquiring or developing land and facilities (including machinery and equipment), and of constructing, altering, converting, rehabilitating, or enlarging the building or buildings of the particular project and shall, among others, be on the following conditions:

(A) That other funds are available in an amount which, together with the assistance provided hereunder, shall be sufficient to pay such aggregate cost;

(B) That not less than 10 per centum of such aggregate cost be supplied by the State or any agency, instrumentality, or political subdivision thereof, or by a community or area organization which is nongovernmental in character, as equity capital or as a loan;

(C) That in extending financial assistance under this section with respect to an industrial or rural redevelopment area, the Administrator shall require that not less than 5 per centum of the aggregate cost of the project for which such loan is made shall be supplied by nongovernmental sources;

(D) That any Federal financial assistance extended under this section in connection with a particular project shall be repayable only after other loans made in connection with such project and in accordance with this section have been repaid in full. If any Federal financial assistance extended under this section is secured, its security shall be subordinate and inferior to the lien or liens securing other loans made in connection with the same project.

(10) No such assistance shall be extended unless there shall be submitted to and approved by the Administrator an overall program for the economic development of the area and a finding by the State, or any agency, instrumentality, or local political subdivision thereof, that the project for which financial assistance is sought is consistent with such program: *Provided,* That nothing in this Act shall authorize financial assistance for any project prohibited by laws of the State or local political subdivision in which the project would be located.

(c) If there is no agency or instrumentality in any State, or political subdivision thereof, qualified to approve applicants for assistance under this section as provided in paragraph (2) of subsection (b), the Administrator shall, upon determining that any area in such State is a redevelopment area, appoint a local redevelopment committee (hereinafter referred to as a "local committee") to be composed of not less than seven residents of such area who, as nearly as possible, are representative of labor, commercial, industrial, and agricultural groups, and of the residents generally of such area. In appointing any such local committee, the Administrator may include therein members of any existing local redevelopment committees. Financial assistance under this section in connection with projects located in a redevelopment area, for which a local committee has been appointed under this section, shall be extended only to applicants, both private and public (including Indian tribes), which have been approved by such local committee.

(d) Of the funds authorized to be raised under section 9 of this Act, not more than $100,000,000 shall be deposited in a revolving fund which shall be used for the purpose of making loans under this section with respect to projects in industrial redevelopment areas, and not more than $100,000,000 shall be deposited in a revolving fund which shall be used for the purpose of making loans under this section with respect to projects in rural redevelopment areas.

LOANS FOR PUBLIC FACILITIES

SEC. 7. (a) Upon the application of any State, or political subdivision thereof, Indian tribe, or private or public organization or association representing any redevelopment area or part thereof, the Administrator is authorized to make loans to assist in financing the purchase or development of land for public facility usage, and the construction, rehabilitation, alteration, expansion, or improvement of public facilities within any redevelopment area, if he finds that—

(1) the project for which financial assistance is sought will provide more than a temporary alleviation of unemployment or underemployment in the redevelopment area wherein such project is, or will be, located, and will tend to improve the opportunities in such area for the successful establishment or expansion of industrial or commercial plants or facilities;

(2) the funds requested for such project are not otherwise available on reasonable terms;

(3) the amount of the loan plus the amount of other available funds for such projects are adequate to insure the completion thereof; and

(4) there is a reasonable expectation of repayment.

(b) No loan under this section shall be for an amount in excess of 65 per centum of the aggregate cost of the project for which such loan is made. Subject to section 12(5), the maturity date of any such loan shall be not later than forty years after the date such loan is made. Any such loan shall bear interest at a rate equal to the rate of interest paid by the Administrator on funds obtained from the Secretary of the Treasury as provided in section 9 of this Act, plus one-quarter of 1 per centum per annum.

(c) In making any loan under this section, the Administrator shall require that not less than 10 per centum of the aggregate cost of the project for which such loan is made shall be supplied by the State (including any political subdivision thereof) within which such project is to be located as equity capital, or as a loan. In determining the amount of participation required under this subsection with respect to any particular project, the Administrator shall give consideration to the financial condition of the State or local government, and to the per capita income of the residents of the redevelopment area, within which such project is to be located.

(d) Any loan made under this section in connection with a particular project shall be repayable only after other loans made in connection with such project and in accordance with this section have been repaid in full. If any loan made under this section is secured, its security shall be subordinate and inferior to the lien or liens securing other loans made in connection with the same project.

(e) No financial assistance shall be extended under this section with respect to any public facility which would compete with an existing privately owned public utility rendering a service to the public at rates or charges subject to regulation by a State regulatory body, unless the State regulatory body determines that in the area to be served by the public facility for which the financial assistance is to be extended there is a need for an increase in such service (taking into consideration reasonably foreseeable future needs) which the existing

public utility is not able to meet through its existing facilities or through an expansion which it is prepared to undertake.

(f) Of the funds authorized to be raised under section 9 of this Act, not more than $100,000,000 shall be deposited in a revolving fund which shall be used for the purpose of making loans under this section.

GRANTS FOR PUBLIC FACILITIES

SEC. 8. (a) The Administrator may conduct studies of needs in the various redevelopment areas throughout the United States for, and the probable cost of, land acquisition or development for public facility usage, and the construction, rehabilitation, alteration, expansion, or improvement of useful public facilities within such areas, and may receive proposals from any State or political subdivision thereof, Indian tribe, or private or public organization or association representing any redevelopment area, or part thereof, relating to land acquisition or development for public facility usage, and the construction, rehabilitation, alteration, expansion, or improvement of public facilities within any such area. Any such proposal shall contain plans showing the project proposed to be undertaken, the cost thereof, and the contributions proposed to be made to such cost by the entity making the proposal. The Administrator, in consultation with such entity, is authorized to modify all or any part of such proposal.

(b) The Administrator, pursuant to a proposal received by him under this section, may make grants to any State, or political subdivision thereof. Indian tribe, or private or public organization or association representing any redevelopment area, or part thereof, for land acquisition or development for public facility usage, and the construction, rehabilitation, alteration, expansion, or improvement of public facilities within a redevelopment area, if he finds that—

(1) the project for which financial assistance is sought will provide more than a temporary alleviation of unemployment or underemployment in the redevelopment area wherein such project is, or will be, located, and will tend to improve the opportunities in such area for the successful establishment or expansion of industrial or commercial plants or facilities;

(2) the entity requesting the grant proposes to contribute to the cost of the project for which such grant is requested in proportion to its ability so to contribute; and

(3) the project for which a grant is requested will fulfill a pressing need of the area, or part thereof, in which it is, or will be, located, and there is little probability that such project can be undertaken without the assistance of a grant under this section.

The amount of any grant under this section for any such project shall not exceed the difference between the funds which can be practicably obtained from other sources (including a loan under section 7 of this Act) for such project, and the amount which is necessary to insure the completion thereof.

(c) The Administrator shall by regulation provide for the supervision of carrying out of projects with respect to which grants are made under this section so as to insure that Federal funds are not wasted or dissipated.

(d) No financial assistance shall be extended under this section with respect to any public facility which would compete with an existing privately owned public utility rendering a service to the public at rates or charges subject to regulation by a State regulatory body, unless the State regulatory body determines that in the area to be served by the public facility for which the financial assistance is to be extended there is a need for an increase in such service (taking into consideration reasonably foreseeable future needs) which the existing public utility is not able to meet through its existing facilities or through an expansion which it is prepared to undertake.

(e) There is hereby authorized to be appropriated not to exceed $75,000,000 for the purpose of making grants under this section.

FUNDS FOR LOANS

SEC. 9. To obtain funds for loans under this Act, the Administrator may, with the approval of the President, issue and have outstanding at any one time notes and obligation for purchase by the Secretary of the Treasury in an amount not to exceed $300,000,000. Such notes or other obligations shall be in such forms and denominations, have such maturities, and be subject to such terms and conditions as may be prescribed by the Administrator with the approval of the Secretary of the Treasury, and shall bear interest at a rate determined by the Secretary of the Treasury, but such rate shall not be greater than the current average yields on outstanding marketable obligations of the United States of comparable maturities as of the last day of the month preceding the issuance of such notes or other obligations. The Secretary of the Treasury is authorized and directed to purchase any notes and other obligations issued under this section and for such purpose is authorized to use as a public debt transaction the proceeds from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under such Act are extended to include any purchases of such notes and other obligations. The Secretary of the Treasury may at any time sell any of the notes or other obligations acquired by him under this section. All redemptions, purchases, and sales by the Secretary of the Treasury of such notes or other obligations shall be treated in every respect as public debt transactions of the United States.

INFORMATION

SEC. 10. The Administrator shall aid redevelopment areas by furnishing to interested individuals, communities, industries, and enterprises within such areas any assistance, technical information, market research, or other forms of assistance, information, or advice which are obtainable from the various departments, agencies, and instrumentalities of the Federal Government and which would be useful in alleviating conditions of excessive unemployment or underemployment within such areas. The Administrator shall furnish the procurement divisions of the various departments, agencies, and other instrumentalities of the Federal Government with a list containing the names and addresses of business firms which are located in redevelopment areas and which are desirous of obtaining Government contracts for the furnishing of supplies or services, and designating the supplies and services such firms are engaged in providing.

TECHNICAL ASSISTANCE

SEC. 11. In carrying out his duties under this Act, the Administrator is authorized to provide technical assistance to areas which he has designated as redevelopment areas under this Act. Such assistance shall include studies evaluating the needs of, and developing potentialities for, economic growth of such areas. Such assistance may be provided by the Administrator through members of his staff or through the employment of private individuals, partnerships, firms, corporations, or suitable institutions, under contracts entered into for such purpose. Appropriations are hereby authorized for the purposes of this section in an amount not to exceed $4,500,000 annually.

POWERS OF ADMINISTRATOR

SEC. 12. In performing his duties under this Act, the Administrator is authorized to—

(1) adopt, alter, and use a seal, which shall be judicially noticed; and subject to the civil service and classification laws, select, employ, appoint, and fix the compensation of such officers, employees, attorneys, and agents as shall be necessary to carry out the provisions of this Act, and define their authority and duties, provide bonds for them in such amounts as the Administrator shall determine, and pay the costs of qualification of certain of them as notaries public;

(2) hold such hearings, sit and act at such times and places, and take such testimony, as he may deem advisable;

(3) request directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality information, suggestions, estimates, and statistics needed to carry out the purposes of this Act; and each department, bureau, agency, board, commission, office, establishment, or instrumentality is authorized to furnish such information, suggestions, estimates, and statistics directly to the Administrator;

(4) under regulations prescribed by him, assign or sell at public or private sale, or otherwise dispose of for cash or credit, in his discretion and upon such terms and conditions and for such consideration as he shall determine to be reasonable, any evidence of debt, contract, claim, personal property, or security assigned to or held by him in connection with the payment of loans made under this Act, and collect or compromise all obligations assigned to or held by him in connection with the payment of such loans until such time as such obligations may be referred to the Attorney General for suit or collection;

(5) further extend the maturity of or renew any loan made under this Act, beyond the periods stated in such loan or in this Act, for additional periods not to exceed ten years, if such extension or renewal will aid in the orderly liquidation of such loan;

(6) deal with, complete, renovate, improve, modernize, insure, rent, or sell for cash or credit, upon such terms and conditions and for such consideration as he shall determine to be reasonable, any real or personal property conveyed to, or otherwise acquired by, him in connection with the payment of loans made under this Act;

(7) pursue to final collection, by way of compromise or other administrative action, prior to reference to the Attorney General, all claims against third parties assigned to him in connection with loans made under this Act. This shall include authority to obtain deficiency judgments or otherwise in the case of mortgages assigned to the Administrator. Section 3709 of the Revised Statutes, as amended (41 U.S.C. 5), shall not apply to any contract of hazard insurance or to any purchase or contract for services or supplies on account of property obtained by the Administrator as a result of loans made under this Act if the premium therefor or the amount thereof does not exceed $1,000. The power to convey and to execute, in the name of the Administrator, deeds of conveyance, deeds of release, assignments and satisfactions of mortgages, and any other written instrument relating to real or personal property or any interest therein acquired by the Administrator pursuant to the provisions of this Act may be exercised by the Administrator or by any officer or agent appointed by him for that purpose without the execution of any express delegation of power or power of attorney;

(8) acquire, in any lawful manner, any property (real, personal, or mixed, tangible or intangible), whenever deemed necessary

or appropriate to the conduct of the activities authorized in sections 6 and 7 of this Act;

(9) in addition to any powers, functions, privileges, and immunities otherwise vested in him, take any and all actions, including the procurement of the services of attorneys by contract, determined by him to be necessary or desirable in making, servicing, compromising, modifying, liquidating, or otherwise administratively dealing with or realizing on loans made under this Act;

(10) to such an extent as he finds necessary to carry out the provisions of this Act, procure the temporary (not in excess of six months) service of experts or consultants or organizations thereof, including stenographic reporting services, by contract or appointment, and in such cases such service shall be without regard to the civil service and classifications laws, and, except in the case of stenographic reporting services by organizations, without regard to section 3709 of the Revised Statutes (41 U.S.C. 5); any individual so employed may be compensated at a rate not in excess of $75 per diem, and, while such individual is away from his home or regular place of business, he may be allowed transportation and not to exceed $15 per diem in lieu of subsistence and other expenses; and

(11) establish such rules, regulations, and procedures as he may deem appropriate in carrying out the provisions of this Act.

TERMINATION OF ELIGIBILITY FOR FURTHER ASSISTANCE

SEC. 13. Whenever the Administrator shall determine that employment conditions within any area previously designated by him as a redevelopment area have changed to such an extent that such area is no longer eligible for such designation under section 5 of this Act, no further assistance shall be granted under this Act with respect to such area and, for the purposes of this Act, such area shall not be considered a redevelopment area: *Provided,* That nothing contained herein shall (1) prevent any such area from again being designated a redevelopment area under section 5 of this Act if the Administrator determines it to be eligible under such section, or (2) affect the validity of any contracts or undertakings with respect to such area which were entered into pursuant to this Act prior to a determination by the Administrator that such area no longer qualifies as a redevelopment area. The Administrator shall keep the departments and agencies of the Federal Government, and interested State or local agencies, advised at all times of any changes made hereunder with respect to the designation of any area.

URBAN RENEWAL

SEC. 14. (a) Title I of the Housing Act of 1949, as amended, is amended by adding at the end thereof the following new section:

"INDUSTRIAL REDEVELOPMENT AREAS UNDER THE AREA REDEVELOPMENT ACT

"SEC. 112. (a) When the Area Redevelopment Administrator certifies to the Administrator (1) that any county, city, or other muncipality (in this section referred to as a 'municipality') is situated in an area designated under section 5(a) of the Area Redevelopment Act as an industrial redevelopment area, and (2) that there is a reasonable probability that with assistance provided under such Act and other undertakings the area will be able to achieve more than temporary improvement in its economic development, the Administrator is authorized to provide financial assistance to a local public agency in any such municipality under this title and the provisions of this section.

"(b) The Administrator may provide such financial assistance under this section without regard to the requirements or limitations of section 110(c) that the project area be clearly predominantly residential in character or that it be redeveloped for predominantly residential uses; but no such assistance shall be provided in any area if such Administrator determines that it will assist in relocating business operations from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

"(c) Financial assistance under this section may be provided for any project involving a project area including primarily industrial or commercial structures suitable for rehabilitation under the urban renewal plan for the area.

"(d) Notwithstanding any other provision of this title, a contract for financial assistance under this section may include provisions permitting the disposition of any land in the project area designated under the urban renewal plan for industrial or commercial uses to any public agency or nonprofit corporation for subsequent disposition as promptly as practicable by such public agency or corporation for the redevelopment of the land in accordance with the urban renewal plan: *Provided,* That any disposition of such land under this section shall be made at not less than its fair value for uses in accordance with the urban renewal plan: *And provided further,* That the purchasers from or lessees of such public agency or corporation, and their assignees, shall be required to assume the obligations imposed under section 105(b).

"(e) Following the execution of any contract for financial assistance under this section with respect to any project, the Administrator may exercise the authority vested in him under this section for the completion of such project, notwithstanding any determination made after the execution of such contract that the area in which the project is located may no longer be an industrial redevelopment area under the Area Redevelopment Act."

(b) The next to the last paragraph of section 110(c) of such Act is amended by inserting after "such projects" the following: "(including projects assisted under section 112 of this title)".

URBAN PLANNING GRANTS

SEC. 15. The second sentence of section 701 of the Housing Act of 1954 is amended by adding the following in clause (2) after the words "decennial census which": "(i) are situated in areas designated by the Area Redevelopment Administrator under section 5(a) of the Area Redevelopment Act as industrial redevelopment areas, or (ii)".

VOCATIONAL TRAINING

SEC. 16. (a) The Secretary of Labor, in consultation with the Administrator, shall determine the vocational training or retraining needs of unemployed individuals residing in, or who were last employed in, redevelopment areas and shall cooperate with the Secretary of Health, Education, and Welfare and with existing State and local agencies and officials in charge of existing programs relating to vocational training and retraining for the purpose of assuring that the facilities and services of such agencies are made fully available to such individuals.

(b) Whenever the Secretary of Labor finds that additional facilities or services are needed in the area to meet the vocational training or retraining needs of such individuals, he shall so advise the Secretary of Health, Education, and Welfare. The Secretary of Health, Education, and Welfare, through the Commissioner of Education, shall provide assistance, including financial assistance when necessary, to the appropriate State vocational educational agency in the provision of such additional facilities or services. If the Secretary of Health, Education, and Welfare finds that the State vocational educational agency is unable to provide the facilities and services needed, he may, after consultation with such agency, provide for the same by agreement or contract with public or private educational institutions: *Provided,* That the Secretary of Labor shall arrange to provide any necessary technical assistance for setting up apprenticeship, journeyman, and other job training needed in the area: *Provided further,* That any vocational training or retraining provided under this section shall be designed to enable unemployed individuals to qualify for new employment in the redevelopment area in which they reside or were last employed.

RETAINING SUBSISTENCE PAYMENTS

SEC. 17. (a) The Secretary of Labor in consultation with the Administrator shall, on behalf of the United States, enter into agreements with States in which redevelopment areas are located, under which the Secretary of Labor shall make payments to such States for the purpose of enabling such States, as agents of the United States, to make weekly retraining payments to unemployed individuals residing within such redevelopment areas who are not entitled to unemployment compensation (either because their unemployment compensation benefits have been exhausted or because they were not insured for such compensation) and who have been certified by the Secretary of Labor to be undergoing vocational training or retraining under section 16 of this Act. Such payments shall be made only during the period the individual is receiving vocational training or retraining under section 16 of this Act, but not in any event to exceed sixteen weeks, and the amounts of such payments shall be equal to the amount of the average weekly unemployment compensation payment payable in the State making such payments.

(b) The Secretary of Labor and the Administrator shall jointly prescribe such rules and regulations as they may deem necessary to carry out the provisions of this section and section 16 of this Act.

(c) There are hereby authorized to be appropriated such sums, not in excess of $10,000,000, as may be necessary to carry out the provisions of this section.

PENALTIES

SEC. 18. (a) Whoever makes any statement knowing it to be false, or whoever willfully overvalues any security, for the purpose of obtaining for himself or for any applicant any loan, or extension thereof by renewal, deferment of action, or otherwise, or the acceptance, release, or substitution of security therefore, or for the purpose of influencing in any way the action of the Administrator, or for the purpose of obtaining money, property, or anything of value, under this Act, shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

(b) Whoever, being connected in any capacity with the Administrator (1) embezzles, abstracts, purloins, or willfully misapplies any moneys, funds, securities, or other things of value, whether belonging to him or pledged or otherwise entrusted to him, or (2) with intent to defraud the Administrator or any other body politic or corporate, or any individual, or to deceive any officer, auditor, or examiner of the Administration, makes any false entry in any book, report, or statement of or to the Administrator, or without being duly authorized, draws any order or issues, puts forth, or assigns any note, debenture, bond, or other obligation, or draft, bill of exchange, mortgage, judgment, or decree thereof, or (3) with intent to defraud participates, shares, receives directly or indirectly any money, profit, property, or benefit through any transaction, loan, commission, contract, or any other act of the Administrator, or (4) gives any unauthorized information concerning any future

action or plan of the Administrator which might affect the value of securities, or having such knowledge, invests or speculates, directly or indirectly, in the securities or property of any company or corporation receiving loans or other assistance from the Administrator, shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

EMPLOYMENT OF EXPEDITERS AND ADMINISTRATIVE EMPLOYEES

SEC. 19. No loan shall be made by the Administrator under this Act to any business enterprise unless the owners, partners, or officers of such business enterprise (1) certify to the Administrator the names of any attorneys, agents, or other persons engaged by or on behalf of such business enterprise for the purpose of expediting applications made to the Administrator for assistance of any sort, and the fees paid or to be paid to any such person; and (2) execute an agreement binding any such business enterprise for a period of two years after any assistance is rendered by the Administrator to such business enterprise, to refrain from employing, tendering any office or employment to, or retaining for professional services, any person who, on the date such assistance or any part thereof was rendered, or within one year prior thereto, shall have served as an officer, attorney, agent, or employee of the Administration, occupying a position or engaging in activities which the Administrator shall have determined involve discretion with respect to the granting of assistance under this Act.

RECORD OF APPLICATIONS

SEC. 20. The Administrator shall maintain as a permanent part of the records of the Administration a list of applications approved, which shall be kept available for public inspection during the regular business hours of the Administration. The following information shall be posted in such list as soon as each application is approved: (1) the name of the applicant and, in the case of corporate applications, the names of the officers and directors thereof, (2) the amount and duration of the loan for which application is made, (3) the purposes for which the proceeds of the loan are to be used, and (4) a general description of the security offered.

PREVAILING RATE OF WAGE AND FORTY-HOUR WEEK

SEC. 21. The Administrator shall take such action as may be necessary to insure that all laborers and mechanics employed by contractors or subcontractors on projects undertaken by public applicants assisted under this Act (1) shall be paid wages at rates no less than those prevailing on the same type of work on similar construction in the immediate locality as determined by the Secretary of Labor in accordance with the Act of August 30, 1935 (Davis-Bacon Act), and (2) shall be employed not more than forty hours in any one week unless the employee receives wages for his employment in excess of the hours specified above at a rate not less than one and one-half times the regular rate at which he is employed.

ANNUAL REPORT

SEC. 22. The Administrator shall make a comprehensive and detailed annual report to the Congress of his operations under this Act for each fiscal year beginning with the fiscal year ending June 30, 1960. Such report shall be printed, and shall be transmitted to the Congress not later than January 3 of the year following the fiscal year with respect to which such report is made. Such report shall show, among other things, (1) the number and size of Government contracts for the furnishing of supplies and services placed with business firms located in redevelopment areas, and (2) the amount and duration of employment resulting from such contracts. Upon the request of the Administrator, the various departments and agencies of the Government engaged in the procurement of supplies and services shall furnish to the Administrator such information as may be necessary for the purposes of this section.

APPROPRIATION

SEC. 23. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

USE OF OTHER FACILITIES

SEC. 24. (a) To avoid duplication of activities and minimize expense in carrying out the provisions of this Act, the Administrator shall, to the extent practicable and with their consent, use the available services and facilities of other agencies and instrumentalities of the Federal Government on a reimbursable basis.

(b) Departments and agencies of the Federal Government shall exercise their powers, duties, and functions in such manner as will assist in carrying out the objectives of this Act. This Act shall be supplemental to any existing authority, and nothing herein shall be deemed to be restrictive of any existing powers, duties, and functions of any other department or agency of the Federal Government.

RECORDS AND AUDIT

SEC. 25. (a) Each recipient of assistance under section 6 or 7 of this Act shall keep such records as the Administrator shall prescribe, including records which fully disclose the amount and the disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance is given or used, and the amount and nature of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

(b) The Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination to any books, documents, papers, and records of the recipient that are pertinent to assistance received under section 6 or 7 of this Act.

Mr. DOUGLAS. Mr. President, I further ask unanimous consent that members of the committee staff in addition to the number permitted by the rule be privileged to be present in the Chamber to give help and advice to Members of the Senate.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois? The Chair hears none, and it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I yield 30 minutes to the Senator from Connecticut [Mr. DODD] on the bill.

The PRESIDING OFFICER (Mr. HART in the chair). The Senator from Connecticut is recognized for 30 minutes.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. DODD. I yield.

Mr. DIRKSEN. If it is agreeable to the Senator, I should like to offer my amendment in the nature of a substitute at this time, so that it will be before the Senate.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the amendment be printed in the RECORD without reading.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois? The Chair hears none, and it is so ordered.

The amendment offered by Mr. DIRKSEN is as follows:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That this Act may be cited as the 'Area Assistance Act of 1959'.

"DECLARATION OF PURPOSE

"SEC. 2. The Congress declares that, even during periods of prosperity for the Nation as a whole, some of our communities suffer substantial and persistent unemployment; that such unemployment causes hardship to many individuals and their families and detracts from the national welfare by wasting vital human resources; that to overcome this problem the Federal Government, in cooperation with the States, should help areas of substantial and persistent unemployment to take effective steps in planning and financing their economic development; that Federal assistance should enable communities to achieve lasting improvement and decrease economic vulnerability by the establishment of stable and diversified local economies; and that new employment opportunities should be created rather than merely transferred from one community to another.

"AUTHORITY OF SECRETARY OF COMMERCE

"SEC. 101. (a) The Secretary of Commerce, hereinafter referred to as the Secretary, may designate as an area of substantial and persistent unemployment any area certified as eligible for such designation by the Secretary of Labor.

"(b) To assist areas in the United States designated as areas of substantial and persistent unemployment, the Secretary is authorized—

"(1) to make grants for technical assistance for such areas in accordance with the provisions of section 106 (a) of this Act; and

"(2) to provide loans for such areas in accordance with the provisions of section 107 of this Act.

"(c) The Secretary is also authorized—

"(1) to extend the full cooperation of the Federal Government to all areas in the United States (including Puerto Rico) in promoting the more effetcive use of local resources, in the establishment of new industries based on local resources, and in the expansion of existing industries; such cooperation to be provided through technical advice and consultation and, when necessary, through the conduct of special studies;

"(2) to decrease, through grants made in accordance with the provisions of section 106(b) of this Act, the economic vulnerability of towns predominantly dependent on one industry, small towns which could serve as centers for economic diversification of rural areas of underemployment, and rural low-income areas by helping them develop manufacturing, processing, and other activities calculated to diversify and improve their economics; and

"(3) to coordinate his functions under this Act with those of the Secretary of Agriculture and other officials administering Federal programs affecting local economic conditions.

"(d) As used in this Act: (1) The term "United States" includes the several States, the Territory of Hawaii, and the District of Columbia; (2) the term "State" refers to an individual State, the Territory of Hawaii, or the District of Columbia; and (3) the term "loan" includes loans, immediate participation in loans, and purchase of evidences of indebtedness.

"AUTHORITY OF SECRETARY OF LABOR

"SEC. 102. (a) The Secretary of Labor shall from time to time, or upon the request of the Secretary, certify the existence of areas eligible for designation as areas of substantial and persistent unemployment whenever he finds on the basis of available labor force data, or studies which he initiates when he deems necessary, that—

"(1) the rate of unemployment in the area, excluding unemployment due primarily to temporary or seasonal factors, is currently 6 per centum and has averaged at least 6 per centum for the qualifying time periods specified in (2) below; and

"(2) the annual average rate of unemployment in the area has been at least—

"(A) 50 per centum above the national average for four of the preceding five calendar years, or

"(B) 75 per centum above the national average for three of the preceding four calendar years, or

"(C) 100 percentum above the national average for two of the preceding three calendar years; and

"(3) nonagricultural employment in the area has declined, or has shown a smaller increase than in the country as a whole, during the preceding five calendar years: *Provided,* That no area shall be excluded by the requirement of this subsection if the annual average rate of unemployment in that area for three of the last four years exceeds 8 per centum.

"(b) In the case of labor market areas for which appropriate historical labor force data have not been compiled, the Secretary of Labor shall certify as eligible for designation as areas of substantial and persistent unemployment those areas in which the unemployment rate and duration, based on a survey of available labor force data, generally equals or exceeds the rate and duration specified in section 102 (a).

"(c) The Secretary of Labor may also certify under subsection (a) or (b) of this section the existence of eligible areas upon request of any appropriate State government agency, instrumentality, or political subdivision.

"(d) The Secretary of Labor is authorized upon request and whenever he determines that such studies are needed, to undertake, or to provide assistance to others in studies of the size, characteristics, skills, adaptability, occupational potentialities, and related aspects of the labor force of an area certified under section 102.

"(e) When skills of the labor force in an area designated under section 101 are not such as to facilitate full utilization of the human resources in such area, the Secretary of Labor is authorized to provide advice and technical assistance in developing and carrying out a program to improve the utilization of such labor force.

"(f) Whenever the Secretary of Labor finds a need for vocational education services in an area designated under section 101 and when such area has an economic development program as provided in section 107 (b) (9), he is authorized to assist interested agencies to determine the vocational training needs of unemployed individuals residing in the area, and he shall notify the Secretary of Health, Education, and Welfare of the vocational training or retraining requirements of the area. The Secretary of Health, Education, and Welfare, through the Commissioner of Education, is authorized to provide assistance, including financial assistance when necessary or appropriate, to the State vocational education agency in the provision of such services in the area.

"AUTHORITY OF HOUSING AND HOME FINANCE ADMINISTRATOR

"SEC. 103. Title I of the Housing Act of 1949, as amended, is amended by adding the following new heading and section at the end of title I:

"'AREAS OF SUBSTANTIAL AND PERSISTENT UNEMPLOYMENT

"'SEC. 112. (a) When the Secretary of Commerce certifies to the Administrator (1) that any county, city, or other municipality (referred to as 'municipality' in this section) is situated in an area designated by the Secretary of Commerce pursuant to the Area Assistance Act of 1959 as an area of substantial and persistent unemployment, and (2) that there is a reasonable probability that with assistance provided under the Area Assistance Act of 1959 and other undertakings the area will be able to achieve lasting improvement in its economic development, the Administrator is authorized to extend financial assistance to a local public agency in any such municipality under this title and the provisions of this section.

"'(b) The Administrator may provide such financial assistance under this section without regard to the requirements or limitations of section 110(c) of this title that the project area be clearly predominantly residential in character or that it will be predominantly residential under the urban renewal plan.

"'(c) Financial assistance under this section may be provided for any project involving a project area including primarily industrial or commercial structures suitable for rehabilitation under the urban renewal plan for the area.

"'(d) Notwithstanding any other provisions of this title, a contract for financial assistance under this section may include provisions permitting the disposition of any land in the project area, designated under the urban renewal plan for industrial or commercial uses to any public agency or nonprofit corporation for subsequent disposition as promptly as practicable by such public agency or corporation for the redevelopment of the land in accordance with the urban renewal plan: *Provided,* That any disposition of such land to such public agency or corporation under this section shall be made at not less than its fair value for uses in accordance with the urban renewal plan: *And provided further,* That the purchaser from or lessees of such public agency or corporation, and their assignees, shall be required to assume the obligations imposed in conformity with the requirements of section 105(b) hereof.

"'(e) Following the execution of any contract for financial assistance under this section with respect to any project, the Administrator may exercise the authority vested under this section for the completion of such project notwithstanding any determination made after the execution of such contract that the area in which the project is located may no longer be an area of substantial and persistent unemployment.'

"SEC. 104. The first sentence of section 202(c) of title II of the Housing Amendments of 1955 is amended to read as follows:

"'(c) In the processing of applications for financial assistance under this section, the Administrator shall give priority first to applications of counties, cities, and other municipalities and political subdivisions for financing needed public facilities in areas determined to be areas of substantial and persistent unemployment under the Area Assistance Act of 1959: *Provided,* That the Secretary of Commerce certifies there is reasonable probability that with assistance made available under the Area Assistance Act of 1959 and other undertakings such areas will be able to achieve lasting improvement in their economic development; and, second, to applications of smaller municipalities for assistance in the construction of basic public works (including works for the storage, treatment, purification or distribution of water; sewage, sewage treatment, and sewer facilities; and gas distribution systems) for which there is an urgent and vital public need.'

"SEC. 105. The second sentence of section 701 of the Housing Act of 1954, as amended, is amended by adding the following in clause (2) after the words 'decennial census which': '(i) are situated in areas designated by the Secretary of Commerce under the Area Assistance Act of 1959 as areas of substantial and persistent unemployment or (ii)'.

"GRANTS FOR TECHNICAL ASSISTANCE

"SEC. 106. (a) In carrying out section 101 (b) (1), the Secretary is authorized to make grants for technical assistance including studies evaluating the needs of, and developing potentialities for, economic growth of areas designated under section 101(a). These grants may be made without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529). Appropriations are hereby authorized for these grants in an amount not to exceed $1,500,000 annually.

"(b) In carrying out section 101(c)(2), the Secretary is authorized to make similar grants for the benefit of towns and areas described therein. Negotiations taking into account the financial ability of the grantee and other relevant considerations shall be made for contributions to costs of projects undertaken hereunder. These grants may be made without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529), and appropriations therefor are hereby authorized in an amount not to exceed $1,500,000 annually.

"LOANS

"SEC. 107. (a) In carrying out section 101(b)(2) of this Act, the Secretary is authorized to aid in financing any project for the purchase or development of land and facilities for industrial usage, for the construction of new factory buildings, for rehabilitation of abandoned or unoccupied factory buildings, or for the alteration, conversion, or enlargement of any existing buildings for industrial use. Such loans shall not be extended for working capital, for purchase of machinery or equipment, or to assist establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

"(b) Loans made under this section shall be on such terms and conditions as the Secretary determines, subject, however, to the following restrictions and limitations:

"(1) The total amount of loans outstanding at any one time shall not exceed $50,000,000;

"(2) Such loans shall be extended only to applicants, both private and public, approved by the State (or any agency or instrumentality thereof concerned with problems of economic development) in which the project to be financed shall be located;

"(3) No such loan shall be extended hereunder unless the financial assistance applied for is not otherwise available from other lenders on reasonable terms;

"(4) No direct loan shall be made unless it is determined that an immediate participation is not available;

"(5) No loans shall be made unless it is determined that there is a reasonable assurance of repayment;

"(6) Each loan shall bear interest at a rate not less than the interest rate currently payable under section 108(e) on advances from the Treasury plus additional amounts deemed adequate to cover administrative expenses and a reasonable reserve for losses;

"(7) No loan, including renewals or extension thereof, may be made hereunder

for a period exceeding twenty-five years: *Provided*, That the foregoing restrictions on maturities shall not apply to securities or obligations received by the Secretary as a claimant in bankruptcy or equitable reorganization or as a creditor in other proceedings attendant upon insolvency of the obligor, or if extension or renewal or additional periods, not to exceed, however, a total of ten years, will aid in the orderly liquidation of such loan or of such evidence of indebtedness;

"(8)(A) Not less than 15 per centum of the aggregate cost to the applicant (excluding all other Federal aid in connection with the undertaking) of acquiring or developing land and facilities, and of constructing, altering, converting, rehabilitating, or enlarging the building or buildings of the particular project shall be supplied by the State or any agency, instrumentality, or political subdivision thereof, or by a community or area organization, as equity capital or as a loan repayable only after the financial assistance hereunder has been repaid in full according to the terms thereof and, if such loan is secured, its security shall be subordinate and inferior to the lien or liens securing the financial assistance hereunder;

"(B) Of the remaining 85 per centum of the aggregate cost, 35 per centum of the aggregate cost may be loaned by the Secretary under the terms of this Act and security for such a loan may be subordinate and inferior to the lien or liens which secure any loan or financing other than funds required by section 107(b)(8)(A).

"(C) Loans shall not be available hereunder unless other funds are available in an amount which, together with assistance provided hereunder and funds provided under section 107(b)(8)(A), shall be sufficient to pay such aggregate cost; and

"(9) No such loan shall be extended unless there shall be submitted and approved by the Secretary an overall program for the economic development of the area and a finding by the State, or any agency, instrumentality, or local political subdivision thereof, that the project for which loans is sought is consistent with such program: *Provided*, That nothing in this Act shall authorize financial assistance for any project prohibited by laws of the State or local political subdivision in which the project would be located.

"AREA ASSISTANCE FUND

"SEC. 108. (a) There is hereby authorized to be established in the Treasury of the United States a revolving fund to be known as the area assistance fund (hereinafter referred to as the 'fund'), which shall be available to the Secretary for the payment of all obligations and expenses in connection with the loans authorized under section 101(b)(2).

"(b) When requested by the Secretary, advances shall be made to the fund from the appropriations made therefor. There is hereby authorized to be appropriated for the purpose of making advances to the fund, without fiscal year limitation, an amount not exceeding $50,000,000.

"(c) Receipts arising from the loan program shall be credited to the fund.

"(d) Any moneys in the fund determined by the Secretary to be in excess of current needs shall be credited to the appropriation from which advanced to be held for future advances to the fund.

"(e) There shall be paid into miscellaneous receipts of the Treasury at the close of each fiscal year interest on advances to the fund at a rate which shall be determined by the Secretary of the Treasury after taking into consideration the current average market yields of outstanding marketable obligations of the United States having maturities comparable to loans made by the Secretary.

"(f) Contributions shall be made from the fund to the civil service retirement and disability fund, on the basis of annual billings as determined by the Civil Service Commission, for the Government's share of the cost of the civil service retirement system applicable to employees (and their beneficiaries) performing activities authorized under section 101(b)(2). Contributions shall also be made to the employee's compensation fund, on the basis of annual billings as determined by the Secretary of Labor, for the benefit payments made from such fund on account of employees performing activities authorized under section 101(b)(2). The annual billings shall also include a statement of the fair portion of the cost of the administration of the respective funds, which shall be paid by the Secretary into the Treasury as miscellaneous receipts.

"BUDGET AND AUDIT

"SEC. 109. In the performance of and with respect to the functions, powers, and duties vested in him by section 107 of this Act, the Secretary shall—

"(a) prepare annually and submit a budget program as provided for wholly owned Government corporations by the Government Corporation Control Act, as amended; and

"(b) maintain a set of accounts which shall be audited annually by the General Accounting Office in accordance with the principles and procedures applicable to commercial transactions as provided by the Government Corporation Control Act, as amended, and no other audit shall be required: *Provided*, That the Secretary, with respect to the program of financial assistance authorized by section 101(b)(2), shall determine the character of and the necessity for obligations and expenditures and the manner in which they shall be incurred, allowed, and paid, subject to provisions of law specifically applicable to Government corporations.

"AREA ASSISTANCE ADMINISTRATOR

"SEC. 110. There shall be appointed by the President, by and with the advice and consent of the Senate, an Area Assistance Administrator in the Department of Commerce, who shall receive compensation at a rate equal to that received by Assistant Secretaries of Commerce. The Administrator shall perform such duties in the execution of this Act as the Secretary may assign.

"POWERS

"SEC. 111. In the performance of, and with respect to, the functions, powers, and duties vested in him under this Act, the Secretary may—

"(a) adopt, alter, and use a seal, which shall be judicially noticed; and subject to the civil service and classification laws, select, employ, appoint, and fix the compensation of such officers, employees, attorneys, and agents as shall be necessary to carry out the provisions of this Act, and define their authority and duties;

"(b) hold such hearings, sit and act at such times and places, and take such testimony, as he may deem advisable;

"(c) under such regulations as he may prescribe, make such findings and determinations as may be required for the proper administration of this Act and such findings and determinations, together with those required to be made by the Secretary of Labor pursuant to section 102, hereof, shall be final and shall not be subject to review in any court by mandamus or otherwise: *Provided*, That with respect to the validity, effect, and enforcement of section 101(b)(2) hereof or security taken thereunder, statutes, rules, and regulations pertaining generally to suits by and against the United States shall be applicable;

"(d) under regulations prescribed by him, assign or sell at public or private sale, or otherwise dispose of for cash or credit, in his discretion and upon such terms and conditions and for such consideration as the Secretary shall determine to be reasonable, any evidence of debt, contract, claim, personal property, or security assigned to or held by him in connection with the payment of loans granted under this title, and to collect or compromise all obligations assigned to or held by him and all legal or equitable rights accruing to him in connection with the payment of such loans until such time as such obligation may be referred to the Attorney General for suit or collection;

"(e) deal with, complete, renovate, improve, modernize, insure, rent, or sell for cash or credit, upon such terms and conditions and for such consideration as the Secretary shall determine to be reasonable, any real property conveyed to or otherwise acquired by him in connection with the payment of loans granted under this title;

"(f) pursue to final collection, by way of compromise or other administrative action prior to reference to the Attorney General, all claims against third parties assigned to the Secretary in connection with loans made by him. Section 3709 of the Revised Statutes, as amended (41 U.S.C. 5), shall not be construed to apply to any contract of hazard insurance or to any purchase or contract for services or supplies on account of property obtained by the Secretary as a result of loans made under this title if the premium therefor or the amount thereof does not exceed $1,000. The power to convey and to execute in the name of the Secretary deeds of conveyance, deeds of release, assignments and satisfactions of mortgages, and any other written instrument relating to real property or any interest therein acquired by the Secretary pursuant to the provisions of this title, may be exercised by the Secretary or by any officer or agent appointed by him for the purpose;

"(g) acquire, in any lawful manner, any property (real, personal, or mixed, tangible or intangible), whenever deemed necessary or appropriate to the conduct of the activities authorized in section 101(b)(2) of this Act; and

"(h) in addition to any powers, functions, privileges, and immunities otherwise vested in him, take any and all actions, including the procurement of the services of attorneys by contract, determined by him to be necessary or desirable in making, servicing, compromising, modifying, liquidating, or otherwise administratively dealing with or realizing on loans made or securities acquired under the provisions of this title: *Provided*, That no attorney's services shall be produced by contract in any office where an attorney or attorneys are or can be economically employed full time to render such service.

"ADVISORY BOARD

"SEC. 112. To advise the Secretary in the performance of functions authorized by this Act, there is authorized to be created an Area Assistance Advisory Board, hereinafter referred to as the 'Board', which shall consist of the following members, all ex officio: The Secretary, as Chairman, the Secretaries of Agriculture, Health, Education, and Welfare, Labor, and Treasury, the Administrators of the Housing and Home Finance Agency and of the Small Business Administration. The Chairman may from time to time invite the participation of officials of other agencies of the Executive Branch interested in the functions herein authorized. Each member of the Board may designate an officer of his agency to act for him as a member of the Board with respect to any matter there considered.

"DEPOSITARIES AND AGENTS

"SEC. 113. The Federal Reserve banks are authorized and directed to act as custodians and fiscal agents for the Secretary in the general performance of the powers conferred by this title. Each Federal Reserve bank

shall be entitled to be reimbursed for all expenses incurred as such fiscal agents. Any banks insured by the Federal Deposit Insurance Corporation, when designated by the Secretary of the Treasury, may act as custodians and depositaries for the Secretary.

"PENALTIES

"SEC. 114. With respect to financial assistance authorized by this Act:

"(a) Whoever makes any statement knowing it to be false, or whoever willfully overvalues any security, for the purpose of obtaining for himself or for any applicant any loan, or extension thereof by renewal, deferment of action, or otherwise, or the acceptance, release, or substitution of security therefor, or for the purpose of influencing in any way the action of the Secretary, or for the purpose of obtaining money, property, or anything of value, under this Act, shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

"(b) Whoever, being connected in any capacity with the Secretary (1) embezzles, abstracts, purloins, or willfully misapplies any moneys, funds, securities, or other things of value, whether belonging to him or pledged or otherwise entrusted to him, or (2) with intent to defraud the Secretary or any other body politic or corporate, or any individual, or to deceive any officer, auditor, or examiner of the Secretary makes any false entry in any book, report, or statement of or to the Secretary, or, without being duly authorized, draws any order or issues, puts forth, or assigns any note, debenture, bond, or other obligation, or draft bill of exchange, mortgage, judgment, or decree thereof, or (3) with intent to defraud participates, shares, receives directly or indirectly any money, profit, property, or benefit through any transaction, loan, commission, contract, or any other act of the Secretary, or (4) gives any unauthorized information concerning any future action or plan of the Secretary which might affect the value of securities, or, having such knowledge, invests or speculates, directly or indirectly, in the securities or property of any company or corporation receiving loans or other assistance from the Secretary shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

"(c) As used in this section, the term 'Secretary' shall mean, with respect to the lending activities of the Housing and Home Finance Administrator authorized under this Act, the Housing and Home Finance Administrator.

"USE OF OTHER FACILITIES

"SEC. 115. (a) To avoid duplication of activities and minimize expense in carrying out the provisions of this Act, the Secretary shall to the extent practicable and with their consent use the available services and facilities of other agencies and instrumentalities of the Federal Government on a reimbursable basis.

"(b) Departments and agencies of the Federal Government shall exercise their powers, duties, and functions in such manner as will assist in carrying out the objectives of this Act. This Act shall be supplemental to any existing authority and nothing herein shall be deemed to be restrictive of any existing powers, duties, and functions of any other department or agency of the Federal Government.

"CONSULTANTS

"SEC. 116. The Secretary is authorized to obtain services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55(a)), at rates not to exceed $75 per diem for individuals.

"ANNUAL REPORT

"SEC. 117. The Secretary shall make a comprehensive annual report of his operations under this Act for the fiscal year ending on the preceding June 30, to the President, for transmission to the Congress as soon as practicable in each year, but in no case later than the third day of the following January.

"AUTHORIZATION FOR APPROPRIATIONS

"SEC. 118. In addition to appropriations specifically authorized by sections 106 and 108, appropriations are further authorized for the carrying out of other provisions and purposes of this Act.

The PRESIDING OFFICER. The question is on agreeing to the amendment in the nature of a substitute offered by the Senator from Illinois [Mr. DIRKSEN].

Mr. CAPEHART. Mr. President, I should like to ask the Senator a question. The amendment is the same as the bill which was considered by the Senate Committee on Banking and Currency, introduced by the able minority leader, the Senator from Illinois [Mr. DIRKSEN], is it not?

Mr. DIRKSEN. The Senator is correct.

Mr. CAPEHART. It is normally called the administration bill?

Mr. DIRKSEN. The Senator is correct.

Mr. CAPEHART. The amendment is a complete substitute for the pending bill, is it not?

Mr. DIRKSEN. The Senator is correct.

Mr. CAPEHART. And the amendment is the pending question?

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Illinois [Mr. DIRKSEN].

Mr. DOUGLAS. Mr. President, I ask for the yeas and nays on the pending amendment.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

Mr. LANGER. Mr. President, I was a cosponsor of S. 722, a bill to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas. I now offer an amendment intended to be proposed by me which states as follows:

On page 6, line 13, after the period, add the following new sentence:

The Administrator shall also designate as rural redevelopment areas each State the civilian income from manufacturing of which is less than 50 per centum of the average income from manufacturing of the States of the United States.

The reason for my offering the amendment is that the amendment would definitely be beneficial to 13 States whose civilian income from manufacturing is less than 50 percent of the national average. Those States and their percentage of income from manufacturing are as follows: North Dakota, 3.1 percent; Nevada, 5.3 percent; South Dakota, 6.8 percent; Wyoming, 8.5 percent; Montana, 10.1 percent; New Mexico, 10.2 percent; Florida, 10.9 percent; Arizona, 11.4 percent; Nebraska, 14.1 percent; Colorado, 14.6 percent; Utah, 14.8 percent; Idaho, 14.8 percent; and Oklahoma, 15.4 percent.

Mr. President, I have received correspondence from the Honorable Lawrence A. Schneider, director of the Economic Development Commission, State of North Dakota, in which he urges the adoption of the proposed amendment. He states:

If the amendment and the bill are passed, it would make possible the borrowing of funds by our States and communities so that they, too, could interest and develop the expansion of manufacturing into the above 13 States.

Mr. President, this bill is a resubmission of the depressed areas bill of the recession. However, I should like to impress upon my colleagues that when this bill was introduced in the previous session, our Nation was on the road to one of the highest levels in the history of our economy. The gross national product and the earnings of our people generally were going up and did reach their highest level after the depressed areas bill was reintroduced in the 85th Congress on January 29, 1957. If there was—and beyond doubt there was—a great need for such a measure as a depressed areas bill in 1956–57, there certainly is a far greater need today when we are about to vote on this bill, since we all know that our Nation has been in the throes of a recession, which became evident in March 1958, when unemployment reached a peak of over 6.5 million people—a tremendous increase in unemployment over the time when the bill was introduced in the 84th Congress and reintroduced in the 1st session of the 85th Congress.

More than a decade ago, Congress recognized its responsibility to utilize the country's resources and shape its policies to establish conditions which would assure that maximum employment, production, and purchasing power would prevail throughout the United States. The Employment Act of 1946 was passed with this thought in mind. However, in view of this legislation and in view of the tremendous surge of our national economy through 1956 and into 1957, there still remain a large number of communities that fail to share in the prosperity which has prevailed generally throughout the country. Chronic unemployment and underemployment of the type weighing upon so many American cities, communities, and rural sections tend to stifle the economic life of entire areas. This, of course, has an impact on community institutions and living standards of many persons. It affects their education, health, and welfare problems. This, of course, increases the taxpayer's burden for welfare and assistance costs.

I strongly believe that Senate bill 722, with my amendment will provide for redevelopment of these areas by providing a flexible and adaptable program to meet the needs of the many communities, both industrial and rural, which have suffered from chronic unemployment and underemployment. My great State of North Dakota and other States of similar size and population will receive great benefits from my proposed amendment which provides that—

The administrator shall also designate as rural development areas each State the civilian income from manufacturing of which is less than 50 percent of the average income from manufacturing of the States of the United States.

Mr. President, I am certain that after all the facts in the matter are seriously considered, the Members of the Senate will vote favorably on S. 722 and my proposed amendment.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD a letter dated March 17, 1959, which I have received from Martin N. Gronvold, director of the North Dakota Unemployment Compensation Division.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NORTH DAKOTA WORKMEN'S COMPENSATION BUREAU,
Bismarck, N.Dak., March 17, 1959.

The Honorable WILLIAM LANGER,
U.S. Senate, Washington, D.C.

DEAR SENATOR LANGER: In response to your letter of March 12, please be advised that insured unemployment averaged 10.4 percent in North Dakota for the week ending February 21, 1959.

The areas having the highest percent of unemployment were:

1. Mandan area—21.9 percent. (Includes the counties of Grant, Mercer, Morton, Oliver, and Sioux.)
2. Jamestown area—14.7 percent. (Includes the counties of Dickey, Foster, LaMoure, Logan, McIntosh, Stutsman, and Wells.)
3. Bismarck area—11.8 percent. (Includes the counties of Burleigh, Emmons, Kidder, McLean, and Sheridan.)
4. Minot area—11.5 percent. (Includes the counties of Bottineau, McHenry, Pierce, Renville, Rolette, and Ward.)
5. Grand Forks area—10.3 percent. (Includes the counties of Grand Forks, Steele, and Traill.)

By way of comparison, the Fargo area, which includes only Cass County, had an insured unemployment rate of 4.2 percent.

I should stress that the above rates of unemployment relate only to those workers which are covered by unemployment insurance, which in North Dakota includes only those nonagricultural establishments which have four or more employees. While we have no information available regarding agricultural employees, it is assumed that the rate of unemployment among this group of workers would be much higher than that of nonagricultural employees at this time of the year.

As you know, the large part of our unemployment problem stems from the seasonality of our economy. Each year our rate of insured unemployment will range from one of the lowest in the United States in the summer months to one of the highest during the winter months.

If we can be of any further service to you in this connection, please do not hesitate to call upon us.

Sincerely yours,
NORTH DAKOTA UNEMPLOYMENT COMPENSATION DIVISION,
MARTIN N. GRONVOLD, *Director.*

Mr. DOUGLAS. Mr. President, I assume the time consumed by my friends and colleagues from Illinois, North Dakota, and Wisconsin will not be taken from the time of the Senator from Connecticut.

The PRESIDING OFFICER. That is the understanding of the Chair.

The Senator from Connecticut is now recognized for 30 minutes.

Mr. DODD. Mr. President, for the past 20 years our country on the whole has enjoyed a prosperity previously unknown anywhere in the world.

To be sure, there have been three serious recessions during this period. Fortunately, their effect was limited, and we have succeeded in avoiding a major depression. But millions of our fellow Americans, living in many areas of the country, have not shared in this growing prosperity. For them there has been nothing but hard times, which have lingered on year after year.

As the general level of economic well-being has improved, conditions in these areas have continued to deteriorate.

The blight of chronic unemployment has spread its withering tentacles across whole regions of this country.

In West Virginia 300,000 families have been reduced to such a point that hunger is a day-to-day reality and in many cases only the distribution of Federal surplus foods is preventing actual starvation.

In Pennsylvania alone, almost a million people are dependent on these surplus food distributions, inadequate and deficient as they are.

In Kentucky, large areas are slipping into a swamp of poverty and despair that is as bad and in some cases worse than the darkest days of the 1930's.

In New England, economic disaster has spread from one textile center to another, leaving mass unemployment, ruined towns, and depressed conditions in its wake.

And so the story goes in other pockets of permanent depression spread throughout the country.

Each of these depressed areas is an economic cancer eating away at the fabric of our national prosperity. These regions could be contributing richly to the wealth of our country, furnishing markets for goods, providing sources of national strength, and adding greatly to our productive power. But instead, they constitute a source of national weakness and of economic loss; and they lay a heavy toll on our whole economy.

Of far greater importance, however, is the price paid in terms of human misery, of ruined lives, of broken families, of lost opportunities, of ignorance and of degradation which inevitably accompany grinding and prolonged poverty. The extent of this impoverishment in depressed areas has been documented again and again in this Chamber by other Senators. In a series of memorable speeches, the distinguished Senators from West Virginia [Mr. BYRD and Mr. RANDOLPH], day in and day out have brought before the Members of the Senate the tragic situation in West Virginia and other areas. Other Senators have done the same. The facts are all in the record. We can no longer plead ignorance.

We know these conditions exist. And we know that in this great land of plenty there is no justification for allowing such conditions to continue. There is no excuse for it, economically, politically, or morally.

The Douglas area redevelopment bill proposes a many-pronged attack on the problem of depressed areas. It calls for the establishment of a Federal agency, which working in close cooperation with local authorities and private industry, would provide a wide variety of assistance to these regions.

Under the provisions of the Douglas bill, S. 772, Federal loans would be available for the establishment of industry in depressed areas. The bill calls for additional loans for building public facilities necessary to the establishment of industry, such as sewers, roads and drainage systems. And direct assistance grant for the construction of other public facilities are included; in order that conditions in depressed communities may be made more livable for their people, and more attractive for outside industry.

Technical advice would be furnished to local communities by competent authorities; programs to teach the unemployed new skills would be set up. Subsistence would be provided for workers learning these skills. Thus, these communities would be given the tools to work out their own problems.

What of the cost? The cost is $300 million in loans that would be paid back with interest. The cost is $89 million for Federal grants.

This is a small price to pay for helping to bring about prosperity when compared to the cost of continuing poverty. In 1958, the cost in unemployment compensation payments from all sources was $4½ billion. Representative PATMAN has pointed out that if unemployment in depressed areas could be reduced to the national level of unemployment, a saving of $450 million annually in unemployment compensation payments would be effected. The cost of supplying Federal surplus food distribution to areas of high unemployment has amounted to $1.2 billion during the past 6 years. These are only small indexes of the total cost which we shall be actually levying upon ourselves if we refuse to take action to overcome chronic unemployment.

The Douglas bill proposes the same kind of assistance to our own people that we have been providing at a cost of billions of dollars to peoples all over the globe. We have before us what I call a point 4 program for aid to depressed and underdeveloped areas of our own country. Many of those who oppose this bill, support foreign aid, as I do; and I say that what is right for the peoples of other countries is right for the people of our own country.

A number of objections have been raised against this depressed area legislation. It is argued that this is not a task for the Federal Government; that Federal funds should not be used to aid in the establishment of private enterprises; that new jobs created in depressed areas are jobs taken away from prosperous areas; that for geographical or economic reasons, large areas of the country will inevitably suffer permanent depressed conditions; and that the answer to this problem is not Federal aid but mass migration of the populations involved to more prosperous regions. And it is said that, although the present program may be a modest one, it is bound to expand in years ahead, and therefore, it should be strangled in its infancy.

In the face of the gravity of the problem of depressed areas, the enormity of the suffering involved, and the tragedy of the loss in human and economic terms, these arguments seem to me nar-

row and flimsy, even if they were in some respects valid. But I do not think they are valid.

Why is this not a proper and legitimate area for Federal endeavor?

The problem involves millions of people in a score or more of States. It is a problem too vast to be solved by individuals or by local or State governments. And the continuation of these conditions involves an injustice which can no longer be tolerated by the American people.

The need for Federal help is clear. The means for Federal help are at hand. The responsibility can no longer be avoided.

We cannot accept the reasoning that a new job in a depressed area is a job taken away from some other area. Such reasoning assumes that we have a static economy, that there is a fixed number of jobs, a number far below the available manpower.

The advocates of depressed-area legislation believe in the concept of a growing economy, sometimes called an expanding economy. We believe that new jobs create other jobs; that grinding poverty in one place endangers prosperity in all places; and that in the long run, progress and economic growth anywhere helps us everywhere.

The idea of mass migration for the unemployed may seem appealing to someone sitting in a comfortable office surrounded by charts and graphs, someone to whom unemployment and poverty are mere statistics. But when one goes out into the depressed areas in Connecticut, Pennsylvania, West Virginia, and other States, he immediately sees the absurdity and cruelty of this suggestion. Vast areas of the country are involved. Millions of people are involved—people who, in most cases, are relatively unskilled, or people whose skills are no longer in demand. Where will they go? Can whole counties and regions be abandoned? To ask these questions is to answer them.

All of the areas covered by the bill were at one time growing and prosperous. All of them have been in the past a source of national strength and of economic strength. We believe that they can be again and that they will be, if only we give them a chance.

Some agree that the program being discussed today is modest and acceptable, but they say it is bound to expand and become extravagant and that, therefore, it should be choked off before it gets started.

If we were to apply this philosophy to every grave problem before us, our country would soon become paralyzed. We cannot refuse to attempt to solve the problems of our time because we fear the incompetence and extravagance of future administrations or future Congresses. We can only try to meet effectively the demands of our time and our hope that our successors will do the same in their time.

There are other objections which I cannot deal with properly in the limited time available but I can say this: To those who oppose this bill on the grounds that it is too small to do what its advocates hope it will do, we say, "Come forward with your amendments and proposals to make this bill more effective and greater in scope and we will support them."

To those who say that the bill is unfair because it deals with only a certain portion of the unemployed, to the exclusion of others, we say, "Join with us on this bill; and then bring forward your own suggestions for helping the unemployed you refer to, and we will join with you."

To those who say that the bill is administratively unworkable, we say, "Come forward with proposals that will make it more workable and we will support them."

Opponents of this type of legislation in my own State have raised doubts as to the effectiveness of the Douglas bill as far as Connecticut is concerned. Some go further, and say that the bill could have an adverse effect on Connecticut through encouraging a shift of industry to other States that would otherwise have remained in, or located in, Connecticut.

I dispute this contention.

Connecticut has a real and a continuing need for this proposed legislation. We have almost 100,000 unemployed workers. All our industrial cities will soon become eligible for aid if depressed conditions continue. This is one of the strange features of the situation. The cities of Bristol, Danielson, and Norwich already qualify. In a few months, based on present unemployment figures, Ansonia, Bridgeport, Meriden, New Britain, and Torrington will become eligible for some form of aid. And 4 months later, Middletown, New Haven, Thompsonville, Waterbury, and Willimantic will qualify.

These cities form the industrial heart of Connecticut; and I cannot understand opposition to this bill on the grounds that it would provide only insignificant aid to our State. Nor do I believe that this bill will result in a loss of industry to other States.

I share the belief of Governor Ribicoff of Connecticut that because of the proximity of our State to the great markets of the Northeast, Connecticut stands to gain greatly from the establishment of branch plants, if only some extra inducements can be provided, inducements which are provided in the Douglas bill.

I have been urged to oppose this bill on the grounds that some States will obtain greater assistance than will Connecticut. This argument, which is not a new one, but which has often been used, is advanced often in a State such as mine, which has high standards of per capita income, health, education, and public facilities. It does not seem to matter whether the question is highways, education, urban renewal, unemployment compensation, or something else; someone is sure to point out that Connecticut is better off than many other States, and that therefore we should oppose any Federal help anywhere in the United States until other States have drawn even with Connecticut. I reject this view: It runs against the grain of my political philosophy, and as a practical matter it gets Connecticut nowhere.

Certainly we are more fortunate than many other States in many fields. I do not say this boastfully, but rather because I have a point to make. However, we also have problems which we cannot solve without the help of other States. We will not get such help, and we will not deserve it, if we adopt a selfish, narrow attitude toward the needs of our sister States.

I believe I have documented the fact that Connecticut has great need for depressed area legislation and stands to benefit greatly from its provisions. I have pointed out that Connecticut has almost 100,000 unemployed and that factories are closed in every one of our industrial cities. But even if there were not a single unemployment worker in Connecticut, even if there were not a single factory or shop shut down, I would still support this bill because it is good for the country. If there are representatives in this Chamber from States that have no economic problems, surely they cannot be indifferent to the plight of millions of their fellow Americans.

The depressed areas of today were once thriving. The thriving areas of today and this is something to remember—may someday be depressed. We cannot go wrong by doing what is good for the whole country.

Long ago we, as a Nation, decided that Federal funds should be used to combat economic problems which were national in scope. I do not believe anyone questions that decision now. There is no longer any fundamental division between our two political parties on this question. Both the administration and Democratic congressional leaders have submitted programs for aid to depressed areas. Therefore, we need not argue the appropriateness and feasibility of Federal aid in this case. That question has been decided and is now, for all practical purposes, a closed issue.

The question before us is which proposal for Federal aid to depressed areas shall we adopt? I support the Douglas bill, S. 722. I support it because it is broader in scope, because it provides more assistance, and because it provides better organization and better tools to accomplish an enormous responsibility.

For many years the great senior Senator from Illinois [Mr. DOUGLAS] has acted as the conscience of the Nation in keeping before us the plight of the forgotten men of our time, the victims of depressed areas.

I have watched for many years with growing admiration the way in which month by month and year by year the Senator from Illinois [Mr. DOUGLAS] has kept the plight of the people of the depressed areas before the Nation and has, bit by bit, won approval for his enlightened program. The Senator from Illinois has walked a long and, I think, a lonely road that has been filled with disappointments. He has seen his bill passed by the Senate and fail in the House. He has seen it passed by both Houses, only to be vetoed by the President.

I hope and believe that we are now on the threshold of final victory for depressed area legislation.

I am glad that the Senator from Illinois is on the floor. Let me say to him and to my other colleagues on the floor that as each depressed area of our country is converted to a prosperous and *thriving* community, it will be only another monument to the foresight, the courage, and the perseverance of the great man who is the father of the legislation before us today. I congratulate the Senator from Illinois and I wish to say of him publicly what I often feel privately. The whole country is the better and the stronger for having this remarkable scholar, this dedicated humanitarian, and this true statesman in the United States Senate.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. DODD. I yield.

Mr. DOUGLAS. First, I wish to thank the Senator from Connecticut for his very generous statements about me, which are undeserved but which I appreciate very much. I congratulate the Senator from Connecticut for the very broad and statesmanlike attitude he is taking. Is it not also true, as the Senator from from Connecticut has stated, that the pending bill would be of present benefit to a number of Connecticut areas which would be eligible for assistance, notably the Bristol, Danielson, and Norwich areas?

Mr. DODD. Yes.

Mr. DOUGLAS. Is it not also true that the current rate of unemployment in such large industrial centers of Connecticut as Bridgeport, New Britain, New Haven, and Waterbury is above 6 percent?

Mr. DODD. Yes.

Mr. DOUGLAS. Unless conditions are improved very greatly in the near future, these same areas will be in need of assistance. Is that not true?

Mr. DODD. Yes. That is correct. I brought that point out in my statement a few moments ago. It appears from the best evidence available that these areas will be eligible very soon.

What is significant, I believe, is the fact that the areas where unemployment is occurring are not areas which have been affected or are now affected primarily by cycles of unemployment or seasonal unemployment. There is something far more at fault. It has been a paralyzing fault. I wish I could take my colleagues to the northeastern section of Connecticut to which I am referring. I am not speaking rhetorically or overstating the case when I say that we have experienced hard times in these areas. These people are not able to help themselves. Many of them are people with skills which are no longer usable. Unless something of this kind is done for them they will be cast on the trash heap of life, so to speak.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DODD. I shall be glad to yield as soon as I have finished my comment in further answer to the question of the Senator from Illinois. We have this condition in parts of Connecticut. However, I hope the Senator from Illinois heard me say also that if not even one man or woman was out of work in Connectiuct in one factory or shop, I would still be in favor of the bill, because it is in the best interest of the whole Nation. We are one Nation, we are one Union and we must think and act as one united people. The times, the conditions, and the welfare of all require, yes demand, that we cast off our narrow, ancient attitudes and pull together at home, even as we are urging our friends to do with us abroad.

I heard the Senators from West Virginia [Mr. BYRD and Mr. RANDOLPH] describe to the Senate day after day the plight in their State. I have heard the same situations described by others. My State has been prosperous. Generally speaking, it has made great advances. However, I do not believe we should view the general situation in that light. All of us should be deeply distressed by the plight of the people in our sister States. What I have said about the situation is right. What is good and what is salutary for the country—and this is a great, dynamic program—will prove in some considerable measure the solution of many of our serious economic troubles.

Mr. DOUGLAS. Mr. President, will the Senator yield further?

Mr. DODD. I yield.

Mr. DOUGLAS. While it is true that the exurban county of Fairfield is a prosperous county, where prosperous New Yorkers live, and while it is true that the great insurance city of Hartford is prosperous, nevertheless, as the Senator from Connecticut has brought out, even within the generally prosperous State of Connecticut there are areas of great need. Is that not correct?

Mr. DODD. Yes; mine is a small State but it is a great and strong State. Geographically, it is a very small State. Nevertheless, it has pockets of unemployment, even though much of our State is prosperous. I shall be glad to yield to the Senator from Indiana [Mr. CAPEHART] now if he wishes me to yield. If not, I am ready to yield the floor.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. DODD. I yield.

Mr. BYRD of West Virginia. I compliment the junior Senator from Connecticut on having made a very clear and cogent analysis of the purposes of the bill. I am very grateful to him for his reference to the situation which exists in my State of West Virginia. I am very much pleased that he and other Senators have continued to recognize the situation which confronts my suffering State every day.

I appreciate the fact that the junior Senator from Connecticut has rendered a very great service today not only to the people of his State, but also to all the people of the country. I especially commend him for taking the exemplary position that were there not a single unemployed person in his State of Connecticut, he would favor the bill. Someone has said:

> There is a destiny that makes us brothers;
> None walks his way alone.
> All that we send into the lives of others
> Comes back into our own.

I think the Senator from Connecticut has taken the position which today all Americans should take. I feel certain that every Member of the Senate will take that position. Some of us may not see eye to eye on the bill. Perhaps there is a considerable area of disagreement about the purposes of the bill or about the results which will accrue from it. Nevertheless, I believe every Senator feels as does the Senator from Connecticut about his country.

I again congratulate the Senator from Connecticut.

Mr. DODD. I thank the Senator from West Virginia.

Mr. DOUGLAS. Mr. President, I yield 5 minutes to the junior Senator from Alaska on the bill.

Mr. GRUENING. Mr. President, the bill, S. 722, now before the Senate, tends, as do so many economic measures, to become beclouded in a welter of economic statistics, charts, and tables.

I concede, of course, that these are necessary in order that we may be in a position to judge the economic impact of such measures.

But we should never overlook the fact that what is involved also is the ability, or lack of ability, of men, women, and children to feed, clothe, and house themselves. We are talking about our fellow American citizens who, although trying desperately to find work, cannot do so and who then face the heartrendering problem of wives and children at home who are cold and hungry.

When the acting Governor of Alaska telegraphs me, as he has, that unemployment in Alaska is 20 percent of the working force, that cold statistic has great and sobering economic significance. But it has even greater impact when translated into specific examples of the human want and misery which it represents.

It would be well, Mr. President, as we debate the merits of S. 722 and of the proposals which are made to cut back drastically on the size of this economic shot in the arm, to keep clearly in mind that what we do here will be directly translated into food, clothing, and shelter.

This, then, is what our discussions about area redevelopment, about unemployment compensation, or about the myriad of economic measures which will come before us during this session amount to in real terms.

We are discussing measures which will prevent men, women, and children from going hungry, from being inadequately clothed—and all this in an America about whose might and wealth we justly boast.

The needs which S. 722 seeks to meet are acute and compelling.

This is self-help on a new and enlightened scale. The appeal to statesmanship in S. 722 is not in the relief it offers, however vital that is. Neither does its appeal lie in its potential as a cure for a lingering economic evil which has struck some areas of the United States even during a period of relative prosperity.

For me, the appeal of S. 722 is that it seizes upon an economic ill, traces it to its source, and, while eliminating the cause of the ailment, replaces it with new

and effective materials for growth and success.

This has, of course, a very special meaning for Alaska which still retains many of the qualities of strength combined with underdevelopment that we commonly associate with the American frontier. Alaska is now an integral part of the American Union. Its possibilities for growth and the promise of contribution to the Nation's total wealth are beyond anything known to American history since the Louisiana Purchase.

Those who are indulging in the present budget balancing obsession regardless of consequences make their biggest mistake when they seek to strike down any proposal for Federal financial commitment greater than that contained in the President's budget without regard to the purpose of the proposed expenditure.

There is a vast difference in how we view, or should view, capital investments as opposed to expenditures for day-to-day operating expenses.

Senate bill 722 should, as a matter of fact, have great appeal to the budget balancers, because it seeks, through capital investments, to increase America's productivity.

This is a wealth producing, not a wealth exhausting, proposal.

It is no secret that there is incomparable potential treasure in fisheries, in minerals, and in industry in Alaska. But for years the treasures in my State have been permitted to rest neglected and remain fallow for lack of use and development. Had they been aided in development, the results would now be showing up in increased tax revenues and in increased gross natural product. As it is, our fishing communities are in a disastrous plight, a result in large part ascribable to the mismanagement of the Federal agency which has had our once great fishery under its exclusive control. Our fishing communities badly need the help which this depressed areas bill will afford.

It is similarly a case of bad statesmanship to permit decay and bankruptcy to strangle whole regions inside the borders of our own States which have already been developed. To permit an economic ghost to seize upon what had once been a prosperous and productive area and reduce it to economic decay is unconscionable indecision.

Yet all that is proposed in S. 722 is economic help which, for the most part, will be repaid with interest. It is a businesslike plan, not a plan derived from motivations of sentiment without regard for the economic facts of life.

The regions to be helped are already equipped with the materials for rehabilitation: physical plan, industrial and commercial resources, and human beings whose dislocation could be immensely more expensive than having restored to economic health on location.

I urge us not to be men of little vision.

We should, I firmly believe, bear constantly in mind the words of the distinguished senior Senator from Kentucky [Mr. COOPER] who said in the Chamber on a recent evening that his reason for supporting S. 722 as reported was that it will take a bill of at least the sweep of this measure to make any impact upon those areas which today find themselves economically depressed, with Americans being forced to seek their daily bread from garbage cans.

Such a case was illustrated the other day by Walter Reuther, who told a moving story about a veteran in Detroit, a man who had served in Korea for 13 years. The man was out of work. He had vainly sought employment. He had exhausted all his unemployment compensation and other resources. He was taking garbage out of a can. He was arrested for vagrancy.

When he went before the judge, he said, "I am not a vagrant. I have a home here."

He was asked what his home was. He said his home was a pup tent. He was asked how he could live in a pup tent in temperatures which had dropped, as they had in Detroit, to about 20 below zero.

He said, "I have a big shaggy dog I cuddle up with when it is that cold."

Mr. President, that did not happen in a foreign country; it happened in the United States of America. When there are examples like that, I do not see how we can hesitate to take very seriously the kind of action which will relieve such conditions and relieve them permanently.

I commend the junior Senator from Connecticut [Mr. DODD] for his very eloquent presentation on behalf of the bill, and for the very generous characterization he made of the senior Senator from Illinois [Mr. DOUGLAS] who is leading our battle for the bill.

Mr. President, I join with many of my colleagues in urging the Senate not to follow a policy of too little, too late. The times call for an all-out effort. If we provide less, we shall be shirking our responsibilities. We shall not be bringing to bear upon the problem the remedies called for, and which it is within our power to provide.

I hope most earnestly that the bill will pass without crippling amendments.

Mr. BUSH. Mr. President, I yield 5 minutes to the senior Senator from Vermont on the bill.

Mr. AIKEN. Mr. President, no one is more unhappy than I am to see unemployment, whether it be among individuals or in whole communities. No one would like to help cure this situation more than I would. However, I do not believe the bill before the Senate would have the salutary and beneficial effects which its promoters feel it would have.

The purpose of the bill should be to create new employment opportunities, rather than to transfer industries and jobs from one community to another.

This measure promotes industry seduction with Government assistance, which could create new depressed areas as old ones are eliminated.

There are, at present, no detailed area studies of the forces underlying chronic unemployment, so the administrator of the act would have to make discretionary judgments in favor of some areas and to the detriment of other areas.

Mr. President, the proposed legislation ignores the fact that American industry, like agriculture, is going through a technological revolution. The only real and lasting corrections will be found by industry itself, through research. Research produces new ideas for new things; and the resulting new demands must be filled by means of the creation of new industries and new jobs. The emphasis should, therefore, be placed on industrial research, rather than simply on shifting plants from one locale to another. It would not be wise to move existing plants to new areas simply because the people of one area happen to be unemployed, and desire to have established in the area in which they live plants which presently are operating in other areas.

Mr. President, there are alternatives to this proposed legislation. I shall briefly review a few of them.

First. Instead of setting up a new bureaucratic agency to create more Federal jobs and, consequently, more Federal waste, any program of this kind should more properly be placed in the Area Development Division of the Department of Commerce. If that Division is not being conducted properly at the present time—although I believe this Division has done much good—Congress should see to that it does work properly. That Division already has had considerable experience in helping communities solve their economic problems, and I believe the work of the Area Development Division could efficiently be expanded to include large population areas.

Second. The basic Morrill Act legislation should be implemented by establishing an extension service for industrial development, along the lines of the present agricultural extension service.

Third. The rural assistance program under Senate bill 722 should be replaced by enlargement of the present rural development program of the Department of Agriculture. The latter would be far more adaptable to the depressed rural areas. Again I say that if the present rural development program of the Department of Agriculture is not working properly at the present time, Congress should take steps to see that it does work properly and adequately.

Fourth. Vocational training should be expanded, so that more skilled labor may be developed. That would enable individuals to sell their services more effectively, either in their own communities or elsewhere. At the same time, a skilled labor force is a specific asset in attracting new industry to a community or in generating new industry.

Fifth. The Small Business Investment Act is a good step toward filling the gap in our investment structure, which heretofore made it difficult for small businesses to obtain long-term credit and equity capital. The principles embodied in the pending legislation could be expanded in order to provide similar funds for the development of new industrial effort in areas of chronic unemployment.

Mr. President, if the Small Business Investment Act is presently not adequate to meet the need, Congress should see to it that that act is made adequate.

The PRESIDING OFFICER. The time yielded to the Senator from Vermont has expired.

Mr. AIKEN. Mr. President, will the Senator from Indiana yield an additional minute to me?

Mr. CAPEHART. Mr. President, I yield 1 additional minute to the Senator from Vermont.

The PRESIDING OFFICER. The Senator from Vermont is recognized for 1 additional minute.

Mr. AIKEN. I thank the Senator from Indiana.

Mr. President, a sixth alternative is that unemployment compensation benefits can be made more adequate either by the States or, in the event the States refuse to do so, by the Federal Government.

Personally, Mr. President, I think the formula for qualification, as set forth in the old Douglas bill, was vastly preferable to the one contained in the pending bill.

Mr. DOUGLAS. Mr. President, will the Senator from Vermont yield 1 minute to me?

Mr. AIKEN. Yes; if the Senator from Illinois will yield me an additional minute.

Mr. DOUGLAS. Mr. President, I yield an additional minute to the Senator from Vermont.

Let me say to him that what we did was adopt the criteria of the administration; but now the Senator from Vermont is reproaching us because we have adopted the Republican criteria. Evidently we cannot please him, no matter what we do.

Mr. AIKEN. Oh, yes; the Senator from Illinois can please me. He can please me by going back to the old Douglas formula, because I am just as much dissatisfied with the administration's formula as I am with the formula set forth in the pending bill. Neither of them is good. Under no foreseeable circumstances could any community in Vermont or New Hampshire qualify under the formula now advanced by the administration or under the formula contained in the new Douglas bill—which, unfortunately, is not as good as the formula contained in the old Douglas bill. All communities in Vermont would be subject to seduction by communities in other areas which now have unemployment, and thus could qualify under the formula of the pending bill.

The PRESIDING OFFICER. The additional time yielded to the Senator from Vermont has expired.

Mr. CAPEHART. Mr. President, I yield 1 additional minute to the Senator from Vermont.

The PRESIDING OFFICER. The Senator from Vermont is recognized for 1 additional minute.

Mr. AIKEN. Mr. President, it is possible that some communities in Massachusetts and Connecticut could qualify under the provisions of the pending bill. But, on the whole, I believe even they would lose more than they would gain if the bill were enacted, and if it were to go into effect.

Mr. President, I may vote for the administration bill as an amendment in the nature of a substitute for the Douglas bill. But if I do, I will not thereafter vote for the administration bill, on the question of final passage. I hope that this statement will make the Senator from Illinois feel better, because, from my standpoint, the administration bill has the same faults that the present Douglas bill contains, with its unfortunate change in the formula.

The PRESIDING OFFICER. The additional time yielded to the Senator from Vermont has expired.

Mr. THURMOND. Mr. President——

Mr. CAPEHART. Mr. President, I yield 12 minutes to the able Senator from South Carolina.

The PRESIDING OFFICER. The Senator from South Carolina is recognized for 12 minutes.

Mr. THURMOND. Mr. President, in May of 1958, the Senate considered Senate bill 3683, which contained provisions almost identical to those of Senate bill 722. At that time I spoke in opposition to those proposals; and my remarks at that time are equally applicable to the provisions of Senate bill 722. Therefore, I ask unanimous consent that my statement of May 13, 1958, be printed at this point in the RECORD as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT IN OPPOSITION TO SENATE BILL 3683, DELIVERED BY SENATOR THURMOND ON THE FLOOR OF THE SENATE ON MAY 13, 1958

Mr. President, the bill before this body today represents one of the longest strides toward state socialism that the Senate has considered in recent years. It is a step toward a system of Government-controlled industrial production in which efficiency is the least of the objectives. It is an attempt to defy the laws of economics. These are strong statements, and I shall elaborate on them in a few moments.

I congratulate the members of the committee who prepared the minority report. In a few short pages, they have pointed up more defects in the bill than I had thought conceivably could exist in one piece of legislation; yet, if they erred in their remarks, it was on the side of leniency.

As the minority report points out, the bill is plainly discriminatory. It would benefit only those living in certain arbitrarily designated geographic areas. Of the 4,494,000 unemployed in January 1958, according to the Bureau of Employment Security, only about 1 in 8 lived in the areas which would have been covered by the provisions of this bill had it then been in effect. The bill commits the Federal Government to a program of improving the economic welfare of the residents of these areas at the expense of the residents of other areas.

The bill also poses insurmountable administrative difficulties. The program overlaps existing programs in the Department of Commerce and the Department of Agriculture. It provides retraining subsistence payments to unemployed persons that are, for all practical purposes, supplements to the existing unemployment compensation programs; a supplement which lacks, however, the sound financial approach of existing programs. Efforts of State and local organizations in this field are brushed aside, apparently in the belief that in the spending of the Federal taxpayers' dollar lies the solutions to the problems with which these groups have been struggling.

One of the most unnecessary and abominable features of the bill is the part that undertakes to supplement the Community Facilities Act so recently passed by this body. To the billion dollars there authorized, the proponents would have us add authorization for additional funds to be administered by a different agency within the same agency.

This is administrative duplication turned back inside of itself, like a snake swallowing its own tail.

We should understand clearly that this is not a temporary program. The committee report sets that fact on the record plainly. It is a bill for the aid of chronically depressed areas, or, as the committee has said, those that "have suffered from a high level of unemployment and underemployment, year after year, in good times and bad."

There is a corollary to be drawn from this fact. The authorization for the outlay of $380 million asked in this bill is only the beginning. It is highly unlikely that the sum will meet the immediate demand, and a dead certainty that it will not begin to meet the demand that will continue year after year.

The problem of chronically distressed economic areas is not a new one. We have always had areas which have been less prosperous, year in and year out, than other areas. It is a problem which has had the careful attention of many groups, in State and local government and in the business and financial community. Yet, significantly, the location of private industry is an area in which the Federal Government has no backlog of experience on which it can rely.

As for the portion of the program that deals with the revitalization of rural areas, I can only conclude that this portion of the bill was written in the hope that it would attract some support for this legislation in rural areas. It selects for rural redevelopment the 300 counties that appear to be, by the arbitrary criteria written into the bill, those most in need of developing. As it happens, these are primarily agricultural areas, and mainly in the southern part of the country.

In view of the setbacks which agriculture has suffered in recent years, it is important that more industries be located in our rural areas. The task of locating industries in our rural areas, however, should be the job of local communities, their development boards, their chambers of commerce, and private industry. The Federal Government should not be permitted to spend and lend the money of all the people for the purpose of favoring any one area over another with industrial development. This is another case of the right idea with the wrong approach.

All of these objections, and many others, the minority report clearly indicated. There are others which are not enumerated by the minority report.

An outstanding example is the inclusion of the Davis-Bacon wagefixing provisions in the bill. Surely we are not still unaware that this very provision has upset and damaged more local economies than this bill could possibly remedy, even were it feasible otherwise.

I am of the opinion, then, that the bill is discriminatory, administratively unworkable, and extremely expensive. These alone would be reasons enough for me to oppose it.

However, the main reason for my opposition, as I stated at the outset of these remarks, is that the program envisioned by this bill would encourage a system of State socialism, and the most inefficient form of socialism at that.

Mr. President, I was impressed particularly by two sentences in the committee report, in which the framers of the bill stated the manner in which money would be allocated for the construction of public facilities:

"The organization requesting the grant must contribute to the cost of the project in

proportion to its ability to contribute. The grant would be limited to the amount necessary to assure completion of the project."

The same thought was put more succinctly by Karl Marx in 1875 in his famous maxim of communism, "from each according to his abilities, to each according to his needs."

What are the roots of the problem? If an area is economically depressed, if the people there fail to make a decent living, year after year, there must be some reason for it. Chronic hard times do not happen by chance.

One of the principal reasons for chronic economic distress is the loss of industry because of technological changes. For example, at the present time, we find distress in some areas where the economy is dependent on the mining of coal. Some communities that have depended solely on the textile industry for their economic base have suffered by the impact of the long-term depression which that industry has suffered—with very little sympathy from the Federal Government—since the end of World War II. Several resort cities are on the list of the chronically afflicted; they do not have the industrial base which makes for a sound economy.

The stories are different in every case, but they all have one thread in common. The communities that are suffering the most are the ones that have lacked diversification in industry.

The problem suggests its own answer, and it is an answer which the sponsors of this bill have apparently seized without fully weighing the consequences. If a community lacks diversification of its economy, they have reasoned, let the Federal Government help it to diversify.

But why the Federal Government? There is no shortage of investment capital in the United States. Why do not American industrialists, with all of their supposed ingenuity and foresight, build plants in the areas where labor is in surplus? Why will they require the guidance and urging of the Federal Government?

I think we must face the harsh fact that there are areas which are, for one reason or another, unsuitable for further industrial development at this time. They may be too far removed from their natural markets, they may be lacking in raw material, the local tax structure may be unsound, or the local labor market may be priced too high to meet competitive conditions in a particular industry.

There are many reasons why an industrialist may not be anxious to move into a given community. Fortunately, local citizens can do much, by imaginative and concerted effort, to remove some of their handicaps. Industrial development boards are in operation in many communities. Local and State chambers of commerce play an important part. Local government, too, can encourage the advent of new industry by careful tax planning.

I will not deny that some communities are handicapped by natural factors that cannot be brought under control by human intervention.

Mr. President, the effect of S. 3683 is to give those economically ailing communities a transfusion of Federal money with the hope that it will bring about a cure.

The principal fallacy of the bill is that this kind of treatment does not strike at the roots of the malady. It merely eases the symptoms, and encourages the patient to return for further treatment over an indefinitely extended period of time.

The bill encourages industry to move into areas where it is not inclined to go, because, under normal circumstances, industry could not make a profit in those areas. I doubt that the bill, if passed, will be very successful in this endeavor. The inducements offered are not enough to bring a hard-headed businessman into an area in which he will operate under a serious handicap in competition with his competitors.

Indeed, the bill may have an effect of a kind opposite to that which is intended. One of the general problems of industry in the United States is that we are at a point where Federal taxation threatens to dry up the reservoir of capital with which industry expands. The proposal to embark on this new program carries with it the clear implication that it will be supported and expanded through taxation. To the extent that the cost of the program falls on industry, it will inhibit the ability of industry to expand through its own efforts.

Assuming that the bill does achieve its purpose, to some limited degree, it will bring about new problems far worse than the ones it is supposed to solve. It will provide the stricken community with a hand-to-mouth existence, encourage it to borrow beyond its means for public construction, and, in the long run, encourage the development of an economy based on a Federal dole.

The end result of such a Federal policy can only be the senseless one of locating industry in the areas least suitable for its growth. This is no way to foster the economic development of the United States. We will all be better off—those in the chronically depressed areas as well as those in other areas—if we follow, in this country, a policy of locating industries in the places best adapted for industry.

The most effective way to aid areas where the economy is depressed is through measures that will stimulate the whole of our American economy. We need some revisions in our foreign trade and foreign aid programs, which have operated to the serious detriment of vital segments of American business. We need to practice strict economy in every department of Government, with the aim of removing some of the heavy burden of taxation with which our economy is saddled. We need to remove some of the heavy burden of Government regulation which requires the businessman to make a multitude of complex and expensive reports to a whole host of Federal agencies.

I am in sympathy with the residents of areas with chronic economic problems, but I am convinced that this legislation does not contain any solution to their dilemma. It could only frustrate the efforts being made to solve the problem on a sensible basis.

I do not favor socialism. Even if I did, I would not favor this bill. It is a socialistic bill with so many defects in it that even the dubious advantages of socialism would not be attained.

Mr. THURMOND. Mr. President, there can be no argument over the premise that the Federal Government has a definite responsibility in promoting the fullest possible employment. But there is as great a difference between a sensible implementation of this principle and the proposals of Senate bill 722 as there is between free enterprise and socialism.

Our Government is uniquely designed to foster the operation of private enterprise, as distinguished from government enterprise. Our Constitution fairly shouts the word "opportunity," by enunciating the framework of a government with a minimum of the fetters of regulation. Our standard of living and our productivity are undeniable proof of the superiority of free enterprise as a means of providing material goods within the economic reach of the maximum number of people.

Involved economic theories are not necessary to explain the success of free enterprise under a system of government which permits it to exist. On the contrary, its success is obviously due to the fact that it provides an incentive for efficiency in the form of profits, while insuring the elimination of inefficiency.

Efficiency, in this instance, can be said to be the ability to produce goods at a cost which the maximum number of people can afford to pay and are willing to pay. In the case of any industry which is a component of our economy, its efficiency is controlled by a great variety of variable factors. Three primary and initial prerequisites are capital, business judgment, and a market for the product produced. If we assume these to exist in sufficient quantities, the efficiency of the particular industry will depend on such factors, among others, as proximity to market and raw materials, cost of power, cost of labor, cost of raw materials, adequacy and cost of transportation, climate, and local and State fiscal policies and practices, not only as they apply to the particular industrial effort, but also as they apply to its competitors. These are some of the factors which will determine whether any particular industrial effort will succeed or fail; and, just as surely, they will influence the determination of the question of whether there will be substantial unemployment in the area of the industry's location.

To be efficient, and therefore competitive, industry must be responsive to changes in all these factors, and others, which affect its efficiency. A slow response can be fatal. In some instances, response is impossible—as, for example, where the market ceases to exist, or where available capital is insufficient to enable the industry to keep abreast of technological developments. Thus occur industrial failures and the resulting unemployment. Such unemployment can be permanently relieved only by the expansion or inauguration of other industry, often at a different location, in order to avoid the adverse factors which created the unemployment in the first place.

Business success is the answer to full employment; it can only lie through bold, confident, and rapid decisions by those who undertake the business venture, and then only when they have the capital to implement their decisions.

Our Government can best contribute to full employment by creating an attitude of confidence on the part of businessmen, and by adopting policies which will permit the existence of capital to implement that attitude.

Senate bill 722, is a step in the opposite direction. Our Government is ill equipped to substitute its judgment for that of the entrepreneurs who have built our free enterprise system. A representative, deliberative type of government intentionally sacrifices efficiency and speed in the interest of stability and cautious protection of individual rights. Although ours is an ideal system for government, it is not at all capable of efficient operation of a business.

Nothing could prove the point more conclusively than Senate bill 722. Thousands of development boards have been

created by States, cities, and communities; and most, if not all of them, have diligently set about creating the conditions conducive to industrial efficiency, so that industry, recognizing these assets, would locate and thrive in the community. Senate bill 722, on the other hand, would substitute Government funds for the lack of conditions which would insure the ability of industry to be efficient and competitive. Not only would the subsidy of taxpayers' funds seek to promote the establishment of industry where it could not be competitive without subsidy, but it would discourage industries which finance themselves, and also those commendable efforts of development boards all over the country.

This Federal area redevelopment program would encourage communities to borrow funds unwisely, which they hope to repay from increased tax sources. True, employment may be temporarily boosted, but as soon as the competitive advantages created by the subsidy have been exhausted, the initial factors which left the community without employment in the first place will reassert themselves. The alternative will then have to be faced of either continuing the subsidy or leaving the community where it was, but for the additional burden of a staggering addition to the public debt.

We have an excellent opportunity to assist in securing full employment, although the course of fulfillment certainly does not lie through programs such as those proposed by Senate bill 722. On the contrary, it lies through the adoption of a policy of fiscal responsibility, and a reduction of Federal regulations, which bind our industrial sinews.

Our present program of fiscal unbalance neither encourages an attitude of business confidence, nor leaves much hope for the continued existence of the capital necessary for industrial expansion. Only by reducing Government spending to a figure within its income, can we encourage an attitude of confidence that the whims of legislators will not consume the very capital essential to industrial expansion. Only through the reduction of spending can we make possible a reduction in taxes—and if there be any doubt that this is the true course to industrial expansion, one need but look at the 8 percent increase in gross national product which followed the $7.5 billion tax reduction of 1954.

If our industrial expansion is to continuously keep pace with our growing population, we must cease our unnecessary regulation of business, which now approaches a state of regimentation. We should continue, of course, to prevent abuses of the free enterprise system, but this does not necessitate the creation of burdensome reports and regulations which encumber every business effort and discourage new business ventures.

Mr. President, let us realize at this late hour, before it is too late, that the Government is contributing to unemployment, with its irresponsible deficit spending and its creation of unnecessary regulations, which apparently reflect a sort of hostility to business. Such socialistic schemes as S. 722 will only further compound the problem.

Mr. CAPEHART. Mr. President, I wish to correct the RECORD, and I am sure the able Senator from Illinois would like to have me do it. The committee did not accept the administration's criterion. The committee accepted the administration's formula. The administration's criterion was 50 percent above the national average for 4 out of the 5 preceding years, or 75 percent above the national average for 3 out of the preceding 4 calendar years, or 100 percent above the national average for 2 of the preceding 3 years.

The bill, as the Senate is now considering it, provides a criterion of 50 percent above the national average for 3 of the preceding 4 calendar years, or 75 percent above the national average for 2 of the preceding 3 calendar years or 100 percent above the national average for 1 of the preceding 2 years.

The committee accepted the formula, but not the criterion.

Mr. DOUGLAS. We accepted the formula, but cut the period of time provided by 1 year in each case.

Mr. CAPEHART. I wanted to correct the RECORD because I was sure the Senator from Illinois would not want to leave the impression that the committee adopted word for word the so-called administration criteria. The committee adopted the formula. While I am against even the administration's criteria, I congratulate the Senator from Illinois for adopting the administration's formula. But the committee did not adopt the number of years proposed by the administration.

Mr. AIKEN. Mr. President, in discussing the proposed administration formula a few moments ago, I was referring to the formula applying to the benefits. When I read the criteria, I realized I was against the bill, anyway, as long as it contained those criteria.

Mr. CAPEHART. I was sure the Senator from Illinois did not want the RECORD to show that the committee had copied word for word the administration's criteria. The committee still took the formula.

Mr. DOUGLAS. Whenever the administration comes up with a good idea—which is not very often—we Democrats are very glad to accept it.

Mr. CAPEHART. It is too bad the Democrats did not accept more good ideas during the past 20 years. Perhaps the country and the people would be in a better position today.

Mr. DOUGLAS. But the Republicans have good ideas so seldom.

Mr. CAPEHART. We have had many ideas which have not had an opportunity to be put into practice during the last 20 or 25 years.

Mr. DIRKSEN. Mr. President, I make a point of no quorum, but I ask unanimous consent that the time taken in calling for a quorum be not taken from the time of either side. I think we should alert our colleagues, because, so far as I am aware, the first action taken will be on the substitute I have proposed. I shall not take much time on it.

The PRESIDING OFFICER. The clerk will call the roll and, without objection, the time taken for calling the roll will not be charged to either side.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, what is the pending question?

The PRESIDING OFFICER. Has the Senator yielded back his time on his amendment?

Mr. DIRKSEN. Mr. President, I think the pending question is the substitute amendment I offered, which is presently at the desk. Has the amendment been stated?

The PRESIDING OFFICER. It has been ordered printed in the RECORD.

Mr. DIRKSEN. Mr. President, for the benefit of the membership of the Senate, I do not propose to labor the question involved very long. The whole matter has been before the Senate and before the House of Representatives at other times. I wish to review only a little of the background, and a few highlights of the substitute.

In January of 1956—to be exact, the 9th of January 1956—the first administration bill on this subject was introduced by former Senator Smith of New Jersey. At that time 25 Senators joined in sponsorship of the bill.

There were two bills presented at that time. One was introduced by my distinguished colleague [Mr. DOUGLAS], which was referred to the Committee on Labor and Public Welfare, and I believe the Smith bill was referred to the Committee on Banking and Currency.

I testified with respect to the bill in January of 1956. At the time I pointed out that insofar as I knew, on the basis of data made available by the Committee on Labor and Public Welfare, there were eligible 10 major and 74 minor areas, embracing about 190 counties in the United States. Interestingly enough, 123 of the 190 counties are in 7 States. The reason for that was quite simple. The State of Illinois was one of the States. I think in the main our problems spring from the fact that in the coal areas mines have been abandoned because the cost of production is too high, or for other reasons, and so there has developed a chronic or semichronic unemployment condition. That is true in Kentucky, Illinois, and West Virginia.

The administration has certainly been mindful of the so-called distressed area problem, and prior administrations also have been mindful of it. I believe interest in the problem extends back to 1946, 13 years ago. There was area redevelopment activity in the Department of Commerce at that time under a subagency known as the Business and Defence Advisory Service. The program may have had another name at that time, but it does not make too much difference. The fact is that for the past 13 years, certainly, a variety of activities have taken place in that field. They took the form of surveys, the form of technical assistance to those areas, and the form of defense contracts.

I believe I pointed out in my remarks to the Committee on Labor and Public Welfare that some 25 defense facilities

were located in those areas, at a total cost of nearly $210 million.

I think it is very clear that over a long period of time there has been a manifestation of interest in the problem of chronic unemployment and the distress which besets some of the areas in which that condition has developed, because their resources and facilities at no time admitted of any high degree of industrial prosperity.

There were other aids and other activities as well. The Small Business Administration has been helpful. There was a program for rapid tax amortization to help facilities which would locate in such areas. There was the distribution of surplus food. There was also special advice and technical assistance given to the State development corporations, which were also mindful of the problem.

In another field, of course, the administration was mindful of the need for a rural development program. In fact, that was formalized after a number of individual conferences with officials of the Department of Agriculture.

Insofar as I can tell, the program which began in 1955 is now operative in 102 counties. In addition to that, the States on their own initiative have set up a corresponding program in another 80 counties. The program, therefore, is rather dynamic in character. It is moving along. It has almost doubled as the result of State initiative. Those areas have been receiving assistance and advice from the Agricultural Extension Service and the Soil Conservation Service, and also have been benefited by Farmers Home Administration loans.

Since the bill which was passed by both the House of Representatives and the Senate was vetoed by the President, I have introduced, and I support, the substitute amendment on which the vote will first occur, because it is an expression of the administration's viewpoint.

The criteria are rather simple. An area must have had an unemployment situation 50 percent above the national average for 4 of the last 5 calendar years; or 75 percent above the national average for 3 of the last 4 calendar years; or 100 percent above the national average for 2 of the last 3 calendar years; and there must have been unemployment in excess of 6 percent for that period of time. That is a reasonably simple criterion on which the administration proposal is based.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. SCOTT. Am I correct in my understanding that the present status of S. 722, the Douglas bill, is that it includes the criteria from the substitute offered by the distinguished Senator from Illinois?

Mr. DIRKSEN. I am not sure the provisions are quite identical. I think some change has been made.

Mr. SCOTT. May I ask for clarification?

Mr. DIRKSEN. Yes. I think the senior Senator from Illinois can probably answer the question.

Mr. DOUGLAS. We have adopted the administration criteria, but we have cut the number of qualifying years back by one in each case.

Mr. DIRKSEN. That would mean the unemployment would have to be 50 percent above the national average for 3 out of the past 4 calendar years instead of 4 out of the last 5 calendar years.

Mr. SCOTT. That is the 50-percent provision.

Mr. DIRKSEN. Or 75 percent for 2 out of the last 3 calendar years.

Mr. DOUGLAS. Two out of the last 3 calendar years.

Mr. DIRKSEN. Or 100 percent for 1 out of the last 2 calendar years.

Mr. DOUGLAS. For 1 out of the last 2 calendar years.

Mr. DIRKSEN. The Senator is correct.

Mr. SCOTT. Let me say to the junior Senator from Illinois that I am very much concerned. These criteria still would not cover the area of Philadelphia and the degree of unemployment there. I am not certain, but they do not appear to cover the large unemployment area around Pittsburgh. For that reason I desire to indicate that, after the vote on the amendment in the nature of a substitute offered by the junior Senator from Illinois, I shall seek recognition and offer Senate bill 268 as a substitute, because in my judgment it goes much further toward establishing the criteria necessary to solve some of the problems in my State beset as it is by unemployment and chronically distressed areas.

I thank the Senator for yielding.

Mr. DIRKSEN. Trying to develop static criteria for a problem of this kind is difficult; and it is doubtful whether we can lay down in words, criteria which will cover every situation. The distinguished Senator from Indiana [Mr. CAPEHART] raised that question at a conference session several weeks ago, and I think the distinguished Senator from Connecticut [Mr. BUSH] did likewise. For aught I know, they may deal with it. I merely cite the criteria in the administion proposal.

With respect to relief, assuming, of course, that under these criteria certain areas would become eligible for whatever relief and whatever remedies are provided in the bill, let me skeletonize the provisions. There would be 25-year loans at the market rate, provided the money was not available elsewhere at reasonable rates.

There would be a limit of 35 percent on Federal participation. That means, of course, that States and localities would carry the larger share of the burden.

There must be some expectation of repayment. This, I think, is one of the important features of the proposal.

The loan must result in more than a temporary alleviation of unemployment. I think that is the crux of the situation. We may go into a given area and build a city hall, a hospital, or a gymnasium for a high school; and when we are through, we are back where we started. So the question is, in every case, Is there an assurance that the relief will be more than mere temporary relief?

I had that in mind in January 1956 when I appeared before the Committee on Labor and Public Welfare. At that time I said:

> Any solution worthy of the name must be durable. Merely to scratch the surface and provide temporary employment in these depressed areas will not meet the problem.

Coming back to the relief which is provided, there will be no aid where relocation of an industry moving from one area to another might hurt the area from whence it comes, even though it might benefit the area to which it might go.

The substitute provides for no rural loans and no loans or grants for public facilities. There is a total of $50 million involved in loans, and about $3 million for administrative and technical assistance. So the criterion, of course, is what is believed to be something more than a temporary alleviation of the problem. I think that is the basic thesis—to encourage self-help and to follow a proven basis.

It might be said that I appeared before the committee and suggested certain amounts higher than those in the pending bill. That is true. I did. But open confession is good for the soul; and I never mind making it, whether it be on the floor of the Senate or elsewhere. The figures were estimates. I had no concrete experience on which to base them, and it was not until sometime later that the Pennsylvania experience, under a board created by the Pennsylvania Legislature, became available. I laid that information before the Senate Committee on Banking and Currency when I testified in connection with the pending bill.

There is no use going into detail, but there was an experience at the State level, with some 64 projects, which shows what can be done under given circumstances.

The administration bill, drafted by the Department of Commerce, is geared to what happened in Pennsylvania and elsewhere at the State level. It undertakes to cure the degree of employment which represents the percentage over and above the national level. If it could be done with a rather modest investment at the State level, obviously a well-managed program at the Federal level could do the same thing.

It is not proposed in the substitute to establish an independent agency. This activity has been carried on at higher or lower levels for a number of years, under the present administration and prior administrations. They have done a good job. Unfortunately, 2 years ago when the agency asked for about $390,000 to carry on in this field, Congress saw fit to cut back the appropriation to $120,000, and crippled the activity to that extent. But it has been going on; and I see no reason why, under the circumstances, an independent agency should be created.

The amendment contains, in substance, the administration's proposal. It is within the terms of the 1960 budget, and is geared to the budget. I hope, therefore, that it will commend itself to the good thinking of the Senate, and will be favorably received.

With that I rest the case, and yield the floor so that other Senators who desire to discuss the question may do so.

Mr. JOHNSON of Texas. Mr. President, I wonder if it would be possible to obtain an agreement as to a time for voting on the Dirksen substitute. I understand that the Senator from Pennsylvania [Mr. CLARK] desires 5 minutes. The Senator from Illinois [Mr. DOUGLAS] wishes 7 minutes.

I ask unanimous consent that the vote be taken in 20 minutes, 12 minutes to be controlled by the senior Senator from Illinois [Mr. DOUGLAS] and 8 minutes by the junior Senator from Illinois [Mr. DIRKSEN].

The PRESIDING OFFICER. Without objection it is so ordered.

Mr. DOUGLAS. Mr. President, I yield 5 minutes to the senior Senator from Pennsylvania [Mr. CLARK].

Mr. CLARK. Mr. President, I have listened with great interest to the comments just made by the distinguished minority leader with respect to his reasons for advocating the administration bill. In the course of his comments he undertook to testify with respect to the situation in my home Commonwealth of Pennsylvania.

I have the highest regard for the distinguished minority leader, but I am afraid that in this instance someone has led him down the garden path so far as the situation in my native State is concerned.

As I sat and listened to him, I understood him to say that the principal reason for our problems in Pennsylvania was that the coal business was not so good as it used to be. I turn to page 6 of the minority views, where are to be found listed the areas of labor surplus as of January 1959, and read for the record the following Pennsylvania labor surplus areas, in which not 1 ton of coal has ever been mined: Allentown, Bethlehem, Easton, Altoona, Erie, Philadelphia, Pittsburgh, Reading, York, Oil City, Franklin, Titusville, Sayre, Athens, Towanda, and Williamsport.

It is true, of course, that the hard coal areas have been badly hit by the depression, but to say that our problems are due to the failure of the coal industry, and that adequate steps are being taken in other areas to remedy that distressing situation, I state, with all due deference to my friend the junior Senator from Illinois, is not entirely in accord with the facts.

The distinguished junior Senator from Illinois also had occasion to talk about our fine State efforts to remedy this condition in Pennsylvania. Those efforts have been fine, and they have resulted in a measurable amount of good; but it is as clear as the nose on anyone's face that the Pennsylvania effort, by itself, is entirely to meet the need in my Commonwealth.

The Governor of Pennsylvania so testified. The secretary of labor and industry so testified. The secretary of commerce so testified; and a number of witnesses coming from different parts of the Commonwealth told us that Pennsylvania had bled itself white with its State effort to remedy unemployment; and that the effort had been helpful but was entirely inadequate. The secretary of commerce for the Commonwealth of Pennsylvania testified as follows before the Senate Commitee on Banking and Currency:

> Senator CLARK in a release the other day made an estimate that in order to bring our unemployment down to the 6-percent level in 17 areas of Pennsylvania, which is high enough, we would need to create 72,800 jobs. And the assumption was that half of those would have to be in manufacturing and the balance generated in the services, and so forth.
>
> * * * * *
>
> If we say that in Pennsylvania in utilizing these loan funds we were to average out at not the full 65 percent on all of them but say 35 percent, we would need in Pennsylvania on the basis of that calculation alone, according to my figures, $47,756,800.

In other words, Mr. President, my own Commonwealth of Pennsylvania, using the 35 percent rate which is contained in the administration bill, would use up practically all the money in one State. That is a pretty good measure of the utter inadequacy of the administration bill, calling, as it does, for $53 million, as opposed to $389 million in the Douglas-Cooper-Clark bill.

I am sure, Mr. President, Senators will note that to adopt the substitute, excluding the availability of funds for loan purposes for public utilities, would destroy the purpose of the bill, because hard-pressed areas cannot raise money in the open market or by taxes to take care of such situations as the construction of streets, water works, sewage systems, and industrial parks, which are necessary to bring industry into the unfortunate areas.

So, Mr. President, with the provision for $100 million of rural loans taken out of the bill, by the administration's substitute, we have in the pending amendment a proposal which is not only too little and too late but also is close to being a fraud on the American people because of the inadequacy of its provisions.

I yield back the remainder of my time.

Mr. CAPEHART. Mr. President, how much time remains on the bill?

The PRESIDING OFFICER. Eight minutes remain on the substitute.

Mr. CAPEHART. How much time remains on the bill?

The PRESIDING OFFICER. Forty-one minutes remain on the bill.

Mr. CAPEHART. I yield myself 3 minutes on the bill.

Mr. President, in order to keep the record straight, although the bill is intended to be a $389 million bill to help unemployment, I am afraid it does not so state.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CAPEHART. I yield.

Mr. CLARK. I have just finished stating it.

Mr. CAPEHART. Yes; but I am afraid that the statement is not quite in accordance with the record. One hundred million dollars is provided for industrial loans, which would create, we hope, permanent jobs. Another $100 million is provided for public facilities, which would create temporary jobs while the public facilities were being built. However, that would not create any permanent employment.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. CAPEHART. I yield.

Mr. DOUGLAS. Many loans for public facilities could most certainly help to create jobs. An industrial water project, for example, could be created, and industrial parks constructed which would make it possible for industries to locate in those areas and thus create permanent jobs.

Mr. CAPEHART. Yes; but I want the RECORD to be clear that there is only $100 million in the bill for creating permanent jobs.

Mr. DOUGLAS. There would also be $100 million for industrial loans in rural areas where incomes are low, and there is underemployment as well. These loans could help create jobs.

Mr. CAPEHART. I have not as yet reached that point. There is another $100 million provided, of course, for rural areas where people are supposedly underpaid. However, that creates no new jobs.

Mr. DOUGLAS. I beg the Senator's pardon. This amount is for loans to start new industries in rural areas where the income is low and where there is a great deal of underemployment and unemployment.

Mr. CAPEHART. The purpose is primarily—and it is so stated—it help areas where there is low income.

Mr. DOUGLAS. And where there is underemployment.

Mr. CAPEHART. Perhaps so, but primarily—and the bill so states—it is for the benefit of areas where the workers are paid very little. The point I wish to make is—and I make this point so the RECORD may be kept clear and so that people throughout the Nation will not be misinformed—so far as industrial jobs in the cities are concerned, there is only $100 million involved, not $389 million, for permanent jobs. One hundred million is to be divided among all the industrial centers in the United States. Another $100 million is to be used to create jobs in so-called rural areas where there is underemployment. Then there is another $100 million, of course, for public utilities, which, of course, would create jobs to build the public utilities, but not permanent jobs.

Mr. President, I yield myself 3 additional minutes on the bill.

That portion of the bill probably does not belong in the bill at all, because it has nothing to do, particularly, with depressed areas. The $100 million which has to do with the rural areas ought to be handled by another department, and should not be included in a new bill.

Therefore, so far as jobs in the cities are concerned, and so far as the really depressed areas in towns are concerned, there is $100 million in the so-called Douglas bill; and we are now talking about $50 million in the so-called Dirksen-administration bill, which is the substitute under consideration.

The substitute on which we are about to vote contains no money at all for rural areas. It has no money in it, of course, for public facilities, primarily for

the reason that under the Housing Act funds are provided and an organization is set up to handle public utilities.

Therefore, about the only difference between the two bills, so far as creating jobs in industrial centers is concerned—I mean permanent jobs—is $50 million. That is about the only difference between the two bills so far as the city folk, so-called, are concerned, and so far as permanent jobs are concerned.

There is another $100 million in the Douglas bill to build public utilities, such as waterworks, and so forth. I doubt if that provision should be in a depressed areas bill.

I can understand the need for providing water in a small town, for example, so that a plant can be built there, but we must remember that there is already a law in existence to take care of such a situation. It is contained in a section of the Housing Act, which grants that kind of relief. In connection with that part of the pending bill, we would merely be adding another piece of legislation to do what the Housing Act has been doing for many years. The authors of the section of the Housing Act designed to grant loans to towns for public utilities, was introduced by the late Senator from South Carolina, Mr. Maybank, and myself. That has been a part of the Housing Act for many years.

COMPARISON OF DIRKSEN SUBSTITUTE FOR S. 722 AS REPORTED

Mr. DOUGLAS. Mr. President, the administration is proposing to kill the rural redevelopment bill with a poisoned kiss. On the one hand, it says it is in favor of the idea, but on the other hand, it would appropriate so little money and attach so many crippling conditions to the small appropriation it does propose, that the program would be of no real value.

The Dirksen amendment in the nature of a substitute would replace the provisions of S. 722 with those of the Dirksen bill, S. 1064, which embodies the proposals of the administration. The committee very carefully considered this proposal, and the bill which we have reported has made a number of concessions designed to meet the objections of the administration. But there are several features of the administration's bill which would so severely restrict its application that it would be completely ineffective.

AMOUNTS OF MONEY

The administration bill provides for only $50 million for loans to industrial areas. The committee bill provides for $100 million for loans to industrial areas, and also $100 million for loans to rural areas, and $100 million in loans for public facilities. During the committee hearings, it was testified that the State of Pennsylvania alone would be eligible to use $47 million in loans in order to bring unemployment in that State down to the national average. Although other factors such as the economic potential of an area and the prospective repayment must be taken into account, it is still obvious that $50 million would be completely inadequate for the Nation as a whole.

With respect to the $100 million loan fund for community facilities, the committee felt that these were often necessary before industrial development could possibly get underway in many situations. For it is often true that before an industry can locate in an area, it must have adequate water supplies, sewage systems, access roads, and other public facilities before it will be possible to locate in such an area. It should be remembered that these are repayable loans.

In addition to public facility loans, the committee also provided for a $75 million fund to make grants to areas for public facilities where industrial development needs such facilities but the community concerned does not have the wherewithal to repay such loans. The administration bill provides nothing in this regard. Yet it is true that such grants will in some cases be necessary before industrial development can take place.

Moreover, the problem of unemployment and underemployment in rural areas is perhaps just as real as that of industrial areas, and it is only fair that we provide equal treatment for that segment of our population.

It is perfectly clear that all the administration is proposing to do is to make a nominal authorization for $50 million for some of the hard-pressed industrial areas. The administration does this reluctantly in order to head off the $100 million which we advocate. It proposes nothing for rural areas which suffer from poverty and underemployment. Nothing is provided, except the promise that it can be taken care of under the rural development program of the Department of Agriculture.

That program has been surveyed, as I pointed out the other day, by a distinguished nonpartisan committee. The vital criticism which that committee makes of the so-called rural development program of the Department of Agriculture is that no outside financial aid is given to the hard-pressed rural communities. We believe in a program which will strike at persistent unemployment and persistent underemployment, both in the industrial and the rural areas of the country.

We also know that in order to attract industry to such areas, it will be necessary to provide industrial water, access roads, water and sewage systems, and, in some cases, industrial parks. That is the purpose of the third revolving loan fund of $100 million and the one-shot grant of $75 million.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. RANDOLPH. We who believe in the proposals contained in Senate bill 722 are cognizant that the spirits of the men and women who till the soil, as they do that job, are either high or low in relationship to the substance which is built in between. The provision of the bill, as the Senator has said, is for aid to rural folk in West Virginia in the amount of $1,000 or less, per farmer, of farm income a year. Those people need such assistance.

Mr. DOUGLAS. I thank the Senator from West Virginia. The map which is displayed in the rear of the Chamber shows the farm counties throughout the Nation which could be benefited by the program we are suggesting.

ADMINISTRATION OF THE PROGRAM

There is another crucial weakness in the administration's proposal. It would give the administration of the measure to the Department of Commerce, whereas our bill calls for its administration by a separate agency. It might look better on an organization chart to have the administration of the program in the Department of Commerce; but we know that that would be fatal to the program itself. The Department of Commerce has been a persistent, unrelenting foe of all such programs as this. It is well-known that it was the Department of Commerce which advised the President to veto the bill which Congress passed last year. While the Secretary has changed, the attitude of the Department remains the same.

We would not give to a nurse having homicidal tendencies the care of infant children; nor would be put wolves in charge of the care of sheep.

The only way to have such a program as this properly administered is to place it under a new agency, one which may have some enthusiasm in its work and will not use the measure to strangle and to kill it.

GRANTS FOR TECHNICAL ASSISTANCE

The committee bill provides for an authorization of $4½ million a year for grants to provide technical assistance in redevelopment areas. The administration bill provides for $1½ million a year for the designated areas, and another $1½ million a year for towns predominantly dependent on one industry.

Many people feel that the technical assistance aspects of this program are extremely valuable, and it would seem that $4½ million will be a very modest amount in this regard. It would be a shame to cut this figure by a third as the administration bill would do.

GRANTS FOR VOCATIONAL RETRAINING SUBSISTENCE PAYMENTS

The committee bill provides a $10 million grant for subsistence payments to those being retrained and who are not entitled to unemployment compensation. The administration bill provides nothing. In this respect, the question is how are many of the unemployed persons who have exhausted their unemployment compensation payments going to exist while undergoing retraining which will be necessary for them to qualify for the jobs which might be available with industrial redevelopment. This is a humane feature of our bill which we feel to be absolutely necessary.

RESTRICTIONS ON LOANS

The committee bill would permit Federal participation in industrial loans up to a maximum of 65 percent, while the administration bill would not permit such participation to exceed 35 percent. There would probably be many cases where the 35 percent figure would be adequate, but such a restriction would knock out many projects which could otherwise go forward under the terms of the committee bill.

The administration bill would also require minimum State or local participation of 15 percent, rather than the 10 percent provided in S. 722.

In short, the administration's proposals with respect to Federal and State or local participation are much more restrictive than those of S. 722, and hence would act as a depressing factor in carrying out the program.

MACHINERY AND EQUIPMENT

The administration bill would not permit loans on machinery and equipment whereas S. 722 would permit such loans. The cost of land is relatively small in depressed areas, simply because they are depressed. The cost of buildings will not be much either, because in many cases it would be possible to take over an existing building and rehabilitate it with a relatively small amount of capital. Thus, the thing that can really make redevelopment possible would be the financing of equipment and machinery which lies at the heart of the whole enterprise.

Now, there are two main arguments which might be raised against the inclusion of machinery and equipment. First, it may be said that, because of obsolescence, we should not finance machinery for such a long period of time as 30 years. I would agree with this, but the 30-year period is a maximum, and I would expect the Administrator to provide for a realistic period in the case of loans for machinery and equipment. Depending on the nature of the machinery or equipment, this might run from 5 to 15 years. Second, it may be said that making loans on machines is dangerous, because if the loans cannot be repaid, the Government would lose its investment. However, there are many general-purpose machines such as lathes and punch presses which can be applied to a great variety of uses. Thus, it is not necessarily true that the Government would lose its investment were the loan to go into default.

MAXIMUM PERIOD OF LOANS

In the bill passed last year, the maximum period for industrial loans was 40 years. In a further effort to meet some of the objections of the administration, the bill reported by the committee provides for a maximum of 30 years with a provision for an extension of 10 additional years only in certain cases where the Administrator determines its advisability. The administration bill provides for a maximum period of 25 years, with a 10-year extension possible which may not be enough in some cases.

APPROPRIATIONS VERSUS BORROWING AUTHORITY

S. 722 provides that the three loan funds be borrowed from the Treasury, whereas the administration bill would require that such funds be appropriated.

Where a program involves new authorization for funds from year to year, I would agree that appropriations would normally be preferable. I believe this to be true because times change over the years, and where new funds are being made available, these should be subject to periodic review by Congress.

However, the loan funds in S. 722 are a one-shot authorization and are in amounts which the committee feels necessary to get the program underway. The bill does not provide for additional authorizations from year to year. Were additional authorizations to be made, therefore, they would automatically be subject to the scrutiny of Congress.

Providing that the funds be appropriated rather than borrowed from the Treasury simply means that they would have to run the gauntlet of authorization twice, rather than once; to go through two committees rather than one. The Senate Banking Committee authorized and the Congress enacted a Federal flood insurance program. The Senate twice voted an appropriation to put the program into effect. The House Appropriations Committee, however, refused to authorize any appropriation for this program, and now it has fallen by the wayside. We certainly do not want that to happen in the case of area redevelopment legislation.

S. 722 does provide for appropriation of technical assistance, public facility grants, and retraining grants.

SUMMARY

There are other minor differences between the administration bill and S. 722, but I think I have covered the major differences. In general, the administration bill would be completely inadequate to deal with the real needs for area redevelopment, and it will be a grave mistake for the Senate to substitute it for the bill as reported by the committee.

The committee voted to report S. 722 by a vote of 9 to 6. It should be recognized, however, that this is not representative of the differences between S. 722 and the administration bill. I believe that I am correct in saying that most of the six votes against in reporting would be opposed to the administration bill as well as to S. 722.

I have seen very little support for the administration's bill. It was introduced by Senator DIRKSEN, who as minority leader, is the logical person to introduce administration measures. However, when he introduced it, it lay on the table for 2 days to permit anyone who desired to cosponsor it to do so. There were no takers. S. 722, on the other hand, has a total of 39 sponsors.

There may be a legitimate issue as to whether or not we should have an area redevelopment program, but the enactment of the administration proposal would result in a program so inadequate that there might as well be no program at all as to pass such a measure.

I hope the administration's proposal will be defeated by a resounding vote, a tremendous vote, one which will serve notice on the Department of Commerce and the White House that this country wants an effective bill, not a sham bill.

Mr. GORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. GORE. Last week I addressed the Senate on the general subject of the economic challenge which the United States faces. A part of that economic challenge is the lack of adequate growth of our economy and the lack of employment opportunities.

In the course of the address, I inquired about the policy of the Democratic Congress to meet this challenge. I take it that the bill before the Senate is not intended as an answer to the entire challenge; but does not the able Senator from Illinois think that the restoration of productivity to the depressed areas constitutes an important part of the answer to that challenge and that question?

Mr. DOUGLAS. I certainly do. It would deal with what is termed "structural unemployment" by furnishing seed capital to start new private enterprise in areas of high and persistent unemployment. By putting unemployed persons to work producing commodities which otherwise would not be produced, the inflationary effect would be reduced to very little, and might possibly be completely removed.

Mr. GORE. Mr. President, will the Senator further yield?

Mr. DOUGLAS. I yield.

Mr. GORE. The Senator is aware, I am sure, that there has been but a very slow and, I contend, a very inadequate growth in our national economy since the end of the Korean war.

Mr. DOUGLAS. That is correct.

Mr. GORE. A serious part of that lack of growth has been in cities or communities which it is hoped will be helped by the pending bill.

Mr. DOUGLAS. That is correct. We aim to utilize the greatest unused resource of the American people—namely, the idle time of workers.

Mr. GORE. If we succeed in restoring to productivity the resources, human and material, of the depressed areas alone, will not that make a significant contribution to the growth of the economy?

Mr. DOUGLAS. Yes; and it will reduce the tax burden for unemployment compensation, relief, surplus foods, and the rest.

Mr. GORE. I congratulate the Senator from Illinois upon his leadership in this field. I express the wish that other legislative committees will bring forth, in rapid-fire order, programs of action to meet the economic challenge, which in the long run is as serious as either the political or the military challenge we face.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. Is it not true that the administration substitute virtually destroys the very carefully worked out and carefully studied broad gage program which the committee has reported?

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. As I understand, the administration program not only drastically reduces the amounts which will be available for the rehabilitation of depressed areas, but ignores completely the erosion of human resources which has taken place in the small towns and agricultural areas.

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. And the areas where large numbers of people have been on relief for many years.

Mr. DOUGLAS. That is true.

Mr. MONRONEY. In other words, to qualify under the sole test of the administration substitute, the number of unem-

ployed must have accumulated, it might be said, in the past 12 months, in order to constitute an effective statistic; but those areas which were given knockout blows by the shifting of industry, the closing of mines, or the collapse of agriculture over a period of 10 years have not necessarily had an increase in unemployment, but have been depressed for some 10 or 12 years. So without the committee bill, we would be voting only a feeble straw to move against what has become almost a nationwide plague of pockets of continuing, hopeless unemployment areas, both rural and urban.

Mr. DOUGLAS. The Senator has stated the situation correctly.

The PRESIDING OFFICER. The time of the Senator from Illinois has expired.

Mr. CAPEHART. Mr. President, I yield myself 1 minute.

I think we should keep the record straight. The answer to the able Senator from Oklahoma ought to be that the Senator having the bill in charge, the Senator from Illinois [Mr. DOUGLAS], accepted the administration's criteria. He said so a number of times on the floor of the Senate, in stating how he arrived at the number of areas to be helped. So if anything is wrong, it is not the administration's fault; it is the fault of the able Senator from Illinois for having accepted the administration's criteria. One cannot have his cake and eat it, too. Does the Douglas bill embody the administration's criteria or does it not? If it does not, the Senator from Illinois must change his answer to the Senator from Oklahoma.

Mr. DOUGLAS. First, the administration bill makes no provision for rural areas.

Mr. CAPEHART. The Senator from Oklahoma was not talking about that.

Mr. DOUGLAS. Oh, yes, he was. As I have said many times, every standard for industrial areas is related to the average for the rest of the country, but we have cut the period back 1 year.

Mr. CAPEHART. I know how zealous the able Senator from Illinois [Mr. DOUGLAS] and the able Senator from Oklahoma [Mr. MONRONEY] are to have the record straight. I know that from having served with them for many years. I know they are very grateful to me or to anyone else who may try to correct misinformation which they may give.

Mr. DOUGLAS. We are grateful to the Senator from Indiana when he brings out accuracies, which is not always the case.

The PRESIDING OFFICER. The time of the senior Senator from Illinois [Mr. DOUGLAS] on the amendment has expired.

There remain 8 minutes under the control of the junior Senator from Illinois [Mr. DIRKSEN].

The question is on agreeing to the amendment of the junior Senator from Illinois [Mr. DIRKSEN], in the nature of a substitute for the bill.

Mr. CAPEHART. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

Mr. CAPEHART. Mr. President, I ask unanimous consent that immediately following the quorum call, the vote on the pending amendment be taken.

Mr. LONG. Mr. President, reserving the right to object, is it possible to have a quorum call and then to vote immediately thereafter?

The PRESIDING OFFICER. The Chair is advised that the Senator from Indiana has 5 minutes remaining under his control. Obviously, that is a sufficient length of time in which to have a quorum call.

Mr. LONG. Mr. President, if all the remaining time is not to be yielded back, I would feel compelled to object.

Mr. DOUGLAS. Mr. President, I yield back all time remaining under my control.

Mr. DIRKSEN. Mr. President, I yield back all the time remaining under my control.

Mr. CAPEHART. Mr. President, I withdraw my suggestion of the absence of a quorum, and I also withdraw my request.

The PRESIDING OFFICER. All remaining time has been yielded back.

The question is on agreeing to the amendment of the junior Senator from Illinois [Mr. DIRKSEN], in the nature of a substitute for the pending bill.

On this question the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll; and Mr. AIKEN voted in the affirmative, when his name was called.

Mr. DIRKSEN. Mr. President, has a vote been cast?

The PRESIDING OFFICER. Yes.

Mr. DIRKSEN. Then I assume that it is now too late to propound a parliamentary inquiry.

The PRESIDING OFFICER. Silence suggests that it is now too late.

Mr. DIRKSEN. Very well.

The PRESIDING OFFICER. The clerk will resume the call of the roll.

The legislative clerk resumed and concluded the call of the roll.

Mr. MANSFIELD. I announce that the Senator from Arkansas [Mr. FULBRIGHT] and the Senator from Georgia [Mr. RUSSELL] are absent on official business.

I also announce that the Senator from Washington [Mr. MAGNUSON] is absent because of illness.

I further announce that, if present and voting, the Senator from Arkansas [Mr. FULBRIGHT] and the Senator from Washington [Mr. MAGNUSON] would each vote "nay."

The result was announced—yeas 43, nays 52, as follows:

YEAS—43

Aiken	Dworshak	Morton
Allott	Eastland	Mundt
Beall	Ellender	Prouty
Bennett	Ervin	Robertson
Bridges	Frear	Saltonstall
Bush	Goldwater	Schoeppel

Jackson	Morse	Yarborough
Javits	Moss	Young, Ohio
Johnson, Tex.	Murray	
Johnston, S.C.	Muskie	

NOT VOTING—3

Fulbright	Magnuson	Russell

So Mr. DIRKSEN's amendment, in the nature of a substitute, was rejected.

Mr. DOUGLAS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. JOHNSON of Texas. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas to lay on the table the motion of the Senator from Illinois to reconsider.

The motion to lay on the table was agreed to.

Mr. SCOTT. Mr. President, I call up for consideration, and offer as an amendment in the nature of a substitute for the pending bill, my bill, S. 268; and on the amendment I ask for the yeas and nays.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

Mr. SCOTT. Mr. President, I ask unanimous consent that the reading of the amendment may be dispensed with and that the amendment may be printed in the RECORD.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Pennsylvania? The Chair hears none, and it is so ordered.

The amendment in the nature of a substitute offered by Mr. SCOTT is as follows:

Strike out all after the enacting clause and insert in lieu thereof the following: "That this Act be cited as the 'Area Redevelopment Act.'

"DECLARATION OF PURPOSE

"SEC. 2. The Congress declares that the maintenance of the national economy at a high level is vital to the best interests of the United States, but that some of our communities are suffering substantial and persistent unemployment which causes hardship to many individuals and their families and detracts from the national welfare by wasting vital human resources; that to overcome this problem the Federal Government in cooperation with the States, should help areas of substantial and persistent unemployment to take effective steps in planning and financing their economic development; that Federal assistance should enable communities to achieve lasting improvement and enhance the domestic prosperity by the establishment of stable and diversified local economies; and that new employment opportunities should be created rather than merely transferred from one community to another.

"AREA ECONOMIC REDEVELOPMENT ADMINISTRATION

"SEC. 3. To assist areas in the United States designated hereinafter as redevelopment areas, the Secretary of Commerce is authorized to take such action as may be necessary to carry out the provisions of this

Act. To assist the Secretary of Commerce (hereinafter referred to as the 'Secretary'), there is hereby established within the Department of Commerce an Area Economic Redevelopment Administration which shall be headed by an Administrator who shall be appointed by the Secretary and who shall receive compensation at a rate equal to that received by Assistant Secretaries of Commerce. The Administrator shall perform such duties in the execution of this Act as the Secretary may assign.

"ADVISORY BOARD

"SEC. 4. (a) To advise the Secretary in the performance of functions authorized by this Act, there is authorized to be created an Area Economic Redevelopment Advisory Board (hereinafter referred to as the 'Board', which shall consist of the following members, all ex officio: The Secretary, as Chairman; the Secretaries of Agriculture; Health, Education, and Welfare; Labor; and Treasury; the Administrators of the Housing and Home Finance Agency and of the Small Business Administration. The Chairman may from time to time invite the participation of officials of other agencies of the executive branch interested in the functions herein authorized. Each member of the Board may designate an officer of his agency to act for him as a member of the Board with respect to any matter there considered.

"(b) The Secretary shall appoint a National Public Advisory Committee on Area Redevelopment which shall consist of twenty-five members and which shall be composed of representatives of labor, management, agriculture, and the public in general. From the members appointed to such Committee the Secretary shall designate a Chairman. Such Committee, or any duly established subcommittee therof, shall from time to time make recommendations to the Secretary relative to the carrying out of his duties under this Act. Such Committee shall hold not less than two meetings during each calendar year.

"(c) The Secretary is authorized from time to time to call together and confer with representatives of the various parties in interest from any industry in which employment has dropped substantially over an extended period of years and which in consequence has been a primary source of high levels of unemployment in several areas designated by the Secretary as redevelopment areas. Conferences convened under authority of this subsection shall consider with and recommend to the Secretary plans and programs with special reference to any such industry to carry out the purposes of this Act.

"REDEVELOPMENT AREAS

"SEC. 5. (a) The Secretary shall designate as 'industrial redevelopment areas' those industrial areas within the United States in which he determines that there has existed substantial and persistent unemployment for an extended period of time. There shall be included among the areas so designated any industrial area in which there has existed unemployment of not less than (1) 15 per centum of the labor force during the six-month period immediately preceding the date on which application for assistance is made under this Act, (2) 12 per centum of the labor force during the twelve-month period immediately preceding such date. (3) 9 per centum of the labor force during at least fifteen months of the eighteen-month period immediately preceding such date, or (4) 6 per centum of the labor force during at least eighteen months of the twenty-four-month period immediately preceding such date.

"(b) The Secretary shall also designate as "rural redevelopment areas" those rural areas within the United States in which he determines that there exist the largest number and percentage of low-income families, and a condition of substantial and persistent unemployment or underemployment. In making the designations under this subsection, the Secretary shall consider, among other relevant factors, the number of low-income farm families in the various rural areas of the United States, the proportion that such low-income families are to the total farm families of each of such areas, the relationship of the income levels of the families in each such areas to the general levels of income in the United States, the current and prospective employment opportunities in each such area, and the availability of manpower in each such area for supplemental employment.

"(c) In making the determinations provided for in this section, the Secretary shall be guided, but not conclusively governed, by pertinent studies made, and information and data collected or compiled, by (1) departments, agencies and instrumentalities of the Federal Government, (2) State and local governments, (3) universities and land-grant colleges, and (4) private organizations.

"(d) Upon the request of the Secretary, the Secretary of Labor, the Secretary of Agriculture, and the Director of the Bureau of the Census are respectively authorized to conduct such special studies, obtain such information and compile and furnish to the Secretary such data as the Secretary may deem necessary or proper to enable him to make the determinations provided for in this section. The Secretary shall reimburse, out of any funds appropriated to carry out the purposes of this Act, the foregoing officers for any expenditures incurred by them under this section.

"(e) As used in this Act, the term 'redevelopment area,' refers to any area within the United States which has been designated by the Secretary as an industrial redevelopment area or a rural redevelopment area, and may include one or more counties, or one or more municipalities, or a part of a county or municipality.

"LOANS AND PARTICIPATIONS

"SEC. 6. (a) The Secretary is authorized to purchase evidences of indebtedness and to make loans (including immediate participations therein) to aid in financing any project for the purchase or development of land and facilities for industrial usage, for the construction of new factory buildings, for rehabilitation of abandoned or unoccupied factory buildings, or for the alteration, conversion, or enlargement of any existing buildings for industrial use. Such financial assistance shall not be extended for working capital, for purchases of machinery or equipment, or to assist establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

"(b) Financial assistance under this section shall be on such terms and conditions as the Secretary determines, subject, however, to the following restrictions and limitations:

"(1) The total amount of loans and loan participations (including purchased evidences of indebtedness) outstanding at any one time under this section (A) with respect to projects in industrial redevelopment areas shall not exceed $100,000,000, and (B) with respect to projects in rural redevelopment areas shall not exceed $50,000,000;

"(2) Such assistance shall be extended only to applicants, both private and public, approved by the State (or any agency or instrumentality thereof concerned with problems of economic development) in which the project to be financed shall be located;

"(3) No such assistance shall be extended hereunder unless the financial assistance applied for is not otherwise available from private lenders or other Federal agencies on reasonable terms;

"(4) No loan shall be made unless it is determined that an immediate participation is not available;

"(5) No evidences of indebtedness shall be purchased and no loans shall be made unless it is determined that there is a reasonable assurance of repayment;

"(6) No loan, including renewals or extension thereof may be made hereunder for a period exceeding thirty years and no evidences of indebtedness maturing more than thirty years from date of purchase may be purchased hereunder: *Provided,* That the foregoing restrictions on maturities shall not apply to securities or obligations received by the Secretary as a claimant in bankruptcy or equitable reorganization or as a creditor in other proceedings attendant upon insolvency of the obligor, or if extension or renewal for additional periods, not to exceed, however, a total of ten years, will aid in the orderly liquidation of such loan or of such evidence of indebtedness;

"(7) Such assistance shall not exceed 50 per centum of the aggregate cost to the applicant (excluding all other Federal aid in connection with the undertaking) of acquiring or developing land and facilities, and of constructing, altering, converting, rehabilitating, or enlarging the building or buildings of the particular project and shall, among others, be on the following conditions:

"(A) That other funds are available in an amount which, together with the assistance provided hereunder, shall be sufficient to pay such aggregate cost;

"(B) That not less than 10 per centum of such aggregate cost be supplied by the State or any agency, instrumentality, or political subdivision thereof, or by a community or area organization, as equity capital or as a loan repayable only after the financial assistance hereunder has been repaid in full according to the terms thereof and, if such loan is secured, its security shall be subordinate and inferior to the lien or liens securing the financial assistance hereunder; and

"(C) That in making any loan under this section with respect to an industrial redevelopment area, the Secretary shall require that not less than 5 per centum of the aggregate cost of the project for which such loan is made shall be supplied by nongovernmental sources.

"(8) No such assistance shall be extended unless there shall be submited and approved by the Secretary an overall program for the economic development of the area and a finding by the State, or any agency, instrumentality, or local political subdivision thereof, that the project for which financial assistance is sought is consistent with such program: *Provided,* That nothing in this Act shall authorize financial assistance for any project prohibited by laws of the State or local political subdivision in which the project would be located.

"(c) Of the funds authorized to be appropriated under section 8 of this Act, not more than $100,000,000 shall be deposited in a revolving fund which shall be used for the purpose of making loans under this section with respect to projects in industrial redevelopment areas, and not more than $50,000,000 shall be deposited in a revolving fund which shall be used for the purpose of making loans under this section with respect to projects in rural redevelopment areas.

"LOANS FOR PUBLIC FACILITIES

"SEC. 7(a) Upon the application of any State, or political subdivison thereof, or private or public organization or association representing any redevelopment area or part thereof, the Secretary is authorized to make loans to assist in financing the pur-

chase or development of land for public facility usage, and the construction, rehabilitation, alteration, expansion, or improvement of public facilities within any redevelopment area, if he finds that—

"(1) the project for which financial assistance is sought will provide more than a temporary alleviation of unemployment or underemployment in the redevelopment area wherein such project is, or will be, located, and will tend to improve the opportunities in such area for the successful establishment or expansion of industrial or commercial plants or facilities;

"(2) the funds requested for such project are not otherwise available on reasonable terms;

"(3) the amount of the loan plus the amount of other available funds for such projects are adequate to insure the completion thereof; and

"(4) there is a reasonable expectation of repayment.

"(b) No loan under this section shall be for an amount in excess of 50 per centum of the aggregate cost of the project for which such loan is made. Subject to section 11(5), the maturity date of any such loan shall be not later than thirty years after the date such loan is made.

"(c) In making any loan under this section, the Secretary shall require that not less than 10 per centum of the aggregate cost of the project for which such loan is made shall be supplied by the State (including any political subdivision thereof) within which such project is to be located as equity capital, or as a loan repayable only after the financial assistance provided under this section has been repaid in full, and, if such loan is secured, its security shall be subordinate to the lien or liens securing the financial assistance provided under this section. In determining the amount of participation required under this subsection with respect to any particular project, the Secretary shall give consideration to the financial condition of the State or local government, and to the per capita income of the residents of the redevelopment area, within which such project is to be located.

"(d) Of the funds authorized to be appropriated under section 8 of this Act, not more than $50,000,000 shall be deposited in a revolving fund which shall be used for the purpose of making loans under this section.

"APPROPRIATION FOR LOANS

"SEC. 8. There is hereby authorized to be appropriated not to exceed $200,000,000 to provide funds for loans under this Act.

"INFORMATION

"SEC. 9. The Secretary shall aid redevelopment areas by furnishing to interested individuals, communities, industries, and enterprises within such areas any assistance, technical information, market research, or other forms of assistance, information, or advice which are obtainable from the various departments, agencies, and instrumentalities of the Federal Government and which would be useful in alleviating conditions of excessive unemployment or underemployment within such areas. The Secretary shall furnish the procurement divisions of the various departments, agencies, and other instrumentalities of the Federal Government with a list containing the names and addresses of business firms which are located in redevelopment areas and which are desirous of obtaining Government contracts for the furnishing of supplies or services, and designating the supplies and services such firms are engaged in providing.

"TECHNICAL ASSISTANCE

"SEC. 10. In carrying out his duties under this Act, the Secretary is authorized to provide technical assistance to areas which he has designated as redevelopment areas under this Act. Such assistance shall include studies evaluating the needs of, and development potentialities for, economic growth of such areas. Such assistance may be provided by the Secretary through members of his staff or through the employment of private individuals, partnerships, firms, corporations, or suitable institutions, under contracts entered into for such purpose. Appropriations are hereby authorized for the purposes of this section in an amount not to exceed $3,500,000 annually.

"POWERS OF SECRETARY

"SEC. 11. In performing his duties under this Act, the Secretary is authorized to—

"(1) adopt, alter, and use a seal, which shall be judicially noticed; and subject to the civil service and classification laws, select, employ, appoint, and fix the compensation of such officers, employees, attorneys, and agents as shall be necessary to carry out the provisions of this Act, and define their authority and duties, provide bonds for them in such amounts as the Secretary shall determine, and pay the costs of qualification of certain of them as notaries public;

"(2) hold such hearings, sit and act at such times and places, and take such testimony, as he may deem advisable;

"(3) request directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality information, suggestions, estimates, and statistics needed to carry out the purposes of this Act; and each department, bureau, agency, board, commission, office, establishment, or instrumentality is authorized to furnish such information, suggestions, estimates, and statistics directly to the Secretary;

"(4) under regulations prescribed by him, assign or sell at public or private sale, or otherwise dispose of for cash or credit, in his discretion and upon such terms and conditions and for such consideration as he shall determine to be reasonable, any evidence of debt, contract, claim, personal property, or security assigned to or held by him in connection with the payment of loans made under this Act, and collect or compromise all obligations assigned to or held by him in connection with the payment of such loans until such time as such obligations may be referred to the Attorney General for suit or collection;

"(5) further extend the maturity of or renew any loan made under this Act, beyond the periods stated in such loan or in this Act, for additional periods not to exceed ten years, if such extension or renewal will aid in the orderly liquidation of such loan;

"(6) deal with, complete, renovate, improve, modernize, insure, rent, or sell for cash or credit, upon such terms and conditions and for such consideration as he shall determine to be reasonable, any real or personal property conveyed to, or otherwise acquired by, him in connection with the payment of loans made under this Act;

"(7) pursue to final collection, by way of compromise or other administrative action, prior to reference to the Attorney General, all claims against third parties assigned to him in connection with loans made under this Act. This shall include authority to obtain deficiency judgments or otherwise as in the case of mortgages assigned to the Secretary. Section 3709 of the Revised Statutes, as amended (41 U.S.C. 5), shall not apply to any contract of hazard insurance or to any purchase or contract for services or supplies on account of property obtained by the Secretary as a result of loans made under this Act if the premium therefor or the amount thereof does not exceed $1,000. The power to convey and to execute in the name of the Secretary deeds of conveyance, deed of release, assignments and satisfactions of mortgages, and any other written instrument relating to real or personal property or any interest therein acquired by the Secretary pursuant to the provisions of this Act may be exercised by the Secretary or by any officer or agent appointed by him for that purpose without the execution of any express delegation of power or power of attorney;

"(8) acquire, in any lawful manner, any property (real, personal, or mixed, tangible or intangible), whenever deemed necessary or appropriate to the conduct of the activities authorized in sections 6 and 7 of this Act;

"(9) in addition to any powers, functions, privileges, and immunities otherwise vested in him, take any and all actions, including the procurement of the services of attorneys by contract, determined by him to be necessary or desirable in making, servicing, compromising, modifying, liquidating, or otherwise administratively dealing with or realizing on loans made under this Act;

"(10) to such an extent as he finds necessary to carry out the provisions of this Act, procure the temporary (not in excess of six months) service of experts or consultants or organizations thereof, including stenographic reporting services, by contract or appointment, and in such cases such service shall be without regard to the civil service and classifications law, and, except in the case of stenographic reporting services by organizations, without regard to section 3709 of the Revised Statutes (41 U.S.C. 5); any individual so employed may be compensated at a rate not in excess of $75 per diem, and, while such individual is away from his home or regular place of business, he may be allowed transportation and not to exceed $15 per diem in lieu of subsistence and other expenses; and

"(11) establish such rules, regulations, and procedures as he may deem appropriate in carrying out the provisions of this Act.

"TERMINATION OF ELIGIBILITY FOR FURTHER ASSISTANCE

"SEC. 12. Whenever the Secretary shall determine that employment conditions within any area previously designated by him as a redevelopment area have changed to such an extent that such area is no longer eligible for such designation under section 5 of this Act, no further assistance shall be granted under this Act with respect to such area and, for the purposes of this Act, such area shall not be considered a redevelopment area: *Provided,* That nothing contained herein shall (1) prevent any such area from again being designated a redevelopment area under section 5 of this Act if the Secretary determines it to be eligible under such section, or (2) affect the validity of any contracts or undertakings with respect to such area which were entered into pursuant to this Act prior to a determination by the Secretary that such area no longer qualifies as a redevelopment area. The Secretary shall keep the departments and agencies of the Federal Government, and interested State or local agencies, advised at all times of any changes made hereunder with respect to the designation of any area.

"PROCUREMENT BY GOVERNMENTAL AGENCIES

"SEC. 13. Each department, agency, or other instrumentality of the Federal Government engaged in the procurement of any supplies or services for use by or on behalf of the United States shall—

"(1) use its best efforts to award negotiated procurement contracts to contractors located within redevelopment areas to the extent procurement objectives will permit;

"(2) where deemed appropriate, set aside portions of procurements for negotiation exclusively with firms located in redevelopment areas, if a substantial proportion of production on such negotiated contracts will be performed within redevelopment areas and if such firms will contract for such portions of the procurement at prices no higher than those paid on the balance of such procurements;

"(3) where deemed appropriate and consistent with procurement objectives, after the expiration of the period during which bids for any procurement are permitted to be submitted and if the lowest of such bids was submitted by a firm in an area other than a redevelopment area, negotiate with firms in redevelopment areas with a view to ascertaining whether any such firm will furnish the services or supplies with respect to which bids were theretofore submitted for an amount equal to, or less than, the amount of the lowest bid theretofore submitted for the furnishing of such services or supplies, and if such firm can be found, award the contract for the furnishing of such services or supplies to such firm;

"(4) assure that firms in redevelopment areas which are on appropriate bidders' lists will be given the opportunity to submit bids or proposals on all procurements for which they are qualified and on which small business joint determinations have not been made, but whenever the number of firms on a bidders' list is exclusive, there shall be included a representative number of firms from redevelopment areas;

"(5) in the event of tie bids on offers on any procurement, award the contract to the firm located in a redevelopment area, other things being equal;

"(6) encourage prime contractors to award subcontracts to firms in redevelopment areas; and

"(7) cooperate with other departments, agencies, and instrumentalities of the Federal Government in achieving the objectives set out in this subsection.

"URBAN RENEWAL

"SEC. 14. Title I of the Housing Act of 1949, as amended, is amended by adding at the end thereof the following new section:

"'INDUSTRIAL REDEVELOPMENT AREAS UNDER THE AREA ECONOMIC REDEVELOPMENT ACT

"'SEC. 112. (a) When the Secretary of Commerce certifies to the Housing and Home Finance Administrator (1) that any county, city, or other municipality (in this section referred to as a "municipality") is situated in an area designated under section 5(a) of the Area Economic Redevelopment Act as an industrial redevelopment area, and (2) that there is a reasonable probability that with assistance provided under such Act and other undertakings the area will be able to achieve more than temporary improvement in its economic development, the Housing and Home Finance Administrator is authorized to provide financial assistance to a local public agency in any such municipality under this title and the provisions of this section.

"'(b) The Housing and Home Finance Administrator may provide such financial assistance under this section without regard to the requirements or limitations of section 110(c) that the project area be clearly predominantly residential in character or that it be redeveloped for predominantly residential uses; but no such assistance shall be provided in any area if such Administrator determines that it will assist in relocating business operations from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

"'(c) Financial assistance under this section may be provided for any project involving a project area including primarily industrial or commercial structure suitable for rehabilitation under the urban renewal plan for the area.

"'(d) Notwithstanding any other provision of this title, a contract for financial assistance under this section may include provisions permitting the disposition of any land in the project area designated under the urban renewal plan for industrial or commercial uses to any public agency or nonprofit corporation for subsequent disposition as promptly as practicable by such public agency or corporation for the redevelopment of the land in accordance with the urban renewal plan: *Provided*, That any disposition of such land under this section shall be made at not less than its fair value for uses in accordance with the urban renewal plan: *And provided further*, That the purchasers from or lessees of such public agency or corporation, and their assignees, shall be required to assume the obligations imposed under section 105(b).

"'(e) Following the execution of any contract for financial assistance under this section with respect to any project, the Housing and Home Finance Administrator may exercise the authority vested in him under this section for the completion of such project, notwithstanding any determination made after the execution of such contract that the area in which the project is located may no longer be an industrial redevelopment area under the Area Economic Redevelopment Act.

"'(f) Not more than 10 per centum of the funds authorized for loans under section 102 or for capital grants under section 103 shall be available to provide financial assistance under this section.'

"URBAN PLANNING GRANTS

"SEC. 15. The second sentence of section 701 of the Housing Act of 1954 is amended by adding the following in clause (2) after the words 'decennial census which': '(i) are situated in areas designated by the Secretary of Commerce under the Area Economic Redevelopment Act as industrial redevelopment areas, or (ii)'.

"VOCATIONAL TRAINING

"SEC. 16 (a) The Secretary of Labor shall determine the vocational training or retraining needs of unemployed individuals residing in redevelopment areas and shall cooperate with the Secretary of Health, Education, and Welfare and with existing State and local agencies and officials in charge of existing programs relating to vocational training and retraining for the purpose of assuring that the facilities and services of such agencies are made fully available to such individuals.

"(b) Whenever the Secretary of Labor finds that additional facilities or services are needed in the area to meet the vocational training or retraining needs of such individuals, he shall so advise the Secretary of Health, Education, and Welfare. The Secretary of Health, Education, and Welfare, through the Commissioner of Education, shall provide assistance, including financial assistance when necessary, to the appropriate State vocational educational agency in the provision of such additional facilities or services. If the Secretary of Health, Education, and Welfare finds that the State vocational educational agency is unable to provide the facilities and services needed, he may, after consultation with such agency, provide for the same by agreement or contract with public or private educational institutions: *Provided*, That the Secretary of Labor shall arrange to provide any necessary technical assistance for setting up apprenticeship, journeyman, and other job training needed in the locality.

"PREVAILING RATE OF WAGE AND FORTY-HOUR WEEK

"SEC. 17. The Secretary shall take such action as may be necessary to insure that all laborers and mechanics employed by contractors or subcontractors on projects undertaken by public applicants assisted under this Act (1) shall be paid wages at rates no less than those prevailing on the same type of work on similar construction in the immediate locality as determined by the Secretary of Labor in accordance with the Act of August 30, 1935 (Davis-Bacon Act), and (2) shall be employed not more than forty hours in any one week unless the employee receives wages for his employment in excess of the hours specified above at a rate not less than one and one-half times the regular rate at which he is employed.

"PENALTIES

"SEC. 18. (a) Whoever makes any statement knowing it to be false, or whoever willfully overvalues any security, for the purpose of obtaining for himself or for any applicant any loan, or extension thereof by renewal, deferment of action, or otherwise, or the acceptance, release, or substitution of security thereof, or for the purpose of influencing in any way the action of the Secretary, or for the purpose of obtaining money, property, or anything of value, under this title, shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

"(b) Whoever, being connected in any capacity with the Secretary (1) embezzles, abstracts, purloins, or willfully misapplies any moneys, funds, securities, or other things of value, whether belonging to him or pledged or otherwise entrusted to him, or (2) with intent to defraud the Secretary or any other body politic or corporate, or any individual, or to deceive any officer, auditor, or examiner of the Secretary makes any false entry in any book, report, or statement of or to the Secretary, or without being duly authorized, draws any order or issues, put forth, or assigns any note, debenture, bond, or other obligation, or draft, bill of exchange, mortgage, judgment, or decree thereof, or (3) with intent to defraud participates, shares, receives directly or indirectly any money, profit, property, or benefit through any transaction, loan, commission, contract, or any other act of the Secretary, or (4) gives any unauthorized information concerning any future action or plan of the Secretary which might affect the value of securities, or having such knowledge, invests or speculates, directly or indirectly, in the securities or property of any company or corporation receiving loans or other assistance from the Secretary shall be punished by a fine of not more than $10,000 or by imprisonment for not more than five years, or both.

"EMPLOYMENT OF EXPEDITERS AND ADMINISTRATIVE EMPLOYEES

"SEC. 19. No loan shall be made by the Secretary under this Act to any business enterprise unless the owners, partners, or officers of such business enterprise (1) certify to the Secretary the names of any attorneys, agents, or other persons engaged by or on behalf of such business enterprise for the purpose of expediting applications made to the Secretary for assistance of any sort, and the fees paid or to be paid to any such persons; and (2) execute an agreement binding any such business enterprise for a period of two years after any assistance is rendered by the Secretary to such business enterprise, to refrain from employing, tendering any office or employment to, or retaining for professional services, any person who, on the date such assistance or any part thereof was rendered, or within one year prior thereto, shall have served as an officer, attorney, agent or employee of the Secretary occupying a position or engaging in activities with which the Secretary shall have determined involve discretion with respect to the granting of assistance under this Act.

"ANNUAL REPORT

"SEC. 20. The Secretary shall make a comprehensive and detailed annual report to the Congress of his operations under this Act for each fiscal year beginning with the fiscal year ending June 30, 1960. Such report shall be printed, and shall be transmitted to the Congress not later than January 3 of the year following the fiscal year with respect to which such report is made. Such report shall show, among other things, (1) the number and size of Government contracts for the furnishing of supplies and services

placed with business firms located in redevelopment areas, and (2) the amount and duration of employment resulting from such contracts. Upon the request of the Secretary, the various departments and agencies of the Government engaged in the procurement of supplies and services shall furnish to the Secretary such information as may be necessary for the purposes of this section.

"APPROPRIATION

"SEC. 21. In addition to appropriations hereinbefore specifically authorized, there are further authorized to be appropriated such sums as may be necessary to carry out the provisions and purposes of this Act.

"USE OF OTHER FACILITIES

"SEC. 22. (a) To avoid duplication of activies and minimize expense in carrying out the provisions of this Act, the Secretary shall, to the extent practicable and with their consent, use the available services and facilities of other agencies and instrumentalities of the Federal Government on a reimbursable basis.

"(b) Departments and agencies of the Federal Government shall exercise their powers, duties, and functions in such manner as will assist in carrying out the objectives of this Act. This Act shall be supplemental to any existing authority, and nothing herein shall be deemed to be restrictive of any existing powers, duties, and functions of any other department or agency of the Federal Government.

"RECORDS AND AUDIT

"SEC. 23. (a) Each recipient of assistance under section 6 or 7 of this Act shall keep such records as the Secretary shall prescribe, including records which fully disclose the amount and the disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance is given or used, and the amount and nature of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

"(b) The Secretary and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access for the purpose of audit and examination to any books, documents, papers, and records of the recipient that are pertinent to assistance received under section 6 or 7 of this Act."

The PRESIDING OFFICER. The question is on agreeing to the amendment in the nature of a substitute offered by the Senator from Pennsylvania [Mr. SCOTT]. On this question the yeas and nays have been requested. Is there a sufficient second?

The yeas and nays were ordered.

Mr. JOHNSON of Texas. Mr. President, I am informed by the minority leader that the Senator from Pennsylvania and those who support him would be agreeable to a limitation of 10 minutes for them and 10 minutes for the opponents. Is that agreeable?

Mr. SCOTT. That is agreeable. I have had no request for time.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be a time limitation with respect to this particular substitute amendment, 10 minutes to each side, the time to be controlled by the Senator from Pennsylvania [Mr. SCOTT] and the Senator from Illinois [Mr. DOUGLAS].

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

Mr. JAVITS. Mr. President, I have asked the Senator from Pennsylvania for a little time. Could I be given 5 minutes?

Mr. BUSH. Mr. President, I should like to ask the minority leader if he will ask now for a yea and nay vote on one more amendment to be offered jointly by me and by the distinguished Senator from New York [Mr. JAVITS]. In the interest of saving time, which the majority leader has requested, we have agreed to merge out two amendments into one and present them as one amendment. We should like to have a yea and nay vote on the amendment.

Mr. JOHNSON of Texas. I will say to the Senator that at the time his amendment is pending I will support him in his request for the yeas and nays.

The PRESIDING OFFICER. The Senator from Texas has asked unanimous consent for an agreement as to a time limitation with respect to the pending amendment.

Mr. JOHNSON of Texas. It is 10 minutes to each side, to be controlled, respectively, by the Senator from Pennsylvania [Mr. SCOTT] and the Senator from Illinois [Mr. DOUGLAS].

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

The question is on agreeing to the amendment in the nature of a substitute offered by the Senator from Pennsylvania.

Mr. ALLOTT. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. BENNETT. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BENNETT. What was the final determination as to the amount of time assigned to each side?

The PRESIDING OFFICER. Ten minutes to each side, the time to be controlled, respectively, by the Senator from Pennsylvania [Mr. SCOTT] and the Senator from Illinois [Mr. DOUGLAS].

The Senator from Pennsylvania is recognized.

Mr. SCOTT. Mr. President, there is no basic difference of opinion as to the continuing need for economic assistance to depressed areas throughout the Nation. We have only to look at the mounting unemployment figures to realize that serious economic illness persists—in the face of accelerating recovery and a new high level of prosperity.

We have the highest level of employment in our history, yet unemployment mounts. We have income at its highest peak and production booming, yet the family breadwinner in industrial and mining communities in Pennsylvania is walking the streets unemployed—a drain upon the unemployment compensation and public assistance rolls.

Technological changes, migration of industry, shifts in demand, depletion of resources—all have contributed to the complexity of this problem, and leave irreplaceable human resources in the backwash of the rising tide.

We cannot be healthy as a nation with sagging pockets of unemployment and underemployment, as unpleasant reminders of our lack of action, or inability to set our economic house in order.

Depressed areas are an expensive burden, which our country cannot afford to carry.

Mr. President, the urgency of the situation makes it a matter of prime importance that an area redevelopment bill be enacted; that it contain sufficient means for stimulating local and community efforts; and that it not face the ultimate hazard of a veto.

I do not mean to imply that our efforts to legislate should be overshadowed by such a possibility, but I am very aware of the time which has been lost in suffering that action last year.

No, I have no crystal ball whereby I can foresee what the President will do either with regard to the pending bill, or the substitute which I offer.

However, I am mindful of the message of disapproval, and my own conviction that we should not lose further time.

I am also mindful, Mr. President, of the possibility of a veto. I fear the Douglas bill may prove to be unrealistic by being in an amount greater than may gain approval, exactly as I fear the administration bill may be unrealistic by being in an amount less by far than necessary to meet the need.

My amendment calls for an appropriation of $200 million for revolving fund loans. The emphasis is on loans from appropriated funds, as opposed to loans financed by borrowing from the Treasury.

My amendment calls for $100 million for industrial redevelopment; $50 million for rural redevelopment; and $50 million for public facilities, all on a loan basis. The pending bill would establish three $100 million loan funds for the same purpose, plus $75 million in outright grants for public facilities.

My amendment provides for a maximum Federal loan participation of 50 percent, with local, State or outside sources taking over the remaining 50 percent responsibility. The Douglas bill maintains 65 percent Federal participation.

My amendment calls for a maximum loan period of 30 years—the Douglas bill could go as far as 40.

My amendment would place the administration of the program in a separate administration established within the Department of Commerce. I am glad to note that the Douglas bill has departed from the idea of setting up an Area Redevelopment Administration as a constituent agency of Housing and Home Finance. A new separate administration will take time for organization and staffing. I believe that Commerce is the logical Department to have the major responsibility for coordination of this program. Its organization is geared to deal with problems of business and industry.

Mr. President—my amendment provides a practical and reasonable approach to this problem—hitting, as my able friend the senior Senator from Illinois stated on one occasion—a middle-of-the-road position.

I admit that it is middle-of-the-road, between the extremes of S. 722 on the one hand, and the inadequacy of the funds provided in the administration proposal.

I trust that the vote on my amendment in the nature of a substitute for Senate bill 722 may be favorable, for the reason that I believe it would have a far better chance of approval by the administration than the Douglas bill, and because I believe that it would be more effective than the administration bill in meeting the needs of the times in my State and other States.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a brief analysis of my amendment to the area redevelopment bill.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

BRIEF ANALYSIS OF AREA REDEVELOPMENT BILL, INTRODUCED BY SENATOR HUGH SCOTT, INTENDED TO BE OFFERED AS AMENDMENT IN NATURE OF A SUBSTITUTE TO S. 722

1. Authorizes appropriation of $200 million for a revolving loan fund: $100 million, industrial areas; $50 million, rural areas; $50 million, public facilities.

2. Provides for Federal loan participation of 50 percent, with State, local government, or nongovernment sources providing matching 50 percent.

3. No outright grants for public facilities.

4. Provides for loans over period of 30 years.

5. Places program under Department of Commerce.

6. Authorizes Secretary of Commerce to determine realistic rates of interest on all loans.

7. Authorizes loans to industrial areas with following unemployment levels: 15 percent unemployment for 6 months, or 12 percent unemployment for 1 year, or 9 percent for 15 out of 18 months, or 6 percent for 18 out of 24 months, preceding date of application.

3. Contains special urban renewal section to permit Housing and Home Finance to give financial assistance to urban renewal projects in municipalities, without regard to predominantly residential requirement.

9. Contains Davis-Bacon Act provision to assure prevailing wage and 40-hour week on contracts.

10. Authorizes technical assistance of $3.5 million for surveys and evaluation studies.

11. Requires State or its instrumentality to establish local redevelopment plans.

12. Establishes Cabinet-level Advisory Board and 25-member Public Advisory Committee.

Mr. SCOTT. Mr. President, I desire to yield at this time to my good friend the distinguished senior Senator from New York [Mr. JAVITS].

Mr. JAVITS. Mr. President, I desire to express my support for the substitute offered by the Senator from Pennsylvania [Mr. SCOTT], on the grounds, as he has stated, that it is a fair middle-of-the-road proposal.

The PRESIDING OFFICER. Did the Senator from Pennsylvania indicate how much time he wished to yield to the Senator from New York?

Mr. SCOTT. I yield 2 minutes. How much time have I left?

The PRESIDING OFFICER. The Senator has 4 minutes.

Mr. SCOTT. I yield 2 minutes to the Senator from New York.

Mr. BUSH. Mr. President, may I have 1 minute?

Mr. SCOTT. I will yield 1 minute to the Senator from Connecticut.

Mr. JAVITS. Mr. President, I point out that what is sought here is to do something in connection with the very vexing problem of the domestic areas with chronic unemployment.

As one who constantly supports a foreign aid program, which I consider indispensable to the American scene, I feel it my duty to support a meaningful program for our own distressed areas. I think this is the minimum meaningful program. Therefore, consistent with the idea of budget balance, as nearly as it can be attained considering our national needs, I support the amendment offered by the Senator from Pennsylvania.

I point out further that this is a hard-headed proposal. I believe that the 50-percent participation is all that it should be, and that it is not necessary to go to the 65-percent limitation in the Douglas bill.

Finally, I point out that the amendment excludes machinery and equipment. I think that is a very desirable change. I shall have another opportunity to argue that question, because the Senator from Connecticut and I will offer an amendment which would incorporate that idea, and would save up to $100 million in connection with this bill alone.

I believe that the amendment in the nature of a substitute offered by the Senator from Pennsylvania is a fair approach for those who are trying for some kind of balance between income and outgo in Government funds, and who, at the same time, wish to help strike a blow in areas of chronic unemployment, of which there are a considerable number in my own State of New York.

Mr. SCOTT. I now yield 1 minute to the Senator from Connecticut [Mr. BUSH].

Mr. BUSH. Mr. President, I subscribe to what the distinguished Senator from New York has said about the merits of the amendment of the Senator from Pennsylvania [Mr. SCOTT], as distinguished from Senate bill 722. I shall vote for the amendment of the Senator from Pennsylvania, not because I would vote for it on final passage, which, indeed, I would not. I would oppose it; but because I think it is an improvement upon Senate bill 722, the pending business of the Senate, I shall vote for the amendment.

Mr. SCOTT. Mr. President, I believe I have 1 minute left. I should like to reemphasize what I pointed out in an earlier colloquy, namely, that the formula under the administration bill does not cover several of the most populous areas of my State. I suspect that is true of other States. The Douglas measure has accepted a formula somewhat similar to that in the administration bill. Therefore, certainly for my State, and perhaps for many other States, I believe the amendment which I offer more nearly meets the problem and the needs which the problem presents.

Mr. President, I yield back the remainder of my time.

Mr. DOUGLAS. Mr. President, I yield 2 minutes to the Senator from Pennsylvania [Mr. CLARK].

Mr. CLARK. Mr. President, it is with considerable regret that I find myself opposed to the position taken by my distinguished colleague from Pennsylvania. We see eye to eye on many matters, despite the fact that the aisle separates us. However, on this occasion I must urge the Senate to reject his amendment. I do so for the following reasons:

Not only in my State of Pennsylvania, but elsewhere, my junior colleague's amendment would not do the job. He would reduce the grants in rural areas from $100 million to $50 million. That would be unfair, because as a result of the cutback twice as much money would go to industrial areas as to rural areas.

The amendment of my colleague would reduce the loans for community facilities by half. That is not fair, because the most hard-pressed communities are those which need community facilities and are unable to obtain credit on the open market to build them. Without community facilities, such as sewers, industrial water supply, roads, and parks, it would be impossible to induce industry to locate in a depressed area.

The amendment of my colleague would eliminate $75 million in grants for communities which are in such dire financial straits that they are quite unable to make loans which could be repaid. That would be unfair because it would prevent the most depressed areas from qualifying for this relief.

The amendment of my colleague would place the administration of the bill under the Department of Commerce. That would mean that we would never get the program under way, because the former Department of Commerce chief and the present Secretary of Commerce are both opposed to the provisions of the bill.

My colleague calls upon the Secretary of Commerce to determine realistic rates of interest. Note those words—"realistic rates of interest." That means high interest and tight money. For that reason the amendment of my good friend from my home State would come pretty close to reducing the efficacy of the bill more than half, just as he would cut in half the amount of money to be appropriated for hard-pressed areas.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. CLARK. I am happy to yield if I have the time.

Mr. SCOTT. First of all, it is regrettable that we differ on this question. My provision for interest is intended to meet the market rate for interest, in order to be realistic. My purpose in proposing a lesser amount than the senior Senator from Pennsylvania supports is that, among other things, I think my proposal would have a far better chance of approval.

My objection to an independent agency is that it would require more than a year to put such an agency into operation. We are operating under an emergency situation; and long before the Senator's independent agency could

ever become effective, unemployment would have become very much worse.

I believe the Department of Commerce would faithfully execute any instructions given to it by the legislature.

Mr. CLARK. Mr. President, like Voltaire, I thoroughly disagree with what my distinguished colleague says, but I would defend to the death his right to say it.

Mr. SCOTT. Then, as Voltaire counsels, let us both cultivate our garden and hope that some action will be taken.

Mr. DOUGLAS. Mr. President, I yield 2 minutes to the able Senator from Virginia [Mr. ROBERTSON].

Mr. ROBERTSON. Mr. President, I shall require more time than that.

Mr. CAPEHART. Mr. President, I yield 12 minutes to the able Senator from Virginia on the bill.

Mr. CLARK. Mr. President, I understood that the time for debate had expired.

Mr. ROBERTSON. I shall need 2 minutes on the amendment and 12 minutes on the bill; 14 minutes altogether.

The PRESIDING OFFICER. On the bill itself, that is.

Mr. ROBERTSON. Yes.

Mr. CLARK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. CLARK. Is there not a unanimous consent agreement in effect that the vote on the pending amendment would come after the expiration of 10 minutes of debate on each side?

The PRESIDING OFFICER (Mr. Moss in the chair). The Chair is advised that the agreement simply stated that 10 minutes would be allotted on each side on the amendment. However, there was no stipulation as to a vote.

Mr. CLARK. The second part of my inquiry is this. Is my understanding correct—and I see the majority leader on the floor—that as much time can be used on the amendment, allowed from the time on the bill, as Senators may request?

Mr. JOHNSON of Texas. Oh, yes. Some Senators must leave the Chamber to attend a meeting with the Prime Minister of Great Britain at 6 o'clock. I hope we will not talk the bill to death in the meantime.

Mr. CAPEHART. Mr. President, I yield 12 minutes on the bill and 2 minutes on the amendment to the Senator from Virginia [Mr. ROBERTSON].

Mr. DOUGLAS. I, too, yield the time to the Senator from Virginia. He now appears under double auspices. [Laughter.]

Mr. ROBERTSON. Mr. President, so far as the disagreement between the two distinguished Senators from Pennsylvania is concerned, I must side with the senior Senator from Pennsylvania. I do not understand how any Member of the Senate who believes in the philosophy of the bill—and the junior Senator from Virginia does not believe in it—can fail to recognize that one of the weaknesses of the bill is that not enough money is provided by the bill to do what is sought to be done. The amendment would make it only half as effective as it would otherwise be. Anything less than $389½ million would be worthless, in my opinion, from the standpoint of those who favor the enactment of the proposed legislation.

Mr. President, the Committee on Banking and Currency reported S. 722 by a vote of 9 to 6. The minority, of which I was a member, consisted of three Democrats and three Republicans. I wish to call the Senate's attention to the minority views, which consist of pages 39 through 46 of the committee report. I ask unanimous consent that the minority views be inserted in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. ROBERTSON. Mr. President, on Friday, March 20, the Washington Daily News published an editorial entitled "Distress Compounded," in which the editors refer to the minority report. I ask unanimous consent that this editorial be inserted in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. ROBERTSON. Mr. President, I also wish to call attention to the fact that on September 6, 1958, the President issued a memorandum of disapproval of S. 3683, the area redevelopment bill which had been enacted by the last Congress just prior to its adjournment.

I digress here to say that those of us who voted against that bill just before Congress adjourned at the last session were very much encouraged by the fact that the vote on the substitution of $53 million in place of nearly $400 million was substantially large and the bill last year was about $100 million less than the bill we have before us and on which we expect to complete action before adjournment tonight.

This bill called for the expenditure of $279.5 million, or $110 million less than the $389.5 million proposed in the bill now before the Senate. I ask unanimous consent that a copy of this memorandum of disapproval be inserted in the RECORD following the insertions which I have previously requested.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. ROBERTSON. Mr. President, I do not intend to speak at length on the measure. All Senators are familiar with it, I am sure, and we wish to finish consideration of it before 6 o'clock this evening.

I am willing to stand on the record made by the minority views. I do wish to call attention, by way of emphasis, to a few defects of the bill.

The bill, S. 722, is an arbitrary and discriminatory one, contrary to the basic principles of a free economy in which flexibility rather than rigidity is a necessary attribute. By injecting the power and resources of the Federal Government into the so-called distressed areas, the bill would offer incentives to industrial plant location in those areas. The inducements which are proposed to be offered are extremely attractive. A new factory building, complete with all necessary machinery and equipment, on a choice location, supplied with all necessary public facilities, would be available. Moreover, the workers for the factory would be trained for their new jobs at Government expense for 4 months.

It is ironic that, through the Federal income-tax system, the more prosperous communities would be forced to subsidize competitive industries in less prosperous communities. There can be no justification for the use of Federal funds to help certain communities attract new industries at the expense of other communities that receive no Federal aid.

Instead of attempting to find a real solution to the complex problems of chronic unemployment and underemployment, the proponents of this proposed legislation have taken the easy course of attempting to find a new channel into which to pour Federal funds. Federal loans and grants may provide temporary relief in a few localities, but a lasting solution of the problem can come only through local leadership and local initiative.

The bill creates a new permanent Federal agency, in addition to existing agencies already engaged in related programs, with no limitation on the new Agency's number of employees.

The bill provides for the financing of $300 million of the $389.5 million through the well known back-door approach to the Treasury. These funds would not be subject to the appropriation procedures, but borrowed from the Treasury, with no provision for the repayment or termination. The funds would revolve and, no doubt, would be vastly increased by the pressures of later demands.

The proponents of this bill have themselves admitted that even the vast amount of money provided in the bill is inadequate. The Senator from West Virginia [Mr. RANDOLPH] has described the bill as "offering promise of a constructive beginning"—CONGRESSIONAL RECORD, March 20, 1959, page 4748. I call special attention to those portions of the minority report which indicate that the cost of providing jobs for only 8 percent of the Nation's unemployed under this program, at $10,000 to $15,000 per job, would amount to from $3.9 billion to $5 billion. If it is true, as the Senator from West Virginia says, that the program is a beginning, the total amount necessary to do the total job staggers the imagination.

In taking a position in opposition to this bill, I do not wish to appear unaware of the unemployment problem or to suggest that I lack interest in its solution. However, any attempt at a solution which does violence to our system of free competitive enterprise is a disservice, not only to those whom it is designed to assist, but to all our people, and to those who will follow after them in generations to come.

Certainly those of us who attribute to our system of private enterprise the credit for per capita wealth, income, and standards of living, excelling those of all other nations, would be unwilling to admit that in this country private enterprise is beginning to fail. We deny that the remedy for what ails it is to make

the Government a partner in the production of goods and services. Throughout the remarkable technological developments of the 20th century there have been recurring dislocations inevitable, as a matter of course, when a nation moves in a relatively brief period from what is called the "horse and buggy days" to the motor age. Implicit in any system of economic freedom is the freedom to fail as well as the freedom to succeed. It is through these freedoms that private enterprise makes its adjustments to technological advance. And if, as I have said, we believe that our present overall economic strength is due more to our American system of free competitive enterprise than to any other factor, we should prefer that any program to sustain prosperity include the careful judgment of private enterprise concerning future prospects of production in a climate favorable to its success. The present bill makes unemployment the test, ignoring the reasons for unemployment in a given area, and, in fact, selecting areas for development by reason of the very fact that their economies have deteriorated.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. ROBERTSON. I yield.

Mr. LAUSCHE. In the course of the hearings were the causes for the blighted areas or depressed areas developed? Was specific inquiry made as to why the present depressed areas have developed in some States?

Mr. ROBERTSON. Of course, it is quite evident that when the production of coal went down from 600 million tons of coal to 400 million tons, in the southwestern area of Virginia and in West Virginia and in parts of Pennsylvania, work was lost to the extent of one-third, and that has been the condition ever since.

Mr. LAUSCHE. Was there developed the thought that some States, because of their governments, have created an unfavorable business climate and have driven enterprises out of their States?

Mr. ROBERTSON. That was not stressed in the hearings, but I have just referred to it when I said that I wanted the advice of private enterprise on locations which would be favorable to such enterprise and to successful operations. That was simply the other side of the picture. No one who favored the bill would admit that one reason why there was unemployment was that the local climate was not favorable to private enterprise.

Mr. President, the bill is a radical departure from my concept of the proper role of the Federal Government. It is costly, inflationary, arbitrary, and unworkable. I hope it will be defeated.

I yield back the remainder of my time.

EXHIBIT 1

MINORITY VIEWS OF MR. ROBERTSON, MR. FULBRIGHT, MR. FREAR, MR. CAPEHART, MR. BENNETT, AND MR. BUSH

INTRODUCTION

The committee has voted, 9 to 6, to launch a new Federal program in a new Federal agency, with an initial authorization of $389,500,000, plus administrative costs, aimed at alleviating conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

We do not deny the existence of serious problems in certain areas, but we believe the bill, S. 722, is fundamentally wrong in its approach and unworkable in its terms and its administration.

The sponsors of this bill have proposed a complex program which is basically discriminatory and unworkable. The tragedy in this bill is not only the fact that the Federal Government would be involved in wasteful and discriminatory expenditures, but more significantly, by initially labeling certain areas as depressed areas, the Government would raise false hopes for economic redevelopment in a program that is impossible to administer equitably.

ADMINISTRATION INEQUITIES AND OBSTACLES

Discrimination in favor of few

Careful scrutiny of the table in the appendix and the bill's provisions shows that only a very small proportion of the Nation's unemployed would be singled out as eligible for the alleged benefits of the program, and it should be noted that the selection process is based on purely arbitrary criteria.

As of November 1958, the number of unemployed in 23 major labor areas and 89 minor areas that would qualify for assistance under S. 722 was 768,800 or only 16 percent of the total volume of the Nation's unemployed. Furthermore, since the proposed program is presumably geared only to the goal of eliminating unemployment in excess of 6 percent in these areas, it would focus essentially on eliminating only 390,800 from the ranks of the unemployed, or 8 percent of total national unemployment.

The bill proposes that the Federal Government loan $100 million in depressed industrial areas and $100 million in low-income rural areas. These funds would be available for construction or renovation of factory buildings and equipping them with machinery The committee has received evidence indicating that an investment of from $10,000 to $15,000 is required to support an industrial job. Thus, to provide jobs for the 390,800 unemployed who are the prospective beneficiaries of the bill would cost from $3.9 billion to $5 billion, of which the Federal share could be 65 percent. The proponents themselves agree the amounts provided in the bill are inadequate. But, we believe, once this program is started, these additional amounts will be demanded.

Criteria: Arbitrary and unworkable

The criteria used for selecting such a small proportion of unemployed are clearly arbitrary in nature. They provide little basis for distinguishing between cyclical unemployment, the elimination of which is not the purpose of the proposed legislation, and chronic unemployment, presumably the primary target. The weakness of the criteria is clearly evident in the apparent selection of two major areas and six smaller areas made eligible for assistance solely on the basis of unemployment 100 percent above the national average for one of the preceding 2 years. The major areas are Lorain-Elyria, Ohio, and Huntington-Ashland, W. Va. The smaller areas are Newcastle, Ind.; Ionia-Belding-Clarksburg, W. Va.; Greenville, Mich., and Owosso, Mich.; Auburn, N.Y.; and New Castle, Pa. How is the Administrator to determine that these areas are suffering no more than a slow recovery from a cyclical recession?

Under the provisions of the proposed bill, an area may automatically be stamped a "redevelopment area" despite a pronounced improvement in its percentage of employment. South Bend, Ind., for instance, would be eligible for assistance under the bill despite the fact that its percentage of unemployment has declined from more than 16 percent in May of 1958 to around 7 percent in January 1959. Conversely, other areas, now ineligible may be moving toward distress. Fixed unemployment percentages and time periods do not provide an adequate basis for appraising the direction of change in the unemployment picture.

What is the rational basis for arbitrarily selecting a 6 percent volume of unemployment as the basic cutoff point in eligibility considerations? Are we to assume that all unemployment above 6 percent for a specified period reflects chronic conditions, while a lower unemployment percentage for the same time span reflects only frictional or short-run phenomena? Clearly, the evidence available does not support such a distinction. Differentials in unemployment percentages may suggest differentials in severity of unemployment but certainly furnish no insights as to the basic factors underlying unemployment in a given area nor any basis for placing the official "redevelopment area" stamp on particular areas and not on others with slightly lower percentages of unemployment.

The criteria for eligibility, by their nature, impose an impossible burden on the administration of the program. In the absence of detailed area studies of the forces underlying high unemployment, the Administrator is placed in an unenviable position of making discriminatory judgments, in favor of some unemployed, and against others, without having a clear-cut basis for his decision.

Furthermore, once having made his determination of eligibility, how does the Administrator ration admittedly inadequate funds as noted heretofore to solve all the needs of each eligible area?

It will be impossible to meet the demands of all the areas, industrial and rural, eligible for assistance. Pressure will be applied to the Administrator of the program and to Members of the Congress by local communities seeking aid. Since the criteria for eligibility give little or no consideration to economic or business standards, the Administrator may well be forced to choose among the applicants on the basis of favoritism and political expediency. The procedure for processing applications by State or local government departments and by private local committees, if there is no appropriate governmental unit, offers no protection in this regard and, in fact, would intensify the competition among applicants. The situation is further aggravated by the fact that there is no limitation on the amount of funds that may be loaned or granted in any one State.

The bill also provides authorization for $75 million in PWA-type grants for up to 100 percent of the cost of public facilities, with the amount of the community's contribution left solely to the Administrator's discretion. This provision opens up even greater possibilities for politics and favoritism in the distribution of this huge amount of money. However, municipalities who think they see in this grant program a new source of funds for enlargement or improvement of needed public facilities, may also be disappointed to learn that such enlargements in improvements must be related to a private industrial or commercial development which will provide additional permanent employment.

Discrimination within industries

Moreover, not only would the bill promote discrimination by the Federal Government in favor of some areas at the expense of others, it would also promote such discrimination to benefit some companies within a given industry at the expense of competitors.

Assume a situation in which several companies have plants in various parts of the country, none of which are in a so-called "depressed area."

Company A, employing 250 persons, is at a competitive disadvantage because it has not kept pace with the industry as a whole

in modernizing its factory and improving machinery.

A community eligible for redevelopment under the bill builds and equips a factory with Federal assistance, and induces company A to relocate.

A double discrimination, promoted with Federal funds has thus taken place: Discrimination against the area of original location of company A and discrimination against company A's industrial competitors.

Administrative difficulties compounded in rural program

Most of what we have said about the defects of this bill, and the fundamental approach which it takes, has been directed at the "industrial redevelopment areas" classification. These are those areas which have had industrial development in the past and, because of the flexibility and mobility of industry, depletion of natural resources and technological change, have deteriorated. The bill also attempts a program of rural development. At least superficially, the bill attempts to equate the benefits between the two types of areas. In the predecessor bill, S. 3683, 85th Congress, this precept, was also included, but the number of rural counties eligible for development was limited to 300, or 10 percent of the 3,000 counties in the country. This bill eliminates that restriction. However, the criteria for selection are virtually the same, and open up endless possibilities for pressures to be exerted on the Administrator to be political or capricious in his decisions. The very vagueness of the criteria, based upon data which is neither adequate nor current, has led many representatives of rural areas to assume mistakenly that their areas will be selected for development.

The map, entitled "Labor Market Areas Which May Qualify for Assistance Under S. 722, February 1959, and Low Income and Level of Living Areas in Agriculture, 1955" which appears opposite page 110 in part 1 of the hearings and facing page 58 of this report, shows a total of 1,209 counties—more than we believe even the proponents would contend could possibly meet all the criteria of this section of the bill. The map is based on 1955 data, so far as the rural areas are concerned.

We are interested in rural development and in the balancing of the farm economies in many rural areas with industrial development. We favor this because of the high costs and other deficiencies of farm programs, particularly as they affect low-income farmers.

However, the political impetus behind this bill is clearly derived from the deteriorated industrial areas which seek to return to the status quo ante. Believing, as we do, that the administration of the program is bound to be affected by this political bias, we also believe that the development of rural areas promised by this bill will not be fulfilled. On the contrary, we think that their progress toward development will be deterred. Their location with respect to expanding markets, their proximity to natural resources, and other advantages which they would have under private market decisions would be subordinated. Overriding these considerations would be political pressures or arbitrary decisions taking their impetus from industrial areas which seek to return to their former status.

How long is aid to be continued in a particular area? The bill provides no benchmarks for terminating Federal assistance. Since revival cannot be guaranteed, it would always appear that Federal aid was not enough. The proposed bill provides no protection or safeguards against the inevitable pressures from those seeking aid and those fighting against the termination of such aid.

The dilemma of antipirating restrictions

The complete unworkability of the proposed legislation is clearly illustrated by the atempt of its proponents to meet the so-called runaway shop or industry-pirating problem.

The bill includes a so-called antipirating provision stating that Federal loans shall not be made to assist "establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment."

While we differ as to the effectiveness of the proposed language, we agree that the proponents of the bill have placed an impossible burden upon the Administrator, who would face this dilemma:

If areas are to be redeveloped to the maximum extent possible, the inducements offered by the Federal Government in cooperation with other public and private agencies, are bound to encourage the transfer of jobs and facilities from one area to another. The very essence of growth and development involves movement of resources. A manufacturing firm with a branch plant built under a depressed areas program will want to remain free to allocate production among its various plants in future years. Communities in almost every State and congressional district are interested in attracting new industry and jobs. Clearly, under an unrestricted area redevelopment program, communities are certain to feel the impact of any redistribution of resources and jobs induced by the availability of Federal money to areas which are currently depressed. Thus, the danger arises that new depressed areas may be created in an attempt to eliminate those now existing.

On the other hand, if the proposed legislation places severe restrictions on the entry of firms into depressed areas in an effort to guard against the so-called industry-pirating problem, the program of redevelopment may well be seriously handicapped.

In short, the Administrator's problem, under the bill, is one of either building up some areas at the expense of others or attempting to comply with a legislative standard which is unenforceable. There are no criteria for determining the amount of unemployment that might be regarded as inflicting substantial detriment upon a community. Would the relocation of an industry providing 100 jobs from Detroit to another State result in sufficient additional detriment to a community with 217,000 already unemployed to be reckoned as substantial? How and when would the Administrator ascertain that redevelopment in one area violates the apparent intent of the Senate to avoid pressures in other areas?

IMPROPER INTERFERENCE WITH PRIVATE MARKETS

The basic defect of the approach of this bill is this: It runs counter to the precepts of what is still essentially a private market mechanism operating within a dynamic and growing economy.

Resource allocation in a private economy

In such an economy, the decisions of what to produce, how to produce, how much to produce, and where to produce are guided by relationships between prices and costs and what such relationships suggest as to existing and anticipated profits.

If buggy whips are no longer desired, the effective demand falls, the profits disappear and resources tend to shift to other commodities and regions where demands relative to supply are much stronger. If automobile manufacturers expand too rapidly, and overshoot the mark because they have miscalculated the absorptive capacity of the automobile market, some companies will retrench or disappear under the pressure of falling returns. Surplus resources in such a situation tend to move to other economic fields and possibly, and properly, to other regions. It is to be expected that in the course of change and growth, some commodities, particular occupations, and certain regions will decline in economic significance, while others will increase in significance. This is the normal process of adjustment which takes place in a free dynamic economy. There is nothing in the free enterprise system to suggest that a geographical region should continue to have the same economic significance it has always had. There is nothing in a private market economy to suggest that a heavily industrialized area such as Detroit can maintain the rapid rate of growth it enjoyed in the past.

The effective operation of a private market economy does suggest the importance of flexibility in the allocation of resources. Adjustment to changes introduced by technology, demand shifts, etc., require a high degree of mobility of resources, including labor and entrepreneurial ability. The strength of the United States to a great degree is attributable to the fluidity of its resources among such areas as could use them most efficiently. Unlike the economies of other continents, the economy of the United States has been able to distribute its resources into their most efficient uses without regard to State boundaries or regional areas. This has always been an essential strength of our political system—that it permitted these adjustments.

The high cost of Government interference

The proposed bill contradicts the basic prerequisites of our economy by placing the Federal Government in the dangerous position of attempting to induce resources into a region already labeled by market forces as economically unattractive.

The determination of eligible areas is based primarily upon arbitrary criteria—the percentage and duration of unemployment. These criteria entirely ignore the reasons for the unemployment and underemployment in a given area, and the potentialities for redevelopment of the area. The areas are selected for redevelopment by reason of the very fact that their economies have deteriorated. They are selected for redevelopment notwithstanding the fact that private investors do not consider them as attractive as other areas. Whether or not the private judgment is correct, it is artificial and paradoxical to use the very fact of deterioration as the basis for a Federal decision that these areas are the ones to be selected for redevelopment. If any conclusion is to be reached because of their deterioration and inability to attract private investment, it would seem to be that—for any number of reasons—their redevelopment is not economically feasible when compared to other areas. These areas have attracted private investment in the past; they do not attract it now.

The bill's efforts to restore a given area by means of low-cost loans and grants only contributes to a weak and uncertain foundation for that area and to substantial detriment to other areas not eligible for Federal assistance.

What the sponsors of the bill fail to recognize is that redevelopment of certain distressed areas may be obtained only at a high real cost—namely, the goods and services lost to the economy by forcing an allocation of resources which does not permit their most efficient utilization. If Detroit is now suffering from the excesses of industrial overexpansion relative to existing markets, we solve no fundamental problem by inducing resources to such an area, when such resources might be used more appropriately elsewhere.

The Employment Act is cited by the proponents of this bill as an argument for this type of Federal intervention. We do not deny the responsibility of the Federal Government to assist in maintaining maximum employment and purchasing power. We do dispute the contention that the Federal Government, in disregard of economic facts, can

and should restore, in selected areas, employment and purchasing power to levels experienced in the past. The Federal Government's responsibility under the Employment Act is general in nature and should never be construed as an effort to preserve the status quo in every segment, industry and area of the economy.

If we are to have overall economic growth with a minimum of inflationary cost increases, we must strive to maintain flexibility, not rigidity, in the allocation of our resources. We believe the policy objective enunciated in the Employment Act is not merely the full utilization of resources, but, rather, the full and most efficient use of resources so as to provide the maximum volume of goods and services at a minimum of cost. The decision of where to locate a particular industry should be a private one—without any intervention by the Federal Government, so long as we depend upon the private market mechanism as the one which makes the most efficient decisions in this respect.

FAILURE TO RECOGNIZE EXISTING PROGRAMS

The devices established in the bill to carry out its objectives are defective in the failure to recognize existing programs, thus causing a duplication of efforts. The bill proposes to create a new agency. The creation of this new agency completely ignores the existence of the Area Development Office in the Department of Commerce and the rural development program in the Department of Agriculture.

During the last Congress the Small Business Investment Act was initiated. Although the sponsors of this bill, S. 722, have deprecated the progress made in implementing the Small Business Investment Act, the solution to that problem is not to ignore it, nor to pass legislation which would duplicate its functions in the apparent hope that the duplicating of functions will, somehow, cure the lack of progress complained of. The duplicating functions provided in S. 722 undoubtedly will involve longer delays in implementation, if only because they involve the creation of a new agency.

The thesis behind the Small Business Investment Act (Public Law 85-699) was that there was an institutional gap in our economic structure which made it difficult, or unduly expensive for small businesses to obtain long-term credit and equity capital. This conclusion was founded upon a study conducted by the Federal Reserve Board. Neither this study, nor the legislative hearings and reports, indicated in any way that this credit gap was limited to particular areas of the country. On the contrary, as an institutional defect, the inadequacy of long-term and equity facilities, was found to be nationwide.

It was found that this defect was being met, in part, by the mushrooming of State and local development corporations—now some 3,000 in number—which needed additional funds to lend to small business concerns. They were made eligible for long-term loans. The act also provided for assistance in financing (and another act provided tax incentives) for privately organized small-business investment companies, with a large part of their funds coming from private sources. These companies, in turn, will make long-term loans and equity-type investments in small business concerns. The loans and investments would be based upon private judgment of the entrepreneurs, with some risk and some possibility of profit, with minimum interference from the Small Business Administration. Two hundred and fifty million dollars was authorized for loans to and investments in State and local development corporations and small-business investment companies, wherever located.

The program provided in S. 722 is an unwarranted duplication of the provisions of the Small Business Investment Act, and because of its dependence upon artificial criteria for area eligibility, is the least desirable of these duplicating programs, as it puts the Federal Government in the position of influencing the location of industry.

CONCLUSION

We oppose S. 722 because it is arbitrary, discriminatory and antithetical to the basic tenets of a free economy in which flexibility, not rigidity, is essential in the allocation of resources. The bill, if successful, would tend to freeze our economy in a fixed pattern on the basis of criteria which do not take into account reasons for economic deterioration and potentialities for development.

The cost of the program is excessive, particularly in terms of the projected benefits. The initial authorization of $38.5 million at $10,000 to $15,000 per job would not begin to provide jobs for even the 390,800 unemployed who are the prospective primary beneficiaries of the bill. (This is the number of unemployed in the eligible areas whose joblessness makes these areas eligible.) To provide jobs for this number, at $10,000 to $15,000 per job, would cost from $3.9 billion to $5 billion. Thus, the undertaking of this program creates precedent and pressures for immense additional expenditures of Federal money. Yet the projected benefit is to provide jobs for only 8 percent of the Nation's unemployed.

The bill provides for $75 million in grants for public facilities, for up to 100 percent of cost, the communities' contributions to be fixed at the Administrator's discretion, opening up great opportunity for abuse.

The bill creates a new permanent Federal agency in addition to existing agencies already engaged in related programs, with no limitation on the new agency's number of employees.

The bill provides for the financing of $300 million in loans, such money not to be appropriated, but borrowed from the Treasury, with no provision for repayment or termination. The funds will revolve, and in view of their acknowledged inadequacy, there will be great pressure for expansion.

By approaching the problem of unemployment on a local or area basis, the bill puts the Federal Government in the position of influencing the location of industry without adequate safeguards to existing developed areas and to the detriment of previously underdeveloped areas which are progressing toward industrial development.

While we are aware of the problems confronting the people of depressed areas, we are equally aware of the necessity for opposing all programs which strike at the general efficiency of our private economy. We also believe that the program is unworkable in its terms and administration and, therefore, that it will be a disservice to these people to falsely raise their hopes of relief by this means.

[1] Areas classified as areas of "substantial labor surplus" in January 1959.

[2] This listing is preliminary and tentative, and is based largely on bimonthly or semiannual data compiled from area labor market reports prepared in connection with the Bureau of Employment Security's program for the classification of areas according to relative adequacy of labor supply. Data used cover a 2- to 5-year period extending through the closing months of 1958; early 1959 data, now becoming available for some areas could result in several changes in the above listing. A more comprehensive review of area data on a monthly—rather than bimonthly or semiannual—basis, and in the light of whatever criteria may be included in the bill finally enacted, would be required to determine which areas are eligible for assistance as areas with substantial and persistent unemployment.

NOTE.—Major areas are areas included in the Bureau of Employment Security's regular area labor market reporting and classification program. This program covers 149 of the country's leading employment centers. Unemployment and labor force data for these areas are generally available on bimonthly basis.

Smaller areas: Areas with a labor force of 15,000 or more which are officially classified as "areas of substantial labor surplus" by the Bureau of Employment Security. Data for such areas are generally available on a semiannual basis. Information for smaller areas which are not classified, or for areas with a labor force of less than 15,000 is not available in Washington on a consistent basis.

Source: U.S. Department of Labor, Bureau of Employment Security, Office of Program Review and Analysis, Washington, D.C., Mar. 10, 1959.

EXHIBIT 2

[From the Washington Daily News, Mar. 20, 1959]

DISTRESS COMPOUNDED

Now before the Senate, following a squeaky OK by the Senate Banking Committee, is another one of those hurry-up, patch-up, prop-up bills supposed to cure the economy of some of its ills.

This measure melodiously is known as the Area Redevelopment Act. It is a bill to bail out a hundred or so communities listed as victims of chronic unemployment.

The question is not whether these communities are hard hit. No one denies that. The question is whether the bill, if enacted, would be any help.

Six members of the committee (three Democrats and three Republicans) shoot it full of holes in an unusually lucid minority report. They say the bill is unlikely to do any of the things it promises, and besides would be harmful to the country generally and the areas it is supposed to assist.

It flies straight in the face of a free-swinging flexible economy. Its ponderous machinery would raise unfounded hope. And its ultimate cost—like most such Washington proposals—would range far beyond its most optimistic prospect of usefulness.

It is discriminatory, the minority points out, because at the most it would affect only a small fraction of the unemployed, while probably creating more unemployment in other areas. The initial outlay of less than $400 million eventually would run to $4 billion or $5 billion.

It would create another sprawling Government agency, added to others already in this field.

The bill is founded on the identical illusions which led to 25 years of subsidies for a few special farm products. It will lead to exactly the same result—disrupted markets, billions of taxpayer money wasted and an economy blighted by Government interference.

EXHIBIT 3

MEMORANDUM OF DISAPPROVAL

I am withholding my approval from S. 3683, the area redevelopment bill.

Every year for the past 3 years I have strongly urged the adoption of a program of Federal assistance to communities of substantial and persistent unemployment for the purpose of assisting those communities to develop a sounder and more secure economic base. I regret that no action along these lines has been taken by the Congress until this year and, needless to add, I am greatly disappointed that I find myself unable to approve the present bill.

My disapproval need cause no unnecessary delay in initiating a sound area assistance program. Even the unsound program contemplated by S. 3683 could not be of immediate help to any community because the Congress, before adjournment, failed to provide any money to carry out the bill's purposes. Until the next session of the Congress, the needs of areas of severe and persistent unemployment can be met in part through the new program of loans to State and local development companies under the Small Business Investment Act of 1958 which I recently approved.

The repeated recommendations of the administration recognized that the major responsibility for planning and financing the economic redevelopment of communities of chronic unemployment must remain with local citizens if Federal programs are to be effective. The present bill departs from this principle, and would greatly diminish local responsibility. In doing so, and in including other undesirable features, it defeats any reasonable chance of giving effective help to the communities really in need.

S. 3683 provides for less local participation in the costs of local development projects than is proper or necessary to stimulate and assure the continuing interest and support of local governmental and private interests. The administration recommended loans, for periods of 25 years, in amounts not exceeding 35 percent of the cost of redevelopment projects. S. 3683, on the other hand, provides for loans for such projects for periods of 40 years, at artificially low interest rates, in amounts up to 65 percent of the total cost of a project.

S. 3683 proposes in addition a program of Federal grants for public works in redevelopment areas under which it would be possible to have no local participation whatever. Moreover, the criteria for making these grants are so loosely drawn that, without indiscriminate use of funds, administration of these provisions would be almost impossible. This is a field in which, if the Federal Government participates at all, it should be able to rely upon local judgments backed by significant local contributions.

S. 3683 is also defective in my judgment because its assistance in certain instances, would be available in areas in which unemployment is traceable essentially to temporary conditions. Federal assistance to communities where unemployment is not clearly chronic would necessarily mean the assumption of responsibility by the Government for the direct support of local economies—an assumption of responsibility that would have the most profound consequences.

I also believe it would be a grave mistake to establish, as this bill would, an area assistance program in the Housing and Home Finance Agency. Such a program should be lodged, not with an agency concerned with residential housing and related matters, but rather with the Department of Commerce which has primary responsibility for business and industrial development and a long experience in extending to local areas technical aid for economic development.

S. 3683 also contemplates a Federal redevelopment assistance, including loans, in rural areas. There is serious question as to whether Federal loans for the construction of industrial buildings in rural areas would be a proper or effective approach, much less a permanent one, to the problems of surplus labor in essentially agricultural communities.

It is my intention next January when the Congress reconvenes to request the Congress to enact area assistance legislation more soundly conceived to carry out the purposes which I have repeatedly stressed as being in the national interest. It is my hope that Congress at that time will move with all possible speed to enact such an area assistance program.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *September 6, 1958.*

Mr. DOUGLAS. Mr. President, will the Senator from Indiana yield back the remainder of his time?

Mr. CAPEHART. I yield back the remainder of my time and ask that the roll be called.

The PRESIDING OFFICER. All time for debate has been yielded back. The question is on agreeing to the amendment in the nature of a substitute offered by the Senator from Pennsylvania [Mr. SCOTT]. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Arkansas [Mr. FULBRIGHT] and the Senator from Georgia [Mr. RUSSELL] are absent on official business.

I also announce that the Senator from Washington [Mr. MAGNUSON] is absent because of illness.

I further announce that, if present and voting, the Senator from Arkansas [Mr. FULBRIGHT] and the Senator from Washington [Mr. MAGNUSON] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Arizona [Mr. GOLDWATER] is detained on official business. If present and voting, he would vote "nay."

The result was announced—yeas 24, nays 70, as follows:

YEAS—24

Aiken	Curtis	Mundt
Allott	Hruska	Prouty
Bridges	Javits	Saltonstall
Bush	Keating	Schoeppel
Capehart	Kuchel	Scott
Case, N.J	Lausche	Thurmond
Case, S. Dak.	Martin	Wiley
Cotton	Moss	Young, N. Dak.

NAYS—70

Anderson	Gore	Mansfield
Bartlett	Green	Monroney
Beall	Gruening	Morse
Bennett	Hart	Morton
Bible	Hartke	Murray
Butler	Hayden	Muskie
Byrd, Va.	Hennings	Neuberger
Byrd, W. Va.	Hickenlooper	O'Mahoney
Cannon	Hill	Pastore
Carlson	Holland	Proxmire
Carroll	Humphrey	Randolph
Chavez	Jackson	Robertson
Church	Johnson, Tex.	Smathers
Clark	Johnston, S.C.	Smith
Cooper	Jordan	Sparkman
Dirksen	Kefauver	Stennis
Dodd	Kennedy	Symington
Douglas	Kerr	Talmadge
Dworshak	Langer	Williams, N.J.
Eastland	Long	Williams, Del.
Ellender	McCarthy	Yarborough
Engle	McClellan	Young, Ohio
Ervin	McGee	
Frear	McNamara	

NOT VOTING—4

Fulbright	Magnuson	Russell
Goldwater		

So Mr. SCOTT's amendment in the nature of a substitute was rejected.

Mr. DOUGLAS. Mr. President, I move that the vote by which the amendment was rejected be reconsidered.

Mr. MANSFIELD. Mr. President, I move to lay on the table the motion to reconsider.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

Mr. BUSH. Mr. President, I call up my amendment identified as "3–19–59–C," and also the amendment, submitted by the Senator from New York [Mr. JAVITS], which is identified as "3–19–59–B."

Mr. President, my amendment is offered on behalf of myself, the Senator from Utah [Mr. BENNETT], and the junior Senator from New York [Mr. KEATING]; and the amendment of the Senator from New York [Mr. JAVITS] is offered on behalf of himself and myself.

We wish to combine the two amendments and to have them considered as only one amendment.

The amendment submitted by Mr. BUSH, on behalf of himself, Mr. BENNETT and Mr. KEATING, is as follows:

On page 2, line 19, strike out all after the word "created" through line 22, and substitute the following: "rather than merely transferred from one community to another."

On page 9, line 22, insert a period after the word "another" and strike out the remaining language in line 22 through line 24.

On page 28, line 12, insert a period after the word "another" and strike out the remaining language in line 12 through line 14.

The amendment submitted by Mr. JAVITS, on behalf of himself and Mr. BUSH, is as follows:

On page 9, line 15, after the parenthesis "(" and before the word "including", insert the word "not".

On page 12, line 12, after the parenthesis "(" and before the word "including", insert the word "not".

Mr. BUSH. Mr. President, I ask unanimous consent that we may have the privilege of combining these two amendments; that they may be considered together; and that the time available on the two amendments be limited to 40 minutes to a side, rather than to 1 hour to each side, as we would be entitled to have under the agreement which is in effect.

The PRESIDING OFFICER. Is there objection?

Mr. CAPEHART. Mr. President, will the Senator from Connecticut yield?

Mr. BUSH. I yield.

Mr. CAPEHART. Will the Senator from Connecticut ask for one vote or two votes?

Mr. BUSH. We shall ask for one vote on the two amendments. We shall also ask that the yeas and nays be had on this question.

Mr. JOHNSON of Texas. Mr. President, first, may be have an agreement to limit debate on this question to 30 minutes to each side? If that is done, it will permit us to conclude by 5 minutes to 6.

Mr. BUSH. I shall do so if the Senator from Texas will allow me as much as 5 minutes tolerance.

Mr. JOHNSON of Texas. Certainly.

Mr. President, I ask unanimous consent that the debate on this question be limited to 30 minutes to a side. If such consent is given, I shall yield additional time on the bill to the Senator from Connecticut, if necessary.

Mr. CAPEHART. As a substitute, I propose a limitation of 40 minutes to a side.

Mr. BUSH. Mr. President, I appreciate the courtesy of the Senator from Indiana in that connection. But the majority leader is very anxious to keep an engagement to meet with the Prime Minister of England, and so forth and so on; and I am trying to accommodate myself to the exigence of the moment.

Mr. JOHNSON of Texas. Mr. President, let me say to the Senator that the opponents do not plan to use their 30 minutes.

Mr. BUSH. I understand.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that not to exceed 30 minutes be allowed to each side on this question, with the time for the proponents to be controlled by the Senator from Connecticut [Mr. BUSH] and the time for the opponents to be controlled by the Senator from Illinois [Mr. DOUGLAS].

Mr. BUSH. Mr. President, I shall accept that proposal, with the understanding that our side may have as much as 5 minutes additional.

Mr. JOHNSON of Texas. I understand; and I have said that we would, if necessary, yield that much additional time from the time available on the bill.

The PRESIDING OFFICER. Is there objection to the request, as modified? Without objection, it is so ordered.

Mr. BUSH. Mr. President, on this question, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

Mr. BUSH. Mr. President, it is with genuine regret that I oppose Senate bill 722, because I share with the sponsors of the bill a desire to contribute to a solution of a serious and tragic economic problem—namely, the persistence of chronic unemployment in various areas of the Nation during a time of general prosperity.

We must never forget that in discussing unemployment, we are talking about people, and about people who find themselves in a distressing situation.

A. H. Raskin, in an article published in the New York Times of Monday, March 16, has effectively made this point in the following paragraphs:

> Unemployment is people—the individual hardship and heartache of 4,749,000 Americans, willing and able to work but unable to find suitable jobs.
>
> Unemployment is the husky, fresh-faced college graduate, with 3 years of Air Force duty behind him, being told he is too old for a job with a future—at age 26.
>
> Unemployment is the breezy, blustery executive, accustomed to an income of $50,000 a year, trying to pay his bills on a State job insurance check of $40 a week—an amount he once spent on taxis and cigars.
>
> Unemployment is the head shipping clerk, stranded when his textile plant moved from New York to North Carolina, subsisting on odd jobs of heavy cleaning and reading an inspirational pamphlet. Its title, "Get Rich in Spite of Yourself."
>
> Unemployment is the rhinestone setter, with all her State and Federal benefits drawn, watching a giveaway show on television and murmuring, "It makes me feel bad to see people getting all these nice things."
>
> Unemployment is the electrical worker, fearful that automation has permanently wiped out his chances for reemployment, wondering whether he can volunteer for a space flight to the moon.

I commend Mr. Raskin's article to the attention of my colleagues; and I ask unanimous consent, Mr. President, that the article may be printed in the RECORD following my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BUSH. Mr. President, I believe that those of us who are opposing this bill are as sensitive to the human tragedies involved in unemployment as are those who support it.

Why, then, do we oppose it?

The reasons advanced by five other members of the Senate Committee on Banking and Currency and myself are contained in the minority views which appear on pages 39 through 52 of the committee's report on the bill.

I shall not detain the Senate by reading the minority views in their entirety, but I do wish to bring to the attention of Senators the following paragraph:

> The sponsors of this bill have proposed a complex program which is basically discriminatory and unworkable. The tragedy in this bill is not only the fact that the Federal Government would be involved in wasteful and discriminatory expenditures, but more significantly, by initially labeling certain areas as depressed areas, the Government would raise false hopes for economic redevelopment in a program that is impossible to administer equitably.

There is the basic objection to the bill. Not only will it not work, but it will arouse false hopes in the unemployed, in the communities throughout the Nation, who have been led to believe that this bill will solve their problems.

Mr. President, I had intended to ask unanimous consent that the minority views on Senate bill 722 be printed in the RECORD following these remarks, but I understand the Senator from Virginia has already made such a request. Therefore, I shall not ask that they be printed again.

Mr. President, I now desire to invite the attention of the Senate to the "runaway shop" or "industry pirating" problem which the sponsors of the bill recognize, but have failed to solve.

On page 22 of the report of the committee majority appears the following statement, which I heartily endorse:

> If the proposed transfer of a plant from one area to another will create as much unemployment in the area it leaves as it absorbs in the area it moves to, nothing has been gained from the point of view of the overall economy of the United States. The use of Federal funds for a transfer of this sort would not be justified.

However, nothing in the bill would prevent the use of Federal funds to assist in shifting industries and jobs from one area to another.

So-called antipirating language has been incorporated in S. 722, but the difficulties it raises have been described in the following paragraphs contained in the minority views, at pages 42 and 43:

> The complete unworkability of the proposed legislation is clearly illustrated by the attempt of its proponents to meet the so-called runaway shop or industry-pirating problem.
>
> The bill includes a so-called antipirating provision stating that Federal loans shall not be made to assist "establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment."
>
> While we differ as to the effectiveness of the proposed language, we agree that the proponents of the bill have placed an impossible burden upon the Administrator, who would face this dilemma:
>
> If areas are to be redeveloped to the maximum extent possible, the inducements offered by the Federal Government in cooperation with other public and private agencies, are bound to encourage the transfer of jobs and facilities from one area to another. The very essence of growth and development involves movement of resources. A manufacturing firm with a branch plant built under a depressed-areas program will want to remain free to allocate production among its various plants in future years. Communities in almost every State and congressional district are interested in attracting new industry and jobs. Clearly, under an unrestricted area redevelopment program, communities are certain to feel the impact of any redistribution of resources and jobs induced by the availability of Federal money to areas which are currently depressed. Thus, the danger arises that new depressed areas may be created in an attempt to eliminate those now existing.
>
> On the other hand, if the proposed legislation places severe restrictions on the entry of firms into depressed areas in an effort to guard against the so-called industry-pirating problem, the program of redevelopment may well be seriously handicapped.
>
> In short, the administrator's problem, under the bill, is one of either building up some areas at the expense of others or attempting to comply with a legislative standard which is unenforceable. There are no criteria for determining the amount of unemployment that might be regarded as inflicting substantial detriment upon a community. Would the relocation of an industry providing 100 jobs from Detroit to another State result in sufficient additional detriment to a community with 217,000 already unemployed to be reckoned as substantial? How and when would the Administrator ascertain that redevelopment in one area violates the apparent intent of the Senate to avoid pressures in other areas?

I am convinced, as is the distinguished senior Senator from Utah [Mr. BENNETT], that the language now in the bill is completely ineffective. For that reason we have filed individual views, appearing at page 53, which I shall read for the information of the Senate:

> We endorse the views expressed by our colleagues in the minority, but desire to state more fully our opinions with respect to the runaway shop or antipirating problem.
>
> As described in the minority views, the authors of S. 722 recognize that the problem exists, but fail to meet it squarely.
>
> On the contrary, they have used vague and slippery language in the bill which is intended to give comfort both to those who would enthusiastically welcome Federal funds for relocating industry from one area

to another, and to those who oppose the use of Federal funds for that purpose.

To our minds, the use of Federal funds to help some areas attract industries and jobs from other areas is unconscionable and must be prohibited without any qualifications.

If such a prohibition is not written into S. 722, the people of industrial States may be forced to underwrite with their Federal tax dollars the export of jobs to competing areas.

The bill must be confined to the purpose stated in President Eisenhower's economic report to the 86th Congress, namely, "to create new job opportunities instead of merely transferring jobs from one locality to another."

The same thought is expressed in the policy declaration of the administration bill, S. 1064, as follows: "new employment opportunities should be created rather than merely transferred from one community to another."

Regrettably, the draftsmen of S. 1064 failed, in another section of the bill, to carry out the President's thought. Instead, they fell into the same "substantial detriment" trap contained in the Douglas bill.

To bring this issue squarely before the Senate, we propose amendments to S. 722, as follows:

On page 2, line 19, strike out all after the word, "created" through line 22 and substitute the following: "rather than merely transferred from one community to another."

On page 9, line 22, insert a period after the word "another" and strike out "when such assistance will result in substantial detriment to the area of original location by increasing unemployment."

These amendments will draw a clean-cut issue between Senators who wish Federal funds used to assist the relocation of industries and jobs from one area to another, and those who believe, as we do, that such intervention of the Federal Government in competition for industries and jobs among States and communities violates basic principles of the Federal system and is highly improper, unfair and indeed unconscionable.

I hope the Senate will adopt the amendment which is now before it. Without the amendment, I believe the bill is a snare, a sham, and an illusion, and I believe it will work many disadvantages on many parts of the country, including Connecticut.

EXHIBIT 1

[From the New York Times, Mar. 16, 1959]

SURVEY OF THE UNEMPLOYED: PEOPLE BEHIND THE STATISTICS IN FIVE MAJOR JOB AREAS—VICTIMS PUZZLED BY THEIR PLIGHT—FAMILY DEBTS RISE DESPITE INCREASES IN PRODUCTION AT MECHANIZED PLANTS

Puzzlement is more apparent than anger in the attitude of men and women who have tramped the streets, month after weary month, with nothing to show for their efforts but holes in their shoes and a growing pile of debts.

In Detroit, capital of the automobile industry, one worker in seven is jobless and cutbacks in the output of some 1959 models threaten to add thousands to the idle lists in the next few weeks. Pittsburgh, crossroads of steel and coal production, is worried that large-scale unemployment will become a chronic drag on its economic well-being.

In the mine regions of West Virginia the specter of permanent pools of idle workers is even more tragically present. Mechanization has cut the need for manpower so drastically that 68,000 men now dig more coal than 125,000 did 10 years ago. The displaced, returning from futile job-seeking expeditions to Cleveland, Columbus, or Detroit, are less disposed to be philosophical about their plight than most of the country's uncomplaining unemployed.

Surplus food—mollygrub is what they call it in the Kanawha Valley coalfields—has become a mainstay in the diets of tens of thousands of families, not only in West Virginia but also in every other State. In December, 5,230,000 persons benefited from the Federal dole of butter, flour, cornmeal, and other surplus commodities. The food lines were almost twice as long as they had been a year earlier.

Yet, by the standards of mass misery that prevailed in the great depression of the thirties, privation is a minor problem. What bears most raspingly in today's jobless is the sense of uselessness that comes with being unwanted and unneeded in the world's richest and most productive Nation.

The corrosive effect has been acute among youngsters—high school and college graduates, ex-GI's, and others in the 20 to 35 age group—locked in their first real bout with hard times and deprived of the community of suffering that helped preserve the fabric of self-respect in the depression years when everyone was in trouble.

YOUNG MAN'S RECESSION

In many ways this was a young man's recession, especially in factory industries operating under rigid seniority systems. The most recently hired were the first to feel the layoff ax. Now science, moving with the same breathtaking speed in the improvement of industrial technology as it is in the conquest of the atom and of outer space, is making the day of recall to work more remote.

The harnessing of electronic brains to mechanical muscles has made it possible to produce more goods with fewer workers. Men with 10 to 12 and even 15 years of seniority remain on the surplus list while their companies climb past the production peaks they set in the preautomation days.

To make the outlook gloomier, other employers hesitate to hire them for fear that their desire to safeguard their pension equities and priority status in their old jobs will cause them to quit when and if the recall whistle sounds.

For men and women of more advanced age among the unemployed, the calendar is an enemy. The piling up in New York and other States of statutory prohibitions against discrimination based on age has brought no abatement in the conviction of those past 35—and even a good many under that age—that their biggest handicap is the years in which they acquired their maturity and skill.

There is little tendency to clutch for the comforts of the welfare state. Confronted with the necessity for going on relief, most workers will grab a job at half or less than the standard they used to enjoy. And there are plenty of employers ready to capitalize on this preference for staying independent of a government handout.

RELIEF LOAD UP 3 PERCENT

In small machine shops, dry goods warehouses and other small businesses, the calls are for work at only a few cents above the legal minimum of $1 an hour. Only in the large standardized industries and those under stringent union policing is there no move to pull down pay scales or trim fringe benefits. There the movement is still up—in both prices and wages.

In this city, where 50,000 workers have drawn all the Federal and State unemployment insurance they could get in the last 14 months, fewer than 100 a month have turned to the department of welfare for relief after their insurance ran out. The total public assistance caseload here has gone up less than three percent in the last year, and not all of this slight rise is attributable to unemployment.

In contrast to the economic trough of the thirties, when one-fifth of the city's population was on home or work relief, the ratio now is 1 in 23. And many of the family heads now on the rolls are unemployable even by the relaxed tests that would apply in the rosiest flush of full employment.

In Detroit and other centers of "productivity unemployment," the relief rolls have risen more rapidly. But everywhere the idle, without insurance or other sources of support, echo the remark of the Detroit mother of five, who told a reporter:

"Accepting money from welfare, I feel we're down to the last notch. I don't want the children to grow up with the idea of welfare aid. My parents back in Arkansas raised me never to lean on welfare."

Here are some reports on what unemployment has meant to workers and their families:

NEW YORK-NEW JERSEY

The New York-New Jersey metropolitan area, with its incredible diversity of finance, commerce, entertainment, publishing and manufacturing, is enjoying the seasonal upswing that always accompanies the pre-Easter rush in its largest single field of employment, the needle trades.

But the face of joblessness in the metropolis has so many visages that improvement even in a multi-billion-dollar area leaves hundreds of thousands untouched. The last official estimate in mid-January showed 375,000 workers, or 1 in 12, looking for jobs in the 5 boroughs.

A reporter who toured unemployment insurance offices, welfare agencies, union hiring halls and armories where the idle queued up for Federal food came away with the impressions as diverse as the people he talked to. Visits to the jobless in their own homes merely reinforced his feeling that no shortcut cure, by Government or industry, would eradicate the economic sores behind the gleaming new skyscrapers, the flourishing theaters and restaurants and the other badges of New York's opulence.

Waiting in the "T" line

Walk into the job insurance office at 259 West 54th Street and chat with some of the men and women on the "T" line. This is the State labor department's shorthand for temporary unemployed compensation, the emergency program the Federal Government finances for the long-term jobless.

Here is James Matthews a tall, handsome man of 36, with a shy smile, who won a Rhodes scholarship and studied at Oxford and the Sorbonne after graduating from Columbia. He had 4 years of wartime duty on Navy combat ships and was receiving officer's training when V–J Day came.

He entered the State Department's career Foreign Service and held posts in Europe and the Far East until he resigned in 1953 to become an international marketing specialist for a Standard Oil affiliate overseas. An expert in six languages, he was on his way to a European assignment for International Goodrich last summer when a dip in rubber sales wiped out his $200-a-week job.

His pavement-pounding has convinced him that employers want men in their mid-twenties, not midthirties. What depresses him even more is that so many of those he sees going abroad are men whose interest in their foreign trade missions seems to him largely confined to the prospect of hanging around the American bar.

In the meantime Mr. Matthews has a somewhat less global concern. He has just made the transfer from the State insurance lists, where he drew his full quota of 26 $45 checks, to the Federal list. This week red tape connected with the shift will limit his benefit to $11. That means he will have to send a distress signal to his parents in Texas for a fresh loan.

"If Congress doesn't extend the Federal program beyond its present March 31 closing

date, I will really be in the soup," he says. His savings are all gone, but his job insurance and help from his family have enabled him to keep quarters at the Columbia Club, 4 West 43d Street.

A few places down the line is Mrs. Sydonia Goodstein, of 340 West 57th Street, an imperious woman in black caracul. She has the air of a grand dame, as befits a couturiere whose shop used to make costly dresses for Saks Fifth Avenue, Bergdorf Goodman, Neiman-Marcus and other fine stores.

The business she started in 1921 never recovered from a fire that gutted the building 2 years ago. Now, her lease gone and her job insurance expiring this week, she is looking for work. This is her report on her first telephone call in response to a help wanted advertisement:

"The employer said I sounded young and asked how old I was. I am a rabbi's daughter and do not lie, so I said 65. He told me, 'Lady, why don't you go sit in the park?' It reminded me of a book I once read about an uncivilized island where they burned everybody at 50. I thought it was savage, but it doesn't seem so savage now."

The next man asks that his name be kept secret, but it could be Willy Loman, the hapless hero of Arthur Miller's "Death of a Salesman," whose goal in life is to be well liked. He is a jolly, talkative man of 55, whose sales talent made him head of a ladies' belt business with 80 employees, an annual volume of more than $1 million and profits in the $50,000 to $60,000 range.

A bankrupt company he bought for tax-loss purposes and then tried to run, plus the advent of the beltless chemise, proved his downfall. The home he owned in Harrison is gone and the lease on his $230-a-month apartment in Riverdale runs out in June. He has been borrowing on the $100,000 in personal insurance he used to carry, but the end of that is in sight.

Future looks bleak

"I keep telling my wife it's fortunate that I was born with a strong heart and a weak mind," he says with a melancholy attempt at a salesman's laugh. "But I'm really at the end of my rope. I've been selling all my life; I have a wonderful reputation in the field. It doesn't seem possible I can't get connected. But after 14 months of tramping around the future looks very, very bleak."

Drop in on Michael Azzata, a well set-up youth of 26, with glossy black hair and dark, earnest eyes, in his parents' neat apartment in a neat row of identical tan-brick houses at 30–27 41st Street, Long Island City, Queens.

He enlisted in the Air Force after he got out of high school at the height of the Korean war. When he went to Columbia under the GI bill of rights, he took seriously the advice of industrialists and educators that it was wise for young men to get a well-rounded general training in liberal arts, instead of concentrating on specialized technical courses.

Now, with a bachelor of arts degree, he finds himself being told by job interviewers that he lacks the specific instruction or experience they require and that he is too old to get into an executive training program.

It does not help, psychologically, that his own inability to get a job with a future, even at $50 a week, forces his 74-year-old father to keep working at Pennsylvania Station as a bootblack. He will probably settle for a night job as a restaurant supervisor and go back to Columbia to take a master's degree in business administration.

PENNSYLVANIA PUZZLE

(By Stanley Levey)

PITTSBURGH, March 13.—Up and down the river valleys of western Pennsylvania smoke is shooting once again from steel mill stacks. After 2 years of recession and unemployment, it is a signal read in various ways by various persons.

"Look at that smoke," says the owner of a shoe store in Homestead. "Isn't it beautiful?"

"Went back to the mill last week," says a laborer in Ambridge. "First day's work in 14 months. I never thought I'd be so glad to see the lousy place. But after looking at all that television, I really was."

"The recession is over," says a steel company official.

"I don't know," says a forge man in New Castle. "I hear the recession's over and I know a lotta guys have gone back, so I guess maybe it is. But not me, they don't call me back, and sometimes, mister, I don't think they ever will."

ELEVEN PERCENT IDLE IN JANUARY

Halfway across the State in Harrisburg, the capital, in the new sleek building of the department of labor and industry, analysts have compiled statistics and drawn graphs and curves. This is the story they tell:

At the end of January 508,000 Pennsylvanians (or about 11 percent of the work force) were idle. The figure for the country was 6 percent. At the bottom of the recession last June, 520,000 persons were jobless in the State. This was 10.9 percent of the work force. The comparable national figure then was slightly more than 7.5 percent.

What worries the analysts (and workers, union leaders, merchants, and businessmen) is that increased production has not been accompanied by a corresponding increase in employment. Does this tendency mean, they wonder, that new pools of chronic unemployment are in the making—in the steel areas, for example?

"Is Pittsburgh in danger of becoming another Scranton?" asked an economist in the Bureau of Employment Security.

Thirty years ago Pennsylvania's heavily populated hard coal regions about Scranton and Wilkes-Barre employed 150,000 miners. By 1937 the total was 32,000. Today it is probably even lower. Scranton has tried desperately and effectively to attract new industry, but the area's economic base has been almost completely destroyed. Ten thousand new jobs have been provided but the rate of unemployment is about the same.

"Scranton has been running like hell to stand still," said the economist.

The basic cause of high production with fewer workers is automation—the use of machinery to run machines. During the recession many mills have introduced new equipment, discontinued using inefficient plants and eliminated jobs.

Bruce Alexander, district staff member of the United Steelworkers of America in McKeesport, predicted that many workers would never regain their jobs.

"This fellow comes in to see me," Mr. Alexander recalled last week. "He's got his kids with him—three of the cutest kids you ever saw. And he says, 'I'm down to nothing. I got no family to help me. I'm on public assistance and I don't think I'm ever going to get my job back. What's going to become of me?' "

Mr. Alexander lifted his palms in a gesture of helplessness. "What could I tell him?" he asked. "I didn't have any answers. It's rough. Oh, we don't let him hurt. We help him, we get him food and like that. But we can't mislead him and tell him we can get his job back for him."

Actually while the recession has resulted in distress, it has not produced disaster. A reporter looking for signs of political protest or starvation in Pennsylvania would come away with an empty notebook. Tom Leslie, a 42-year-old hammer operator from Beaver Falls with 20 years in the industry, illustrates the reasons why this is so.

In the good days he made as much as $200 a week and averaged $6,000 a year. He saved some money, but not much. He bought a home and has $4,000 still to pay on it. He installed storm windows last year but owes a substantial balance. He still drinks a bottle of beer when he feels like it but not so often as formerly. His wife and three children eat regularly.

WIFE'S WORK IS KEY

"How do you manage it?" he is asked.

"My wife works as a bookkeeper," he says a little sheepishly.

This answer is heard in various forms throughout the steel area:

"My wife does day work."

"My wife got a job as a nurse's aid."

"My son brings home a little money."

"My wife and I moved in with my mother."

"My folks help us out."

Tom Leslie has got by for several other reasons. He has worked occasionally with a friend who owns a truck. He has picked up odd carpentry and repair jobs. He has drawn $35 a week in State unemployment compensation. Under the State-Federal program he is entitled to 45 weeks of payments.

Finally under the supplementary unemployment benefits program negotiated 3 years ago with the steel industry by the union, he has been receiving benefits that started at about $20 a week. They will run for a year. He has only one major complaint.

"Too damned much housework," he said.

Tom Leslie is joined by others who think the benefits may have saved the day. These include merchants in steel towns who were lukewarm about the welfare program when it was broached back in 1956.

A member of the Beaver County Public Assistance Commission reported that in 2 years only 10 steel workers had applied for relief.

"Without supplementary unemployment benefits," he said, "there would have been relief lines all over the country."

In the union's district 15 area, Bruce Alexander and Paul Hilbert, the district director, organized a community services program to help steel workers in distress. Banks were asked to grant moratoriums on mortgage payment, and 150 agreed. Members were told how to obtain public assistance and surplus food. Medical and hospital service were obtained for men whose benefits had lapsed because of prolonged idleness.

But the picture has its shadowy corners, too. George Combs, a burner in the Clairton plant of United States Steel, has been out of work for thirteen months. He says he has not had "eight hours work since I was laid off." His benefits will run out in a few weeks. He owes a $400 furniture bill. The store is waiting. He has not been able to pay his $42-a-month rent for an apartment in a county housing project. The project is waiting.

He receives a relief check for $4 every two weeks. He sought surplus food and was told he was ineligible. Now he finds other men with his seniority called back to work. He is getting uneasy about providing for his wife and three children.

"TAKE JOB ANYPLACE"

"I'll take a job any place," he said. "After more than a year this place don't look so good to me."

In that judgment, George Combs is not typical. Despite unemployment, steel workers are reluctant to strike out to new frontiers. Their homes, their families, their roots keep them clustered about the mills. In Beaver Valley, Wilbert Berarducci, 22 years old and unemployed since July 23, 1957, drove West a few weeks ago with his wife in his 1946 automobile.

Almost as soon as he arrived in California, he received a telegram from his mother, summoning him back home. He had been called back to the mill, she said. Without funds and unable to rely on the old automobile for another trip across the continent, he hitchhiked home in five days only to find there had been a mixup and no job awaited him.

"Why did you come back?" he was asked. "Why didn't you stay out in California and look for a job?"

"Why," he said without hesitation, "this is my home and I'm a steel worker."

WEST VIRGINIA GRIM

(By Homer Bigart)

CHARLESTON, W. VA., March 10.—Thousands of unemployed coal miners have used up their "rockin' chair money" and are living on "mollygrub" in the coalfields of West Virginia.

"Rockin' chair money" is the miner's term for unemployment compensation. "Mollygrub" is the monthly dole of Federal surplus foods.

With about 15 percent of its work force idle, West Virginia is the blackest spot among the Nation's areas of economic distress.

The statistics are grim enough: 45,000 workers have exhausted their unemployment benefits; 280,000 to 300,000 persons are subsisting mainly on "mollygrub."

A tour of coalfields south of Charleston revealed that the human tragedy was not yet as stark as in the 1930's when children fainted in schoolrooms for lack of food. This time the schools are providing free lunches for the desperately poor. And at home the surplus food dole, while deficient in protein and in bulk is generally enough to support what the natives call a "cornbread livin'."

There are no signs of desperate physical distress, not even in Big Coal River Valley, where the expiring communities of Edwight and Highcoal present ghostly rows of boarded-up shacks. In the half-deserted streets and in the tiny yards of ramshackle dwellings, children play who look as least as robust as children in urban slums.

Tensions and despondency bred by long idleness are evident in the hopeless complaining tone of minors who have returned in disgust from job-hunting expeditions in Cleveland, Columbus and Detroit. The added complaint of racial discrimination was raised by Melvin Smoot, a Negro miner, in Highcoal. "A mine superintendent told me he ain't hiring any colored," Mr. Smoot said.

The mine at Highcoal blew out (shut down) more than a year ago, throwing 82 men out of work. They were the last of a gradually reduced force of about 500. Mr. Smoot, 37 years old, with eight children, was laid off December 31, 1957, the night his wife gave birth to twins. He has had no work since then. He drew the maximum of 24 weeks, plus a special extension of 12 weeks, in unemployment payments last year. Payments in reduced amounts ($21 a week) were resumed a few weeks ago, but Mr. Smoot said he had to use his first two checks to pay the utilities bill.

NO RENT SINCE JULY

The Smoot dwelling is a gray, soot-crusted four-room house renting at $16 a month. But Mr. Smoot said he had not paid rent since last July. Nor had he been able to buy tubes for his television which failed Christmas eve.

His monthly "mollygrub" included 30 pounds of flour, 5 pounds of butter, 10 pounds of rice and a small quantity of meal. This was not enough for 3 weeks, he said. Supplementing the Federal dole was a windfall of canned milk, canned peas and a little sugar from Charleston churches following an exposé of Highcoal's plight in the Charleston Gazette.

Despite the dismal outlook, Mr. Smoot said he would remain in the dying town because jobs were scarce in Ohio cities and because "they claim there's going to be a lot of roadbuilding around here."

But up the road in the white community, Carl Harris had decided to quit the mines and try farming. He had gone to Lincoln County to look for a farm. Meanwhile, Mrs. Harris, carried away by visions of bucolic plenty, had bought 100 pullets for $2. They were cheeping in the kitchen as Mrs. Harris told of the impending move to Lincoln County.

"They do right smart farmin' down there," she said. "They got some little bitsy old mines but mostly farms."

Still, she hated to leave Highcoal. "I like the people here: they're friendly," she said.

In near-by Whitesville, shopping center for Big Coal Valley, Quentin Barrett, principal of Whitesville Elementary and Junior High School, summoned his teachers to an emergency meeting.

"Starting tomorrow," he announced "all children who are completely destitute and look undernourished will be given a cup of cocoa and a hot biscuit at the start of school each morning in addition to the regular hot lunch. Maybe some scrambled eggs, too."

He asked the teachers how many children came to school without having had any breakfast at home. They reported a total of 65. The school has an enrollment of 700.

FREE LUNCH TO DESTITUTE

For the hot lunch the school charges 25 cents. But families on relief pay only 15 cents and the lunch is given free to those described as "penniless and destitute."

The Reverend Jack Weller, director of the mission project of the United Presbyterian Church, said conditions were particularly grim in Edwight, a few miles up the valley. He said the land company that owned the miners' houses had recently turned off the street lights, adding to the tension, and there were reports the water supply would be shut when the village school closed at the end of the spring term.

He estimated that "at least 1,800 persons in the valley aren't getting a balanced diet." He recalled that the Whitesville Fire Department, in making up its Christmas list, found that 300 families in the area had no income at all.

In Charleston, Raymond Lewis, brother of John L. Lewis and president of District 17 of the United Mine Workers Union doubted that many miners now out of work would find jobs again in the industry.

He called the current crisis "a lot worse" than the depression of the 1930's.

"The 1930's depression was just the end of a boom period. It was not caused by technological advances but by overproduction. This one here is a different story, an industrial revolution like the one that hit England when the spinning jenny was invented."

Mr. Lewis said scarcity of labor during World War II forced operators into mechanization. "By 1949 new equipment began to come in. Thereafter there was a steady decrease in miners and an increase in production.

"In 1948, West Virginia had 125,000 coal miners. Last year there were only 68,000 men in mines."

Sheriff T. H. McGovran, of Kanawha County (Charleston) said the number of men arrested for nonsupport had risen steadily during the last 14 months of deepening unemployment.

He suspected that in some cases the man was driven by desperation to seek a jail sentence for nonsuport so that his wife could then apply to the State Department of Public Assistance for benefits. "A man who can't support his wife can do it by going to jail," the sheriff explained.

DETROIT DESPERATE

(By Damon Stetson)

DETROIT, March 11.—Mrs. Charles Lawrence listened quietly as her husband, a carpenter, sat in the living room of his small Oak Park home and told about his futile efforts to get a job.

His unemployment benefits had run out and the immediate future looked grim for a couple in their early thirties with two children.

Suddenly Mrs. Lawrence, a brown-haired woman wearing a pink jersey and black skirt, leaned forward and said grimly:

"I think the situation here in the Detroit area is just as desperate as if we'd been hit by a tornado. It's just as much a disaster for us if we lose our house as if a tornado struck us—except that the kids are safe. But if a tornado hit, the whole country'd be ready to help us.

"As it is," she continued, "the bill collectors keep saying the recession is over. For whom, I'd like to know?"

"For me," Mr. Lawrence said "it's no recession. It's a depression."

FIFTEEN AND FOUR-TENTHS PERCENT IDLE IN AREA

The Lawrences are probably luckier than thousands of other unemployed people in this hard-hit area. They have been getting $49 a week in unemployment benefits, plus $55 a month as a veteran's disability pension.

Mr. Lawrence has some hope of getting work when the weather improves, although his disability is likely to force him to give up carpentry. But this couple were able, in a few words to articulate the plight of the 229,000 people, 15.4 percent of the labor force, now out of work in Detroit.

In Michigan, 364,000 people, or one worker in eight, are without jobs. Last year 242,800 of the unemployed exhausted their jobless benefits. By April 1 about 145,000 will have exhausted their temporary additional benefits.

You begin to sense what has been happening when you pass a store on Charlevoix Street where the featured items are smoked hocks at 19 cents a pound, neck bones at 15 cents and spare ribs at 10 cents.

A visit to the welfare department's surplus commodities division at 8300 Woodward provide further insight. A thousand people a day line up there to get their allotments of dry milk, rice, corn, meal, flour and butter. Last month 130,112 persons got surplus food at this center and 154 grocery stores, where the commodities are also distributed.

Robert Feagin, a 38-year-old auto worker, was laid off at Chrysler's Jefferson plant in 1957. He has a wife and three children, and long ago exhausted his unemployment benefits. Lately he has been getting $69 every 2 weeks from welfare.

"JUST CAN'T GET A JOB"

"They tell me at the plant there's no chance of getting back unless a miracle happens," he said. "I've been looking for work all over but I just can't get a job. I hate being on welfare. Its enough to make a man jump into the river. But right now I've got to see about getting some blood. My wife's expecting and I'm afraid she's going to need some help."

Roy Case, a thin, bespectacled man who lives in a three-room flat among drab, closely packed houses, was laid off in January, 1958. He has not worked since. He has a wife and one child. They have been living on $41.45 every 2 weeks from welfare since their unemployment benefits stopped. Of this, $20 goes to Mr. Case's landlord for rent.

"I went to Chicago once looking for a job," he said, But I didn't have any luck. Around here all you get is 'no' when you ask for a job. It's the worst I've ever seen it."

Harvey Sampson, an auto worker with 12 years' seniority, has been getting $44 a week

in unemployment compensation plus $9.14 in supplementary unemployment benefits since he was laid off last year.

He has a wife and three children and has to pay $55 a month in rent for his six-room flat.

"We're not living," he said. "We're existing. I can't find anything. If I go to an employer and ask for a job, he says he doesn't want to hire me because I have 12 year's seniority and he's afraid I'll be called back."

A boom in the auto industry would do more than anything else, probably, to resolve Detroit's and Michigan's unemployment problems.

But the overconcentration on manufacturing in Michigan, especially in automotive production, means that the State's economy is unusually sensitive to economic dips and consequent declines in the purchase of durable goods.

The long term answer to Michigan's unemployment problem, competent analysts of the situation say, is greater diversification to insure a better balance and less dependence upon the economic fate of one or two major products. Additional defense work, drastically reduced here since the emphasis has been on missiles, would perhaps provide more immediate help.

Mr. SALTONSTALL. Mr. President, will the Senator yield for an insertion?

Mr. BUSH. I had promised to yield first to the distinguished Senator from New York, but I yield 30 seconds now to the Senator from Massachusetts on the amendment.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 30 seconds.

Mr. SALTONSTALL. Mr. President, I shall support the amendment of the Senator from Connecticut and the Senator from New York, but I am opposed to the bill. I have prepared a speech. Because of the pressure of time, I shall not try to deliver the speech, but I ask unanimous consent that it may be printed in the RECORD at this point.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR SALTONSTALL

I rise to express serious misgivings about S. 722, the area redevelopment bill which is now before the Senate.

First, I wish to express my confidence in the sincerity of concern for a real problem which has been expressed by the Senator from Illinois, Mr. DOUGLAS, who introduced S. 722, and by many other Senators who joined Mr. DOUGLAS in sponsoring this bill. I share their concern about any conditions of unemployment which now or may in the future exist in the United States. We have experienced in Massachusetts and in New England our share of industrial depression in many communities. I am deeply sympathetic with the plight of our citizens in communities in my own State who have been affected in recent years by localized chronic unemployment. My objection to this measure in no way reflects a lack of concern nor do I differ with the basic objectives of aiding depressed areas. Rather, in my judgment, this bill offers an unsound approach to these problems and generally would not assist us in Massachusetts. We have in Massachusetts met our adversities with imagination and industry.

We have local industrial development commissions in almost every industrial center in the State. The story of Lawrence's industrial redevelopment has been given nationwide publicity. The city has earned the admiration of all for the manner in which it has shouldered its responsibilities and regained its industrial strength. In Lowell, Mass., the local officials and civic-minded citizens have worked together to restore thousands of jobs in diversified industries after textile mill closings brought about a severe depression. The city built and housed new plants and attracted new industry. Cities such as Quincy, Mass., have undertaken a number of ambitious civic projects which have kept the city strong and I am pleased that Quincy is today among those areas not classified as labor surplus. Fall River as a civic project constructed a modern manufacturing plant and attracted an industry from outside to use it. Other communities in Massachusetts are taking equally imaginative and vigorous steps to aid their own local economies.

Moreover, the bill is highly discriminatory as it affects many of our communities. It would aid some of our depressed areas but fail to aid others. It fails to seek out the basic causes of our difficulties and establishes arbitrary standards whereby the citizens of one community subsidize transfer of their livelihood to other communities which, on fundamental analysis, may not be as seriously affected as their own.

The bill fails to take into account the fact that many of our communities, and I speak now of Massachusetts cities and towns with which I am familiar, have already borrowed to their debt limits. In our case in Massachusetts this would necessitate permission of the State legislature before further borrowing could be undertaken.

Insofar as Massachusetts is concerned, this bill would only hold out false hopes for our depressed communities.

Fundamentally, I am opposed to the program in the bill before us today for the reason that it would not operate, as proposed, to cure much to be deplored unemployment thereby making the economy healthier. Rather, it would seek to cure unemployment in certain areas while simultaneously creating unemployment tendencies elsewhere.

This measure would establish a program under which States like my own and others with long histories of industrialization, would be forced to contribute to the erosion of their own substance. This Federal program to subsidize the establishment of new industrial enterprises cannot operate but to injure Massachusetts. We have already suffered from the migration of our industry to States with lower wage levels, lower cost programs of public welfare, less costly public utility services and lower property and income taxation. We have suffered through the operation of Federal programs frankly designed to help other parts of the country. Examples of these are the subsidies given to American producers of raw materials and manufactured products needed in New England industry and commerce. These subsidies include import barriers on foreign produced fishing vessels, petroleum products and wool and artificially supported raw cotton prices. Moreover, Massachusetts contributes far more in Federal taxes than she received back in Federal grants and services.

Massachusetts and other similarly situated States will only suffer further disadvantage from the Area Redevelopment Act which openly proposes to industrialize large quantities of rural areas at our expense and with the inevitable effect of attracting industries and jobs from our communities.

The principle underlying this bill is that Paul can be paid by robbing Peter—a totally indefensible proposition.

The bill by implication concedes that it involves the risk of helping depressed areas at the direct cost of reducing employment in healthier areas by providing the new jobs should be created in depressed areas "without substantially reducing employment in other areas." Nowhere does the bill provide a definition or a standard for defining what constitutes "substantial" reduction of employment outside the depressed areas. Amendments which would attempt to guard against the transferring of jobs from healthier areas to depressed areas have been rejected. The best explanation for this refusal is that the program provided in the bill can only help the depressed areas at the expense of healthy areas.

In all American history, our Nation has never been more dynamic; our work force has never been more qualified. And yet we are asked to consider a bill which would bring the mountain of industrial facilities to the Mohammed of arbitrarily selected numbers of unemployed persons. And we are supposed to credit the notion that this process will not retract substantially from the employment opportunities of areas to which no such mountain will be brought.

A third reason for my opposition to the bill is that the program it would establish is arbitrary in application, without clear criteria or standards for its operation and unrelated to the underlying conditions which it is intended to cure. The definition of eligibility for the loans and grants provided in the bill would exclude from any assistance vast numbers of the Nation's unemployed by the application of purely statistical criteria which are in no way designed to take account of the causes of unemployment involved nor to give any recognition to areas in which conditions of unemployment are eliminated or averted through the application of local initiative and effort. The citizens in such areas and those in healthy areas will not only not benefit under the terms of this bill, but they will be forced to contribute tax revenues which may by their applications in some instances constitute a subsidy or reward for imprudent or mistaken behavior by business men, labor leaders, and local governments whose actions have caused or contributed to the conditions of unemployment which would be eligible for help under the bill.

Fourth, the bill would in effect establish a policy completely at odds with the basic principles of our competitive enterprise economy. Its operation can only weaken rather than strengthen private initiative.

Fifth, there is no evidence of which I am aware that the loan assistance provided in this bill for the financing of industrial facilities goes in any way to meet a genuine need in depressed industrial areas.

Jobs cannot be created simply by building and equipping a factory. Beyond that is needed a product with consumer demand which can be produced and distributed to compete successfully against similar products which are already being made and sold. With respect to these imperative needs in the creation of new industrial employment, the bill provides only for the duplication, under a cumbersome new administrative arrangement, of technical advice and assistance which is already effectively provided by or available from a host of competent existing private and public sources.

In this respect then, S. 722 is a deceiving illusion. It offers assistance of a character that is not needed—capital for industrial facilities—and adds nothing with respect to what may be the crucial needs to what is already available. It assumes that Federal funds will somehow create new products and the jobs to make the products.

Ten years ago a wise and able citizen of Massachusetts who rendered exceptional service to our Nation, Vannevar Bush, wrote as follows:

"The search for security by action of a paternalistic government * * * is * * * one in which muddled thinking abounds.

"One result of that kind of thinking appears to take the form of a belief that the Federal Government has a pipeline to some

inexhaustible treasury on the moon; that it has income in addition to what it gets from the people in taxes; that the national income each year consists of something in addition to such total annual national products as we can produce. This kind of thinking looks at dollars, at money, as something significant in itself, rather than as to what it is—a mechanism, a mirror that reflects tons of coal, tons of steel, bushels of wheat, and so on.

"* * * We still conceive that money in some strange ways gives birth to more money, or that money can merely be printed.

"* * * Money does not make money. But money combined with judgment, courage, and risktaking can and does."

Federal Government money will not create a permanent net increase in industrial employment by the program called for by S. 722.

This brings me to my final point. This bill would create large new Federal welfare enterprise, which would strike a heavy blow against local initiative and effort both public and private. Local initiative applied to public problems must be strengthened rather than thwarted.

This concerns me very greatly.

The most significant development of our generation in the political structure of America is the diminishing responsibility of local government.

As one who has served in city government, the legislative and executive branches of State government, and for 14 years in the United States Senate, I believe in the importance of strong local government which this bill would tend to diminish.

I want to make it clear that I am greatly troubled by this development. Local government is very important. It should be nourished and strengthened. It should not have functions and responsibilities which it is capable of performing effectively usurped by either the State or the Federal Government.

The reasons for the diminishing significance of local government appear to me to include the following:

First, many of the tasks and problems of government have gotten too large and complex to be dealt with by local government. This has been a natural and perhaps inevitable corollary of the increase in the size of our population, the increase in the complexity and integration of our economy, and the manifold changes which these increases have helped to induce in the relationship of our Nation to the rest of the world. In addition, we have developed a more acute and larger sense of social responsibility which has contributed to the shift in relative significance from local to National Government.

Examples of the challenges to its feasibility which local government has not been able to meet either in terms of institutional capability or financial capacity include:

Public safety in the areas of civil defense and internal security.

Public utility services which are shifting to county, district, and metropolitan institutions; atomic energy has been absolutely federalized.

Transportation services including roadbuilding, and local railroad, bus, and subway services.

Regulation of industry and commerce including quality, weight, measure, shipping standards, and other conditions of manufacture, and distribution of goods and performance of services.

Construction of public school facilities which has already been shifted to being in part a State government responsibility may be on the threshold of a further partial shift to a responsibility of the Federal Government.

There are doubtless some further necessary attritions ahead for untrammeled local government responsibility. A view of the road ahead may be accurately depicted by Prof. Robert C. Wood of Massachusetts Institute of Technology in his interesting recent book, "Suburbia, Its People and Their Politics."

Second, dissemination of information to the public is dominated by news media which are addressed to such large masses of people that they must focus public attention on tasks and problems of government of the broadest interest—the ones which are dealt with by the Federal and to a lesser extent the State government.

Third, our educational institutions have followed the lead of the mass media in concentrating their focus and the attention of their students on the tasks and problems of the Nation and the world and away from local public concerns.

Fourth, the conditions described in 1–3 tend to orient the vast majority of people who are best qualified and most strongly motivated for public service to render service in the Federal Government, thus negating State and local government needs.

All the foregoing conditions are operating to diminish the significance of local government. We cannot afford further erosion in the substance of this vital level of our political institutions.

There are a great many tasks and problems of a public character which are best undertaken at the local level—matters such as zoning and land use planning, establishment of private building standards, furnishing library services, supervision of the content and administration of public education, administration of real property tax assessment and collection, provision of programs of recreation for youth and the aged, to mention only a few.

The importance of strong and effective local governments to deal with these matters lies in their unique qualification to preserve precarious local characteristics which inhere in them. The greater the geographical area and the larger the number of people for which a standardized government solution to a problem must be found, the narrower is the range of permissible individual deviation which can exist for that area or population. Local individuality must inevitably be curtailed as problems are transferred to higher levels of government.

A further essential characteristic of local government is the opportunity which it affords for effectively fixing responsibility for the sound and efficient management of public services.

Because Senate bill 722 would operate to curtail further the responsibility of local government with respect to a task which is inherently within its capacity to undertake in cooperation with existing activities of State governments and the Federal Government, I cannot support it in the form in which it was reported to the Senate by the committee.

In summary, I oppose S. 722 because:

1. The communities in my State by local effort, initiative and imagination have done much to cure their own economic ills, and the bill offers practically nothing which is not now already available either from private or public sources.

2. Although I have great concern for the economic welfare of many communities in Massachusetts, this measure is discriminatory in that it forces our citizens to subsidize the development of some areas selected on arbitrary standards, while neglecting other areas.

3. The bill would encourage piracy and would draw industries away from those areas which with their own investment have already industrialized. It would create an arbitrary economic advantage for rural areas without justification.

*4. The bill is vague and ambiguous.

5. It overlooks the basic causes of unemployment and creates the illusion that by the mere construction of factories jobs can be created.

6. It is at odds with our basic competitive enterprise system.

7. Finally, it would tend to weaken further the responsibility and authority of local governments where effort of this nature should best be managed.

Mr. BUSH. Mr. President, I yield 2 minutes to the distinguished Senator from Utah [Mr. BENNETT].

The PRESIDING OFFICER. The Senator from Utah is recognized for 2 minutes.

Mr. BENNETT. Mr. President, I have prepared a statement with respect to the amendment sponsored by the distinguished Senator from Connecticut and myself, and a short statement with respect to the equipment amendment offered by the Senator from New York. In the interest of saving the Senate's time, and as an accommodation, I ask unanimous consent at this time to have those statements printed in the RECORD without my reading them.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENTS BY SENATOR BENNETT

ANTIPIRATING SECTION IS WEAK AND VAGUE

Section 2

A. The dilemma of antipirating restrictions: The complete unworkability of the proposed legislation is clearly illustrated by the attempt of its proponents to meet the so-called runaway shop or industry-pirating problem.

The bill includes a so-called antipirating provision stating that Federal loans shall not be made to assist—"establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment."

While we differ as to the effectiveness of the proposed language, we agree that the proponents of the bill have placed an impossible burden upon the Administrator, who would face this dilemma:

If areas are to be redeveloped to the maximum extent possible, the inducements offered by the Federal Government in cooperation with other public and private agencies, are bound to encourage the transfer of jobs and facilities from one area to another. The very essence of growth and development involves movement of resources. A manufacturing firm with a branch plant built under a "depressed areas" program will want to remain free to allocate production among its various plants in future years. Communities in almost every State and congressional district are interested in attracting new industry and jobs. Clearly, under an unrestricted area redevelopment program, communities are certain to feel the impact of any redistribution of resources and jobs induced by the availability of Federal money to areas which are currently depressed. Thus, the danger arises that new depressed areas may be created in an attempt to eliminate those now existing.

On the other hand, if the proposed legislation places severe restrictions on the entry of firms into depressed areas in an effort to guard against the so-called industry-pirating problem, the program of redevelopment may well be seriously handicapped.

In short, the Administrator's problem, under the bill, is one of either building up some areas at the expense of others or attempting to comply with a legislative standard which is unenforceable. There are no criteria for determining the amount of unemployment that might be regarded as inflicting "substantial detriment" upon a community.

Would the relocation of an industry providing 100 jobs from Detroit to another State result in sufficient additional "detriment" to a community with 217,000 already unemployed to be reckoned as "substantial"? How and when would the Administrator ascertain that redevelopment in one area violates the apparent intent of the Senate to avoid pressures in other areas?

B. Discrimination within industries: Moreover, not only would the bill promote discrimination by the Federal Government in favor of some areas at the expense of others, it would also promote such discrimination to benefit some companies within a given industry at the expense of its competitors.

Assume a situation in which several companies have plants in various parts of the country, none of which are in a so-called depressed area.

Company A, employing 250, is at a competitive disadvantage because it has not kept pace with the industry as a whole in modernizing its factory and improving machinery.

A community eligible for redevelopment under the bill builds and equips a factory with Federal assistance, and induces company A to relocate.

A double discrimination, promoted with Federal funds, has thus taken place: Discrimination against the area of original location of company A and discrimination against company A's industrial competitors.

C. Senator DOUGLAS and I went to Detroit and held a hearing. The mayor of Detroit told us on his own—on its own—the city government has raised $2 million and purchased 17 acres of land and torn the buildings down and they were redeveloping it. And later that afternoon in came a representative of the city of Jackson, Mich., who did a little arithmetic and said, "Those 17 acres are costing the city of Detroit $118,000 an acre." And he said, "The best place for me to pirate industry is not outside of Michigan, it is in the city of Detroit."

In other words, with this kind of language remaining in here, we can actually envision a situation where communities both using Federal funds are in a position to pirate industry away from each other, and we will set up an industry with Federal funds in community A, Detroit, and then the fellow from Jackson will come over and take it away because he said, "We can furnish them industrial land for $350 an acre, not $118,000."

D. Individual views of Mr. BENNETT and Mr. BUSH: To our minds, the use of Federal funds to help some areas attract industries and jobs from other areas is unconscionable and must be prohibited without any qualifications.

If such a prohibition is not written into S. 722, the people of industrial States may be forced to underwrite with their Federal tax dollars the export of jobs to competing areas.

The bill should be confined to the purpose stated in President Eisenhower's "Economic Report" to the 85th Congress, namely, "to create new job opportunities instead of merely transferring jobs from one locality to another."

On page 2, line 19, strike out all after the word "created" through line 22 and substitute the following: "rather than merely transferred from one community to another."

On page 9, line 22, insert a period after the word "another" and strike out "when such assistance will result in substantial detriment to the area of original location by increasing unemployment."

These amendments will draw a clean-cut issue between Senators who wish Federal funds used to assist the the relocation of industries and jobs from one area to another, and those who believe, as we do, that such intervention of the Federal Government in competition for industries and jobs among States and communities violates basic principles of the Federal system and is highly improper, unfair, and indeed unconscionable.

E. Let us suppose that in a period of rising demand, a manufacturer established a branch or second plant in a depressed area with Federal assistance in financing. Let us further assume that he occupied his new plant for a few years and during the next dip in the business of the firm he had to cut back some operations—reduce output.

If he reduced the work force in his original plant and held the full force in the new one, would this represent a transfer of jobs?

If he finally had to close one plant for lack of business—would it be a violation of his loan agreement if he closed the old one? If so, would the Federal Government call his loan and maybe put him completely out of business?

If, in a new plant established through this program, business suffers due to poor management or good management and a poor market condition, can the Government then stop helping the project it started?

Is there a moral obligation to continue subsidy to a business venture in the first instance nurtured through subsidy?

Questions of this sort are difficult to answer. Experience with agricultural subsidies, for instance, illustrates the difficulty of terminating any program of Federal aid once it has become established. Can we let this happen to the American manufacturing industry? It is the first steps that seem so mild, so meritorious, that begin such unwise programs.

LOANS FOR EQUIPMENT UNJUSTIFIED AND UNFAIR

1. Thirty-year loans are okay for land and buildings, but have no relationship to the life of equipment. Equipment would be depreciated several times over that long a time.

2. Any enterprise brought in on the basis of land and buildings should be able to finance the equipment. If the firm can't finance equipment itself, it is doubtful that the community would want such a business risk.

(NOTE.—This applies to nonfixed equipment not attached to the building.)

3. This is an unreasonable public subsidy of business. You are doing more than just trying to aid areas with chronic unemployment.

4. It gives a major competitive advantage to those so subsidized.

Mr. BUSH. Mr. President, I yield to the Senator from New York [Mr. JAVITS] as much time as he may need.

The PRESIDING OFFICER. The Senator from New York is recognized.

Mr. JAVITS. Mr. President, I shall take but a few minutes to explain what I consider to be an important point.

Mr. President, may we have order? This is an important bill, and this happens to be an important point about the bill, though I have no illusions of being able to convince a good many of our friends on the other side of the aisle; but this point at least ought to be listened to.

The PRESIDING OFFICER. The Senate will be in order.

Mr. JAVITS. Mr. President, what the Senator from Connecticut is proposing is that there should not be raiding, under the guise of this bill, on the big industrial States. I do not see how anyone can argue with that desire, if the honesty of the bill is to be maintained.

What I am proposing is the exclusion from financing, under the provisions of the bill, of machinery and equipment. There either would be made available another $80 million or $100 million, or the amount provided by the bill would be reduced by that amount. If another $80 million or $100 million should be made available we should take into consideration the objections made by the chairman that the cloth is not adequate to go around.

Those who wish to make reductions in the amount available will find it possible to reduce, legitimately, the amount provided. Why do I say "legitimately"? The classic pattern followed in the sections which have been hurt by chronic unemployment and unemployment because of technological reasons has been financing through tax avenues and through acquisition of land in a community and the construction of buildings. One of the most notable examples of the rehabilitation of a community under self-help programs is the fantastic job done in the Utica-Rome area, which was one of the most depressed areas. It has been restored economically by the technique of making it possible to buy machinery on fairly liberal terms, under a self-financing plan. Machinery can become obsolescent or perishable. Then it is mostly a drug on the market for a particular community. Hence that kind of program should not be connected with this type of rehabilitation program. It costs a great deal of money. It takes much out of the bill.

In the testimony of the Department of Commerce, which is to be found at the foot of page 400 of the record of testimony on this bill, it is stated: "Machinery and equipment exceeds the investment in land and buildings by 4 to 1."

A survey by the Department of Commerce of industrial establishments under new construction showed that machinery and equipment constitute 43 percent of the total cost of building those establishments.

When that fact is coupled with the fact that the proposal is completely outside the tradition with respect to area rehabilitation, the very large amount provided in the bill which will go to machinery and equipment will cause legitimate suspicion on the part of great industrial States that an attempt will be made to raid them, using this very provision for machinery and equipment as bait. That factor would place a great handicap in the bill, unless the amendment were adopted.

I say to the friends of the bill—not those against it, but its friends—if they are really serious about the purposes of the bill, as they have expressed them, and wish it passed to assist their States, they should accept, not oppose, this particular amendment.

Mr. DIRKSEN. Mr. President, I should like to ask the Senator a question. Would the proposed amendment cut any money from the bill, or would it simply eliminate the use of funds for machinery and equipment, so that the funds would be intact and could be used only for renovation, construction, and so forth?

Mr. JAVITS. As I and the Senator from Connecticut designed the amend-

ment it would cut no money from the bill.

Mr. DIRKSEN. The amount of money in the bill as reported by the Committee on Banking and Currency would remain intact?

Mr. JAVITS. Exactly. However, if we are successful it would be legitimate to move to reduce the amount, and the same purpose could be accomplished, or we could accomplish 40 percent more if we left the amount intact.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. BUSH. I believe the amendment, as merged, would severely restrict the use of these funds. That is the purpose of my amendment.

Mr. JAVITS. That is the purpose of my amendment.

Mr. BUSH. The money could not be used for financing the transfer of an industrial organization from one State to another. The use of Federal funds would be prohibited in that regard.

Mr. DIRKSEN. But the amendment inserts the word "not" so that the money would remain intact at the level reported in the Douglas bill, but could not be used for machinery and equipment.

Mr. JAVITS. The Senator is correct.

Mr. DIRKSEN. The money would remain in the bill at some $380 million-plus.

Mr. JAVITS. Except that it would be susceptible to a reduction of from $80 million to $100 million, without changing the purpose of the bill.

The PRESIDING OFFICER. The time of the Senator from Connecticut has expired.

Mr. BUSH. Mr. President, how much time have I remaining?

The PRESIDING OFFICER. The Senator has 15 minutes remaining.

Mr. BUSH. Mr. President, I yield myself 2 additional minutes.

I simply wish to say I endorse all my distinguished friend from New York has said regarding the amendment. I want to thank the Senator for the suggestion that we merge the two amendments, which I think are not conflicting, but rather are complementary. I believe if the amendment is agreed to by the Senate, it will make the bill much more palatable to a great many areas of this country. I strongly urge the Senators who believe that the pirating of industry should not be done at the expense of the Federal Government to support the amendment.

Mr. DOUGLAS. Mr. President, I yield 2 minutes to the very able junior Senator from Connecticut.

Mr. DODD. Mr. President, I am reluctant to enter the debate on the amendment, because my distinguished colleague, the senior Senator from my State sponsored the amendment. There are many occasions when I find myself in agreement with my friend and colleague from Connecticut, but I feel compelled to differ with him on this amendment for two or three reasons which I should like to make clear on the record.

I speak in opposition to the pending amendment which would, in my judgment, make this bill unworkable and endanger its passage.

I fully agree that funds under this bill should not be used for simply moving industries from one place to another. We are all in agreement on this point.

However, I am convinced that the antipirating clause now in the bill provides reasonable and adequate protection against this practice. There are many controversial points in this legislation, but the antipirating clause is one point upon which there is preponderant agreement. The clause in the Douglas bill, S. 722, is the same as that in the administration bill, S. 1064, and in fact it was taken from the administration bill. The clause in the Douglas bill has the support of the administration, the Banking and Currency Committee, and has substantial backing from both sides of the aisle. It has this support because it is the best clause that reasonable and conscientious men can agree upon.

The philosophy behind the pending amendment seems to be that Connecticut cannot compete successfully with other States for new businesses. I do not share this view. I think our State has more to offer new business than any State I can think of. Our State finances are sound. We have a great deal of skilled labor of all kinds; the level of health and education and of public facilities in our State is high and we are located right in the midst of the great consumer market of the Northeast.

There have always been, and always will be, transfers of business from one locality to another. Of necessity, redevelopment requires a degree of flexibility, a margin for discretion, in order to tailor each project to the needs of a particular area. To prevent any relocation of industry, to remove the necessary margin of discretion from the hands of the Administrator would destroy this bill.

The rigid amendment that my colleague the Senator from Connecticut proposes would make the administration of this bill impossible, invite countless lawsuits over its application, and cost the whole bill the support of many who now favor it.

Congress learned long ago that it can make the laws but not administer them.

The wording of this bill is clear. The legislative intent as spelled out in the hearings and in the floor debate is clear. Congress is on record, completely and adequately, against use of this bill for purposes of industrial pirating.

We must depend on the executive branch to administer any law faithfully and conscientiously. We cannot administer it ourselves. We know that the amount of money available under this bill is not nearly enough to meet the requests that will flood in from all areas of the country. I believe we can rely on the integrity and the dedication of those administering this act to see to it that only those requests which best square with the intent of Congress will be granted.

Over the years in this as in all bills of this kind, we shall probably find provisions which need tightening or loosening.

This may prove true of the antipirating clause. But for now, the present clause in the Douglas bill, which has substantial support from all sides, should be given a chance. I oppose the present attempt to amend it.

Mr. DOUGLAS. Mr. President, I ask for the defeat of the amendment. The Bush portion of the amendment has already been adequately taken care of in the bill itself, and is covered in the report. To have further binding language would hurt our friends of the South. The amendment is, in a sense, an anti-southern amendment; and though I come from the North, I do not wish to sponsor or support such an amendment. The Javits portion would be too restrictive.

BUSH ANTIPIRATING AMENDMENT NOT NECESSARY

At page 9, line 20 of the bill as reported, it is stated:

Such financial assistance shall not be extended for working capital, or to assist establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

Then, on page 22 of the report, it is stated:

Section 6 expressly provides that loans made under it for industrial projects must not be granted to assist establishments relocating from one area to another, when such assistance will result in substantial detriment to the area of original location by increasing unemployment. This provision reflects the declaration of purpose of the act, to create new employment opportunities by developing and expanding facilities and resources without substantially reducing employment in other areas of the United States.

If the proposed transfer of a plant from one area to another will create as much unemployment in the area it leaves as it absorbs in the area it moves to, nothing has been gained from the point of view of the overall economy of the United States. The use of Federal funds for a transfer of this sort would not be justified. Expansion of existing firms and the creation and development of new businesses or new branches of firms in business elsewhere, without at the same time substantially reducing existing employment opportunities, is the aim of this Federal assistance. In an expanding economy ample opportunities can be found to develop the depressed areas without injury to other areas of the country.

Now this, I submit, is sufficient protection against the use of Government funds to finance so-called runaway plants. The main objection to plant relocation is that it causes substantial unemployment. We are not trying to freeze in the status quo. If that were to be a relocation into a depressed area, and if the relocation did not cause substantial unemployment, I see no reason that it should not be permitted.

I further submit that the bill and the report is sufficient to guide the Administration in allocating loans. Were he to grant a loan to finance a plant relocation which hurt an area, he would clearly be in violation of the intent of the act.

I am firmly convinced that the Bush amendment is so rigid as to virtually destroy sound administration discretion and flexibility.

Moreover, the Bush amendment would cause many of our southern friends to oppose the bill in the belief that it would finance businesses in staying where they are and not creating new employment opportunities in the South. Its adoption would cause the bill to lose support without picking up any new support. For example, even if we adopted it, I doubt that the senior Senator from Connecticut would support the bill as amended.

We have discussed and worked on this problem for nearly 5 years. We have reached the agreement embodied in the bill. Thus I will certainly oppose efforts to upset this agreement.

JAVITS PROPOSAL TO EXCLUDE MACHINERY AND EQUIPMENT TOO RESTRICTIVE

The Javits portion of the amendment would restrict the loans to lands and buildings, and would make the program largely ineffective.

The cost of land is relatively small in depressed areas, simply because they are depressed. The cost of buildings will not be much either, because in many cases it would be possible to take over an existing building and rehabilitate it with a relatively small amount of capital. Thus, the thing that can really make redevelopment possible would be the financing of equipment and machinery which lies at the heart of the whole enterprise.

Now, there are two main arguments which might be raised against the inclusion of machinery and equipment. First. It may be said that, because of obsolescence, we should not finance machinery for such a long period of time as 30 years. I would agree with this, but the 30-year period is a maximum, and I would expect the Administrator to provide for a realistic period in the case of loans for machinery and equipment. Depending on the nature of the machinery or equipment, this might run from 5 to 15 years. Second. It may be said that making loans on machines is dangerous, because if the loans cannot be repaid, the Government would lose its investment. However, there are many general-purpose machines such as lathes and punch presses which can be applied to a great variety of uses. Thus, it is not necessarily true that the Government would lose its investment were the loan to go into default.

Therefore, Mr. President, I hope very much that the Bush-Javits amendments will be defeated.

Mr. BUSH. Mr. President, I yield myself 2 minutes for the purpose of observing it is delightful to see my friend, the Senator from Illinois, show so much consideration for our friends of the South. I am sure they appreciate his concern very much, indeed.

In regard to what my distinguished colleague from Connecticut [Mr. DODD] said, I wish to observe that the northeastern part of our State, to which he referred in his remarks earlier in the day, has suffered for many years from an unemployment factor, although that has not always been the case. In 1956 that section pretty well attained full employment. Nevertheless, the area has been seriously affected by the moving of industry from our State.

I simply wish to say that I am indeed concerned about the effect of the bill, since it would facilitate the movement of industry from my State into other sections of the country. I object very strongly on behalf of my State to the use of Federal funds for that purpose. The whole purpose of the so-called Bush-Bennett amendment, and I make no apology for it, is to prevent such a thing happening.

I believe if the sponsors of the bill believe sincerely what they have written into the bill, namely:

> Such financial assistance shall not be extended for working capital, or to assist establishments relocating from one area to another—

They should stop there and say so, rather than permit the bill to be "weasel worded" in such language as—

> when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

I ask Senators if they can tell anyone what constitutes "substantial detriment." I say that is an impossible term to define, and therefore the bill itself would be unworkable and impossible to administer.

Mr. KEATING. Mr. President, will the Senator yield on that point?

Mr. BUSH. Mr. President, I yield 2 minutes to the Senator from New York.

Mr. KEATING. I need only 1 minute to ask the Senator a question.

The junior Senator from Connecticut [Mr. DODD] raised the point that the amendment would make the bill difficult to administer. One of the great merits of the amendment offered by the Senator is that it would make it possible to administer the bill. With the wording—

> when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

The terms are so vague as to make it impossible for any administrator to construe them. Does the senior Senator from Connecticut agree with that statement?

Mr. BUSH. The Senator from New York is absolutely correct. That is the whole point of the amendment.

Mr. ALLOTT. Mr. President, will the Senator yield for a question?

Mr. BUSH. I yield to the Senator from Colorado.

Mr. ALLOTT. Is it not a fact that the language on page 9, which language is sought to be stricken, could be interpreted to mean, in actual practice, that the Administrator could move a business from one area to another area if fewer people would remain unemployed in the former area than would be put to work in the latter area?

Mr. BUSH. Exactly. The purpose of the amendment is to simply prohibit entirely the use of Federal funds for the purpose of relocating an establishment from one area to another.

Mr. LAUSCHE. Mr. President, will the Senator yield for a question?

Mr. BUSH. I yield 1 minute to the Senator from Ohio.

Mr. LAUSCHE. Am I correct in my understanding that under the language of the bill Congress would say to one area, "You can get Federal money for the purpose of damaging a community in Ohio and benefiting yourself."

Mr. BUSH. That is correct.

Mr. LAUSCHE. "Unless it is shown that you propose to damage it substantially, that money will be available to you."

Mr. BUSH. That is correct. But who is to determine what is "substantial detriment"? The poor Administrator? I submit to the Senator from Ohio that he would have an impossible assignment.

Mr. LAUSCHE. In my opinion, that provision, in effect, would serve notice upon communities, "Come to the Federal Government and receive Ohio taxpayers' money, and with that money draw away from Ohio those industries and businesses which it has developed through good government and good service, and locate them in other communities."

Mr. BUSH. The Senator has stated the case better than I possibly could.

Mr. President, unless some other Senator wishes to speak on this amendment, I am prepared to yield back the remainder of my time.

Mr. DOUGLAS. Mr. President, I yield back the remainder of the time on our side.

The PRESIDING OFFICER. All time has been exhausted or yielded back.

The question is on agreeing to the amendment offered by the Senator from Connecticut [Mr. BUSH] on behalf of himself, the Senator from New York [Mr. JAVITS], and other Senators. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Arizona [Mr. HAYDEN], and the Senator from Georgia [Mr. RUSSELL] are absent on official business.

I also announce that the Senator from Washington [Mr. MAGNUSON] is absent because of illness.

I further announce that, if present and voting, the Senator from Washington [Mr. MAGNUSON] would vote "nay."

The result was announced—yeas 33, nays 60, as follows:

YEAS—33

Aiken	Cotton	Martin
Allott	Curtis	Morton
Beall	Dirksen	Moss
Bennett	Dworshak	Mundt
Bridges	Goldwater	Prouty
Bush	Hickenlooper	Saltonstall
Butler	Hruska	Schoeppel
Capehart	Javits	Scott
Carlson	Keating	Wiley
Case, N.J.	Kuchel	Williams, Del.
Case, S. Dak.	Lausche	Young, N. Dak.

NAYS—60

Anderson	Ellender	Jackson
Bartlett	Engle	Johnson, Tex.
Bible	Ervin	Johnston, S.C.
Byrd, W. Va.	Frear	Jordan
Cannon	Gore	Kefauver
Carroll	Green	Kennedy
Chavez	Gruening	Kerr
Church	Hart	Langer
Clark	Hartke	Long
Cooper	Hennings	McCarthy
Dodd	Hill	McClellan
Douglas	Holland	McGee
Eastland	Humphrey	McNamara

Mansfield	Pastore	Stennis
Monroney	Proxmire	Symington
Morse	Randolph	Talmadge
Murray	Robertson	Thurmond
Muskie	Smathers	Williams, N.J.
Neuberger	Smith	Yarborough
O'Mahoney	Sparkman	Young, Ohio

NOT VOTING—5

Byrd, Va.	Hayden	Russell
Fulbright	Magnuson	

So the amendment offered by Mr. BUSH, for himself, Mr. JAVITS, and other Senators was rejected.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate reconsider the vote by which the amendment was rejected.

Mr. DOUGLAS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. JOHNSON of Texas. Mr. President, I am informed that there are two amendments to be proposed which are acceptable to the committee. I believe no discussion of them will be necessary. Then, I understand, the Senator from New York [Mr. KEATING] has a very brief statement to make on the bill. We can have a vote on the passage of the bill this evening if that is agreeable to the Senate. If there is to be a prolonged discussion of the bill we shall have to delay the final vote on the bill until tomorrow, because there is an important meeting to be held at 6 o'clock this evening which some Senators must attend. If the chairman of the subcommittee is agreeable to accepting the Kerr-Monroney amendment and the Bennett amendments we can get action on those amendments at this time.

Mr. DOUGLAS. I shall accept the Kerr-Monroney amendment and the Bennett amendments.

Mr. JOHNSON of Texas. Mr. President, I hope the Senator from New York will not take more than 2 or 3 minutes, because I should like to assign similar time to the Senator from Kentucky.

Mr. ALLOTT. Mr. President, I should like to have a few minutes on the bill. I realize the time schedule the leaders face. However, if I cannot have some time on the bill I shall have to object to a vote at this time.

Mr. DIRKSEN. I most respectfully suggest to the majority leader that perhaps we should delay the vote on the passage of the bill until tomorrow.

Mr. JOHNSON of Texas. Mr. President, may we have the amendments stated and accepted?

The PRESIDING OFFICER. The clerk will state the amendments offered by the Senator from Utah.

The LEGISLATIVE CLERK. On page 31, it is proposed to strike out lines 3, 4, and 5 and through the comma in line 6.

On page 31, after line 10, it is proposed to insert the following:

(c) The Secretary of Labor shall arrange to provide any necessary technical assistance for setting up apprenticeships and to promote journeyman and other job training in the area.

On page 32, lines 10 and 11, it is proposed to strike out "and section 16 of this Act".

Mr. DOUGLAS. Mr. President, I accept the amendments on behalf of the committee.

The PRESIDING OFFICER. Without objection, the amendments are agreed to en bloc.

The amendment offered by the Senators from Oklahoma [Mr. KERR and Mr. MONRONEY] will be stated.

The LEGISLATIVE CLERK. On page 7, line 19, it is proposed to insert after the words "public assistance", the words "from the Federal Government and/or".

Mr. DOUGLAS. Mr. President, on behalf of the committee, I accept the amendment.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. KERR. I thank the Senator from Illinois.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. CAPEHART. Mr. President, I merely wish to say one thing about the bill. It proposes bad legislation. I like to help unemployment. I do not believe that the bill will do that in the long run. Under a socialistic form of government, of course, the government accepts the responsibility for providing employment.

The enactment of the bill would establish the precedent of the U.S. Government furnishing jobs. I believe that under the bill the Federal Government would accept the responsibility of furnishing jobs in the United States even where they were not needed. I wish to go on record as saying that in my opinion the legislation which is here proposed is bad. The bill should be voted down. If we enact the proposed legislation embodied in the bill we may well live to see the day when we will socialize the United States and have the Government accept the responsibility of providing jobs. The bad feature of the bill is that we are accepting the responsibility of furnishing jobs in the United States. I think that is a bad precedent to establish.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be offered, the question is on the engrossment and third reading of the bill.

The bill, S. 722, was ordered to be engrossed for a third reading and was read the third time.

Mr. JOHNSON of Texas. I yield to the Senator from New York such time as he may desire.

Mr. KEATING. Mr. President, the declaration of purpose of the bill before us today, S. 722, contains the worthy and laudable statement that "under the provisions of this act new employment opportunities should be created by developing and expanding new and existing facilities and resources without substantially reducing employment in other areas of the United States."

The provisions of S. 722, however, cannot and will not approach this objective. It is, in fact, a bill which will aggravate the very problem it seeks to solve, a bill which will lead to the creation of additional depressed areas.

I am certain that each Member of this body is concerned over the conditions which exist in economically distressed areas of this Nation. But let us make sure that our diagnosis is correct and that the cure we propose will not lead to worsening conditions in other sections of the country.

One of the major causes of unemployment in parts of the Northeast has been the migration of industry. The provisions of S. 722 cannot help but contribute to the acceleration of such movement. Despite the language which purports to prevent relocation of industry, it would be unrealistic to assume that business firms would not take advantage of the inducements which are offered, or to assume further that substantial detriment to the area of original location can be determined administratively. What will be the criteria for such determination? Shall it be the loss of 300 jobs, or 500, or 1,000 before there is substantial detriment? It would be detrimental to place legislation on the books which would be responsible for the loss of even one job in one part of the country while attempting to create employment opportunities in other areas.

As a result of the loss of industry, the termination of defense contracts and other factors, there exist pockets of substantial unemployment in my State, ranging from over 8 percent of the labor force in the Syracuse area to over 12 percent of the labor force in the Buffalo area. None of these areas would be eligible for assistance under the legislation which has been proposed. Among the smaller areas of substantial labor surplus in my State, only 3 of 14 would be considered under the provisions of S. 722. This situation can be multiplied in other States.

In other words, under the terms of this bill, New York taxpayers will be required to shell out large sums to relieve unemployment in other areas without any benefit whatever in New York. We do not want to appear selfish or unsympathetic to the needs of other communities but our New York taxpayers have serious problems right at home which are bound to constitute a drain on their resources at the State and local level.

I bring these facts to the attention of the Senate not to urge the broadening of the aid provided under this legislation, but to point out what I believe to be a serious defect in this proposal as presented to us. It is designed to aid a few communities at the expense of all.

I am deeply concerned over the unemployment picture in various sections of my own State. I cannot in good conscience support efforts which not only will not help New York but will actually aggravate our situation.

When I pointed out on the floor of the Senate last Friday that S. 722—even if workable—could render aid to only a small portion of the unemployed of this country and would be in effect nonexistent as far as the unemployed of my State were concerned, I was duly informed by the Senator from Illinois that these people of New York State might well be eligible tomorrow or next year.

I dislike to believe that such is the philosophy behind this proposed legislation. I dislike to believe that we are being asked to contribute our tax dollars

at this time and wait until our unemployment picture becomes so aggrieved as to become eligible for this proposed aid tomorrow or next year.

In any event, this bill is unfair and discriminatory to those States which are bearing the costs of programs to alleviate their own unemployment problems and are now being asked to shoulder additional burdens. It is unfair to those States which are exerting every effort to maintain and attract business and which would be faced with the loss of such industry under the inducements written into this bill. And lastly and probably most unfortunately, it is unfair to the very people it purports to help, the unemployed of this Nation, few of whom will ultimately be the beneficiaries. Millions will think they are getting something but less than 10 percent of them, under the most favorable circumstances, will benefit and at the same time, by the very terms of the bill, the unemployment problem will be rendered more acute elsewhere.

Let us not evade our responsibilities to the unemployed in depressed areas; but let us pursue a course which would provide the help which is needed without inflicting damage elsewhere.

Mr. ALLOTT. Mr. President, I wish to join my colleague, the junior Senator from New York, in the statement he has just made in opposition to the pending bill.

The bill, as written, is a misguided attempt to help those areas which have suffered from unemployment chronically throughout the years. I do not oppose this simply because it leaves my own State out of any possible benefits from the act, except those which are too nebulous to attract even the most guileless person.

I oppose it because:

First. As written, the program creates a precedent and pressures for immense additional expenditures of Federal money.

Second. The bill would not begin to provide jobs for even the 390,000 who are supposed to be the primary beneficiaries of the bill.

Third. By approaching the problem of unemployment on a local or area basis, the bill puts the Federal Government in the position of locating and influencing the location of private business in this country.

Fourth. The refusal to adopt the Bush-Javits amendment leaves the bill wide open to the most pernicious practice of all; that is, the pirating of business from one community to the other. Under the phrase, as used on line 22, page 9, and subsequently in the bill, "when such assistance will result in substantial detriment to the area of original location," the way is open wide for the pirating of business from one area to another. The bill does not set up standards by which the Administrator is to make such decisions. For example, under this bill it is possible for the Administrator to assist a chronic area even though it will result in unemployment in another area, if the total unemployment thus produced could not be considered substantial in the latter area. Or, to put it another way, if the amount of unemployment in the pirated area produced by moving a business was not substantial with relation to the total population, businesses could be pirated, not only with the assistance of the Government but with the Government supplying the money.

I look with great sympathy on the areas of this country which the sponsors of this bill say they are trying to help. I am anxious to try and assist them. But such assistance can never come within the straitjacket of this concept which is here before us again today in an even worse form than ever before.

Since the bill cannot help but set in motion a chain of events detrimental to communities now healthy, and cannot begin to do the job which its proponents claim, I am forced to oppose it.

Mr. JOHNSON of Texas. Mr. President, I yield to the Senator from Kentucky as much time as he may desire.

Mr. COOPER. Mr. President, I have supported the committee bill, S. 722, and opposed the administration bill. I spoke at some length on this subject on last Friday. In the short time now available, I want to say simply that I have done so because I believe S. 722 will meet more adequately the desperate situation existing in the distressed areas or our country.

Federal responsibility and Federal action have been admitted by the administration bill, the amendment in the nature of a substitute offered by the distinguished Senator from Pennsylvania [Mr. SCOTT], and, of course, by the committee bill, S. 722. Unless one opposes all bills in principle, the only question before us, is the adequacy of the bill.

There is no question in my mind that S. 722 will cope more adequately with the problems of depressed areas than any other bill before us.

We do not know precisely what effect the passage of the bill will have on the budget. It will undoubtedly increase expenditures. Nevertheless, along with the defense of the country I can think of no greater obligation than to help persons out of work and hungry, in the depressed areas of our country such as S. 722 proposes. It is the only measure before Congress which offers any permanent help. For these reasons, I am glad to cosponsor and support S. 722.

Mr. DOUGLAS. Mr. President, I yield 2 minutes to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, I hope the Senate will pass the pending bill by a majority large enough to insulate it from any veto.

All of us know that if a community is to attract industry that community must offer good living as well as good business.

It takes more than a new factory building ready for occupancy. It takes roads, schools, sewers, playgrounds, plus all the other things which make any town a proper place in which to live and work.

Can communities do this by themselves? Let us be realistic. Local government finances in many of our localities have been drained by the recession until there is barely enough left to meet their own payrolls. How, therefore, can they afford, on their own, to make the additional investment needed to attract industry?

Where necessary and right, loan capital should be furnished by the Federal Government. And that is exactly what this area redevelopment bill will do.

In addition, S. 722 has the following features which make it worthy of our support:

First. It helps both rural and industrial areas.

Second. It is primarily a loan program, rather than a program of outright grants.

Third. The community lending procedure is so safeguarded as to avoid competition with private banks.

Fourth. It is directed primarily toward revitalizing and modernizing private enterprise, rather than toward substituting Government business for private business.

This is not a spending bill; it is an investment bill. Any businessman knows the difference between current operating expenditures and capital investment in plant and equipment. This distinction is equally true here.

Unemployment is not cured by unemployment compensation and other such benefits, necessary as they are. These are symptoms, not causes.

This bill attacks the causes. It is such investments today that will make sure chronic unemployment does not persist in the future. Only by investments of this type can we make sure that we will in the future operate our economy on a full production basis and thereby meet the great economic challenge posed to us by the Communist world.

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD just prior to the vote on the area redevelopment bill a statement prepared by me in regard to the bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY

Today in Washington and throughout this Nation of ours we hear and read the slogan "Balance the budget." Those who question the wisdom in reducing needed Federal Government programs which a balanced budget would require are branded as spenders. Yes; everyone who wants a school lunch program for all the hungry children is, according to the Republican administration, a wild eyed radical spender. To be a saver or a good boy according to 1959 Republican Party standards, you have got to be against unemployment compensation, slum clearance and low-rent public housing.

I for one and the overwhelming majority of my Democratic colleagues will not be scared off by this flow of unsupported and unsupportable political propaganda. I want to balance the budget, too. But first, like President Roosevelt, I want to balance the budget of human needs. Sometimes I find it difficult to believe that the Republican Party can so underestimate the basic good sense of the American people. All last year the President and his supporters talked about the Nation's good economic health and how a clever advertising campaign was all that was needed to help us regain the jobs lost because of the recession. We Democrats in Congress last year passed over strong administration opposition an area redevelopment bill. The President vetoed this bill which would have helped local distressed areas to help themselves. Well, the voters

voted dozens of the President's fellow Republicans out of Congress last November.

To me the voters of the Nation spoke in clear and simple terms last November. They told the Congress and others in the Government that they were tired of confused lectures on how their Government was unable to meet the challenges of our time. The people of America told us by their votes that they were fed up with governmental officials who because of an apparent obsession with fears of the present or ghosts of the past could not or would not see the America of the future as a great and expanding country.

Everyone of us regardless of political affiliation is determined that the peoples of the world be free. That means we are not going to stand back and permit the Communist leaders of the Soviet Union to take over and strangle freedom in America or any other free nation. Therefore, we must remain strong enough to deter or discourage the Soviet leaders from going to war. There should be no doubt left in the minds of any would-be aggressor that we have the might and determination to win any kind of war they might start.

We all look forward to the day when the threat of war will lessen and permit the direction of our present military expenditures into programs to accelerate the progress toward a better life for all mankind. But we need not—and indeed we will not—wait until military expenditures are reduced before turning our attention to the relief of individual and community distress and the improvement of our economic structure.

EXPANDED ECONOMY URGED AS PREFERRED WAY TO BALANCED BUDGET

The United States can't afford to merely stand still.

We cannot be content with business activity only approaching a level we had already reached in 1956.

We cannot have a model T economic program in the jet age. If we do, the world will soon rush by leaving us by the wayside as a second-rate nation.

In view of our expanding industrial capacity, a constantly rising work force, and an increasing population, in order to maintain a healthy economy it is necessary that there be steady and solid economic growth and development.

A high level of unemployment and the widening gap between our industrial capacity and actual output is a tragic waste of men and equipment.

It cannot be condoned when we have so many unfilled needs here at home, when we should be giving greater assistance to underdeveloped nations so as to raise their standards of living, and when our defenses need strengthening so badly.

If we are to remain as the leader of the free nations of the world, it is imperative that we have a strong, growing, and dynamic economy. We cannot afford idle men and machines at so crucial a time in world history.

The President's budget is not geared to a healthy, expanding economy which can produce the goods and services we need if we are to maintain both a prosperous America and also maintain adequate defenses.

The President's budget is designed to limit economic growth on the theory that this is the only way to hold down prices and stop inflation. However, the facts are that in the past 3 years while our economy has stood still we have had the sharpest rise in the cost of living in the peacetime history of the country.

The answer doesn't lie in a stagnant economy, but rather in an expanding and growing economy whereby our manpower and machinery is effectively utilized.

We are all for a balanced budget. There is no earthly reason why a country as rich as ours should have to operate at a deficit in these times. I am for a balanced budget.

But there are three ways to balance the budget.

One way is to simply slash public spending to the level of expected income, regardless of the importance of the programs.

A second way is to raise taxes.

And the third way—which I favor—is to meet the costs of necessary public spending through fiscal and monetary policies designed to stimulate economic growth and larger incomes, which in turn means larger tax revenues.

This third alternative seems to me the only one which makes real sense.

There are a number of programs we can and should undertake now both as necessary to present needs and essential to future progress. Redevelopment of depressed areas is absolutely necessary to put our economy on a sound footing so that we can all move ahead together.

Major areas in the United States have suffered high levels of unemployment for the past several years. The causes for this are easily ascertained by a review of the economy in each of these areas. During the war years West Virginia produced the fuel that put the guns, planes, and ships into the hands of the fighting men of the United States and her allies. Production was stepped up to a point far beyond the need for coal when the war effort was cut off. Then, too, came automation. Coal is mined with more machinery and fewer hands. Other fuels came into the market.

The evidence before us in the Senate is that the need for area redevelopment is found in every region of the Nation. When we read down the list of cities where substantial unemployment has persisted for months and years we find communities that were once flourishing communities with thriving industry and people. Charleston, W. Va.; Providence, R.I.; Erie, Pa.; Buffalo, N.Y.; Detroit, Mich.; Durham, N.C.; Knoxville, Tenn.; Jaspar, Ala.; Kenosha, Wis.; and Texarkana, Tex., are now among the distressed. But they were among the leading communities in America's economic development. These are the distressed communities of today, but they can be the bulwark of tomorrow's economic growth.

The problems of these depressed areas are not new. Until 1954 there was some hope that national full employment would spread itself around and pull up the economies of the depressed areas. However, by 1954 we could see that the problem required special attention. Many of us in Congress called for a program to promote economic rehabilitation in the urban and rural areas which had been passed over by general prosperity. It was 5 years ago that we in Congress pointed out that the Government of the United States had in the Employment Act of 1946 pledged itself to policies which would promote maximum employment. The Employment Act of 1946 did not say that this pledge was not to cover Charleston, W. Va., or Scranton, Pa., or Buffalo, N.Y., or Detroit, Mich., or Duluth, Minn., or any other city where unemployment was at a high level. No; the pledge of the Government of the United States is to follow policies to promote maximum employment in the Nation as a whole. Here we are, 5 years later, still trying to get the administration to act.

When we in Congress first put forward proposals to meet the specific problems of the depressed areas, the administration ignored the proposals. The serious recession of 1957 and 1958 added to the human deprivation of those who live in the areas of chronic high-level unemployment. So the administration can no longer ignore the problem. They cannot just say it doesn't exist—the facts have been called to the attention of the American people. The people know that children are hungry. The people know that in hundreds of communities children are unable to attend school because they have no shoes. The people know that hundreds of thousands of men, ready, willing, and able to work, have been unable to find jobs. And what is even more important is that the American people know these conditions will not correct themselves. Therefore, the proposals in Congress to encourage the redevelopment of these depressed areas have received wide support among our people.

Even the administration now knows that these proposals can no longer be ignored. Yet, instead of supporting the effort to promote area redevelopment, they continue to oppose any real action.

The President vetoed the area redevelopment bill Congress passed last s''mmer, and the people of America showed their disapproval by vetoing more Republican candidates for Congress than at any time since 1936. Unfortunately, the administration still opposes the area redevelopment proposals which would do the long-overdue job.

The Republican administration now admits that there may be some distress in a few areas of the Nation, but they propose that the State and local governments do whatever is required. The administration takes the position that the Government of the United States just can't afford to help families and communities to recover and redevelop their economic potential.

I think the Congress, with the full support of the American people, should and will tell the administration that there are some things more important than a balanced dollar budget. That food, clothing, decent housing, medical care, and adequate education are necessary to a balanced human society. And that in the long run our whole way of life—our liberty, freedom, and high standard of living—depends on the willingness of each generation to assure expanding opportunities. The question should be, How can the free people of America best utilize their human and natural resources? To force able and willing men and women to stand by unoccupied because of the lack of jobs is unpardonably wasteful. To deny today's children the necessities of life is to wantonly destroy our greatest future resource. But the men of little vision in the administration can only talk about the budget. And they say our depresesd area redevelopment program is too expensive.

What have we proposed? We who have joined in the sponsorship of area redevelopment legislation, and there are more than 40 Senators on the bill, would authorize low-interest loans for private industry and public projects and grants for public facilities, in addition to informational, planning, and technical assistance to help State and local governments and development groups increase the number of permanent jobs in depressed areas. Also, we would permit an unemployed worker to continue to draw subsistence payments if he enters into a training program to acquire a skill which would help him get a job. The total cost of this entire program would be about $390 million, with $300 million of the total being in the form of repayable loans. The total cost to the Federal Government would be less than $90 million or about one-tenth of 1 percent of the Eisenhower budget for 1960. Still the administration says "No, we can't afford it."

Let me tell you that there are expenditures included in the Eisenhower budget which we must pay, but which were unnecessarily incurred. I refer to the increase in interest on Government bonds—an increase of $2,200 million. This increase of the interest rate, which will cost $2.2 billion in the 1960 budget, was deliberately planned and engineered by the Eisenhower administration. What is more they are planning even more interest increases. This increased debt service charge is an expense which will recur each and every year. So here we find the same administration

which says: "No, we can't afford area rehabilitation and the encouragement of job opportunities. We just don't have the $90 million that the program would cost. But we will pay $2.2 billion more in interest on Government bonds."

In 1960 this high interest policy will cost the American taxpayer 25 times that requested for the area redevelopment bill.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the RECORD, immediately preceding the vote on the area redevelopment bill, a statement explaining my position.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BYRD OF VIRGINIA

The pending area assistance bill would establish WPA-type programs involving Federal and local money and possibly State money in areas where unemployment is found to be persistent.

The bill would authorize expenditure of $389.5 million in Federal money. The administration proposed a similar program with expenditure authorizations totaling $53 million. The bill would exceed the administration request by $336.5 million.

As reported by the Senate Banking and Currency Committee the bill would authorize expenditure directly out of the debt, outside of appropriation control, of $300 million. It would authorize other spending authority which may be either contract authority or authority to appropriate totaling $89.5 million.

Provisions of the bill would:

1. Set up new independent agency in executive branch—the Area Development Administration.

2. Set up new loan program with two revolving funds for industrial and rural areas —to aid and participate in purchase, construction, rehabilitation, etc., of facilities for industrial uses; and it specifies that security for the Federal portion of the loans is subordinate.

3. Set up new loan program in another separate revolving fund for purchase, construction, rehabilitation, etc., of public facilities, which are unlimited in the absence of a definition in the bill.

4. Set up new grant program for planning, construction, rehabilitation, etc., of public facilities.

5. Direct the Administrator to promote and encourage participation in the program by providing information and assistance to any interested parties.

6. Authorize $4½ million annually for technical assistance to designated areas, including studies, evaluations, etc., either directly or under outside contracts.

7. Broaden the urban renewal program to allow areas covered by the bill to get and use urban renewal money.

8. Authorize new vocational training and retraining program in the Department of Health, Education, and Welfare.

9. Provide grants to States by the Secretary of Labor for subsistence payments to individuals being trained or retrained. Payments would be made to individuals not receiving unemployment compensation, and would be for a 16-week period.

10. Make provisions of the Davis-Bacon Act applicable to all construction under the bill.

11. According to the committee report, implement the so-called Full Employment Act.

12. Make adverse effect on an industry resulting from Trade Agreements Act the basis for high priority consideration under the program.

The following table shows area assistance funds provided under S. 722, as reported by the Senate Banking and Currency Committee, compared with the administration requests:

Area assistance funds provided under S. 722 as reported by the Senate Banking and Currency Committee, compared with administration request

	Authority to expend from public debt receipts		Contract authority and other authority to appropriate		Total	
	Administration request S. 1064	Reported by Senate S. 722	Administration request S. 1064	Reported by Senate S. 722	Administration request S. 1064	Reported by Senate S. 722
Loans:						
For industrial projects:						
In industrial redevelopment areas		$100,000,000	$50,000,000		$50,000,000	$100,000,000
In rural redevelopment areas		100,000,000				100,000,000
Subtotal, industrial projects		200,000,000	50,000,000		50,000,000	200,000,000
For public facilities		100,000,000				100,000,000
Total, loans		300,000,000	50,000,000		50,000,000	300,000,000
Grants and payments:						
For public facilities				$75,000,000		75,000,000
For technical assistance [1]			3,000,000	4,500,000	3,000,000	4,500,000
Retraining subsistence payments [1]				10,000,000		10,000,000
Total, grants and payments			3,000,000	89,500,000	3,000,000	89,500,000
Grand total		300,000,000	53,000,000	89,500,000	[2]53,000,000	[2]389,500,000

[1] Authorizations for annual appropriations in the amounts shown.
[2] Exclusive of administrative and other cost which would require additional appropriations annually.

Mr. DOUGLAS. Mr. President, in the interest of saving time I ask unanimous consent that a summarizing statement I had intended to make on Senate bill 722, be printed in the RECORD prior to the final vote.

There being no objection, the statement was ordered printed in the RECORD, as follows:

STATEMENT BY SENATOR DOUGLAS ON S. 722

I should like to make a few final remarks before the rollcall on final passage of S. 722, the area redevelopment bill.

AREA REDEVELOPMENT PROGRAM NEEDED NOW

There are many areas in the United States which have fallen prey to substantial and extended unemployment and underemployment, a condition which has existed for some time. These areas have been especially hard hit during recessions and, even during periods of recovery, they have often remained in a depressed state. This has caused hardship to many families and is a waste of vital resources. S. 722 would help these distressed areas with a program of self-help.

S. 722 would help those depressed areas which have sound economic potential, to strive more effectively for recovery. The areas, industries, and individuals in these areas should thus be able to achieve lasting improvements and create new employment opportunities.

Continued over a long period, depressed conditions cause disintegration of community physical resources—schools, stores, hospitals, banks, office buildings, homes, churches, and other community services. Moreover, carrying out the purposes of S. 722 would serve to reduce public outlays for unemployment compensation, relief, and various other forms of public assistance.

The needs of the low-income rural areas are also pressing. Rural areas have not shared during recent years in the growth of the country. In many rural counties in the United States, the average per capita income is as little as one-fourth that of the average person in the United States.

Funds provided by S. 722 would represent an investment in increasing productivity. Dollars spent to promote production by otherwise idle or inefficiently employed resources do not have the same inflationary effects as those which are spent under conditions of relatively full employment. Indeed, by making possible an increase in productivity in the Nation's distressed areas, the loans by the Federal Government contemplated under S. 722 might actually have anti-inflationary effects.

HOW THE BILL WOULD HELP

S. 722 proposes the establishment of an Area Redevelopment Administration headed by an Administrator appointed by the President with the advice and consent of the Senate. To be eligible for assistance, it would be necessary for areas to qualify under certain criteria and be designated by the administration as a redevelopment area. Two types of areas, industrial and rural, would be involved.

In the case of industrial areas, the Administrator would have the discretionary authority to designate any area with substantial and persistent unemployment over an extended period of time. When an area meets the specific criteria set forth in the bill, it would automatically become eligible for assistance.

The bill would also permit the Administrator to qualify rural areas for assistance in the case of those rural areas which have the largest numbers and percentages of low-income families, persons receiving public assistance, and where substantial and persistent unemployment or underemployment prevails.

Three revolving loan funds of $100 million each would be created. These would be devoted to loans for (1) industrial areas, (2) rural areas, and (3) public facilities in both industrial and rural areas where such facilities would encourage economic development.

In addition to the three revolving loan funds, the bill provides authorization for appropriations up to $75 million for grants for public facilities in those areas which cannot repay loans.

An authorization for appropriation of $1,500,000 a year would permit the Administrator to make technical assistance grants to designated areas.

Upon the request of the Administrator, the Housing and Home Finance Agency would give financial assistance to municipalities in industrial redevelopment areas without regard to the residential requirements in current urban renewal legislation. In addition, urban planning grants would be made available to designated areas having a population of 25,000 or more.

The bill would provide for Federal assistance for vocational training in designated areas which would be furnished through State vocational education agencies where it can provide the facilities and services needed. If this is not possible, such training

could be furnished through public or private institutions.

There would also be a fund of $10 million for the purpose of making subsistence payments to unemployed persons being retrained and not entitled to unemployment compensation.

AREAS AFFECTED

According to the best estimates of the Department of Labor, 112 industrial areas spread over 26 States qualify for the designation of "industrial redevelopment area" under the terms of S. 722.

About 6.3 million workers or roughly a 10th of the total national civilian labor force are located in these areas. However, these same areas account for about 17 percent of total national unemployment. In addition, 12.2 percent of the work force in these 112 areas is unemployed, a rate twice as high as the current national average.

With respect to rural areas, it should be noted that the Department of Agriculture has prepared lists of the 500 counties in the United States with 100 or more commercial farms which have ranked, according to the 1954 Census of Agriculture, lowest in terms of level of living for farm-operating families and the 500 counties in the United States with the highest proportion of the commercial farms having gross sales of farm products of less than $2,500. A total of 336 counties appeared on both lists. It may be assumed that these areas provide the core of the low-income rural areas which would be eligible for assistance under a comprehensive Federal-assistance program aimed to alleviate underemployment.

REFUTATION ARGUMENTS AGAINST S. 722 IN THE MINORITY REPORT

Let us consider some of the main arguments against S. 722 which appeared in the minority report.

1. Discrimination in favor of a few: The minority report (p. 39) states that "only a very small proportion of the Nation's unemployed would be singled out as eligible for the alleged benefits of the program, and it should be noted that the selection process is based on purely arbitrary criteria." It further points out that the program would focus only on those unemployed in the designated areas which are in excess of 6 percent.

In effect, this says that an unemployed worker is not helped if he lives in an area which does not qualify for help.

This point fails to take into account the fact that an unemployed worker has less chance of a job if he lives in a depressed area. If the unemployment rate is small and of relatively short duration, he has less competition in getting a job than does a worker who lives in an area of high and persistent unemployment. This is one of the main reasons that, for the country as a whole, we become more concerned about unemployment at a high rate than when the rate is low. Dealing with nationwide unemployment requires a broad program. S. 722 is aimed at alleviating local rather than national depressions.

2. Arbitrary criteria: The minority report (p. 40) says that the criteria for area eligibility is arbitrary and unworkable.

Any standards laid down can be called arbitrary. The report asks, Why select 6 percent unemployment as a base? In establishing any standards, we have to draw the line somewhere. We also need to permit discretion on the part of the Administrator. An area with 7 percent unemployment may, for a variety of reasons, be in worse shape than an area with a 9-percent rate. That is why discretion is necessary.

As to fixing a minimum rate of 6 percent, this was based on testimony at various hearings held on the measure. We have to draw the line somewhere. Government programs which establish standards where a so-called arbitrary line has to be drawn are too numerous to list, but I will mention a few examples. The social security work clause stipulates that an annuitant cannot receive payments if he makes more than $1,200 a year in covered employment. Why not $1,000 or $1,400? Many universities require 120 credit hours for graduation. Why not 115 or 125? Most States require that a person be 21 years of age before being able to vote. Why not 20 or 22?

I could go on ad infinitum, but I hope I have shown how ridiculous it is to attack a program as being arbitrary merely because it sets specific standards.

The minority report also states that the program would be unworkable. We have given the Administrator criteria for the designation of redevelopment areas. He would have a Cabinet-level advisory committee and a 25-man public advisory committee to help him. The committee report has indicated the congressional intent that the program is to be based on economic soundness. I suppose that we could go on and on with further restrictions and directions, but that would destroy the flexibility of the program. Unfortunately, it is always necessary in the final analysis to assume that a Government administrator will have at least a modicum of common sense. If not, we have congressional committees with the power to investigate and change laws if the operation of a program proves unsatisfactory.

3. Interference with private market: The minority report states (p. 43) that "the basic defect of the approach of this bill is this: It runs counter to the precepts of what is still essentially a private market mechanism operating within a dynamic and growing economy."

Surely the signers of the minority report are not advocating a return to a strict interpretation of Adam Smith economics. The purpose of S. 722 is to help, to some extent at least, to channel some of our industrial growth into areas of substantial labor surplus. The degree to which this would be an interference in the private economy should certainly be no greater than subsidizing airlines, railroads, the oil industry, shipbuilders, or other groups currently enjoying the Government's largess. Moreover, it is obvious that subsidizing cotton primarily subsidizes agriculture in the South; that subsidizing corn helps the Midwest; that subsidizing wool helps the West. So that even the concept of helping an area is by no means new.

4. Failure to recognize existing programs: The minority report states (p. 45) that "the devices established in the bill * * * are defective in the failure to recognize existing programs, thus causing a duplication of efforts." It cites, as duplication, small offices concerned with development which are existent in the Department of Commerce and the Department of Agriculture. It also cites the Small Business Investment Act.

So far as I am concerned, I would be glad to have whatever minor programs there are in Commerce and Agriculture to be put into the new Area Redevelopment Administration proposed by the bill.

With respect to the Small Business Investment Act, the minority report itself admits that this was designed to fill an "institutional gap" in our economic credit structure; namely, the difficulty in small business enterprises to securing adequate credit. But the SBIA is designed to help small business as such, whether in a depressed area or an area of great prosperity. It is designed to help small business as such.

To the degree that the facilities of the SBIA could be used to create new industry in depressed areas, that would be done since the Administrator of the area redevelopment program cannot allocate loans when they are available from other sources. Moreover, the development of industries in the depressed areas will often involve big business as well as small business.

SUMMARY

The problems which S. 722 is designed to meet have been recognized for several years. The Joint Economic Committee in the 84th Congress called for Federal action to help chronically distressed communities. Later, in its 1955 report, that committee urged that the public works program be speeded up, and that loans and technical assistance be extended to help these distressed communities to improve their economic conditions.

Also in 1955, the Joint Economic Committee made a careful study of low-income families in the United States under the direction of Senator SPARKMAN and called attention to the persistence of low income in various rural areas in the country, as well as the problems of depressed industrial areas. The committee urged a Federal program to combat the basic causes of economic distress both in depressed industrial areas and in low income regions.

In 1956, the committee reiterated its conclusion that a Federal depressed areas program was needed, and the majority of the committee endorsed a comprehensive program which was embodied in a bill which I introduced, S. 2663, 84th Congress. That bill was the subject of long hearings by the Committee on Labor and Public Welfare. It was passed by the Senate during the last days of the session, but the House did not have time to act upon it before the 84th Congress adjourned.

Both major parties called for Federal legislation to aid economically depressed areas in their respective 1956 platforms.

In the 85th Congress, along with 39 cosponsors, I introduced S. 3683, which was referred to the Senate Banking Committee. This bill, with modifications, was passed by Congress last year, but did not become law because of a Presidential pocket veto.

Again in the 86th Congress, I introduced, with 38 cosponsors, similar legislation in the bill S. 722. This bill was the subject of committee hearings. The committee has now reported S. 722 with amendments. This is the bill now before us for a vote.

The area redevelopment bill now before us would help to reduce unemployment and poverty where it is the worst. It is not a program designed to cure great industrial depressions nor seasonal unemployment. But it would reduce the persistent and deep pockets of unemployed and hence decrease so-called structural unemployment, which general monetary and fiscal policy cannot reach.

I hope from the bottom of my heart that we can get legislation in the very near future. In this way, we shall have ample opportunity to consider the measure again if the President should veto it for a second time.

Mr. JOHNSON of Texas. Mr. President, I ask for the yeas and nays on the passage of the bill.

The yeas and nays were ordered.

Mr. JOHNSON of Texas. Mr. President, if the Senator from Illinois [Mr. DIRKSEN] will yield back the remainder of his time, I will yield back the remainder of my time.

Mr. DIRKSEN. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on the passage of the bill. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Arkansas [Mr. FULBRIGHT] and the Senator from Georgia [Mr. RUSSELL] are absent on official business.

I also announce that the Senator from Washington [Mr. MAGNUSON] is absent because of illness.

I further announce that, if present and voting, the Senator from Georgia [Mr. RUSSELL] would vote "nay."

On this vote, the Senator from Arkansas [Mr. FULBRIGHT] is paired with the Senator from Washington [Mr. MAGNUSON].

If present and voting, the Senator from Arkansas would vote "nay," and the Senator from Washington would vote "yea."

The result was announced—yeas 49, nays 46, not voting 3, as follows:

YEAS—49

Anderson	Hart	Morse
Bartlett	Hartke	Moss
Beall	Hayden	Murray
Bible	Hennings	Muskie
Byrd, W. Va.	Hill	Neuberger

Eastland	McClellan	

NOT VOTING—3

Fulbright	Magnuson	Russell

So the bill (S. 722) was passed.

Mr. DOUGLAS. Mr. President, I move that the vote by which the bill has been passed be reconsidered.

Mr. SPARKMAN. Mr. President, I move to lay on the table the motion to reconsider.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

LEVYING AND COLLECTION OF TAXES AND ASSESSMENTS

Mr. DOUGLAS. Mr. President, I move that the Senate proceed to the consideration of Senate bill 643, to amend the act entitled "An act relating to the levying and collecting of taxes and assessments, and for other purposes," approved June 25, 1938.

My purpose in making the motion is to have the bill made the unfinished business.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Illinois.

The motion was agreed to; and the Senate proceeded to consider the bill (S. 643) to amend the act entitled "An act relating to the levying and collecting of taxes and assessments, and for other purposes," approved June 25, 1938.

FISCAL SOUNDNESS

Mr. THURMOND. Mr. President, on March 17, 1959, the distinguished senior Senator from Virginia [Mr. BYRD] delivered a very timely and able address before the National Taxpayers Conference at the Sheraton Park Hotel in Washington, D.C. In his address this great fiscal expert and chairman of the Finance Committee has issued a solemn warning to all American taxpayers that they must demand a return to fiscal sanity by our Government if we are to survive as a nation. The importance of the distinguished Senator's address is pointed up by the following two sentences which appear on page 1:

With fiscal soundness I would have no fear for the future—economically or militarily. Without it there will be neither solid economic progress nor security with military preparedness.

This address has received favorable attention in two columns in the Washington Evening Star of March 19 and 20, 1959. The distinguished columnist and magazine editor, Mr. David Lawrence, refers to Senator BYRD's plea for a balanced budget as "significant news." Another distinguished writer, Mr. Gould Lincoln, winds up his favorable comments with this paragraph, which I heartily endorse:

The Senator's voice has been raised against huge Government spending—deficit spending—for more than a quarter of a century. With the Federal debt approaching the $300 billion mark, it is time the people and the Government should listen.

I wish, Mr. President, that—contrary to what some may have wished once upon a time—we had more HARRY BYRDS in the Senate.

Mr. President, I ask unanimous consent to have printed in the RECORD following these remarks, this excellent address, and the columns by Messrs. Lawrence and Lincoln, previously referred to.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY SENATOR HARRY F. BYRD, DEMOCRAT, OF VIRGINIA, BEFORE THE NATIONAL TAXPAYERS CONFERENCE, SHERATON-PARK HOTEL, WASHINGTON, D.C., 8 P.M., TUESDAY, MARCH 17, 1959

Development of our great resources through free enterprise democracy is the source of this Nation's strength. With atomic energy, rocketry, etc., we are entering a new era. Our population is increasing. We have unduly exploited our resources, but they are still tremendous. Our productive know-how and capacity are yet unsurpassed. These are elements on which free enterprise democracy should thrive soundly, and proceed constructively for the good of all mankind.

Our free enterprise democracy is the greatest system the world has ever evolved. But there is one controlling requirement, and this must never be overlooked. The system is based on solvent government and sound money. With fiscal soundness I would have no fear for the future—economically or militarily. Without it there will be neither solid economic progress nor security with military preparedness. We have allowed ourselves to grow weak in the requirement for solvent government and sound money. Assurance of fiscal soundness in the future does not now exist.

Deficit financing has been the rule—not the exception—for more than a quarter of a century. Current Federal spending and deficit have been exceeded only in the peak years of global war emergency. Federal debt set its alltime record January 23, this year. It exceeded the World War II peak by more than $6 billion. Best experts concede that deficit financing in present circumstances is a heavy factor in continuing inflation.

We have reached a point of serious reluctance to invest in the bonds of the U.S. Government. The fiscal situation deteriorated faster during the past year than in any comparable peacetime period to my knowledge. In 6 months we moved from estimates of virtually balanced budgets in fiscal years 1958–59 to combined deficits of $15 billion. In the process we were forced to raise the statutory debt limit twice in the same period. At the present rate, Federal agencies would spend more than $400 billion in 5 years.

Contrary to general understanding, recent great increases in Federal spending have not been for defense or foreign aid. The tremendous increases have been for domestic-civilian programs. Since 1954 expenditures outside of defense, atomic energy, and foreign aid categories increased from $19.1 billion to $34 billion estimated in the current year. This is an increase of $14.9 billion, or 78 percent.

There is terrific pressure in the current session of Congress for enactment of more nonessential spending programs. Almost invariably these new spending programs involve multiyear or permanent commitments for heavy spending in the future.

Much of the domestic-civilian spending is for subsidies; and by subsidies I mean nearly all kinds of loans, grants and payments out of the Federal Treasury to special beneficiaries. Many of these subsidy programs are bottomless pits for Federal spending and contribute to sky-high inflation. The Federal Government of the United States can not now pay its bills except by increasing debt and inflation. Revenue at present tax rates does not meet our commitments.

Interest on the Federal debt is taking approximately one-tenth of all taxes collected. Chronic inflation has reduced the purchasing power of our money 52 percent. The American dollar is now worth 48 cents by the 1939 index. Inflation destroys fixed incomes, provident investment, prudent business, sound financing, national security, and democratic government. More than 20 years of destructive inflation in this country to date have led to continual demands for increased Federal subsidization. The Federal Government is now subsidizing business, industry, private finance, agriculture, transportation, power, health, education, States, localities, individuals, etc.

By the process of cheapening our money and centralizing power in the Federal Government, we have descended to a level of state socialism which is obvious, if not admitted. Social democracy is a subterfuge for sound government and constructive enterprise. Its evils are historically documented wherever nations have stooped to it. The Federal position alone is bad enough, but it is epidemic. It has spread to State and local governments. It has permeated our whole economy. It has dangerously changed our attitudes—public and private.

Total public expenditures in this country—Federal, State, and local—this year will reach nearly $150 billion. Federal, State, and local governments this year will take $130 billion or more out of the pockets of American taxpayers in revenue receipts from

all sources. In their annual budgets Federal, State, and local governments this year will run deficits totaling $15 to $20 billion. Public debt—Federal, State, and local—this year will approach $350 billion. Private debt now runs at more than $500 billion.

In short, we have nearly a trillion dollars of debt on our backs. That figure is beyond ordinary comprehension. When individuals become insolvent they take bankruptcy and dispose of their obligations. When governments become insolvent their money becomes worthless and they go through a revolution wringer. The nature and process of the revolutions may vary, but invariably the form of government is changed. There is no reason to think free enterprise democracy as we have known it could survive. I concede, of course, the necessity for deficits in extreme national emergencies.

For the first 150 years of our history we met our emergencies when they arose. But when they were over we promptly restored sound financing, characterized by balanced budgets, and began paying off the debt. Under this practice, combined with our wealth and natural resources, this Nation grew great in the short span of a century and a half. But in our time we have not only continued exploitation of our resources; we have abandoned our traditional policy of fiscal soundness. We have sapped our strength and undermined our form of government with continual deficit spending, rising debt, and spiraling inflation.

There can be no doubt that we have allowed ourselves to become weak in the fundamental requirement for fiscal soundness. Effects of this weakness to date are bearing down heavily upon us in all private and public pursuits. Privately they are tangible in the form of inflation. Publicly they are manifest in Federal fiscal frustration at all levels of government. The situation will continue to grow worse unless there is drastic action in the immediate future.

In the process of centralizing power, the Federal Government is usurping State and local revenue sources. At the same time it is encouraging greater spending at all levels. And through expanding paternalism, great segments of business, labor, agriculture, and taxpaying individuals are being brainwashed with Federal subsidy. States have been pushed to a point where they are having difficulty paying the bills. Highway programs are examples.

Localities also are running out of funds and sources. They will be in Washington this week asking for Federal payments in lieu of taxes on federally owned real estate.

Taxpayers, caught in the pinch of levies at all levels, are driven to search for tax loopholes and avoidance, and coming to Government with hands out for payments of all kinds. Once we are on this merry-go-round, we are riding an endless circle.

On the other side we find States sacrificing their sovereignty through increasing efforts to push more costs on the Federal Treasury. Public assistance and unemployment payments are examples. Localities are sacrificing their autonomy in the same way. For instance, they are now demanding that the Washington Government underwrite the bill for slum clearance and urban renewal in privately owned, locally taxable districts.

Individuals, business, agriculture, etc., are sacrificing their traditional American independence for Federal subsidy in forms which are legion. Nearly 40 million people will receive direct payments from the Federal Treasury. this year. With their families these 40 million people could reach a number equivalent to half the population of the United States. Nearly $87 billion is outstanding at this moment under so-called Federal credit programs for housing, veterans, agriculture, commerce, defense production, small business, etc. There are now 77 programs for State and local subsidy. Payments to State and local governments are now totaling $7 billion.

Some of these programs are not generally referred to as subsidies, but they are Federal payments to special beneficiaries just the same. There are others under other programs, and called by other names. There are some that do not meet the eye such as the postal deficit, foreign trade, and development programs, Government contracts under which beneficiaries demand that the level of Federal expenditures be maintained or increased, needed or not. Fiscal frustration is evident at every turn in the Federal Government. Our debt is the highest the world has ever known, and we are right up against the highest peacetime debt ceiling of all time. We engage daily in deficit financing, and there is reluctance in the purchase of Government bonds. Tax revenue is insufficient, but tax rates are near the point of diminishing returns. Cynics advocate more inflation to produce more revenue, but it increases the cost of everything the Government buys.

The President says balance the Federal budget, and the spenders say spend more. Sometimes the frustration descends to complete fiscal irresponsibility. In the Senate during recent weeks we have heard the spenders say: "Disregard the budget when it interferes with our projects; resort to a capital budget and hide the spending; and do away with the budget, if you just spend enough the revenue will increase."

This kind of fiscal irresponsibility is inherent in efforts to use the Federal budget to turn the economy on and off like a spigot. Fiscal irresponsibility is just as inevitable in efforts to use the Federal budget to force social reform. Fiscal irresponsibility is at its worst when effort is made to use the Federal budget as a tool of the so-called Full Employment Act.

Those of us working simply to achieve constructive reduction in Federal spending to preserve solvent government and sound money have our own difficulties with the budget. But they are of a different kind.

We find billions to be spent through back doors and out of unexpended balances which are outside of annual appropriation control. We find billions more to be spent under previous commitments in foreign agreements, Federal-State formulas, contracts with those dealing in Government purchases, and promises to pay in scores of subsidy programs.

The staff of the Joint Committee on Reduction of Nonessential Federal Expenditures has just completed a study of the $77 billion expenditure budget for the coming fiscal year, beginning July 1. It found that only about one-third of the $77 billion in expenditures scheduled for fiscal year 1960 can be effectively or practically reached in appropriation bills to come before Congress in the current session.

Preservation of fiscal soundness in governments of the United States will not be easy. There are no short cuts.

It is a grave responsibility which rests upon the President, the Congress, and every citizen of the Nation acting individually and through all organizations with which he may be affiliated. It will take constant, unrelenting effort by all of those willing to practice unselfish patriotism for the preservation of our form of government.

I am here tonight because I know you represent the kind of people upon whom we must rely. If we are to preserve the solvency of our Government and the validity of our money—in short, our way of life—let's summarize what we have to do now.

First. We must support the President in his offorts to reduce Federal expenditures. If he is forced to veto appropriation or other legislation authorizing expenditures, the need for our support will be even greater.

Second. We must oppose all new legislation for nonessential Federal spending with all means at our disposal at all stages of the legislative process.

Third. We must constantly urge the President to hold down Federal spending under administrative control of Federal agencies, including spending out of balances in prior appropriations.

Fourth. We must support all current proposals to recapture congressional control over the annual rate of Federal spending.

Fifth. We must constantly urge State governments, local governments, organizations representing segments of the population such as business, labor, agriculture, veterans, etc., and individuals themselves to reduce demands on the Federal Treasury, and eliminate abuses in Federal programs in which they are involved.

Sixth. We must constantly demand that the Federal Government withdraw from programs which usurp State sovereignty, local autonomy, and individual independence.

Seventh. We must constantly demand that the Federal Government, in withdrawing to its constitutional sphere, return to other levels of government the sources of revenue it has usurped.

The Federal Government now owns more than 455 million acres of land in the United States. This is nearly 25 percent of our national confines. The staff of the Joint Committee on Reduction of Nonessential Federal Expenditures has just been ordered to make a survey of Federal property which should be returned to local tax rolls. Your State organizations could be extremely helpful in this matter. If you can ferret out idle Federal areas which could be developed as taxable property, please let us know. We should like to work with you to the best of our ability.

With respect to Federal payments to States, localities, business, individuals, etc., the joint committee staff has started also a study of Federal subsidies. Here again you could be extremely helpful, if through your State organizations, you could bring influence to bear on State and local governments, and organizations representing individuals, in an effort to reduce demands on the Federal Treasury. Federal subsidies are ugly words to many people. But I can assure you that the committee study will treat the subject in its broadest definition. Reduction in the cost of these programs can be accomplished by tightening up at the source—by elimination of abuses.

As you know, Congressmen SMITH and CANNON, and Senator THURMOND and I, and others, have introduced resolutions designed to recapture congressional control over the annual rate of Federal spending. Your support of these measures will be helpful.

The President is asking you to support his efforts to hold down Federal spending. I know you will comply. I join you.

Beyond this, I think you believe that, in view of the tremendous debt we are carrying, a balanced budget is not enough. We need a substantial surplus. We would be far safer if, in the coming year, Federal expenditures were held below $72 billion. Such a figure would allow for a reasonably good recovery from last year's decline in receipts. It would offer relief from excessive deficit spending. It would require some slow-down in the rapid rise in domestic civilian expenditures. But you are forewarned that such a reduction in the coming year would require more than action on current appropriation bills alone.

Some reductions applying to fiscal year 1960 can be made in the forthcoming appropriation bills. But for other reductions, such as those in expenditures from balances in appropriations enacted in prior years, we must rely on the President. For still other reductions in such expenditures as public

assistance and urban renewal, we must urge State and local governments to hold down demands.

And, finally, there must be cooperation by business with Government in tightening up policies with respect to subsidies and more efficient performance on contracts; and those on Government subsidy and payment rolls must be urged to eliminate abuses in the programs. That is a large order, but realistically I do not look for substantial reductions until those participating in the high cost of Government begin to cooperate with unselfish patriotism. Organizations such as yours could render no greater service than to take the lead in such a crusade. Personally I shall support the President's effort to reduce Federal expenditures.

In addition, I believe the best interests of this Nation and our allies would be served if the $77 billion expenditure estimate for the coming fiscal year were reduced by $5 to $6 billion or between 7 and 8 percent. I know this could be accomplished without the impairment of a single essential function. From long experience I know public demand could force such reductions.

The voice of the people of this country, if it is loud enough, will overcome selfish and highly organized minorities and will prevail. This is the great virtue of our constitutional democracy as contrasted with dictatorship. So the job is up to you and me and every other citizen.

We must remember that the very foundation of our democracy rests upon the fact that people support the Government; it is not the purpose of the Government to support the people.

The national interest must come ahead of private gain. To achieve our objective there must be sacrifice all down the line.

Federal expenditures, fiscal years 1954–59, broken categorically to show national security, foreign aid, etc., and domestic-civilian

[In millions]

	Actual					Estimated, 1959
	1954	1955	1956	1957	1958	
National security:						
Military functions	$40,336	$35,532	$35,791	$38,439	$39,062	$40,800
Stockpile and defense production	1,045	944	588	490	625	378
Atomic energy	1,895	1,857	1,651	1,990	2,268	2,630
Subtotal, national security	43,275	38,334	38,030	40,918	41,955	43,808
Foreign aid:						
Military assistance	3,629	2,292	2,611	2,352	2,187	2,312
Economic and other	1,511	1,960	1,616	1,686	1,909	3,321
Subtotal, foreign aid	5,140	4,252	4,227	4,038	4,096	5,633
International affairs	221	221	231	290	325	387
Total, other than domestic-civilian	48,636	42,807	42,487	45,246	46,376	49,828
Domestic-civilian:						
Veterans' services and benefits	4,256	4,457	4,756	4,793	5,026	5,198
Labor and welfare	2,485	2,575	2,821	3,022	3,447	4,380
Agriculture and agricultural resources	2,557	4,389	4,868	4,526	4,389	6,775
Natural resources	1,315	1,202	1,104	1,296	1,543	1,708
Commerce and housing [1]	817	1,420	2,142	3,392	3,816	6,421
General government	1,235	1,199	1,627	1,787	1,353	1,673
Interest	6,470	6,438	6,846	7,308	7,689	7,601
Allowance for contingencies						200
Total, domestic-civilian [1]	19,136	21,679	24,165	26,124	27,267	33,955
Grand total [1]	67,772	64,486	66,652	71,370	73,643	83,873

[1] Since 1954 expenditures for Federal National Mortgage Association and highways have been dropped from the general fund budget and converted into so-called trust funds—FNMA in 1955 and highways in 1957. Commerce and housing figures and affected totals above are adjusted to include these figures throughout for complete and accurate comparison over the period.

[From the Washington Evening Star, Mar. 20, 1959]

(By David Lawrence)

A WARNING TO CURB SPENDING—SENATOR BYRD IS PRAISED FOR URGING DRASTIC ACTION TO AVERT INSOLVENCY

If you're one of the spenders in Congress and you ridicule the idea of a balanced budget, you get plenty of attention. But if you're a saver and want to keep the American dollar from being forced down to a value of 10 cents, then you're old fashioned and not in tune with the times.

Senator HARRY BYRD of Virginia happens to be chairman of the Senate Finance Committe. He also happens to be a member of the Democratic Party, so many of whose members are trying to make a virtue of bigger and bigger spending by Government. Yet, when he spoke Tuesday night at the National Taxpayers Conference here, his words got scant attention.

"Contrary to general understanding," said Senator Byrd, "recent great increases in Federal spending have not been for defense or foreign aid. The tremendous increases have been for domestic-civilian programs."

This alone seems to be a worthwhile piece of news. For, in the speeches emanating from Capitol Hill, President Eisenhower is repeatedly being accused of trying to balance the budget at the expense of national defense in the battle against Communists. The purpose of the crusade for more spending is of course, to break the faith of the public in budget balancing by using defense as an excuse, so that all sorts of subsidies and grants can be made in the guise of social reform. The Virginia Senator says:

"Since 1954, expenditures outside of defense, atomic energy and foreign aid categories increased from $19.1 billion to $34 billion estimated in the current year.

"This is an increase of $14.9 billion, or 78 percent. There is terrific pressure in the current session of Congress for enactment of more nonessential spending programs. Almost invariably these new spending programs involve multiyear or permanent commitments for heavy spending in the future.

"Much of the domestic-civilian spending is for subsidies—and by subsidies I mean nearly all kinds of loans, grants and payments out of the Federal Treasury to special beneficiaries. Many of these subsidy programs are bottomless pits for Federal spending and contribute to sky-high inflation.

"The Federal Government of the United States cannot now pay its bills except by increasing debt and inflation. Revenue at present tax rates does not meet our commitments.

"Interest on the Federal debt is taking approximately one-tenth of all taxes collected

"Chronic inflation has reduced the purchasing power of our money 52 percent. The American dollar is now worth 48 cents by the 1939 index.

"Inflation destroys fixed incomes, provident investment, prudent business, sound financing, national security, and democratic government.

"More than 20 years of destructive inflation in this country to date have led to continual demands for increased Federal subsidization.

"The Federal Government is now subsidizing business, industry, private finance, agriculture, transportation, power, health, education, States, localities, individuals, etc.

"By the process of cheapening our money and centralizing power in the Federal Government, we have descended to a level of state socialism which is obvious, if not admitted.

"Social democracy is a subterfuge for sound government and constructive enterprise. Its evils are historically documented wherever nations have stooped to it.

"When individuals become insolvent, they take bankruptcy and dispose of their obligations.

"When governments become insolvent, their money becomes worthless and they go through a revolution wringer.

"The nature and process of the revolutions may vary, but invariably the form of government is changed. There is no reason to think free enterprise democracy as we have known it could survive."

Senator BYRD said he concedes the necessity for deficits in extreme emergencies, but that in its first 150 years America met her emergencies and then promptly restored sound financing, she balanced the budget, and began paying off debt. He points out that nearly 40 million persons are getting direct payments from the Federal Treasury this year and that, with their families, this could reach a number equal to half the population of the United States. He appeals to his colleagues in Congress to stop the spending. He says "cynics advocate more inflation to produce more revenue, but it increases the cost of everything the Government buys." The Virginia Senator adds:

"The situation will continue to grow worse unless there is drastic action in the immediate future."

This plea by the chairman of the Senate Finance Committee—who, though a Democrat, supports the President's efforts to balance the budget—is significant news.

[From the Washington Star, Mar. 19, 1959]

GET OFF UNCLE SAM'S BACK

(By Gould Lincoln)

Senator HARRY F. BYRD, of Virginia, chairman of the powerful Senate Finance Committee, has issued a call for Americans to get off Uncle Sam's back and save our present democratic form of government. The Virginia Democrat has produced an alarming array of figures and facts, which show that the Federal Government is being rapidly shoved into a state of insolvency. He shows, too, that State and local governments and the people and their businesses are doing their share to bring about an intolerable financial situation, cheapening the dollar and causing more and more inflation. Addressing the National Taxpayers Conference Tuesday the Senator warned:

"When governments become insolvent, their money becomes worthless and they go through a revolution wringer. The nature and process of the revolutions may vary, but invariably the form of government is changed. There is no reason to be-

lieve that our free-enterprise democracy as we have known it could survive."

Senator BYRD also said: "By the process of cheapening our money (the dollar is now worth 48 cents by the 1939 index) and centralizing power in the Federal Government, we have descended to a level of state socialism which is obvious, if not admitted."

In support of this contention, he pointed out that the Federal Government is now subsidizing business, industry, private finance, agriculture, transportation, power, health, education, States and localities.

THREE HUNDRED AND FIFTY BILLION DOLLARS PUBLIC DEBT

The Senator said that total public expenditures in this country—Federal, State, and local—will reach the staggering total of $150 billion this year, with the Federal Government spending slightly more than half of the total. He predicted that deficit spending of the governments will total $15 to $20 billion in the same period, and that public debt will approach $350 billion. Private debt, he said, now runs at more than $500 billion.

The Virginia Senator did not mince words in speaking about the spenders in his party in Congress who are seeking—and apparently accomplishing their end—to upset President Eisenhower's precariously balanced $77 billion Federal budget. He accused them of cynicism and worse in their proposals to spend the country out of debt. Instead, Senator BYRD urged that the Democratic-controlled Congress and the President combine to cut the Federal budget by some $5 billion or $6 billion below $77 billion. He insisted that such cuts could be made in Federal spending for the next fiscal year without impairing any of the essential Government services to the people.

Senator BYRD's economic philosophy differs radically from that of the free spenders in Congress and from that of the Democratic Advisory Council and the Americans for Democratic Action. More and more, it appears certain that the issue of fiscal responsibility in Government will go into the national political campaign next year. And the Democratic Congress can and apparently is bent on making it an issue. Senator BYRD sums up the situation this way:

"The President says balance the budget and the spenders say spend more. Sometimes the frustration descends to complete fiscal irresponsibility. In the Senate during recent weeks we have heard the spenders say: Disregard the budget when it interferes with our projects; revert to a capital budget and hide the spending; do away with the budget—if you just spend enough, the revenue [of the Government] will increase."

PROPOSED STEPS

The only way to halt our march along the road to financial ruin, in Senator BYRD's opinion, is for public opinion to exert itself in opposition to this ever-increasing demand for bigger and bigger Government expenditures. The first step, the Senator said, is to support President Eisenhower in his battle for a balanced budget. Other steps he outlined are opposition to all new legislation for nonessential Federal spending, pressure on the President to hold down spending under administrative control of the Federal agencies, and pressure on all State and local governments, on business and labor organizations, on agriculture and veterans organizations and on individuals themselves to reduce their demands on the Federal Treasury.

Senator BYRD called attention to the fact that, contrary to the general belief, recent great increases in Federal spending have not been for defense but for domestic civilian programs sometimes called "social programs." To prove his point, Senator BYRD said that expenditures outside defense, atomic energy and foreign aid, since 1954, increased from $19.1 billion to $34 billion estimated in the current year.

The Senator's voice has been raised against huge Government spending—deficit spending—for more than a quarter of a century. With the Federal debt approaching the $300 billion mark, it is time the people and the Government should listen.

KEEPING PERSPECTIVE AND FAIR ATTITUDES ON THE QUESTION OF NEPOTISM IN THE SENATE AND THE HOUSE

Mr. NEUBERGER. Mr. President, all Members of the Senate and the House have followed the excitement over nepotism in Congress. I think it is certainly sound that the public know who are on public payrolls. I would support a resolution providing that Senate payrolls be open to the press and the public.

However, Mr. President, when a Member of Congress employs a relative, it does not follow that the relative is incompetent or undeserving of such employment. We all know that many famous and outstanding Members of Congress have hired their relatives—for example, Senator Harry S. Truman, Senator Arthur H. Vandenberg, Senator Irving M. Ives, Speaker John N. Garner, and many others.

No relative serves on my payroll, although my wife performs many valuable services at my Senate offices. Yet I would never criticize a Senator because he chose to hire a relative. If the relative were without merit, that would be different. But it never follows that a relative is, per se, underserving of being on a payroll.

One of the most thoughtful editorials I ever have read on the whole question of nepotism was published on March 18, 1959, in the Oregon Daily Journal, in my home city of Portland, Oreg. The editorial sets the issue in perspective, and points out that many sons of corporation presidents become vice presidents and the stockholders foot the bill. So let us be fair when we consider the nepotism question.

I ask unanimous consent, Mr. President, that this able editorial from the Oregon Journal be published in the body of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KEEP PERSPECTIVE ON NEPOTISM

Like congressional junkets, congressional nepotism is a favorite target for critics. And like junkets, there is nothing wrong with the practice so long as it does not get out of hand and so long as the public gets its money's worth.

The term "nepotism" has taken on unpleasant connotations, much like the term "politician"—a development which isn't altogether fair to those who practice it.

The Oregon Legislature might be cited as an example of nepotism run rampant. Wives in great numbers show up on the State payroll as secretaries to their senator or representative husbands. There have been times when a particular wife couldn't distinguish a page of Gregg pothooks from a page of braille, and occupied the secretarial seat on house or senate floor only on occasions of great moment when seating space was at a premium.

No one has raised great objection to this, and certainly not to the wife who actually works. We pay our legislators a pittance, we deny them any living expenses and, as a consequence, the wife has to go to work if a legislator is even to come close to breaking even.

And Federal Senators and Representatives, even at $22,500 a year, find the job is not exactly a money-making proposition. The criterion should be not whether the congressional employee is or is not a relative, but whether he or she is doing a job commensurate with the salary.

When the spotlight swings to the payroll in a Congressman's office, it is inevitable that the innocent as well as the guilty will get hurt.

For example, the Associated Press published a list of Representatives who had persons with the same or similar family name on their January payroll.

This brought cries from the Smiths, the Browns, and the Joneses. FRANK SMITH (Democrat, Mississippi), for example, took the floor of the House to "raise one voice in opposition to this great self-righteous crusade which the press of the country has taken upon itself to conduct against the House of Representatives * * * concerning relatives and alleged relatives on the payroll."

The Representative from Mississippi went on to say he would be glad to claim kinship with all the Smiths in the country but could not and that the young woman in his office, whose surname is Smith, unfortunately is not a relative.

And so it goes. Undoubtedly, there are abuses in this field as there are in the matter of congressional junkets and the occasional glare of publicity probably has a salutary effect. But let's keep our perspective, and for those who would throw stones at all public officeholders, let's not forget that private business has its favorite sons who become vice presidents overnight, and the stockholders foot the bill.

TRIBUTE TO ROBERT G. BAKER FOR FURTHERING PASSAGE OF HAWAIIAN STATEHOOD BILL

Mr. GRUENING. Mr. President, the House of Representatives of the Territory of Hawaii, being very appreciative of the action recently taken by the Congress, has adopted House Resolution 100, entitled "Resolution Extending to Robert G. Baker Warmest 'Mahalo Nui Loa' and 'Aloha' for His Interest and Activities in Behalf of Statehood for Hawaii."

I should like to read two paragraphs of this admirable resolution, as follows:

Whereas Robert G. Baker, often referred to as the third Senator from South Carolina, is secretary to the majority in the Senate of the Congress of the United States, and as such is the right-hand man for the majority leader of the Senate, Hon. LYNDON B. JOHNSON; and

Whereas Robert G. Baker has favored the admission of Hawaii as a State, and has actively pushed for statehood and used his prestige and influence with the Members of the Senate; and

Whereas his activities on behalf of statehood for Hawaii have very materially assisted the passage of the Hawaii statehood bill: Now, therefore, be it

Resolved—

I ask unanimous consent that the entire text of this admirable resolution be printed in the RECORD, following my remarks; and I should like to take this occasion to say that the people of Alaska feel no less appreciative to Mr. Baker for

his services last year in behalf of statehood for Alaska.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

HOUSE RESOLUTION 100

Resolution extending to Robert G. Baker warmest "mahalo nui loa" and "aloha" for his interest and activities in behalf of statehood for Hawaii

Whereas Robert G. Baker, often referred to as the third Senator from South Carolina, is secretary to the majority in the Senate of the Congress of the United States, and as such is the right-hand man for the majority leader of the Senate, Hon. LYNDON B. JOHNSON; and

Whereas Robert G. Baker has favored the admission of Hawaii as a State, and has actively pushed for statehood and used his prestige and influence with the Members of the Senate; and

Whereas his activities on behalf of statehood for Hawaii have very materially assisted the passage of the Hawaii statehood bill: Now, therefore, be it

Resolved, That the House of Representatives of the 30th Legislature of the Territory of Hawaii hereby extends to Robert G. Baker its warmest "mahalo nui loa" and "aloha" for his interest and activities in behalf of statehood for Hawaii; and be it further

Resolved, That the Honorable JOHN A. BURNS, Delegate to Congress from Hawaii, be requested to personally present a certified copy of this resolution to Robert G. Baker; and be it further

Resolved, That to accomplish this purpose, two certified copies of this resolution be forwarded to the Honorable JOHN A. BURNS.

We hereby certify that the foregoing house resolution was this day adopted by the House of Representatives of the 30th Legislature of the Territory of Hawaii.

ELMER F. CRAVALHO,
Speaker, House of Representatives.
HERMAN T. F. LUM,
Clerk, House of Representatives.

INVITATION TO CHIEF JUSTICE OF THE UNITED STATES TO ADDRESS A JOINT SESSION OF THE CONGRESS ANNUALLY—INTRODUCTION OF A JOINT RESOLUTION

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a joint resolution to invite the Chief Justice of the United States to address a joint session of the Congress annually.

The purpose of the joint resolution is to provide a simple and direct method whereby the head of the judicial branch of the Government can report to the legislative branch of the Government. The word "invite" is specifically used, because there is nothing mandatory in the resolution. If the Chief Justice felt that it was unnecessary to report for any particular year, he could decline the invitation.

The Attorney General of the United States, the Honorable William P. Rogers, has declared that the most effective way to focus public attention on the judiciary would be through such an address to the Congress.

An annual address by the Chief Justice would provide a bridge between Congress and the judiciary. The Chief Justice could advise Congress of any needed legislation affecting the courts and the judicial function which he might want it to consider. He might also wish, at that time, to review in brief the work of the Supreme Court during the preceding period, possibly explaining some of the important decisions. An authoritative explanation as to what the Supreme Court is doing on the frontiers of constitutional law from time to time, especially in the light of some of the recent controversial decisions of the Court, could prove extremely helpful both to the Court and to Congress.

Finally, the Chief Justice might see fit to give Congress the benefit of some of his longer range observations and experiences. Neither Congress nor the President possess the permanency of tenure of the Chief Justice. He holds an office and speaks for an institution which maintains its continuity through all the vicissitudes of politics. I believe it would be greatly in the public interest to have his observations and suggestions formally and publicly made, not only for the benefit of the Congress, but also for the benefit of the rest of the Nation.

Mr. President, I ask unanimous consent that the full text of the joint resolution be printed in the RECORD following my remarks.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 80) to invite the Chief Justice of the United States to address a joint session of Congress annually, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on Rules and Administration, and ordered to be printed in the RECORD, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That as soon as practicable after the beginning of each regular session of the Congress, the Chief Justice of the United States shall be invited to address the Congress with respect to the state of the judicial branch of the Government and related matters. Upon his acceptance of the invitation, a joint session of the Senate and the House of Representatives shall be convened to hear his address at a suitable time after the delivery by the President of the state of the Union message to the Congress.

ADJOURNMENT

Mr. DOUGLAS. Mr. President, I move that the Senate adjourn until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 6 o'clock and 11 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, March 24, 1959, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 23, 1959:

IN THE ARMY

The following-named officer to be placed on the retired list in the grade indicated under the provisions of title 10, United States Code, section 3962:

To be general

Gen. Maxwell Davenport Taylor, O14898, Army of the United States (major general, U.S. Army).

The following-named officer to be placed on the retired list in the grade indicated under the provisions of title 10, United States Code, section 3962:

To be lieutenant general

Lt. Gen. James Dunne O'Connell, O14965, Army of the United States (major general, U.S. Army).

IN THE NAVY

Rear Adm. Ralph K. James, U.S. Navy, to be Chief of the Bureau of Ships in the Department of the Navy for a term of 4 years.

CONFIRMATION

Executive nomination confirmed by the Senate March 23, 1959:

U.S. TARIFF COMMISSION

J. Allen Overton, Jr., of West Virginia, to be a member of the U.S. Tariff Commission, for the remainder of the term expiring June 16, 1962.

HOUSE OF REPRESENTATIVES

MONDAY, MARCH 23, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, Jr., pastor, Fountain Memorial Baptist Church, Washington, D.C., offered the following prayer:

The Psalmist has said, Psalms 27: 14: *Wait on the Lord: be of good courage, and He shall strengthen thine heart.*

Heavenly Father, God, we know Thou art solicitous about the affairs of this great Nation. Because of this we know Thou art concerned about every law that is made by this great body.

Because Thou art Lord of Lords and King of Kings teach us patience. So many times when we endeavor to make momentous decisions we eliminate from our thinking divine guidance. In our eagerness to come to a conclusion we fail to wait on the Lord.

Dear God, as decisions are made in this great body, discipline and increase the faith of Thy children by directing the Holy Spirit to entreat them to wait on the Lord.

This petition we make in the name of Jesus our Lord and Saviour. Amen.

The Journal of the proceedings of Friday, March 20, 1959, was read and approved.

MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Ratchford, one of his secretaries.

INVESTIGATION OF INDUSTRIAL MOVEMENTS OUT OF ESTABLISHED AREAS

Mr. STRATTON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. STRATTON. Mr. Speaker, I have today introduced a House resolution designed to create a select committee of the House to investigate the reasons behind the movement of industries out of well-established industrial locations, and also the hardship that is caused as a result of these movements.

No problem, with the exception of strengthening our national defense, is more urgent on the agenda of this 86th Congress than the problem of unemployment. We have authorized an extension of unemployment compensation benefits and we will soon be debating the provisions of the distressed areas bill. But much of the unemployment to which these measures are addressed has been caused by the gradual shift of established industries out of one section of the country and into other sections of the country.

A lot has been said about the reasons for these movements, which have been taking place in my State of New York and in other portions of the industrial Northeast. We are told, for example, that our States do not possess a "favorable business climate," and that is the reason for the move. Other people have other explanations. But so far, Mr. Speaker, no careful scientific study of the real causes of these shifts and of the tremendous hardship which they create has ever been made.

How can we intelligently provide a satisfactory answer to this problem unless we make some thorough study of the causes of these movements?

I urge the adoption of my resolution as a necessary part of the legislative package dealing with unemployment which this Congress has a responsibility to adopt. Let us get this serious problem out into the open once and for all, so that we may know exactly what steps to take to correct it.

PUBLIC FACILITY LOAN PROGRAM

Mr. SPENCE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. SPENCE. Mr. Speaker, I am introducing today a bill which would expand the public facility loan program of the Community Facilities Administration of the Housing and Home Finance Agency. This bill would authorize up to $1 billion of direct Federal Government loans to water supply and sewage disposal projects, public and nonprofit hospitals, and public nursing homes. Two hundred and fifty million dollars is earmarked for cities of 35,000 population or less. This program is linked to the local health and employment needs. It will also strengthen the existing program for pollution control of our waters.

We cannot in good conscience continue to be apathetic or indifferent toward the great need for the construction and improvement of the water and sewer facilities of our cities and towns.

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. ALBERT. Mr. Speaker, on behalf of the gentleman from Arkansas [Mr. HARRIS], I ask unanimous consent that the Committee on Interstate and Foreign Commerce may be permitted to sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PROVIDING PROGRAM FOR DISCOVERY OF MINERAL RESERVES—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and referred to the Committee on Interior and Insular Affairs:

To the Congress of the United States:

I transmit herewith the report of the Secretary of the Interior prescribed by section 5 of the Act of August 21, 1958, entitled "To provide a program for the discovery of the mineral reserves of the United States, its Territories, and possessions by encouraging exploration for minerals, and for other purposes."

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 23, 1959.*

REPORT OF RAILROAD RETIREMENT BOARD FOR FISCAL YEAR ENDED JUNE 30, 1958—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and referred to the Committee on Interstate and Foreign Commerce:

To the Congress of the United States:

In compliance with the provisions of Section 10(b)(4) of the Railroad Retirement Act, approved June 24, 1937, and of section 12(1) of the Railroad Unemployment Insurance Act, approved June 25, 1938, I transmit herewith for the information of the Congress, the report of the Railroad Retirement Board for the fiscal year ended June 30, 1958.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 23, 1959.*

REPORT OF NATIONAL CAPITAL HOUSING AUTHORITY FOR FISCAL YEAR ENDED JUNE 30, 1958—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and referred to the Committee on the District of Columbia:

To the Congress of the United States:

In accordance with the provisions of section 5(a) of Public Law 307, 73d Congress, approved June 12, 1934, I transmit herewith for the information of the Congress the report of the National Capital Housing Authority for the fiscal year ended June 30, 1958.

DWIGHT D. EISENHOWER.

The WHITE HOUSE, *March 23, 1959.*

ONE HUNDREDTH ANNIVERSARY OF ESTABLISHMENT AND EXISTENCE OF SUPERIOR COURT OF MASSACHUSETTS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent for the present consideration of the concurrent resolution (H. Con. Res. 109) extending the felicitations of the Congress to the Commonwealth of Massachusetts on the 100th anniversary of the establishment of the Superior Court of Massachusetts.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Clerk read the concurrent resolution, as follows:

Whereas July 2, 1959, marks the 100th anniversary of the existence of the Superior Court of Massachusetts; and

Whereas the open and impartial administration of justice is the firmest bulwark of a free society; and

Whereas the Superior Court of Massachusetts, throughout its long and distinguished history, has functioned in harmony with the highest ideals of American judicial procedure; and

Whereas, in these critical times, when justice is made a mockery in so much of the world, it is of the utmost importance that we in America cherish and preserve our legal heritage: Now therefore be it

Resolved by the House of Representatives (the Senate concurring), That the Congress extends its greetings and felicitations to the Commonwealth of Massachusetts upon the occasion of the 100th anniversary of the establishment and existence of the Superior Court of Massachusetts, and expresses the appreciation of the American people for its outstanding leadership in the never-ending struggle to achieve the ideal of liberty and justice for all.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

TRADE FAIR ACT OF 1959

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5508) to provide for the free importation of articles for exhibition at fairs, exhibitions, or expositions, and for other purposes.

The Clerk read the title of the bill.

Mr. BAILEY. Mr. Speaker, reserving the right to object, will the gentleman from Arkansas give the Members of the House some idea of the contents of this legislation?

Mr. MILLS. I will be glad to do so, Mr. Speaker.

As the gentleman from West Virginia will recall, the Committee on Ways and Means has in the past had before it a number of individual bills designed to accomplish the purpose of providing for the free importation of articles for exhibition or use at trade fairs in the United States. As an example, in the 85th Congress we enacted into law nine such bills. This is a general bill unanimously reported by the Committee on Ways and Means to obviate the necessity of continuing to pass these individual bills providing for the free importation for use at each of the trade fairs and exhibits in the future.

Mr. BAILEY. Would the gentleman answer this question? Does the bill provide for the importation of certain things to be used in construction?

Mr. MILLS. It does not have anything to do with any particular commodity; it limits the use of these commodities to these trade fairs or exhibitions. In the event any of these articles should subsequently be offered for sale then the import taxes would apply.

Mr. BAILEY. I thank the gentleman.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Short title.

This Act may be cited as the "Trade Fair Act of 1959".

SEC. 2. Designation of fairs.

(a) IN GENERAL.—When the Secretary of Commerce is satisfied that the public interest in promoting trade will be served by allowance of the privileges provided for in this Act to any fair to be held in the United States, he shall so advise the Secretary of the Treasury, designating (1) the name of the fair, (2) the place where the fair will be held, (3) the date when the fair will open and the date when it will close, and (4) the name of the operator of the fair.

(b) DEFINITIONS.—For purposes of this Act—

(1) The term "fair" means any fair, exhibition, or exposition designed by the Secretary of Commerce pursuant to this section.

(2) The term "closing date" in the case of any fair means the date designated pursuant to subsection (a)(3) as the date when the fair will close, or (if earlier) the date on which such fair actually closes.

(c) REGULATIONS.—The Secretary of Commerce may prescribe such regulations as he deems necessary or appropriate to carry out the provisions of this section.

SEC. 3. Entry of articles for fairs.

Any article imported or brought into the United States—

(1) which is in continuous customs custody, covered by a customs exhibition bond, or in a foreign trade zone, and

(2) on which no duty or internal revenue tax has been paid,

may, without payment of any duty or internal-revenue tax, be entered under bond under this section for the purpose of exhibition at a fair, or for use in constructing, installing, or maintaining foreign exhibits at a fair.

SEC. 4. Disposition of articles entered for fairs.

(a) ENTRY UNDER GENERAL CUSTOMS LAWS, ETC.—At any time before, or within 3 months after, the closing date of any fair, any article entered for such fair under section 3 may be sold or otherwise disposed of within, or may be removed from, the area of such fair. This subsection shall apply only if, before such disposition or removal—

(1) the article, after the entry for such fair under section 3, has been entered under any provision of the customs laws, and

(2) any applicable duties and internal revenue taxes are paid on such article in its condition and quantity, and at the rate in effect, at the time of such entry as if such article were imported or brought into the United States at the time of such entry.

(b) DISPOSITION WITHOUT PAYMENT OF DUTY.—At any time before, or within 3 months after, the closing date of any fair, any article entered for such fair under section 3 may, without the payment of any duties or internal revenue taxes, be—

(1) exported,

(2) transferred from such fair to other customs custody status or to a foreign-trade zone,

(3) destroyed, or

(4) abandoned to the Government.

(c) MANDATORY ABANDONMENT TO GOVERNMENT.—If any article entered under section 3 is still in customs custody, under such entry, at the expiration of 3 months after the closing date of the fair for which it was entered, such article shall thereupon be regarded as an article abandoned to the Government and shall be subject to sale or destruction of the article and disposition of the proceeds of sale in the manner provided for in sections 491, 492, and 493 of the Tariff Act of 1930. For purposes of this subsection, any duties or internal-revenue taxes on the article shall be computed on the basis of its condition and quantity at the time it becomes subject to sale.

(d) PERIOD FOR PERFORMANCE OF CERTAIN ACTS.—Whenever any article entered under section 3 is transferred pursuant to subsection (b)(2) or entered under subsection (a), the period prescribed for the performance of any act required by the provision governing the status to which the article is transferred, or under which the article is entered, shall run from the date of such transfer or entry.

SEC. 5. Marking, packaging, and labeling.

(a) CUSTOMS LAWS.—Articles entered under section 3 shall not be subject to any marking requirements of the customs laws, except that when any such article is entered for consumption under section 4 it shall not be released from customs custody until the marking requirements of the customs laws have been complied with.

(b) INTERNAL-REVENUE LAWS, ETC.—Articles entered under section 3 shall not be subject to the packaging, marking, or labeling requirements of the internal-revenue laws or of the Federal Alcohol Administration Act, except that any such article failing to comply with such requirements—

(1) shall be conspicuously marked prior to exhibition "Not labeled or packaged as required by law—not for sale", and

(2) when entered for consumption under section 4, shall not be released from customs custody until such packaging, marking, and labeling requirements have been complied with.

The application of the permit requirements of the Federal Alcohol Administration Act and the occupational taxes prescribed by chapter 51 of the Internal Revenue Code of 1954 shall be determined without regard to this Act.

SEC. 6. Responsibilities of fair operator.

(a) SOLE CONSIGNEE AND IMPORTER.—Each fair operator designated by the Secretary of Commerce pursuant to section 2 shall be deemed the sole consignee and importer of all articles entered under section 3 for the fair for which such operator has been designated.

(b) EXPENSES OF CUSTOMS CUSTODY, ETC.—The actual and necessary customs charges for labor, services, and other expenses in connection with the entry, examination, appraisement, custody, abandonment, destruction, or release of articles entered under section 3, together with the necessary charges for salaries of customs officers and employees in connection with the accounting for, custody of, and supervision over, such articles, shall be reimbursed to the United States by the operator of the fair for which they are entered. Receipts from such reimbursements shall be deposited as refunds to the appropriation from which paid, in the manner provided for in section 524 of the Tariff Act of 1930, as amended (19 U.S.C., sec. 1524).

SEC. 7. Regulations.

The Secretary of the Treasury may prescribe such regulations as may be necessary or appropriate to carry out the provisions of this Act (other than section 2 thereof).

Mr. MILLS. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania [Mr. SIMPSON] and I may extend our remarks with regard to each of the bills to be called up this morning.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. MILLS. Mr. Speaker, H.R. 5508, designated the "Trade Fair Act of 1959," has been unanimously reported by the Committee on Ways and Means. The bill has one purpose and that is to provide, under explicit safeguards, for the free importation of articles for exhibition or use at trade fairs in the United States.

The Committee on Ways and Means has in the past had before it individual bills designed to accomplish this purpose with respect to individual trade fairs and expositions in the United States. For example, in the 85th Congress nine such bills were enacted into law. There are presently pending before the Committee on Ways and Means two bills and one resolution relating to individual trade fairs.

In order to facilitate the free entry of imported goods for exhibition at trade fairs your committee felt it desirable to report general legislation that would not require the specific enactment of individual bills. The experience over the years with the individual trade fair bills has shown that they have operated well and that there is no need for the repetitious work involved in individual enactments by the Congress, nor for the Treasury Department to issue individual regulations implementing each of these individual enactments.

The provisions of H.R. 5508 are patterned closely on the provisions of the individual trade fair bills enacted in the past. Instead of requiring a special enactment in each case, H.R. 5508 designates the Secretary of Commerce as the officer of the United States Government responsible for determining which trade fairs should be accorded the privileges contained in the bill. He will make this decision if he finds that the public interest will be served by so doing. The Secretary of Commerce will then advise the Secretary of the Treasury of the name, location, opening, and closing dates, and the name of the fair operator.

As in the case of the individual trade fair bills, H.R. 5508 would authorize articles to be admitted free of duty under bond for exhibition or for use in con-

structing, installing, or maintaining foreign exhibits at the fair. Also in line with the individual bills, H.R. 5508 would permit the sale or other disposition for consumption in the United States of such articles subject, however, to payment of applicable customs duties and internal revenue taxes and compliance with the usual marking and labeling requirements. Such duties and taxes would be based on the condition of the article and the rate in effect at the time of its disposition.

In order to permit articles entered for one fair to be transferred to another fair the bill specifically provides for such transfer and also provides for the transfer of such articles from a fair to customs custody or to a foreign trade zone and then to another fair.

Enactment of H.R. 5508 would therefore establish a general procedure as a substitute for individual enactments of bills. It would serve to reduce the legislative burden on the Congress and would result in a considerable saving in time and manpower for the customs service.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, it has been the practice of the Congress in the past to enact legislation as the occasion arose authorizing the duty free importation of articles for exhibition at specific trade fairs. To avoid the necessity for individual bills dealing with each trade fair the administration has recommended to the Congress the enactment of general legislation on this subject. H.R. 5508 would constitute permanent legislation permitting the free entry of exhibition articles at fairs approved by the Secretary of Commerce. Under the legislation when the Secretary of Commerce is satisfied that the public interest will be served by approval of an application, he will so inform the Secretary of the Treasury so that appropriate steps may be taken by the Bureau of Customs to observe the duty free status.

The legislation contains the necessary safeguards to prevent abuse of the privilege of duty free importation. The Committee on Ways and Means was unanimous in approving this legislation and I have joined with the distinguished chairman of the committee in urging the House to take favorable action with respect to it.

The bill was ordered to be engrossed, and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NET OPERATING LOSS CARRYBACKS

Mr. MILLS. Mr. Speaker, I ask unanmous consent for the immediate consideration of the bill (H.R. 2906) to extend the period for filing claims for credit or refund of overpayments of income taxes arising as a result of renegotiation of Government contracts.

The Clerk read the title of the bill.

There being no objection the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 6511(d)(2)(A) of the Internal Revenue Code of 1954 (relating to special period of limitations with respect to net operating loss carrybacks) is amended by inserting before the period at the end of the first sentence thereof the following: "; except that if a net operating loss carryback is created by the elimination of excessive profits by a renegotiation (as defined in section 1481(a)(1)(A)), the period shall not expire before September 1, 1959, or the expiration of the twelfth month following the month in which the agreement or order for the elimination of such excessive profits becomes final, whichever is the later".

(b) Section 322(b)(6) of the Internal Revenue Code of 1939 (relating to special period of limitations with respect to net operating loss carrybacks) is amended by inserting before the period at the end of the first sentence thereof the following: "; except that if a net operating loss carryback is created by the elimination of excessive profits by a renegotiation (as defined in section 3806(a)(1)(A)), the period shall not expire before September 1, 1959, or the expiration of the twelfth month following the month in which the agreement or order for the elimination of such excessive profits becomes final, whichever is the later".

(c) The amendment made by subsection (a) shall apply with respect to claims for credit or refund resulting from the elimination of excessive profits by renegotiation to which section 6511(d)(2) of the Internal Revenue Code of 1954 applies. The amendment made by subsection (b) shall apply with respect to claims for credit or refund resulting from the elimination of excessive profits by renegotiation to which section 322(b)(6) of the Internal Revenue Code of 1939 applies, but only with respect to claims resulting from renegotiations of excessive profits received or accrued for taxable years ending after December 31, 1952.

With the following committee amendments:

Page 1, beginning in line 7, strike out "that if a net operating loss carryback is created by" and insert "that, with respect to an overpayment attributable to the creation of or an increase in a net operating loss carryback as a result of".

Page 2, beginning in line 8, strike out "that if a net operating loss carryback is created by" and insert "that, with respect to an overpayment attributable to the creation of or an increase in a net operating loss carryback as a result of".

The committee amendments were agreed to.

Mr. MILLS. Mr. Speaker, the general rule provided by the Internal Revenue Code with respect to claims for credit or refund provides that such claims must be filed within 3 years from the time the return giving rise to the credit or refund is filed or 2 years from the time the tax is paid, whichever period expires later. However, net operating losses create a special problem and a special rule is now provided by the Code to take care of this problem. Thus, existing law provides that if a claim for credit or refund relates to an overpayment of tax arising from the carryback of a net operating loss, the period in which such claim may be filed is that period ending 38½ months following the end of the taxable year in which the net operating loss arose. Generally speaking, this special period is adequate to protect taxpayers in the ordinary net operating loss carryback situation. However, in cases where the net operating loss arises as a result of the restoration of excessive profits pursuant to renegotiation, the period is not adequate, since renegotiation and the appeals resulting therefrom to the Tax Court of the United States, and under the bill of last year extending the Renegotiation Act to June 30, 1959, to the courts of appeals, the period during which the taxpayer is at risk with respect to a net operating loss can and will often exceed 38½ months. Since it is unfair that the Government should require the restoration of excessive profits on the one hand and deny the taxpayer a credit or refund of the taxes paid with respect to such profits, your committee's bill, as amended, provides a new rule for both the Internal Revenue Codes of 1939 and 1954 stating that, in the case of a net operating loss which is created or increased as a result of the elimination of excessive profits by renegotiation, the period for filing a claim for credit or refund shall not expire until 12 months after the month in which the agreement or order for the elimination or the excessive profits becomes final. It is to be noted that the amendments made by the bill apply only to that portion of the overpayment for any taxable year which is attributable to the creation of, or an increase in, a net operating loss carryback as a result of the elimination of excessive profits by renegotiation. Thus, there will be no extension, by reason of this legislation, for any portion of the overpayment which is not so attributable.

The Committee on Ways and Means was unanimous in ordering H.R. 2906 favorably reported. I urge its adoption by the House.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the legislation which has just been approved by the membership of the House extends the period for filing claims for credit or refund of overpayments of income taxes where such overpayments result from renegotiation findings with respect to Government contracts. Under the bill the period for filing a claim where the overpayment is attributable to a net operating loss carryback resulting from renegotiation procedures is not to expire prior to the end of 1 year after the month in which the renegotiation finding becomes final.

Present law provides a special period somewhat in excess of 3 years for filing a claim for credit or refund where net operating loss carrybacks are present. In general this special period has been found to be adequate. However, a circumstance has recently been brought to the attention of the Committee on Ways and Means where the existing period was not adequate and hardship resulted. The case involves a renegotiation procedure in which final action was not taken until after the special period had run with respect to the year in which the net operating loss arose.

This legislation which was unanimously reported by the membership of the Committee on Ways and Means would correct this tax inequity.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ESTATE TAX DEDUCTION FOR CERTAIN CHARITABLE TRANSFERS

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 137) to allow a deduction, for Federal estate tax purposes, in the case of certain transfers to charities which are subjected to foreign death taxes.

The Clerk read the title of the bill.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2053(d) of the Internal Revenue Code of 1954 (relating to deductions from the gross estate for certain State death taxes) is amended to read as follows:

"(d) CERTAIN STATE AND FOREIGN DEATH TAXES.—

"(1) GENERAL RULE.—Notwithstanding the provisions of subsection (c)(1)(B) of this section, for purposes of the tax imposed by section 2001 the value of the taxable estate may be determined, if the executor so elects before the expiration of the period of limitation for assessment provided in section 6501, by deducting from the value of the gross estate the amount (as determined in accordance with regulations prescribed by the Secretary or his delegate) of—

"(A) any estate, succession, legacy, or inheritance tax imposed by a State or Territory or the District of Columbia, or any possession of the United States, upon a transfer by the decedent for public, charitable, or religious uses described in section 2055 or 2106(a)(2), and

"(B) any estate, succession, legacy, or inheritance tax imposed by and actually paid to any foreign country, in respect of any property situated within such foreign country and included in the gross estate of a citizen or resident of the United States upon a transfer by the decedent for public, charitable, or religious uses described in section 2055.

The determination under subparagraph (B) of the country within which property is situated shall be made in accordance with the rules applicable under subchapter B (sec. 2101 and following) in determining whether property is situated within or without the United States. Any election under this paragraph shall be exercised in accordance with regulations prescribed by the Secretary or his delegate.

"(2) CONDITION FOR ALLOWANCE OF DEDUCTION.—No deduction shall be allowed under paragraph (1) for a State death tax or a foreign death tax specified therein unless the decrease in the tax imposed by section 2001 which results from the deduction provided in paragraph (1) will inure solely for the benefit of the public, charitable, or religious transferees described in section 2055 or section 2106(a)(2). In any case where the tax imposed by section 2001 is equitably apportioned among all the transferees of property included in the gross estate, including those described in section 2055 and 2106(a)(2) (taking into account any exemptions, credits, or deductions allowed by this chapter), in determining such decrease, there shall be disregarded any decrease in the Federal estate tax which any transferees other than those described in sections 2055 and 2106(a)(2) are required to pay.

"(3) EFFECT ON CREDITS FOR STATE AND FOREIGN DEATH TAXES OF DEDUCTION UNDER THIS SUBSECTION.—

"(A) ELECTION.—An election under this subsection shall be deemed a waiver of the right to claim a credit, against the Federal estate tax, under a death tax convention with any foreign country for any tax or portion thereof in respect of which a deduction is taken under this subsection.

"(B) CROSS REFERENCES.—

"See section 2011(e) for the effect of a deduction taken under this subsection on the credit for State death taxes, and see section 2014(f) for the effect of a deduction taken under this subsection on the credit for foreign death taxes."

SEC. 2. Section 2014 of the Internal Revenue Code of 1954 (relating to credit for foreign death taxes) is amended by adding at the end thereof the following new subsection:

"(f) ADDITIONAL LIMITATION IN CASES INVOLVING A DEDUCTION UNDER SECTION 2053(d).—In any case where a deduction is allowed under section 2053(d) for an estate, succession, legacy, or inheritance tax imposed by and actually paid to any foreign country upon a transfer by the decedent for public, charitable, or religious uses described in section 2055, the property described in subparagraphs (A), (B), and (C) of paragraphs (1) and (2) of subsection (b) of this section shall not include any property in respect of which such deduction is allowed under section 2053(d)."

SEC. 3. Section 2011(e) of the Internal Revenue Code of 1954 (relating to limitation on credit for State death taxes) is amended—

(1) by striking out "imposed upon a transfer" and inserting in lieu thereof "imposed by a State or Territory or the District of Columbia, or any possession of the United States, upon a transfer";

(2) by striking out "for which a deduction" in paragraph (1) and inserting in lieu thereof "for which such deduction";

(3) by striking out "the deduction authorized by" each place it appears in paragraph (2) and inserting in lieu thereof "such deduction authorized by".

SEC. 4. The amendments made by the preceding sections of this Act shall apply with respect to the estates of decedents dying after the date of the enactment of this Act.

With the following committee amendments:

Page 2, beginning in line 9, strike out "Columbia, or any possession of the United States," and insert "Columbia".

Page 2, line 11, strike out "public" and insert "public,".

Page 2, line 15, strike out "country" and insert "country,".

Page 2, line 18, strike out "States upon" and insert "States, upon a".

Page 4, line 7, strike out "adding at the end thereof" and insert "relettering subsection (f) as subsection (g) and by inserting after subsection (e)".

Page 5, beginning in line 1, strike out "Columbia, or any possession of the United States," and insert "Columbia".

The committee amendments were agreed to.

Mr. MILLS. Mr. Speaker, as Members of the House will recall, prior to the enactment of Public Law 414 of the 84th Congress, a pyramiding of estate taxes resulted in instances of a gift by a decedent for charitable purposes which qualified for deduction under the Federal estate-tax law but which did not so qualify under the provision of applicable State law. This pyramiding came about as a result of the following rules. The amount allowable as a deduction for purposes of the Federal estate tax was limited to the amount payable to the charity. This amount was, of course, reduced by the amount of the State taxes imposed on the value of the gift. The combination of the two taxes, and the resulting pyramiding, could result in the Federal estate tax being increased by much more than the estate tax on the bequest and in a considerable reduction in the amount of the transfer to charity. To prevent this, Public Law 414 granted a deduction to the estate for the amount of the State death taxes imposed upon a charitable transfer in cases where the net decrease in Federal estate taxes resulting from the deduction inured solely to the benefit of a charitable transferee or the entire Federal estate tax is equitably apportioned among all of the transferees of the decedent. However, the rules thus provided do not extend to foreign death taxes, and the pyramiding sought to be avoided by Public Law 414 still results in cases where a foreign tax is imposed upon a gift made to charity where the decedent is subject to the Federal estate tax.

To place such gifts on a parity with gifts subject to the death taxes of a States, the District of Columbia, or the Territories of the United States, H.R. 137 provides that an executor may elect to take a deduction for any foreign death tax actually paid with respect to property situated within the foreign country if such property is included in the gross estate of a citizen or resident of the United States. However, as is presently the case with respect to the deduction for State death taxes, the deduction for foreign death taxes will be allowed only if the decrease in Federal estate tax resulting from the deduction inures solely to the benefit of public, charitable, or religious transferees or if the entire Federal estate tax is equitably apportioned among all of the transferees of the decedent which received property included in the gross estate.

The Committee on Ways and Means was unanimous in ordering H.R. 137 favorably reported. I urge its adoption by the House.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the legislation which has just passed the House relates to the Federal estate tax and would allow a deduction with respect thereto in the case of certain charitable transfers which are subject to foreign death taxes. This bill would make the deduction allowed with respect to foreign death taxes comparable to the present law treatment of deduction for State death taxes.

The effect of the bill is to prevent a pyramiding of Federal estate taxes where foreign death taxes are imposed on a charitable bequest. An executor would be granted an election to take a deduction for an estate, succession, legacy, or inheritance tax paid to a foreign country with respect to property located in that country provided the property is included in the gross estate of a U.S. citizen or resident and is property which would otherwise be transferred for public, charitable, or religious uses.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SOCIAL SECURITY COVERAGE FOR CERTAIN SCHOOL EMPLOYEES

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate

consideration of the bill (H.R. 213) to provide that certain State agreements under section 218 of the Social Security Act may be modified to secure coverage for nonprofessional school district employees without regard to the existing limitations upon the time within which such a modification may be made.

The Clerk read the title of the bill.

There being no objection the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 104(f) of the Social Security Amendments of 1956 is amended by striking out "prior to July 1, 1957."

With the following committee amendment:

Page 1, before the period in line 4, insert "and inserting in lieu thereof 'prior to January 1, 1962,'."

The committee amendment was agreed to.

Mr. MILLS. Mr. Speaker, the purpose of H.R. 213, which was introduced by our colleague, the gentleman from Texas [Mr. PATMAN], is to provide an additional period of time within which certain State agreements under section 218 of the Social Security Act may be modified to secure coverage for nonprofessional school district employees. This bill would reinstate, until January 1, 1962, a provision of the Social Security Amendments of 1956 under which eight specified States and the Territory of Hawaii could provide old-age, survivors, and disability insurance coverage for certain nonprofessional school district employees without a referendum and as a group separate from the professional employees who are in positions under the same retirement system. The provision in question was in effect for less than a year and the Committee on Ways and Means has been advised that at least some of the States named in the provision did not secure the desired coverage before the provision expired. Because of the relative shortness of the period during which the provision was in effect, and because the objectives of the legislation were not accomplished during that period, it is desirable that a temporary reinstatement of this provision be made in order to give the specified States additional time in which to obtain coverage under the provision. Since some of the specified States may need State enabling legislation in order to obtain coverage under the provision, and since the legislative bodies of almost all of these States meet only in odd-numbered years, the bill would reinstate the provisions until January 1, 1962.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, this legislation, H.R. 213, would allow the modification of certain State agreements entered into with the Secretary of Health, Education, and Welfare so as to provide old-age and survivors insurance coverage for nonprofessional school district employees. This would be accomplished by providing an additional period of time for the modification of these agreements. The prior authority for such modification was in effect for less than a year and expired on July 1, 1957 with the result that certain States did not take timely action to achieve this extension of coverage to the school district employees affected. To provide sufficient time the bill which has just received favorable House consideration would extend the modification authority until January 1, 1962.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider was laid on the table.

The title of the bill was amended to read: "A bill to provide additional time within which certain State agreements under section 218 of the Social Security Act may be modified to secure coverage for nonprofessional school district employees."

ESTATE TAX TREATMENT

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 1219) to amend section 2038 of the Internal Revenue Code of 1954—relating to revocable transfers.

The Clerk read the title of the bill.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2038 of the Internal Revenue Code of 1954 (relating to the treatment of certain revocable transfers for purposes of the estate tax) is amended by adding at the end thereof the following new subsection:

"(c) EFFECT OF DISABILITY IN CERTAIN CASES.—For purposes of this section, in the case of a decedent who was (for a continuous period beginning not less than 3 months before December 31, 1947, and ending with his death) under a mental disability to relinquish a power, the term 'power' shall not include a power the relinquishment of which on or after January 1, 1940, and on or before December 31, 1947, would, by reason of section 1000(e) of the Internal Revenue Code of 1939, be deemed not to be a transfer of property for purposes of chapter 4 of the Internal Revenue Code of 1939."

SEC. 2. The amendment made by the first section of this Act shall apply only with respect to estates of decedents dying after August 16, 1954. No interest shall be allowed or paid on any overpayment resulting from the application of the amendment made by the first section of this Act with respect to any payment made before the date of the enactment of this Act.

Mr. MILLS. Mr. Speaker, under present law the gross estate of a decedent, for purposes of the Federal estate tax, includes property held in trust if the grantor of the trust reserves the right to change the trust beneficiaries even though in all other respects he has no interest in the corpus of the trust. Under the 1939 code, in the case of trusts created prior to January 1, 1939, a retained power to change beneficiaries could be relinquished if done so on or after January 1, 1940, or on or before December 31, 1947, without the imposition of a gift tax. In addition, as a result of the Technical Changes Act of 1953, in the case of mentally incompetent decedents who died after December 31, 1950, no Federal estate tax was imposed with respect to the corpus of a trust with a retained power to change beneficiaries if such property would have been free of gift tax had the power been relinquished under section 1000(e) of the 1939 code. This latter rule is applicable if the decedent was under a mental disability for a period beginning at least 3 months prior to December 31, 1947, and continuing to the date of his death. The rule of the Technical Changes Act of 1953 was extended by Public Law 414 of the 84th Congress to decedents dying after December 31, 1947.

Because of the limitations contained in the Technical Changes Act of 1953, and Public Law 414 of the 84th Congress, notwithstanding the incompetence of the decedent to relinquish a power, such decedent's gross estate would include all property with respect to which he had a retained power if the decedent was mentally incompetent for a period 3 months or more before December 31, 1947, and continued so until the date of his death if his death occurred after August 16, 1954. To place the estates of such decedents on a parity with estates of decedents dying in years to which the 1939 code applies, H.R. 1219 provides that the term "power" is not to include a power, the relinquishment of which during the period January 1, 1940, to December 31, 1957, would have been free of the gift tax imposed by the 1939 code as a result of section 1000(e) of such code. This new exception for mentally incompetent decedents will apply under the bill to all years from 1947 on so long as the decedent is mentally incompetent from October 1, 1947, to the date of his death.

This bill was unanimously reported by the Committee on Ways and Means, and I urge its adoption by the House.

Mr. BENTLEY. Mr. Speaker, I would like to speak on behalf of my bill, H.R. 1219. My bill would amend section 2038 of the Internal Revenue Code of 1954, which relates to the treatment of revocable transfers under the estate tax, and it will limit its application in the case of certain mentally incompetent decedents.

Under section 2038 of the 1954 Internal Revenue Code, there is required to be included in the gross estate of the decedent—as an interest passing out of him at death—for estate tax purposes certain property held in trust where the trust grantor reserves the right to change beneficiaries of the trust, although he has otherwise divested himself of interest in the trust property.

My bill adds a provision to the 1954 code relating to persons who have been mentally incompetent for a period beginning at least 3 months prior to December 31, 1947, and who remain so until the date of their death. My bill provides that any powers such persons have at the date of their death to change beneficiaries of a trust they created are not to result in such property being included in their gross estate for estate tax purposes.

This legislation would extend under the 1954 code the same relief as existed under the 1939 code. The section involved in the 1939 code—section 811(d)(4)—was not carried over into the 1954 code. The relief granted by the 1939 code was limited to decedents dying before August 17, 1954. My bill amends

the 1954 code to extend exactly the same estate tax relief provided under the 1939 code to estates of decedents dying after August 16, 1954.

Thus as a result of this bill, the exception for mentally incompetent persons will apply to all years from 1947 forward so long as the decedent involved is mentally incompetent from October 1, 1947, to the date of his death. I feel certain that had the decedents involved been mentally competent they undoubtedly would have relinquished their powers within the prescribed period, and as a result would not have had property in question included in their gross estate for estate tax purposes.

I certainly hope the House takes favorable action on this badly needed legislation.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, existing law requires that for Federal estate tax purposes there be included in the gross estate of a decedent property held in trust where the grantor of the trust has reserved the power to redesignate the beneficiaries even though in all other respects the grantor has fully divested himself of any interest in the trust property. The bill H.R. 1219 would alleviate a hardship that results under existing law where a person vested with a power of appointment fails to exercise that power because of his becoming mentally incompetent. Thus, under the bill any powers that a person may have at the date of his death to change beneficiaries are not to result in such property being included in his gross estate where the failure to exercise the power is attributable to mental incompetency.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TEMPORARY SUSPENSION OF PROCESSING TAX ON PALM OIL

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 147) to suspend temporarily the tax on the processing of palm oil, palm-kernel oil, and fatty acids, salts, and combinations or mixtures thereof.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas [Mr. MILLS]?

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the tax imposed under section 4511(a) of the Internal Revenue Code of 1954 shall not apply with respect to the first domestic processing of palm oil, palm-kernel oil, fatty acids derived therefrom, or salts thereof, or of any combination or mixture solely because such combination or mixture contains a substantial quantity of one or more of such oils, fatty acids, or salts, during the period beginning with the first day of the first month which begins more than 10 days after the date of the enactment of this Act and ending with the close of June 30, 1960.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. MILLS. Mr. Speaker, the bill, H.R. 147, which was introduced by our colleague on the Committee on Ways and Means, the gentleman from New York, the Honorable EUGENE J. KEOGH, and which was approved unanimouly by the Committee on Ways and Means, corrects an inequitable competitive situation arising from Public Law 85–235 which suspended through June 30, 1960, the tax of 3 cents per pound imposed upon the first domestic processing of coconut oil.

The tax on the first domestic processing of coconut oil is imposed by section 4511 of the Internal Revenue Code of 1954. This same section imposes the same 3 cents per pound tax on the first domestic processing of palm oil, palm kernel oil, and fatty acids or salts derived therefrom. All of these oils are used for broadly similar purposes such as in the production of soap. The temporary suspension of the tax on coconut oil had the unintended result of placing palm oil and palm kernel oil at a serious competitive disadvantage. This bill provides that the temporary suspension of tax through June 30, 1960, presently provided for coconut oil will be extended to palm oil and palm kernel oil.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, H.R. 147 would provide for the suspension of the 3-cent-per-pound tax on the first domestic processing of palm oil and related products. This legislation would improve the competitive position of the oils affected by the bill with other oils on which Congress has suspended the tax otherwise imposed on the domestic processing.

FREE IMPORTATION OF TOURIST LITERATURE

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 2411) to amend paragraph 1629 of the Tariff Act of 1930 so as to provide for the free importation of tourist literature.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas [Mr. MILLS]?

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) paragraph 1629 of the Tariff Act of 1930 is hereby amended by adding at the end thereof a new subparagraph to read as follows:

"(d) Tourist literature containing historical, geographic, timetable, travel, hotel, or similar information, chiefly with respect to places or travel facilities outside the continental United States, issued by foreign governments or departments, agencies, or political subdivisions thereof, boards of trade, chambers of commerce, automobile associations, or similar organizations or associations."

(b) This Act shall be effective as to merchandise entered for consumption or withdrawn from warehouse for consumption on or after the day after the date of enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. MILLS. Mr. Speaker, the purpose of H.R. 2411, which was introduced by our colleague from the State of Washington, the Honorable DON MAGNUSON, is to amend paragraph 1629 of the Tariff Act of 1930, a free-list provision, by adding at the end thereof a new subparagraph covering tourist literature issued by certain groups and which relates chiefly to places or travel facilities outside the continental United States.

The basic statutory language in the tariff schedules of the Tariff Act of 1930 does not specifically mention tourist literature. In the schedules of that act such literature is embraced within broader tariff provisions in several paragraphs, chiefly paragraph 1410. Certain classes of tourist literature have been carved out of the broader statutory provisions as a result of trade-agreement concessions and are presently dutiable at reduced rates of duty. Thus, the type of tourist literature that is principally covered by this bill is presently dutiable at the rate of 3¾ percent ad valorem if of bona fide foreign authorship and at the rate of 6¼ percent if not of such authorship. Paragraph 1629 provides for the free entry of public documents issued by foreign governments, and this provision has been held to include tourist literature issued wholly by or at the instance and expense of a foreign government or subdivision thereof. The purpose and effect of H.R. 2411 is to simplify the tariff treatment of such tourist literature and to extend the application of the duty-free treatment to a broader class of tourist literature.

During the course of consideration of an identical bill which was reported favorably to the House last year, and which passed the House unanimously, the Committee on Ways and Means was assured that this bill would not affect or in any way alter existing statutory controls on the importation of so-called subversive or propaganda material.

Favorable reports on this legislation were received from the Departments of State and Treasury, as well as an informative report from the Tariff Commission.

The committee is unanimous in recommending the enactment of H.R. 2411.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, this legislation would amend the Tariff Act so as to provide for the free importation of tourist literature relating to places or travel facilities outside the continental United States.

The Committee on Ways and Means was unanimous in approving this amendment to the Tariff Act.

PROVIDING FOR THE FREE ENTRY OF CERTAIN CHAPEL BELLS

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 3681) to provide for the free entry of certain chapel bells imported for the use of the Abelard Reynolds School No. 42, Rochester, N.Y.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas [Mr. MILLS]?

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to admit free of duty twenty-five chapel bells, which are more particularly described as two fully chromatic octaves, twenty-five bells, in the key of C, number 22 size, imported for the use of the Abelard Reynolds School Numbered 42, Rochester, N.Y.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. MILLS. Mr. Speaker, the purpose of H.R. 3681, which was unanimously reported by the Committee on Ways and Means, is to authorize and direct the Secretary of the Treasury to admit free of duty 25 chapel bells imported for the use of the Abelard Reynolds School, No. 42, Rochester, N.Y. The Committee on Ways and Means was advised, during the course of consideration of an identical bill which was reported favorably to the House last year, that the bells range from 2 to 8 inches in diameter, and would be used for the musical training and appreciation of students at the school, remaining the property of the school. The committee was further advised that these bells are not manufactured in the United States.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, as explained by the distinguished chairman of the Committee on Ways and Means, the legislation which has just passed the House would permit the importation duty free of a set of chapel bells for the use of the Abelard Reynolds School, No. 42, in Rochester, N.Y.

In the consideration of this legislation the Committee on Ways and Means was informed that bells of the type that would be authorized for importation under this legislation are not manufactured in the United States. The Committee on Ways and Means was unanimous in approving this legislation.

UNEMPLOYMENT COMPENSATION FOR FEDERAL EMPLOYEES—TREATMENT OF ACCRUED ANNUAL LEAVE

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 3472) to repeal section 1505 of the Social Security Act so that in determining eligibility of Federal employees for unemployment compensation their accrued annual leave shall be treated in accordance with State laws, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas [Mr. MILLS]?

Mr. MARSHALL. Mr. Speaker, reserving the right to object, I would like to ask a few questions about this bill.

I wonder if the chairman could tell me in connection with this particular bill what the attitude of the committee is in reference to it.

Mr. MILLS. Mr. Speaker, the purpose of H.R. 3472, which was introduced by our colleague on the Committee on Ways and Means, the gentleman from Rhode Island, the Honorable AIME J. FORAND, is to repeal section 1505 of the Social Security Act so that in determining eligibility of Federal civilian employees for unemployment compensation their accrued annual leave shall be treated in accordance with State laws.

Title XV of the Social Security Act, which established the Federal employees' unemployment insurance program, provides for the administration of that program by the States under agreements with the Federal Government. Section 1505 of this title, however, presently provides that no compensation may be paid to a Federal employee during a period subsequent to separation from Federal service when he is being paid for accrued annual leave. This bill, by repealing section 1505, would make the award of unemployment compensation to a separated Federal civilian employee while he has accrued annual leave depend upon the provisions of the appropriate State unemployment compensation law.

The Federal civilian worker would then be treated in exactly the same manner as workers in private industry who receive similar annual leave payments upon separation.

Favorable reports on similar legislation last year were received from the Departments of Labor, Treasury, and Health, Education, and Welfare, as well as an informative report from the U.S. Civil Service Commission.

This bill was unanimously reported by the Committee on Ways and Means.

The committee reached the conclusion it did about the bill because the Federal civilian worker would then, under this bill, be treated exactly in the same manner, with respect to annual leave payments, as workers in private industry who receive similar annual leave payment upon separation.

Mr. MARSHALL. Can the gentleman tell me whether or not in some States employees are eligible to collect annual leave and unemployment compensation for the same period of time?

Mr. MILLS. There are some States that provide that a worker who is not a separated civil service employee of the Federal Government but who is a worker in private industry may receive unemployment compensation during the time he is receiving his annual leave payments; that is, upon separation from his private employment. Section 1505 of the Social Security Act prevents a Federal civilian employee, in a State where this may occur with respect to private employees, from receiving the same treatment as the employee in private industry. We were trying to equalize the situation between private and Federal employment in those States where private employees receive this treatment.

Mr. MARSHALL. Will not this make it possible for inequities in the treatment of Federal employees as between the different States of the union?

Mr. MILLS. Now, the gentleman from Minnesota recognizes, I am sure, that unemployment compensation is largely based upon State statutes. It operates in each and every State upon the basis of the State statutes, and the State statutes in the several States vary with respect to many points. Now, some States do allow this separated private employee to receive these benefits while his accrued leave is coming to him. In those States we thought it was fair, since the State law is controlling—because we want to leave the responsibility on the States—that we let our Federal employees be treated just as other employees are presently being treated and that we not prohibit by Federal statute this benefit from being received for this limited period of time by the Federal civilian employees.

Mr. MARSHALL. Is there any possibility that this may lead to a wholesale transfer of Federal employees in order that they may be transferred into States in order to collect their unemployment compensation and annual leave on the same basis?

Mr. MILLS. The gentleman's judgment on that point I would have to take, because I have no information whatsoever that leads me to believe that the Federal Government would precipitously transfer an individual in Washington or some other State into one State just in order for him to receive unemployment compensation at an earlier date than he would otherwise receive it. Now, the period we are talking about, annual leave, the gentleman from Minnesota knows, is not for an extended period at best.

Mr. MARSHALL. Could the distinguished chairman tell me about how much it is anticipated that this will cost the Federal Government?

Mr. MILLS. We asked that question when we had this matter in the committee. We did not get a firm estimate of the cost. It could only involve that period of time for which the individual, the separated Federal civilian employee, is drawing annual leave. He would get his benefits for a certain duration under State law, anyway. Now, if the State law provided for him to receive 26 weeks of benefits, let us say, at $30 a week, he would generally get that amount if he remained unemployed whether we enact this provision or not. This action here does not mean that he would get any more than $30 for that number of weeks. That is all he can get. That is determined by State law. It is just a question of whether or not the commencement of the benefit payment under State law for the prescribed duration period will begin while he is receiving annual leave or whether it will commence after he has exhausted his annual leave. I do not see that it could add any material amount, because we are not extending it. We are not saying that the Federal Government will pay more. We are just saying that the State can begin this payment at perhaps an earlier date than it would under the provisions of existing law, in the light of section 1505.

Mr. FORAND. Mr. Speaker, will the gentleman yield?

Mr. MARSHALL. I yield to the gentleman from Rhode Island.

Mr. FORAND. I would like to emphasize that this is not separation pay, but it is annual leave accrued to the individual to which he has a right. If he takes a vacation, all right, his time is used up. If, instead, he continues to work but has accrued that vacation period credit, he is entitled to that whether he is receiving unemployment compensation or not. The two are separate and distinct. The point we are trying to clear up is the discrimination now existing against Federal employees who live in States where the State recognizes that an individual in private employment is entitled to unemployment compensation, whereas the same kind of treatment should apply to a Federal employee.

Mr. MARSHALL. I appreciate what the gentleman from Rhode Island is trying to do and I am sympathetic to a certain extent with what he is trying to do. It seems to me that the problem we face on this proposition is that this is a matter of Federal employees getting a different interpretation as between the different States. I realize that some of that is beyond the gentleman's control, because it is a State matter. But there is another feature that is not being considered here, but is tied in to it. In a number of States we are now paying unemployment compensation to Federal employees who are collecting their annuities. That is costing us up into the millions of dollars. It seems to me that that is decidedly unfair. I appreciate that that is separate from what the gentleman is trying to do here. But it does seem to me that this does create some discrepancy.

It was my intention today to point the matter up as far as the Congress is concerned in order that we may have a clearer understanding of it.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, effective only with respect to benefit years which begin more than thirty days after the date of enactment of this Act, section 1505 of the Social Security Act (42 U.S.C. 1365) is hereby repealed.

With the following committee amendment:

Page 1, after line 6, insert:

"SEC. 2. Section 1511(f) of the Social Security Act (42 U.S.C. 1371 (f)) is amended by striking out 'section 1505 applies' and inserting in lieu thereof 'section 1505 continues (without regard to its repeal) to apply'."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. SIMPSON of Pennsylvania. Mr. Speaker, H.R. 3472 would amend the Social Security Act so that accrued annual leave for Federal civilian employees would be treated in accordance with State law in determining the employee's eligibility for unemployment compensation.

The Committee on Ways and Means was unanimous in approving this legislation. It is an appropriate amendment to the law because unemployment compensation is intended to maintain in part an employee's purchasing power during a period of temporary unemployment whereas the accrued annual leave of the employee is predicated on the concept that employees earn vacation rights as a result of their employment.

I am happy to have joined in supporting the favorable House action just taken on this legislation.

Mr. MILLS. Mr. Speaker, I ask unanimous consent that the authors of these various bills just passed have permission to extend their remarks in the RECORD following the passage of each bill.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

SPECIAL MILK PROGRAM, FISCAL YEAR 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 5247) to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. HOEVEN. Mr. Speaker, reserving the right to object, and I shall not object, will the gentleman please explain the bill for the information of the House?

Mr. JOHNSON of Wisconsin. Mr. Speaker, it was brought out by a survey in the Department of Agriculture by the people administering the special milk program that up until July 1 of this year there would be a shortage in some 37 States of about $3 million for the carrying out of this program. I introduced legislation that would have increased the appropriation to $5 million for fiscal 1959, and another bill for $10 million for fiscal 1960 and 1961. But the bill was amended unanimously in the committee, which lowered it to $3 million. All this bill does is increase the authorization $3 million from commodity credit fund for the special school milk program. That takes it up to July 1959.

Mr. HOEVEN. Mr. Speaker, this is the popular school milk program which was first proposed by our late colleague, August H. Andresen, of Minnesota. The program has been carried on successfully since that time. It is true, as the gentleman has stated, that the original bill called for an appropriation of $80 million for the current fiscal year. The committee unanimously agreed upon a figure of $78 million for this fiscal year. Although the Department of Agriculture testified that $75 million might be sufficient to carry on the program this year, surveys as to needs might possibly show an expenditure of $77.1 million would be necessary. In order to meet any contingencies, the committee raised the figure to $78 million.

May I ask the gentleman whether or not the expenditure of the money is permissive as far as the Secretary of Agriculture is concerned?

Mr. JOHNSON of Wisconsin. That is right. The Secretary does not have to spend the money, but if it is needed to carry out the program, he has the right to do so.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. HOEVEN. I yield.

Mr. HOFFMAN of Michigan. I know that the gentleman has complete and accurate knowledge of the situation with reference to milk, but what I was interested in was whether this had anything to do with the monopoly that the Maryland and Virginia Milk Producers have in the situation here?

Mr. HOEVEN. All we know about the supposed monopoly, I will say to the gentleman——

Mr. HOFFMAN of Michigan. Supposed? It is a monopoly; we all know that. Surely the leader knows that.

Mr. HOEVEN. The only thing I know about it is what I read in the newspapers.

Mr. HOFFMAN of Michigan. Does this bill help out these Wisconsin milk producers and those over in Pennyslvania and that milk that is coming in from New Jersey?

Mr. HOEVEN. I would say this bill certainly benefits the milk producers of Wisconsin, Michigan, and other areas. If it is going to make the continued flow of this milk into school channels possible, and an added appropriation can authorize you to carry on the work.

Mr. HOFFMAN of Michigan. Let us see about that now.

The SPEAKER. The Chair was advised that this bill would be considered under a unanimous-consent request and was not going to take much time. If this bill is going to take much time, the Chair will be compelled to ask the gentleman from Wisconsin to withdraw the bill, at least temporarily.

Mr. HOFFMAN of Michigan. Can I not get permission for either one of them to yield for a minute?

The SPEAKER. The gentleman may.

Mr. HOFFMAN of Michigan. I mean, may I try?

The SPEAKER. The gentleman may try.

Mr. HOFFMAN of Michigan. Who has the time?

The SPEAKER. The gentleman from Wisconsin. The gentleman from Iowa has taken his seat. The gentleman from Michigan reserves the right to object.

Mr. HOFFMAN of Michigan. Yes; and I do object. I want to ask the gentleman just what I asked in the first place. If he had answered, we would have been way along on our way. My question is whether this proposed legislation has anything to do with this monopoly that the Maryland and Virginia dairymen have on the supply that goes into the District.

Mr. JOHNSON of Wisconsin. None whatsoever. This affects the whole country.

Mr. HOFFMAN of Michigan. It does not prevent the Wisconsin or Pennsylvania fellows from getting their milk in here?

Mr. JOHNSON of Wisconsin. This affects the schoolchildren of the whole country.

Mr. HOFFMAN of Michigan. Then I am as a milk consumer here to pay that same high price?

Mr. GROSS. Reserving the right to object, Mr. Speaker, will this have anything to do with permitting the bringing into the District of any of that so-called "tired" milk from Wisconsin or Iowa?

Mr. JOHNSON of Wisconsin. This is so the schoolchildren all over the country will have milk in the special school-milk program for the balance of fiscal 1959.

Mr. GROSS. It will be very nutritious milk, even though it is "tired" milk.

Mr. LAIRD. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Wisconsin.

Mr. LAIRD. Mr. Speaker, I fully support the legislation pending before the House today to make additional funds of the Commodity Credit Corporation available to meet the needs of the special milk program for the remaining months of the 1959 fiscal year.

According to the table submitted by the Department of Agriculture, well over half of the State agencies feel they do not have sufficient funds to operate the program in schools throughout the end of the school year and to take care of the June operations in summer camps. I understand the point made by the Department of Agriculture that some of the States subsequently may spend less, but States must plan on the basis of their best expectations.

Gordon Gunderson, who heads up the program for the State department of public instruction in Wisconsin, in testimony before the House Agriculture Committee, indicated the actions open to State agencies which anticipate a deficit. Any one of those actions, it seems to me, means curtailed consumption this year and next year, too.

My own bill, H.R. 5413, would have increased the authorization to $80 million this year and then provide an additional $5 million for each of the next 2 fiscal years. There is an immediate need to reassure States that funds will be available to meet all of this year's needs. But, we need also to take early action with respect to the program for next year. School people do not start to plan their programs when school opens in the fall—they must be all set to begin operations by that date. Actually, I would think that the Department of Agriculture should be in a position to outline next year's program to the States by late April.

This program has been remarkably successful. Milk service is now available to about three out of every four children in school and that about half the children in school are regularly drinking milk with the school lunch or under the special milk program. That is a fine record, but it also means that we have not yet exhausted the full potential of the program. It is no time to be trying to reduce or even stabilize it. As long as the Department needs to buy surplus dairy products, we should continue full efforts to move that milk in fluid form to our young children. That is much better for children and much better for dairy producers.

The 2 billion half-pints of milk that moved under this program last year had a healthy influence on children, helped reduce Government purchases of manufactured dairy products, widened fluid markets, and helped form the milk-drinking habit among our young people.

The Congress needs to take early action to see that these benefits are continued in full effectiveness. I am cooperating fully with my friend the gentleman from Wisconsin [Mr. JOHNSON] in securing passage of this temporary legislation today.

I realize the urgency of this request to take care of the remaining portion of the year 1959. The gentleman, I am sure, is also aware of the fact that we do have a problem as far as the fiscal year 1960 is concerned. The program for 1960 is such that it will be necessary for the States to make their plans within the next 2 months. It was my hope we would be able to give consideration to the next year's program at an early date. We should also give some consideration to placing this program on a direct appropriation basis. I will introduce legislation this afternoon to take care of next year's program and will place the milk program on a permanent direct appropriation basis.

Mr. JOHNSON of Wisconsin. I am very hopeful that the Dairy Subcommittee will hold hearings on fiscal 1960 and 1961 special milk program right after the Easter recess. I have been promised by the chairman of that subcommittee that hearings will be held right after the Easter recess.

I might say to the gentleman from Wisconsin [Mr. LAIRD] I also have introduced a bill that would take care of the possible shortage for fiscal 1960 and 1961; but to be sure that the special school milk program was not cut, I agreed to wait and take care of the immediate problem before the Easter recess so no reduction would be had in this worthy program.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first sentence of Public Law 85-478 (72 Stat. 276) is amended to read as follows: "That for the fiscal year beginning July 1, 1958, not to exceed $80,000,000, and for each of the two fiscal years thereafter, not to exceed $75,000,000, of the funds of the Commodity Credit Corporation shall be used to increase the consumption of fluid milk by children (1) in nonprofit schools of high school grade and under; and (2) in nonprofit nursery schools, child-care centers, settlement houses, summer camps, and similar nonprofit institutions devoted to the care and training of children."

With the following committee amendment:

Page 1, line 5, strike out "$80,000,000" and insert "$78,000,000".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent that I may extend my remarks at this point in the RECORD and include extraneous matter, and that all interested Members may extend their remarks at this point in the RECORD on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. JOHNSON of Wisconsin. Mr. Speaker, on March 4, 1959, I introduced two bills in the House of Representatives that would increase the amount of Commodity Credit Corporation funds which could be used for the special milk program for schools and summer camps. My first bill, H.R. 5247, proposed that the authorization for the program for the fiscal year ending June 30, 1959, be increased from $75 million to $80 million. The second bill, H.R. 5248, provided for future expansion of the program as well as a temporary increase for fiscal 1959. Under the provisions of this bill, $80 million would be authorized to carry the program through this fiscal year, and the funds would be increased to $85 million for both 1960 and 1961.

The urgency of the situation is illustrated by the fact that 37 States and the District of Columbia will be forced to curtail operations in this field unless additional funds are authorized soon. According to a survey made by the U.S. Department of Agriculture, the total deficit for the fiscal year ending June 30, 1959, would be $3,378,569 if the program was carried on at the current level until the end of that time. My home State of Wisconsin has an indicated deficit of $102,097.

California will fall $680,936 short of meeting its estimated milk fund needs. As our population increases, the school enrollment naturally keeps going up. These health programs for our young people must be expanded to keep pace with that growth.

Last June, Congress authorized a 3-year extension of the special milk program with an annual authorization of $75 million. This is already proving insufficient. And unless we increase the authorization soon, those 37 States and the District of Columbia will have to tell their schools to cut down the milk supply to children who need it. In addition, the uncertainty over funds will seriously hamper the summer camp milk program, for now is the time when camp managers are making their food plans for the coming season.

Mr. Speaker, because the situation called for immediate action, Congressman COOLEY scheduled hearings March 17 by the House Agriculture Committee on my bills and similar ones which had been introduced by several of my colleagues. In order to secure a unanimous report in favor of my emergency bill, H.R. 5247, the committee adopted an amendment cutting the proposed increase for fiscal 1959 from $80 million

to $78 million. This was done at the insistence of the U.S. Department of Agriculture, which opposed any increase at all. My long-range bill, H.R. 5248, will be studied further by the Dairy and Poultry Subcommittee of the House Agriculture Committee after Congress reconvenes following the Easter recess.

I would like to read a telegram from R. W. Fenske, superintendent of schools at Wisconsin Dells, Wis. He said:

Anything you can do to assure passage of these bills will be appreciated.

He and other educators know that the special milk program is one of the most successful programs of the U.S. Department of Agriculture. If adequate funds are available, over 2 billion half-pints of milk will be consumed under the plan. Added to the 2 billion half-pints used in the school lunch program, this represents about 3.5 percent of all the fluid milk consumed by our nonfarm population. Around 80,000 schools are taking part in the milk program, and about 22 million children are drinking milk at school either under the school lunch program or at recess breaks as part of the special milk plan.

Mr. Speaker, the 80,000 figure does not include the summer camps using the program. If you recall, I introduced the bill to extend the special milk program to the summer camps, and it became a law in 1956. The following year, 2,220 camps participated. In 1958, the number increased to 3,026. I would like to see this worthwhile program continue to expand, but it will not—it can not—unless enough funds are made available.

Although the funds for the special milk program come under the U.S. Department of Agriculture budget, I do not feel it is fair to charge the cost of the program to the farmers. This is one of the farm programs which does as much good for city folks as it does for the farmer. That's why the cost of this humanitarian program should not be lumped with the cost of Government purchases of surplus food, as is now being done. This kind of accounting presents an untrue picture of the expense of the price support program, a picture which is grossly unfair to our farmers.

Mr. Speaker, I can think of no finer investment than one which insures that this country's children continue to receive the full benefits of the special milk program. Few responsibile citizens will quarrel with the idea that the kids of this Nation are entitled to an adequate supply of the world's most complete food—milk. It seems to me that it is far better to use Commodity Credit Corporation funds to encourage children to drink more milk than to use the money to buy surplus butter, cheese and dry milk. When it comes right down to it, that's the choice we are facing—more money for the special milk program or more price support purchases of dairy products.

When the hearings were held on H.R. 5247 and H.R. 5248, Gordon W. Gunderson, administrative assistant to the Wisconsin State superintendent of public instruction, came to Washington, D.C., to testify in support of my bills to expand the special milk program. Mr. Gunderson is a native of Colfax, Wis., which is in my home District, the Ninth He has a long and outstanding record of public service to the people of our State.

Mr. Speaker, during the depression of the 1930's. Mr. Gunderson served as director of the Wisconsin Home and Farm Credit Administration, which undertook a special program of refinancing farm and home loans in order to put an end to the widespread foreclosures then taking place. After this emergency was over, Mr. Gunderson, as a State representative of the U.S. Department of Agriculture, helped establish the school lunch program in Wisconsin. During World War II, he served as State director of the War Food Administration and had under his direction the administration of all war food orders affecting food processing and so forth.

With the transfer of school lunch activities to the department of pubic instruction in 1946, Mr. Gunderson was employed by that department to supervise the school lunch program in Wisconsin. Approximately a year later, the U.S. Department of Agriculture turned over to the State the distribution of commodities to schools, and he took on this additional job. The special milk program in our State has been under his supervision since 1954.

Mr. Gunderson appeared before the House Agriculture Committee in behalf of the American School Food Service Association and the Wisconsin Department of Public Instruction. Under leave to extend my remarks, I want to include his testimony in the RECORD:

STATEMENT BY GORDON W. GUNDERSON ON THE SPECIAL MILK PROGRAM BEFORE THE HOUSE AGRICULTURE COMMITTEE, MARCH 17, 1959

I greatly appreciate the opportunity to testify before this committee on behalf of the special milk program.

I am here today representing the American School Food Service Association—an organization of some 16,000 members including State school lunch directors, county and district school lunch supervisors and managers of individual school lunch programs. I am also representing the Wisconsin Department of Public Instruction. In this department, I am the supervisor of the school lunch, special milk, and commodity distributing program.

The special milk program is now drawing to the close of its fifth year of operation. From the time that Lodi, Wis., the first school in the Nation to begin the operation of the program, served special school milk to its 530 pupils in September of 1954, there has been a steady growth at an ever-increasing rate to reach a total of more than 19 million children in 76,000 schools and child-care institutions and a consumption of more than 1.9 billion half pints of milk in 1958. This astounding achievement is in line with the objectives desired at the time of the enactment of the legislation and all through the 5-year period, even up to the present time.

During the 1954–55 school year numerous federally financed research projects were undertaken in many of the States to discover problems which might hinder the rapid and extensive expansion of the program and to explore new and more effective ways of increasing milk consumption in schools. These projects included experiments concerning effect of new times of service in schools; milk handling practices and temperature controls; use of milk vending machines; use of container sizes other than the usual one-half pint; the serving of flavored milk; and the effect of various levels of price reduction. In Wisconsin we cooperated in the study of price reduction. Other studies were undertaken in at least 11 other States. The data which were gathered was published by the U.S. Department of Agriculture and submitted to all of the State agencies administering the special milk program in order that they might take advantage of any new or improved ideas in milk service to the end that there might be a rapid gain in milk consumption throughout the Nation. In its preface to the "Service Guide for States," dated February 1959, the U.S. Department of Agriculture has stated: "The Department of Agriculture believes that a many-sided approach is necessary to realize the potentialities of the program. It hopes that the program will:

"(1) Make the service of milk possible to schools or eligible child-care institutions not now serving milk;

"(2) Encourage a larger percentage of children to drink milk in those schools and child-care institutions where milk is now available; and

"(3) Offer an opportunity to those children now drinking milk, to drink more milk, if they so desire.

"Reimbursement funds available under the special milk program will make possible reductions in the price at which milk is offered to children and enable schools and institutions to make more milk available for consumption by children. * * * The Department recognizes that a price reduction is but one of several ways in which increased milk consumption can be encouraged; other ways include the establishment of new times for and their method of serving milk, and continuing efforts to better acquaint children with the importance of drinking adequate amounts of milk. Planning for increased efforts along these lines necessarily must rest largely in the hands of interested State and local groups * * *. The special milk program provides another opportunity to assist in local efforts to improve the diets and health of children."

It is evident that this has consistently been the policy of the U.S. Department of Agriculture since the foregoing quotations are almost word for word identical with those in the preface to the "Service Guide" issued in November 1956. State agencies having the responsibility for the administration of the program have accepted this policy at its face value. They have sought and have obtained the cooperation and services of farm organizations, milk distributors and national, State, and local agencies and organizations concerned with the health and welfare of children. These united efforts have made possible the expansion of the program to the point where it appears that the funds available for the current fiscal year will not be adequate to meet obligations under the terms of the agreements which have been entered into with participating schools. In Wisconsin we have approved 131 new applications during the current school term. On the national basis, the increase is approximately 7,000 schools over last year.

In the division of Federal funds among the States for the financing of the program for the current year, the U.S. Department of Agriculture has set aside a reserve for each State equivalent to 112 percent of the State's estimated expenditure during fiscal year 1958. Any funds needed by an individual State in excess of this reserve could be provided only to the extent to which funds could be recaptured from States not utilizing their full reserve.

Information published by the U.S. Department of Agriculture shows that 38 States indicate a deficit totaling $3,060,250. In addition, four of the five area offices of the

U.S. Department of Agriculture indicate a deficit of $318,310.

What will be the effect of this shortage of funds in these States? The respective State agency will be obligated to take one or more of the following actions:

1. Immediately reduce rates of reimbursement to all participating schools to a point which would enable the continuation of the program to the end of the school year, or

2. Continue payments at the contractual rates until funds are exhausted and then terminate all contracts.

3. Reject all new applications for participation for the remainder of the school term.

4. Curtail or eliminate completely participation by summer camps for children.

Certainly any curtailment in the program before the end of the school term would have a devastating effect upon the program not only for the current year but for the years that lie ahead. The major effects would be:

1. An immediate reduction in consumption of milk.

The Wisconsin experiment concerning the effect of price reductions upon consumption of milk by schoolchildren proved conclusively that:

(a) The greater the price reduction, the greater was the increase in consumption.

(b) Reduced prices resulted in increased numbers of children drinking milk in school.

(c) The increased milk consumption at school was new consumption, not the replacement of home consumption.

2. Total exclusion from participation, or reduced consumption by children from low income families.

The St. Louis study conducted in 1955–56 showed that "pupils in elementary schools serving low income districts drank about 171 percent more milk, other than with meals, and students from the middle income districts drank about 157 percent more during the 1955–56 school year than in the previous year. * * * Pupils in schools serving high income districts increased their consumption by only 44 percent * * * the increase demonstrates a greater effect on those in the lower income school districts when price is reduced."

3. Dissuasion from participation in the coming year. Whether or not any school faced with a reduction in reimbursement rate or cancellation of the contract at this time of the school year will even consider renewing its contract for the coming year without a guarantee of continuous payment at full rate throughout the year is problematical, to say the least. Certainly it will act as a serious deterrent to participation by new schools.

The significance of the program becomes extremely interesting and vivid when we convert the millions of half pints of milk consumed into terms of butter, cheese, and powdered milk. Applying the formula that 100 pounds of 3.5 percent milk will produce 4.2 pounds of butter plus 8.5 pounds of nonfat dry milk solids, or 9 pounds of American cheese, we can readily determine that the more than 1.9 billion half pints of milk consumed by our schoolchildren in the past fiscal year would have produced more than 43 million pounds of butter plus more than 72 million pounds of nonfat dry milk, or more than 92 million pounds of American cheese. I believe it is reasonable to assume further that much of this would have found its way into Government warehouses. But the additional butter and powdered milk or American cheese would not have been eaten by American schoolchildren since they have already consumed these products from Government donated stocks at a maximum rate.

It appears to me, therefore, that we face the problem of providing additional funds with which to finance the special milk program or face the probably even greater problem of purchasing and disposing of additional surplus dairy products.

We would support the proposition that the needed funds be made available for the continuation of the special milk program at full capacity and at full rate of reimbursement for the remainder of the current year and for the next 2 years as a health-giving, sound economic program for all concerned.

From an overall fiscal viewpoint, I think we should remember that the special milk program has not utilized the total funds made available in any previous year, so that in the aggregate the expenditure has been less than anticipated. The additional funds required for the current year, plus addition amounts for each of the next 2 years are authorizations and set maximum limits. Only to the extent that the program needs additional funds would CCC funds be called upon. If full use of the authorized funds is not needed in the program, there would be no call on CCC for the funds.

INTERIOR DEPARTMENT APPROPRIATION BILL, 1960

Mr. KIRWAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5915) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1960, and for other purposes; and, pending that, I ask unanimous consent that general debate on the bill be limited to 1 hour, one-half the time to be controlled by the gentleman from Iowa [Mr. JENSEN] and one-half by myself.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 5915, with Mr. PRICE in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. KIRWAN. Mr. Chairman, I yield myself 15 minutes.

Mr. Chairman and Members of the Committee, every year that I come down here to present this bill to the House, I make the same statement, and I will make it again today. I only regret that this bill is not for about $1 billion. If ever there was a country that could afford to spend a billion dollars on itself, it is this country and its Territories—and I mean that sincerely. In the district that I happen to represent, they evacuated people twice in zero weather in the month of February within a short space of 2 weeks. The people had to be taken out of their homes in row boats. There was $10 million worth of damage done just in that little bit of river. So, I repeat again, if there was ever a nation that we should spend money on, it is this Nation. But, the President has asked for a balanced budget of $77 billion. We have before us today the request of the Department of the Interior. I think this committee, that reported this bill out unanimously, did a sound job, and I am going to make every effort to explain to you the basis for the committee's action.

The committee found certain inconsistencies in the budget estimates as well as provision for many items for which there can be no valid justification in these critical budget times. For example, the budget included large increases for national parkways and acquisition of additional park lands and at the same time proposed a decrease of $2 million for forest roads needed for access to timber, the sale of which would increase receipts to the Federal Treasury.

Forest receipts for the current fiscal yeare are estimated at over $100 million, and yet the budget proposed to reduce the funds for access roads that would make possible even greater timber receipts.

The budget also proposed an appropriation of $836,400 in this bill for river basin studies being financed currently by transfer from other agencies without any apparent comparable reduction being made in the 1960 requests of the latter.

While the present Mission 66 plans for improvement of the national parks call for appropriations of over $500 million between 1960 and 1966, or $72 million a year, the 1960 budget request was only $47,600,000. Certainly the public is being misled about this Mission 66.

Every national park and every monument that you go to in the United States has a big sign on it that tells you Mission 66 improvements are to be completed by the year 1966, $500 million more would be required to accomplish this. This year when they should have asked for $72 million, all they asked for was $47.6 million. Yet, included in this amount is $3,250,000 for the acquisition of still another 10,000 acres of park land, the purchase of which would only generate still greater Federal expenditures for construction and operation and maintenance. This request includes $1,250,000 representing the initiation of a 5-year plan to acquire 9,442 additional acres of Civil War battlefield land at a cost in excess of $5 million. Committee review disclosed there are already 18,000 acres in Federal ownership, representing an adequate coverage of the battlefield sites.

Despite the critical budgetary situation, the budget estimates included over $9 million for park and parkway land acquisition and construction projects in the District of Columbia and the nearby areas of Virginia and Maryland with an estimated cost to complete of over $135 million after 1960. Included again in this 1960 request were funds to initiate the scenic parkway in Prince Georges County with an estimated Federal cost of $10 million. This project has twice been disallowed by Congress in the last 2 years.

The total estimated funds available for this fiscal year including the Pay Act request, are $513,449,736.

The budget estimate for 1960 is $491,101,400.

This bill is for $472,198,800.

The reduction from 1959 is $41,250,000, or 8 percent.

The amount of the bill below the budget request is $18,902,600, or 4 percent.

Revenues from items in the bill are estimated at $385 million for fiscal year 1960.

The committee has made decreases in the budget estimate totaling $23,788,600 as follows:

In Pay Act costs (10 percent cut)	−$1,575,000
To hold construction of parkways and Indian schools and roads to level of 1959 appropriations	−10,600,000
Acquisition of park land (including Civil War battlefields and George Washington Memorial Parkway)	−4,853,000
Indian items, including Johnson O'Malley contracts, relocation, and road maintenance	−1,432,000
River basin studies (continue to finance under Reclamation and Engineers)	−836,400
Transfer of administration of Alaska fish and game laws to State of Alaska on Jan. 1, 1960	−1,100,000
Disallowance of one-half of increases for management and maintenance of parks (large increases granted in recent years)	−1,203,500
Use of some unbudgeted balances of permanent appropriations under Fish and Wildlife	−1,123,750
Minerals exploration program	−400,000
Geological Survey—water resources studies—(large increase this year)	−500,000
Other minor changes	−164,950

Only three increases were made in the budget, totaling only $4,220,000. These are for:

Additional campground, trailer, and picnic facilities in parks	+$1,550,000
Forest access roads (to keep 1959 level)	+2,000,000
Fish and wildlife construction	+670,000

Major budget increases allowed, totaling $16,230,000, were as follows:

For land management leasing and disposal, cadastral surveying, and fire control	+$1,112,000
Additional care of Indian children in boarding school dormitories, increased enrollment, and additional Indian welfare assistance, law enforcement, and resources management	+3,296,000
Increased management and maintenance requirements in the National Parks	+1,100,000
Expanded operation and maintenance of hatcheries and wildlife refuges and wildlife research	+1,030,000
Expansion of commercial fishing research and marketing studies	+429,000
Additional loans to the fishing industry	+3,000,000
Administration of the Territories	+1,069,000
Expansion of national forest timber sales	+2,800,000
Acquisition of land for the District of Columbia Park and Playground System (reimbursable)	+1,924,000
Saline water program	+470,000

In reference to the District of Columbia Stadium, we learned during the hearings that the Park Service, beginning in fiscal year 1961, planned to spend $3,400,000 of national parkway funds for a parking area for the stadium. There is no authority for such an expenditure out of parkway or any Federal funds. The committee report on the District of Columbia Stadium Act and the floor debate made very clear that the stadium was to be built with a bond issue and was not to be a burden on the Federal taxpayers. The Stadium Act clearly defines construction of the "stadium" to include "necessary motor-vehicle parking areas" and provides for the payment of all costs, including the parking lots, from the operating fund to be set up from the issuance of the bonds. The only Federal assistance authorized was for a long-term lease of the land. This has been done with a rental charge of only $100 a year.

Again let me say that I know of no committee that has brought in a better bill in the many years I have served on it, now 17, than this year's committee. We tried to do what the Department requested. There were, however, many requests in here from the budget that should never have been requested. I am asking the members of the Committee of the Whole today to do some constructive thinking when this bill is before you for amendment, and should amendments come along, make sure you understand what the amendments are all about. I mean that, because we owe a greater national debt today than all the rest of the world put together. Six of our major allies that are in league with us today followed the same path. Greece was the first to lead the world; then came Rome; and Spain, the wealthiest country in all the world when they were hauling gold to her by the boatload. But look at Spain after the Second World War, with people praying in the streets of Madrid for bread. Then came France, England, Germany, and now us. Those nations led the world each for a couple of centuries. We have been cast in this role only since the Second World War, yet there never existed a nation that has gone down the trail as fast as we are going down it.

I repeat, that our national debt exceeds that of all the rest of the world put together. We have all heard some foolish people say: "Why, we owe it to ourselves." Certainly we owe the debt to ourselves. Yet I have not seen many people in this country of 170 million souls who, when they passed on to the next world, said they were leaving any money to wipe out some of the bonds owed by the Government. I know of only two who left anything to the Treasury of the United States. Oliver Wendell Holmes was one and a rural mailman who left a couple of thousand dollars of his estate to the Federal Government. Yes, they leave it by the millions to universities, and I am for that; they leave it to erect monuments, they leave it to hospitals, and I am certainly for that. But very few times has it been recorded that any money was left to this Nation, the greatest country in the world. That is why I tell you this is a Nation that is to be pitied and taken care of. That is what I say when I look at streams, mountains, forests, the minerals and all the natural resources that God put into this country. What have we done with it? We have burned our forests. I remember, as I have told you many times on this floor, that in order to get at a tree that it took God 200 years to grow they burned a tree that it took God 100 years to grow. We have wasted all our resources and now we have to get many of our requirements from foreign countries. We made no effort to conserve, and that goes for all of our minerals and all of our forests. Our streams are polluted and filled up with debris.

Mr. WESTLAND. Mr. Chairman, will the gentleman yield?

Mr. KIRWAN. I yield to the gentleman from Washington.

Mr. WESTLAND. I want to compliment the chairman of the subcommittee and the committee for bringing in what I consider to be a very excellent bill. It seems to me the gentleman from Ohio has always presented a businesslike approach to these many problems that come to our Interior Department. I am particularly pleased that the committee saw fit to restore $2 million for forest access roads. I know the subcommittee chairman's approach to this subject has been the same as mine throughout the years. Without adequate forest access roads we cannot harvest the timber. By harvesting the timber the Federal Government shows a profit.

Mr. KIRWAN. Yes; it made about $100 million.

Mr. WESTLAND. Besides that, 25 percent of the gross receipts go to the various counties in which these forests are located for the construction of roads and schools. That is also correct?

Mr. KIRWAN. Yes.

Mr. WESTLAND. Therefore, I am particularly happy that the chairman of the subcommittee saw fit to restore those funds.

I would like to ask the gentleman just one further question. As working hours get shorter, as roads get better, and people have more leisure time, we find that our parks and our forests must provide more recreational facilities for our people. Does the gentleman feel this bill carries adequate provision for the construction and maintenance of adequate recreational facilities in the country?

Mr. KIRWAN. Yes. The committee added over one and a half million dollars for facilities in the parks, such as camp sites, tables, and so forth. There are not enough accommodations in our parks today, so we increased the budget to take care of such things in parks throughout the Nation and decreased the request to buy more land. We should take care of what we have before we start expanding and it will cost $500 million just to provide for present plans under Mission 66.

Mr. WESTLAND. I cannot agree more with the chairman. We should adequately take care of our present facilities and wait a while until we get those fixed up before we buy more.

Mr. KIRWAN. Yes.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. KIRWAN. I yield to the gentleman from Iowa.

Mr. GROSS. I want to commend the gentleman for the statement he has made particularly with reference to the

economy of waste policies which we have practiced in the past and which are now coming back to haunt us. In reading some hearings in connection with the Bureau of Reclamation, held before the House Interior and Insular Affairs Committee, I noted there are some 37 Bureau of Reclamation employees detailed to oversea projects. I wonder if the gentleman can tell me what happens in the Bureau of Reclamation when 37 top-flight employees are sent overseas?

Mr. KIRWAN. The Bureau of Reclamation does not come under this bill.

Mr. GROSS. I am curious to know whether these 37 top employees are replaced by others in the Bureau, and, if and when this foreign giveway program is ever ended what disposition will be made of these 37 top employees.

Mr. KIRWAN. If the gentleman will pardon me, let me try to answer the gentleman this way. That does not come under this bill.

Mr. GROSS. You do not have the Bureau of Reclamation in this bill?

Mr. KIRWAN. Not in this bill. That comes under the Public Works Subcommittee. But, to answer the question about replacement, I can say this, that the various agencies made a request in this little bill—it is, comparatively, only a little bill, half a billion dollars—they made a request for 1,330 additional employees. We not only reduced the requested by 1,330, we cut 155 more out of this bill.

Mr. GROSS. I commend the gentleman. When the Public Works Committee comes before the House with a bill dealing with the Bureau of Reclamation, I will be prepared to seek further information.

Mr. BROWN of Missouri. Mr. Chairman, will the gentleman yield?

Mr. KIRWAN. I yield to the gentleman from Missouri.

Mr. BROWN of Missouri. Mr. Chairman, I want to commend this distinguished gentleman from Ohio and this committee. I think this is one of the best examples I have ever seen of how to be conservative without being shortsighted, and how to be liberal without being foolish. This bill gets right at the heart of the problem. It seeks to keep abreast of the growth that this country must have, and I commend the committee for it.

Mr. Chairman, I ask unanimous consent to extend my remarks at this point about something that particularly concerns our people in southwest Missouri.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. BROWN of Missouri. Mr. Chairman, I am sure you have heard of our Ozarks, their picturesque beauty and the fine, clear fishing waters, and so forth. In the past 20 years we have become one of the favored vacation playgrounds of the Middle West, but we have just begun to scratch the surface of this vast potential. We are constantly trying to improve our facilities to accommodate the influx of vacationers. One of the biggest stimulants we have had is the completion of the Table Rock Dam, a major project, and one of the largest units on the White River Basin chain. It is almost 100 percent complete and will be dedicated this year.

In addition, we have Bull Shoals Reservoir, Lake Taneycomo, Roaring River, and many other fishing waters in the Arkansas-Missouri - Kansas - Oklahoma area.

We have streams to fish, and every year we are getting more fishermen.

People who go fishing like to catch fish; and we need more fish.

The only Federal fish hatchery in Missouri, and one of the oldest of the 101 in America, that is still in operation, is located in our southwest Missouri area at Neosho, Mo. This station was authorized in 1888. Except for a few alterations completed under the WPA and PWA days and the customary maintenance work, the Neosho hatchery is basically what it was in the 19th century. Only a minimum amount of maintenance has been done, such as the painting of the buildings and patching of concrete ponds.

The hatchery puts out approximately 25,000 pounds of fish a year, which includes both trout and warm-water or pond fish such as bass, blue gill, and channel cat, but by revamping the station and bringing in some additional water, the output can be doubled. For this reason, there is $320,000 in this bill to rehabilitate the Neosho fish hatchery.

Due to the age of the buildings—practically all are wooden structures at the Neosho fish hatchery—this involves a major replacement program. It is a badly needed, justifiable investment.

Mr. KIRWAN. I thank the gentleman.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. KIRWAN. I yield to the gentleman from West Virginia.

Mr. BAILEY. I would like to ask the distinguished gentleman if you have firm figures for the reduction you are making in the Johnson-O'Malley Act. When our Committee on Education included a lot of the activities now carried out under the Johnson-O'Malley Act concerning school legislation, I made the prediction that it would lead to a sharp reduction in the Johnson-O'Malley funds. Upon what did you base that?

Mr. KIRWAN. Just what we are talking about, it was based on the Federal impact legislation, you had a hand in passing.

Mr. BAILEY. It came out of our committee.

Mr. KIRWAN. Yes; the Indian children are now eligible under the grants made under this new legislation and those funds are appropriated to the Department of Health, Education, and Welfare.

Mr. BAILEY. I thank the gentleman.

Mr. METCALF. Mr. Chairman, will the gentleman yield?

Mr. KIRWAN. I yield to the gentleman from Montana.

Mr. METCALF. I, too, rise to compliment the chairman of the subcommittee of the Committee on Appropriations for bringing out a forward-looking and progressive bill, one which conserves our natural resources. I especially want to commend the committee for the increase in forest access roads, because there is an investment that is good for the taxpayers; there is an investment of money that is good for local contractors and local labor and brings money into the Treasury. There is an increase that will genuinely help to balance the budget.

Mr. KIRWAN. I thank the gentleman from Montana.

Mr. LAIRD. Mr. Chairman, will the gentleman yield?

Mr. KIRWAN. I yield to the gentleman from Wisconsin.

Mr. LAIRD. I would like to ask the chairman of the subcommittee a question which had been asked of me. It deals with the appropriation level for the Office of Territories; the administration of Territories. During the past year both Alaska and Hawaii are being broken away from the Office of Territories, and yet the appropriation item, the budget estimate for 1960, has been increased by $506,000 over the 1959 appropriation level. I would like to know what the basic reason for that is.

Mr. KIRWAN. That increase is for the new jet airport on Samoa. The entire funds for the Alaskan Division in Washington and for the Governors office in Alaska, totaling about $135,000, have been eliminated.

In addition, the funds for Hawaii have been reduced by $78,500, representing the legislative expenses.

Mr. LAIRD. I thank the gentleman.

Mr. JENSEN. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, I agree with my good chairman, the gentleman from Ohio [Mr. KIRWAN], that the time is long past due when we should stop wasting the taxpayers' money as we have been doing, not in this Interior Department program, but in many other programs that have come before this Congress. I hope that the leadership on the other side of the aisle will plead with the Members on their side of the aisle to help the rest of us, who have been trying and are still trying, to keep this great Nation of ours from going into bankruptcy, to the end that we will not spend a lot of money during this session of Congress which is not justified by any stretch of the imagination. I hope we can hold the budget, and further I hope that we will cut below the budget a considerable amount, and by so doing give the American people a shot in the arm, so to speak, so that they may have more confidence in their Government, and thus we shall preserve our great American form of Government, the free enterprise system.

I think there is a condition that exists in the minds of too many people that when we appropriate money here in Congress we are helping the wage earner, the so-called little fellow. But let us not forget that the wage earners of America, the so-called little people, with the people who have a set income, who are on pensions, social security, or welfare, comprise the greatest consuming group in America. And the ultimate consumer of the goods pays all the bill in the final analysis. Every dime that we spend, not only here in Congress, but that is spent by State governments,

county governments, municipal governments, is paid for by the ultimate consumer. And so when we spend money that should not be spent we are hurting the little fellow first and most.

The wage earners, the little fellows whom we are all concerned about—and I say I am concerned about them possibly more than a great many people who are always talking about spending money for the little fellows—they should be down here beating us over the head every day to stop unnecessary spending, because they are the people who are going to be obliged to pay the greater share of the bill—either they or their children, or their children's children. Let us not forget when you come here on the floor of the House and offer amendments to increase appropriation bills that these several subcommittees on appropriations have sat for weeks and possibly months hearing all of these people who come before us to justify their requests, and many times they come before the committee and ask that the budget request be increased to no end.

Mr. HERLONG. Mr. Chairman, will the gentleman yield?

Mr. JENSEN. I yield to the gentleman from Florida.

Mr. HERLONG. May I congratulate the gentleman on the statement he is making about private enterprise. I live in a district where many of the people have to live on fixed incomes. They are retired. What the gentleman says about inflation is eminently true. Our inflationary tendencies are certainly spurred by unnecessary Government spending. It is robbing these people of money they have paid to try to live on, just the same as if a thief broke into a house and took the money out of their pocketbooks.

Mr. JENSEN. I thank the gentleman. He always contributes to a debate. He is a conservative wherever economy is needed but always willing to spend where money should be spent. I congratulate the gentleman.

My good chairman has told you that this bill comes to the floor by unanimous agreement of the committee, which is true. You will note that for the past many, many sessions of Congress this bill has come to the floor by unanimous agreement of the Subcommittee on the Department of the Interior. Why? Because we settle our differences in committee. There are times there is considerable difference of opinion among members of the committee, but we stay there until we settle those differences. However, I may say that such a condition does not exist too often, because we all want to appropriate for this great natural resource program which is so important to the people of America not only for today but for generations to come. Everything in this bill, every dime in this bill, is for the benefit of America and its Territories.

So I need not take much more time. The chairman of our subcommittee, the gentleman from Ohio [Mr. KIRWAN], has explained the bill. I do want to say that I have been on this subcommittee for the past 17 sessions with Mr. KIRWAN, Mr. NORRELL, and Mr. FENTON. We have now several new Members on both sides, comparatively new Members. The gentleman from Pennsylvania [Mr. FENTON] has been in charge of the Bureau of Mines and the Geological Survey for the minority side of the committee for the past many years. The gentleman from Wyoming [Mr. THOMSON], because of his service on the legislative Committee on Interior and Insular Affairs and because of his knowledge of the Federal domain and the Forest Service, I have asked to take charge of the minority side of the committee when such agencies are before the committee. So, I shall not take up more time except to say that this bill comes to the floor a well-rounded bill. I trust the Committee of the Whole House on the State of the Union will not permit any additional amendments to be adopted to this bill.

Mr. KIRWAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Pennsylvania [Mr. QUIGLEY].

Mr. QUIGLEY. Mr. Chairman, I note with regret that the committee in its wisdom saw fit to delete from this bill the Department's request for funds for the acquisition by the National Parks Service of additional acres of Civil War battlefield lands. I note this particularly because included in the Department's request were funds for some 600 additional acres which make up the remaining unacquired acres of the battlefield at Gettysburg.

The second Battle of Gettysburg is currently being fought and I regret to report, Mr. Chairman, that it is not being won. This is the battle to preserve this historic site from the ever-growing encroachment of commercialism. I am afraid that the action of the committee in not providing the National Park Service with sufficient funds will mean that by the time the spotlight of the country and the world is focused upon Gettysburg in 1963 to commemorate the 100th anniversary of that most historic battle, we are going to suddenly discover, when it is too late, that the second Battle of Gettysburg has been lost and that this truly great American shrine has been completely desecrated by the onslaught and ever-expanding growth of commercialism. I intend to support the bill, Mr. Chairman, but I do regret that the committee has seen fit to delete this particular item. I trust the other body will correct this error.

Mr. VANIK. Mr. Chairman, will the gentleman yield?

Mr. QUIGLEY. I yield.

Mr. VANIK. I would like to inquire of the gentleman, if the land is acquired at some future date, whether we have any assurance that it will not be used to build a new golf course out there.

Mr. QUIGLEY. I would merely comment on that by saying that the National Park Service assured me that the 600 acres they contemplated acquiring under this bill was the last and final request it would have to make and that this would have given to the Park Service all of the land they needed to preserve the battlefield area.

Mr. JENSEN. Mr. Chairman, I yield such time as he may desire to the gentleman from Pennsylvania [Mr. FENTON].

Mr. FENTON. Mr. Chairman, the Committee on Appropriations for the Department of the Interior brings to you today a bill that has had the careful consideration of the subcommittee under the chairmanship of Mr. KIRWAN, of Ohio, and Mr. JENSEN, of Iowa, the ranking minority member. The hearings, I believe, gave the membership of the committee pretty fair insight of the work being done by the Department of the Interior. The Department of the Interior and related agencies presented a Bureau of the Budget estimate for 1960 of over $491 million.

Our committee reduced this to $472 million, or a reduction of about 4 percent. This reduction is modest and one we believe the Department of the Interior can live with.

Mr. KIRWAN. Mr. Chairman, I yield 8 minutes to the gentleman from Maryland [Mr. LANKFORD].

Mr. LANKFORD. Mr. Chairman, after considerable deliberation, and fully appreciative of the task confronting the committee to effectuate needed economies, I cannot accept the committee's decision to delete the sum of $1 million requested by the President for right-of-way acquisition for the uncompleted portion of the George Washington Memorial Parkway. It is my sincere belief that this action does not represent an economy, but rather it can only be considered a tragic loss to all the people of the United States that cannot be measured in terms of dollars.

At the appropriate time I shall offer an amendment restoring the President's request for right-of-way acquisition. I emphasize the words "right-of-way acquisition." This $1 million is to insure that this section of the Potomac shoreline, the last great natural scenic feature in the Washington metropolitan area, will still be available when construction money can be granted. If the House today upholds the action of the Appropriations Committee, then it is my belief that rising land values and the pressures of private development will destroy this 30-year dream since the ultimate cost will become prohibitive.

Twenty-nine years ago the Congress of the United States took official notice that the Capital of the Nation had outgrown the boundaries of the District of Columbia. Washington, D.C., had, in effect, spread to parts of Montgomery and Prince Georges Counties in Maryland and Arlington and Fairfax Counties in Virginia. If the capital was to continue to be a showplace worthy of the Nation it represents, some measure was required to assure that development in the adjacent counties did not grip the central city in a concrete and asphalt vise. To fill this need, the 71st Congress passed into law the so-called Capper-Cramton Act. What the Capper-Cramton Act said was this:

Because of proximity to the capital, the regions adjacent to Washington have responsibilities to the Nation not shared by other counties far removed from the Nation's capital. They owe it to the Nation at large to keep the capital area beautiful and to preserve the unique scenic, recreational, and historical features of the area.

If they are to meet these responsibilities—the act said, in effect—they will need help. The Nation as a whole therefore agrees to pay one-half the purchase price of lands needed for these purposes if the adjacent territories will pay the other half. The Nation then will develop these resources as required.

The one specific purchase and development program which the Capper-Cramton Act provided for was the creation of a memorial parkway along both shores of the Potomac River, from Mount Vernon to Great Falls on one side, from Fort Washington to Great Falls on the other. This parkway was not to be just another superhighway. It was to be a scenic route specially designed to preserve as much as possible of the shoreline of the Potomac for the enjoyment of all Americans who come to their capital and to link in a readily accessible manner the sites and monuments along the Potomac of national historical interest.

When the act passed the Congress in 1930, the Mount Vernon Memorial Highway from Arlington to Mount Vernon along the west bank of the river already was under construction. Upon its completion in 1932, it was incorporated into the parkway system, which became known as the George Washington Memorial Parkway. Today, 29 years later, some three-fourths of the parkway authorized by the Capper-Cramton Act either has been completed or is in process of construction. Only one segment, 7½ miles from Washington to Fort Washington in Prince Georges County, Md., remains totally unrealized.

The request for funds for the Prince Georges County segment has not been delayed because this section is any the less needed or desirable than the others. Indeed, the recent mass transportation survey for the National Capital region listed the parkway as an essential part of the area's road system. The delay comes from the fact that not until 2 years ago, in the face of indications that if the land soon was not purchased, private development would have pushed land costs to a prohibitive level, were Prince Georges County officials able to foresee their share of the costs. The Maryland House of Delegates authorized the county to enter into an indebtedness of $1 million as the bulk of the county's share for land acquisitions. At this point, in 1957, the National Capital Planning Commission asked Congress for the Federal share of the land costs. This request passed the House. But the Senate Appropriations Committee delayed it until the Interior and Insular Affairs Legislative Committee could study the proposal and determine if a project planned as long ago as 1930 still was advisable. By the time the Interior and Insular Affairs Committee had studied the project and endorsed it, it was too late for the proposal to be acted upon by the 84th Congress.

I would like to mention briefly the historical significance of the 7½-mile stretch to Fort Washington. First, Fort Washington itself, already federally owned and in the process of development, is one of the best examples extant of an early 19th century fort. It has been constructed, abandoned, and reconstructed several times and has almost a medieval atmosphere, with its drawbridge and moat. It is part of a 341-acre reservation that can provide unlimited recreational facilities.

Historic Harmony Hall and the ruins of Want Water, both dating from the early 18th century, are to be included in the proposed park. Washington frequently stopped to visit his friend, Colonel Lyles, at Want Water, on his way home from attending the Broad Creek Church nearby.

An excerpt from a letter which I received from the present owner of Harmony Hall very colorfully describes this general area and offers convincing evidence why we must not allow this rich historic region to be forever lost as a result of undesirable development. The excerpt reads as follows:

> This property is in the neighborhood closely associated with the life of George Washington. It is on the Maryland side of the Potomac. Directly across the river from Harmony Hall is Wellington, the home of Washington's secretary, Tobias Lear. It is situated on the original Mount Vernon estate.
>
> Washington ferried across the Potomac to the Maryland shore at Warburton Manor—now Fort Washington.
>
> Ancient Want Water adjoins Harmony Hall on the north. It was built before 1700 and was the home of Col. William M. Lyles, a personal friend and neighbor of Washington. It is listed in the Historic American Buildings Survey, as is Harmony Hall. Nearby is St. John's Church, which dates back to 1692. Washington frequently worshiped here. His pew is marked today with a silver plate along with that of Colonel Lyles.
>
> No part of the George Washington Memorial Parkway is more appropriate to the memory of Washington than the neighborhood of Broad Creek.

Without the completion of the Fort Washington Parkway, the lower Potomac project can never be completed. The largest natural open space around Washington is the broad Potomac. To take full advantage of that open space it is desirable to provide access to both sides at as many points as possible. Fort Washington, when its attractions are better known, will certainly become a powerful magnet for visitors from all parts of the country. The recreational values present in the area in question are sorely needed. Many opportunities for picnicking, hiking, bird watching, nature walks, boating, sports, and quiet enjoyment of rural scenery and woodlands will be provided. Americans are a nature-loving people. Each year thousands of young people are learning to use their eyes and ears with understanding as the bird and animal life, together with the tree and plant life, is brought to them through our national parks and forests.

The Potomac River is clearly one of our country's most famous, most scenic, most important rivers. I call upon the House today to complete the task begun 29 years ago. To do less would be a tragedy to be forever regretted by all the people of the United States.

Mr. JENSEN. Mr. Chairman, I yield 5 minutes to the gentleman from Wyoming [Mr. THOMSON].

Mr. THOMSON of Wyoming. Mr. Chairman, my experience of serving on this committee for the first time has been a particular pleasure. The programs and agencies covered in the bill do vitally concern all of America, but many are of immediate concern to certain geographical areas of the country more so than others, particularly the public lands areas.

In the consideration of this bill I have been more than impressed and cannot help but mention the familiarity, the interest, and concern that the chairman of this committee, the ranking Republican member, and all of the other members of the committee have shown. And, I have been particularly impressed with their understanding of the problems nationwide and the close watch which they have kept upon the activities of this particular department and its bureaus and related agencies. Being a bill for America, naturally there are many items that are left out in several districts that affect individual Members, and the same can be said and is true of the district which I represent. But, this is, I think, a time for restraint, restraint without interfering with vital programs, and this bill, I believe, fairly achieves that goal. I think that the fact that it is time for restraint also emphasizes the wiseness of the action of the committee in disallowing a major portion of the funds for acquiring additional land by the Park Service. The Park Service launched in 1955, with the help of this committee and many interested Members, the Mission 66 program. I would like to say that while serving as a member of the legislative committee I was continually concerned with the efforts to add to our national parks and with differentiating between that which was for local recreational needs or otherwise a local function and that which was truly national in scope. I would like to call the attention of the Members to page 469 of the hearings. It shows that on July 1, 1955, the the estimate for the development of our parks to put them in a state of good condition and make them adequate for 1966 as contemplated in Mission 66 was $459 million. It further shows that there have been added to that since that time projects not included in the original Mission 66 plan totaling almost $126 million, or additions equaling more than 25 percent of the original plan. So, I would emphasize that I think every Member of the Congress must, if we are ever going to bring our existing parks up to a minimum standard, exercise restraint in introducing or supporting proposals to add lands or new areas to the system. I certainly hope that the recommendation of the committee to curtail this land acquisition and to appropriate a large portion of this amount for urgently needed park improvements is not infringed upon. If we continue on this course of constant expansion of the park system, it has been well said, we will have something that we cannot take care of, and our parks will deteriorate to a similar or worse condition than they were in before Mission 66 was launched.

There is a particular problem upon which I believe I should comment. For a time, it appeared that the elk, one of the most magnificient of the North American game animals, would become

extinct. Through the cooperation of the State of Wyoming and the Fish and Wildlife Service of the Federal Government, this was prevented. A substantial elk herd has been built up in northeastern Wyoming in the areas around Yellowstone Park.

Hunters from all over the Nation draw for elk licenses and come to hunt in this area. The hunting season is in the fall and closes about the 15th of November. As hunting pressure is applied, elk are driven across the park boundaries into the protected area. They are trapped there by the snows which usually hit the high mountain passes before the hunting season closes, and are prevented from returning.

The Park Service contends that this has built up the herd in the park along the Lamar River to numbers in excess of what the range will carry. There is substantial dispute as to this and as to the number of elk actually in the Lamar herd. At any rate, in recent years the Park Service action has been to wait until the deep snow months, when the elk are down along the highway, and to shoot them, primarily from cars driving up and down the road. As this slaughter operation becomes known to the sportsmen and true conservationists of the Nation, I believe that they will object very violently and I think that they will be joined in their objections by the great majority of American citizens.

It is ridiculous that we should provide in this bill almost $17 million to the Bureau of Sport Fisheries and Wildlife for preservation and propagation of our fish and game, while another agency of government is carrying out a program such as this. It appears to be another case of the right hand not knowing what the left is doing.

A satisfactory solution must be found. Several possible solutions are available. One would be to feed the elk, such as is done at the elk refuge in Jackson Hole. As I am advised, the old Buffalo Ranch, right on the Lamar River, is capable of producing 1,000 tons of hay per year. Another possible solution would be to allow limited hunting in controlled areas along the borders of the park during the hunting season, so as to apply reverse pressure and keep the animals from being driven into the park; or to have the ranger crews do their hunting at this time of the year. Some people would say that this is breaching the time-honored covenant of not permitting hunting in the park. I can only say to them that it is not a question as to whether the hunting will be permitted, but one of whether it will be a sporting proposition or a slaughter operation. Another possible solution is to fence along the park boundary.

Undoubtedly there are other possible solutions. The thing is that the present situation is intolerable. I believe that the Park Service will devote its efforts to finding a solution. If one is not forthcoming, then I believe it is incumbent upon the Congress to consider the problem and to take appropriate action.

In the short time remaining available, I would like to comment on the overall aspects of this bill. The reductions made have been very modest. With regard to the Bureau of Land Management, Forest Service, which do a particularly fine job, the reductions have only been to take care of pay act adjustments. The bills in both instances provide for more funds than were appropriated in fiscal 1959 for these activities. As the hearings will show, we have been assured that the level of the program carried on in the fiscal year 1959 can be carried out in fiscal year 1960. The same is true of the Bureau of Mines, the U.S. Geological Survey and other vital agencies. This is what I think we must do in these days of budget stress. I believe it would be unbecoming, as much as we would like to have additional activities in these fields, to ask for additional money. I support this bill. It is a good bill, and the membership should see that it is passed without amendment.

Mr. JENSEN. Mr. Chairman, I yield such time as he may desire to the gentleman from Pennsylvania [Mr. SAYLOR].

Mr. SAYLOR. Mr. Chairman, I take this opportunity to ask either the chairman or the ranking Republican member of the committee whether or not there is anything in this bill for the Outdoor Recreation Resources Review Commission.

Mr. KIRWAN. That is not before us. That item will be submitted later.

Mr. JENSEN. Mr. Chairman, as the gentleman knows, I am sure, that item is represented by a budget request in the deficiency bill which will be considered tomorrow. In this bill there is considerable money for recreation projects in the different parks and services. We have many recreation activities, and funds for those purposes.

Mr. SAYLOR. Mr. Chairman, it seems strange that on June 26, 1957, the U.S. Senate unanimously passed the bill creating the National Outdoor Recreation Resources Review Commission and on June 16, 1958, under suspension of the rules with hardly a dissenting vote, the House passed and sent to the President a bill creating this Commission. Congress authorized the President to appoint a bipartisan commission, and directed that the Commission present its report not later than September 1, 1961.

The bill also authorized an appropriation of not more than $2,500,000 to carry out the purposes of the act, and such moneys as may be appropriated shall be available to the Commission until expended. There was the sum of $50,000 originally appropriated by this committee, but I notice that for fiscal 1960 there is nothing. This is an example of what so often happens when a commission is appointed by this Congress. The act creating the Commission has a termination date, the Commission is hampered by the lack of appropriations and cannot complete its work and must ask to be extended. Then in a very short time Members will rise and say that here is another example of a commission being appointed that does not terminate within the time originally established, and will oppose its extension. This Commission cannot do the work it was set up to do unless there is money appropriated to take care of its activities.

Mr. THOMSON of Wyoming. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the gentleman from Wyoming.

Mr. THOMSON of Wyoming. I think the gentleman will find that the Outdoor Recreation Resources Commission, being set up as a separate commission, will be handled as an independent agency and will be incorporated in the independent offices bill. There was a request for $30,000 in addition to the $50,000 appropriated last year. That will come in the deficiency appropriation bill which is to be considered later in the week.

Mr. SAYLOR. That would be a deficiency for the current year, but there is nothing in here for next year. However I have been informed that there is nothing in the deficiency appropriation bill that we will consider tomorrow for this commission.

Mr. THOMSON of Wyoming. Next year it will be handled in the independent offices bill, because it is an independent commission.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Iowa.

Mr. JENSEN. I may say to the gentleman that the reason there is nothing in this bill for Outdoor Recreation Resources Review is the simple fact that the budget and the White House no doubt felt that it was necessary to put an item in the deficiency appropriation bill for fiscal 1959 and permit the Deficiency Subcommittee to operate on that item. But since the Deficiency Committee did not have all of the facts that were necessary to justify an appropriation for this purpose, I know the gentleman already is aware that there is no fund even in the Deficiency Committee bill.

Mr. SAYLOR. I am well aware there is nothing in the deficiency appropriation bill that will continue the work of this Commission and I hope to offer an amendment to cure that tomorrow.

Mr. JENSEN. The regular 1960 appropriation request for this item will be considered by the Independent Offices Committee in the regular bill for 1960.

Mr. KIRWAN. Mr. Chairman, I ask unanimous consent that all Members who so desire may be permitted to extend their remarks at this point in the RECORD on the pending bill.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mrs. PFOST. Mr. Chairman, I would like to join with my colleagues in paying tribute to the Appropriations Committee for their careful and diligent study of the budget requests on the measure before us. I think their action on the appropriation for the Department of the Interior is the answer to those who are shouting to the country that the Congress is controlled by spenders. By increasing the funds for such self-liquidating items as forest roads and trails, the Committee is taking a realistic approach to Federal spending. Money

appropriated for forest roads is a sound investment which actually brings added revenue into the Treasury by stimulating timber sales through improved roads which reach into the timber-cutting areas.

By cutting out the administration's requested frills, and by careful, item-by-item scrutiny of the President's requests, the Appropriations Committee was able to increase such necessary items as money for forest access roads, allow the full request for timber sales, and yet they were able to cut $18,902,000 from the overall budget request.

I think the people of the country will appreciate this careful and studied appropriation of their money for essential Government services. It is a responsible and efficient way to control spending. It is budgetmaking in the best manner, without playing politics and without the meat-ax approach advocated by some in cutting Federal spending.

With this type of budgetmaking the 86th Congress will have a proud record to take to the people of the country, and the people will then know who has been responsible for the constantly increasing budgets over the past 6 years.

Mr. METCALF. Mr. Chairman, I am gratified that the Committee saw fit to vote increases of $2.8 million for expanding national forest timber sales and $2 million to maintain construction of forest roads and trails at the present level.

The budgets of the past few years have not permitted progress in timber sales. Montana national forests have an allowable cut of 825 million board feet. In the past 2 fiscal years, an average of only 47 percent, 377 million board feet, of the allowable cut has been sold. But the cut has averaged 457 million board feet. In other words, in the past 3 years, timber cut has exceeded sales by one-third of a billion board feet, and the sales have been at 47 percent of permissible levels.

The Committee wisely restored the administration $2 million cut in the appropriation for forest access roads. Instead of saving the taxpayers money, that cut would have cost them more than $2 million. Had it stood, the Forest Service would have stepped up road construction by timber purchasers—and the Treasury would have been out more than $2 million. When timber purchasers have to build these roads, public timber is sold in large blocks—too large for a small or medium-sized operator to handle. Then there is generally only one bid—at the appraised price, minus the estimated cost of the road.

The taxpayers stand to benefit, in cash on the timber, by having several bidders. They stand to benefit by having the main line road built under separate contract bid upon by roadbuilders; for experience shows that the roadbuilders generally offer to do the job for 10 to 20 percent less than the engineers' estimated cost. These large sales make it impossible for the smaller operators to secure timber. Since estimated cost of a road built by a timber operator is deducted from the price he pays for the timber, this means less money to the Treasury, and, in turn, less money for the rural school and road systems in the counties in which the forests are located. As you know, these counties share in the income from the national forests. In addition, road construction by timber purchasers is outside the control of Congress.

We lose all around when we don't appropriate the money for forest development roads. We lose millions of board feet of timber, deteriorating in inaccessible areas. We spend large sums, and risk the lives of parachuting firefighters, to control fires in these roadless areas. Smaller firms cannot buy timber if they are also burdened with expensive road construction, so they fold. The fewer the bidders, the lower the price the public gets for its timber. Road construction by the purchaser shuts out the road contractors, and the union labor they employ.

I call attention to another matter.

It is essential that funds be appropriated directly to the Fish and Wildlife Service for the investigation of projects in the vast water-resource program of the Federal Government and that under Federal license.

The change in this method of financing will not in itself cost the Federal Treasury one dime. It simply will represent a more orderly method of financing this important work.

This work is carried on under authority of the Fish and Wildlife Coordination Act. This act was strengthened by the Congress only last year when it enacted amendments supported by all national conservation organizations, the commercial fishing industry, and the Governors and fish and game directors of every one of the States.

Reductions made by the committee for this activity leaves the Fish and Wildlife Service with nowhere to turn to finance it in fiscal year 1960. The budgets of the Corps of Engineers and the Bureau of Reclamation have already been prepared, without provision for these transfers. Those budgets would have been higher by the amount of $836,400 if such provision had been made in them.

Unless provision for river basin studies is made here, there will be no river basin studies at all. No river basin studies here because the budget item is not allowed and no river basin studies under the Bureau of Reclamation and Corps of Engineers because this item is not budgeted for those agencies.

The Department of the Army itself is on record as favoring direct appropriations to the Fish and Wildlife Service.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the Department of the Interior and related agencies for the fiscal year ending June 30, 1960, namely.

Mr. KIRWAN. Mr. Chairman, inasmuch as there is relatively little controversy over the bill, I ask unanimous consent that the further reading of the bill be dispensed with and that the bill be open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The CHAIRMAN. Are there any points of order against the bill?

Are there any amendments?

Mr. LAIRD. Mr. Chairman, I move to strike out the last word.

FOREST DISEASE RESEARCH WORK IN THE LAKE STATES REGION

Mr. Chairman, today I want to talk about a problem of utmost importance to the forests of Wisconsin and to other States of our country—the problem of combating the tree diseases that take such heavy toll of our timberlands each year. I want to tell you about the need for more forest disease research in the Lake States—research that will enable us to solve this problem.

We have in the continental United States 484 million acres of commercial forests with large additional areas in our newest States of Alaska and Hawaii. These forest lands support more than 500 billion cubic feet of timber of all sizes.

The impact of diseases on this valuable resource every year exceeds 5 billion cubic feet. It is difficult for me to comprehend that big a loss, or even to visualize that volume of timber. But, when this is translated into local terms and I find in my home State of Wisconsin that more timber probably is lost to diseases each year than is harvested by our own wood-using industries, that I can understand.

This loss in Wisconsin is caused mostly by just one forest tree disease, a canker-type disease of aspen. This disease is prevalent throughout Wisconsin, Michigan, and Minnesota where it alone kills almost as much timber as is consumed by the pulp and paper industry in that tristate area. This must mean that the forests in these Lake States could support twice as big a pulpwood industry if just this one disease could be controlled. Unfortunately this same disease is prevalent throughout the aspen forests of the East and is also found, I am told, in the Rocky Mountain forests. Scientists know the cause of aspen canker but have not yet been able to devote enough attention to it to work out a feasible control.

Most of our forest diseases seem to follow a pattern; either the same disease or a counterpart occurs on different tree species in different parts of the country. In the Lake States, for example, dwarf mistletoe causes a serious disease of our black spruce forests. Other species of this same parasitic plant slow down the growth—often as much as 50 percent—deform and kill various of the conifers in our forests of the West. As another example, I have learned that the heartwood of all species, conifers and hardwoods alike, is subject to decay. These heart rots, working away inside the tree, are inconspicuous but they slowly continue to deplete our available timber supply at the rate of over 3 billion cubic feet per year.

Still other uncontrolled diseases are found in all parts of our country. It is my understanding that many of these

diseases take on added significance as more and more thousands of acres of forest plantations come into being in all parts of our country. This is because of the greater capital investment in planted stands and the frequently more favorable disease environment created when large acreages are planted uniformly to a single kind of tree.

The newest disease to threaten our forests is one called maple blight that was observed for the first time in Wisconsin in 1957. So far, this disease has been found only in a spot or two. But, over the 10,000 acres involved, this disease has killed all of the sugar maples, saplings to mature trees, on an area aggregating about a thousand acres. Industrial users are understandably alarmed by this potential threat, for sugar maple is one of our most valuable timber species and is found on over 9 million acres of Lake States forests. Industrialists are so alarmed, in fact, that $24,000 has been contributed by them to get a cooperative industry, State, and Forest Service research project underway at once. Time has as yet been too short for the research workers to have discovered the cause of this disease.

These small research programs are a help but certainly are not the full answer to the continuing needs for forest disease research if an effective control program is to be developed. The main reason we lack means of lessening the terrific disease losses I have brought to your attention here is because research has not been financed adequately to permit effective work on the many disease problems confronting us. I direct your attention to the Forest Service budget item for forest disease research for fiscal year 1960 which is $740,000. This amount is distributed over a great many problems throughout the country and thus Federal funds are not available to match the efforts the States and private industry are putting into the work on a new disease like maple blight. I hope this committee will give further consideration to the present inadequacies of the forest disease research budget and increase it to a more realistic figure. In my judgment no better investment could be made than to strengthen the forest disease research work in the Lake States region.

I wonder if any distribution was made of the $740,000 appropriated in this bill, or whether the distribution will be made on the basis of a priority set up by the Forest Service in the Department of Agriculture.

Mr. KIRWAN. The committee allowed the budget money. Whatever they requested we gave them, the same as they got last year.

Mr. LAIRD. Then it will be used on the basis of a priority set up by the Forest Service?

Mr. KIRWAN. They understand where to spend it and how.

Mr. LANKFORD. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LANKFORD: Page 34, line 24, strike out "$2,286,000" and insert in lieu thereof $3,286,000; page 34, line 25, strike out "$62,000" and insert in lieu thereof $1,062,000; page 35, line 6, strike out "$50,000" and insert in lieu thereof $173,000.

Mr. LANKFORD. Mr. Chairman, the amendment just read simply restores the $1 million requested by the President for right-of-way acquisition for the uncompleted portion of the George Washington Memorial Parkway. This portion extends from the District of Columbia down to Fort Washington in Prince Georges County, Md., and is a total of 7½ miles in length. It was authorized by the so-called Capper-Cramton Act of 1930 and reaffirmed by the Senate Interior and Affairs Committee in the 84th Congress.

In the 85th Congress the President's request for funds was denied by the Appropriations Committee on the grounds that roads in the area in question are already adequate. I cannot accept this argument inasmuch as it was never intended to be a highway but a "road through a park" acutely needed for the over 7 million visitors who annually visit our Nation's Capital.

In this Congress the committee, while recognizing the desirability of the parkway, termed it a nonessential project and then entered into a discussion of possible ultimate costs. If we believe in parks and parkways—and Congress has repeatedly expressed its approval of the preservation of our marvelous outdoor sights and historic points of interest—then this must be deemed an essential project. For this is the Nation's parkway. It is a living monument to the first President, visioned and created to do him honor.

During the recent hearings, a question was raised as to what Congressman Cramton and Senator Capper would say if they were faced with the ultimate costs of the project. I am in receipt of a letter from Congressman Cramton, who at age 84 is at present a member of the Michigan House of Representatives. I would like at this point to read his letter in its entirety as it so feelingly and movingly portrays the case of the parkway.

HOUSE OF REPRESENTATIVES,
Lansing, Mich., February 17, 1959.

Hon. RICHARD LANKFORD,
Member of Congress,
House Office Building,
Washington, D.C.

MY DEAR CONGRESSMAN: Having been largely responsible for passage of the so-called Capper-Cramton Act in 1930, I read with much interest your remarks in the RECORD February 5 concerning the George Washington Memorial Parkway. I am gratified to note that Maryland continues ready to do its part in the development of this most interesting, highly scenic and historically important parkway.

I still recall the very active and effective cooperation which the Federal Government received from the State of Maryland and local communities in our efforts at that time to extend Rock Creek Park, etc. I remember very satisfactory contacts at that time with Governor Ritchie, Senator Brooke Lee, and other important officials. For the Federal Government now to fail to do its part in the completion of this great project would be a tragedy forever to be regretted by American citizens who want their National Capital beautiful and interesting.

The so-called Capper-Cramton law was initiated and introduced by me in the House and after it passed the House was taken through the Senate by the leadership of Senator Capper. I very deeply hope that you may succeed in getting favorable action by the House Appropriations Committee and the House.

I am sending a copy of this letter to Hon. JAMES G. O'HARA, who has recently taken the place which I once occupied in the House, and to my friend, Senator HART, and also to Dr. Conrad L. Wirth, Director of National Park Services.

Sincerely yours,

LOUIS C. CRAMTON.

I urge the House to adopt my amendment and by so doing earn the gratitude of America and its generations to come.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. LANKFORD. I am glad to yield to my distinguished colleague from Maryland.

Mr. FOLEY. This money that we are seeking to restore for the George Washington Memorial Parkway—to what extent will it change the President's budget? Is it in the budget or will it exceed the budget?

Mr. LANKFORD. It was in the request as submitted to the Committee on Appropriations.

Mr. FOLEY. Is it my understanding then that there would be no no change in the President's budget if the funds you are seeking to restore are restored?

Mr. LANKFORD. This is not to increase any request. This was requested by the President in his budget as sent to the Committee on Appropriations.

Mr. FOLEY. I thank my colleague.

Mr. KIRWAN. Mr. Chairman, I rise in opposition to the amendment.

Mr. KIRWAN. Mr. Chairman, what the gentleman from Maryland said about the Potomac River and all the beauty down there, I agree with 100 percent. It is a beautiful site. But just this portion would cost the Federal taxpayers over $10 million.

When this parkway was authorized in 1930, the Members were assured during the floor debate that the entire project, both in Virginia and Maryland, would cost only $9 million. Already it has cost $20 million and it will cost over $50 million to complete. I wonder what Congressman Cramton and Senator Capper, sponsors of the bill, would say today if they were faced with this staggering figure for a scenic parkway?

Indian Head Highway adequately serves this area at the present time and it is planned to dualize it in the near future. In addition, a new freeway, is planned paralleling the Indian Head Highway.

The Federal Government now owns and maintains over 42,000 acres of park land in the vicinity of Washington. There are now over 400 acres at Fort Foote and Fort Washington, including about 3 miles of shoreline available to the public. The Government owns over 1,100 acres in Greenbelt Park over here in nearby Maryland and is developing this at a cost of over $3 million. Maryland also plans to come in for over $12 million to establish the C. & O. National Historical Park from here to Cumberland. We are now constructing the George Washington Memorial Parkway for Maryland from the District of Co-

lumbia to the Cabin John Bridge at a cost to the Federal taxpayer of $9,800,000.

The Federal Government has appropriated $1,500,000 to date for land for stream valley parks in nearby Maryland, and there is another $150,000 in this bill.

They say this is the only stretch left to complete the parkway from Mount Vernon to Great Falls on the Virginia side and from Great Falls to Fort Washington on the Maryland side. This is not true.

The parkway has not been built from the Cabin John Bridge to Great Falls on either side. Nor does Virginia want it built in this area. And it would cost another $10 million to build it on the Maryland side beyond the Cabin John Bridge. So what Maryland wants is really over $20 million. And the C. & O. Parkway she is after from Washington to Cumberland would cost another $13 million.

The portions of the parkway which are being built are justified because they are needed for transportation; that is to the CIA Building and the Cabin John Bridge on the Virginia side and from the District of Columbia to the Cabin John Bridge on the Maryland side. This Maryland stretch alone is now costing $10 million. These stretches tie in with the circumferential highway. No portions are being built which are purely for scenic purposes. That is what this stretch to Fort Washington is for.

New York pays billions in taxes, but cannot even get a reservoir. Ohio contributes $6 billion and does not have adequate flood control. Michigan is about bankrupt. Pennsylvania is raising taxes. There is difficulty in many States. Maryland is spending millions on roads. Let her spend the money and build her own highway.

When we started this debate today I asked you to do some real thinking about amendments. Here we are faced with this amendment for the George Washington Parkway to go down to Fort Washington. Let me read you something from a pamphlet put out by the Park Service:

> British war vessels, moving up the Potomac to cooperate with their land forces, reached Fort Washington on August 27th. Captain T. Dyson who commanded the position destroyed and abandoned the fort without offering resistance. The British fleet then sailed up the Potomac to Alexandria.

And that is the historic site they want us to spend $10 million on. I am thinking of a group of men under command of George Rogers Clark who captured Vincennes, Ind. They held their muskets up over their heads to keep them out of the water which was up to their necks. If it had not been for them we would probably still be the Thirteen Original States. There is only a small monument there to commemorate their great sacrifice.

Andrew Jackson has only a little monument to his memory and that of his brave men who went out in the swamps to stop the British.

Now here comes one of the wealthier States in the Union and wants $10 million to put in this scenic road to Fort Washington. I say this is one of those items we can certainly do without.

Mrs. BOLTON. Mr. Chairman, I rise in support of the pending amendment.

Mr. Chairman, I ask the very careful attention of the Committee to this amendment because I think that very few Members who are opposing this item have the slightest idea of the consequences of possible negative action.

As the distinguished gentleman from Maryland [Mr. LANKFORD] has told us, the Capper-Cramton Act, creating the George Washington Memorial Highway, was indeed passed in 1930. This is not a Virginia highway nor a Maryland highway, Mr. Chairman; it is a national memorial to the first President of the United States which some 7 million people drive over each year.

With the National Capital situated on the Potomac River and Mr. Washington's home also on its banks, the Potomac cannot be considered less than a national waterway, even as the George Washington Memorial Highway is indeed a national memorial.

This Congress would do well to protect the banks of the Potomac and the highway itself from the encroachment of buildings which could not be built without the destruction of beautiful old trees. The distinguished Chairman of this Committee has spoken feelingly of the need to protect our trees and our rivers. I would remind you, Mr. Chairman, that it is God alone who can make a tree.

The amendment submitted by the distinguished Member from Maryland [Mr. LANKFORD] proposes to reinstate the sum of $1 million to be used for the acquisition of the land necessary for the construction of the last 7½ miles of the planned memorial highway. I submit that to be penny wise and pound foolish in this matter would be action not quite worthy of this House—to be greatly regretted at a future date.

I, therefore, hope that in its wisdom the House pass this amendment.

Mr. THOMSON of Wyoming. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, like everyone else, I dislike to oppose something that is of local interest, but I want to assure the membership of this House that we are not talking about any pennies. During general debate I pointed out that there was shown at page 469 of the hearings the increase in cost of the Mission 66 program since we embarked on the plan in 1955. To complete this program will require an additional $500 million. In the District of Columbia and the immediate environs in Maryland and Virginia, the cost to complete would be $135 million as shown by the table at page 513 of the hearings. Subtracting this from the $500 million, leaves $365 million planned for expenditure in the balance of the Nation. The amount for the area of the District represents over one-third of the amount we intend to spend in all the rest of the Nation. The estimate for the George Washington Memorial Parkway called for in the 1960 budget is $2,614,800 plus this $1 million for land acquisition. For this single item alone, to complete it would cost over $39 million after the 1960 fiscal year, so we are not dealing with pennies. This is something on which I think we should and must exercise restraint.

Mr. POAGE. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the gentlewoman from Ohio warned us not to be penny wise and pound foolish. I think she was right. But, she did not refer to the actual monetary aspects of this proposition. She referred to saving trees, which I think is proper and desirable. But, I think there is another slant that we ought to consider in connection with his particular amendment, and that is, what this undertaking is going to cost us in the long run. It is going to cost us a lot of money; I think we all know that. It has some highly desirable objectives; I think we all recognize that. I think if we follow on and be fair with ourselves, we should realize we are going to appropriate this money sooner or later. It is going to be done, gentlemen. This parkway should be built, and it will be built. The only question is when.

Mr. KIRWAN. Mr. Chairman, will the gentleman yield?

Mr. POAGE. I yield to the gentleman from Ohio.

Mr. KIRWAN. Why not let the State do it? Maryland is not bothered with taxes like the rest of the States are.

Mr. POAGE. I was not greatly impressed with the argument that Maryland appears to run its business better than do some other States, that it should be penalized for doing so. My hat is off to any State that can run its business so that it does not have to look for additional money. I think they have done a pretty good job, and if they have so managed their affairs that they have a cash surplus, I do not think we ought to penalize them as a result.

Mr. KIRWAN. Just as soon as we dump the money over there, Maryland will be in the black. Why not treat them the same as the other States?

Mr. POAGE. I think they should be treated exactly as the other States. And I think we all recognize that we are going to build this road, this parkway, just exactly like we are going to go ahead and build the rest of these big improvements. We are going to do it. It may not be this year; it may not be next year; it may not be the next 5 years, but it is going to be done. We all want this Capital City to be the greatest in the world. The Federal Government is going to contribute half of the cost, somewhere down the line. Whether the gentleman feels we should do it or not, we are going to do it. I think every Member of this House knows that we are going to do it, and for my part I think we should do it, just as we promised. It will be a whole lot cheaper to do it right now than it will be to do it later. on. The costs of rights-of-way are going to increase tremendously as time goes on, even though only a part of the natural beauty which is now there remains to be purchased. I think that the lady from Ohio [Mrs. BOLTON] was right when she said "let us not be penny wise and pound foolish." We are going to pay

in pounds, gentlemen, somewhere down the line, unless we spend in pennies, or dollars, now.

The CHAIRMAN. The question is on the amendment submitted by the gentleman from Maryland [Mr. LANKFORD].

The amendment was rejected.

Mr. PASSMAN. Mr. Chairman, I move to strike out the last word.

Mr. PASSMAN. Mr. Chairman, the House tomorrow will probably be asked to consider a mutual security program supplemental appropriation for an item known as the Development Loan Fund. I think it is well that this matter should be brought to the attention of the House at this time so that Members may have an opportunity to do a bit of research relative to the suggestion which is being made to the effect that the action of the Appropriations Committee is disallowing the DLF supplemental request might be an invitation for another Pearl Harbor.

On July 2 of last year the House passed the Mutual Security Appropriations bill for the fiscal year 1959, and it then went to the other body. Fifty-three days later, or, to be exact, the night the Congress was adjourned sine die, we were informed from the other side of the "Hill" that the House Foreign Operations Appropriations Subcommittee members might come over for a conference. During the conference, in an effort to work out a reasonable compromise, the House conferees did agree to consideration this year of a possible supplemental request for MSP funds, but not specifically the DLF.

Thus far the Subcommittee on Appropriations which handled the mutual security program money bill has not had an opportunity to consider supplemental requests, because such requests now go to a Deficiency Appropriations Subcommittee. And there, according to the press, the DLF item has been, in the manner of the old railroadman's report to the stationmaster, "Off again, on again, gone again. Flannagan."

First, the subcommittee handling the request approved a figure of $150 million as a recommended supplemental appropriation to the DLF for fiscal 1959; then the figure was cut to $50 million; and later the subcommittee raised the recommendation to $100 million. However, when the bill reached the full Committee on Appropriations the DLF supplemental item was eliminated entirely. It is my view that the Deficiency Subcommittee's varied actions on the total to recommend, certainly indicate that there has been no real, definite justification or understanding as to actual additional needs.

I should like to state now, for the information of the committee, that on July 1 of last lear, at the start of the present fiscal year, a total of $15.6 billion was available in all categories of U.S. foreign aid. Furthermore, under the law, there can be transfers from one category into another, and from grants into loans, or loans into grants. Section 501 of the Mutual Security Act of 1954, as amended, provides that transfers into a category may be made by as much as 20 percent, with not more than 10 percent to be taken from any one category. Section 102 of the act provides for military assistance by either grant or loan, and section 105 provides for loans—unless otherwise specifically provided. So actually, either loans or grants can be made from practically any of the several categories of aid.

Mr. Chairman, I hope that the Members will go to the record for the facts. I am putting in the mail today for each Member of this House a certified copy of a memorandum showing the amount of funds available for the Development Loan program. I hope each Member will study these data, and will consider providing supplemental funds or withholding them, upon the basis of need as established, if such need can be established, and not upon the basis of political expediency.

Some public officials, including presidential aspirants, evidently would have us believe the Nation is literally in danger of being destroyed by another Pearl Harbor if we should endeavor to save for the taxpayers a few million dollars. These people, however, have not yet made a valid case to support their claims. Therefore, I ask you again to study the official record, and then reach your decisions accordingly.

Mr. SIKES. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I am seriously concerned by the fact that there is before us in the Department of the Interior and related agencies appropriations for 1960 a recommendation for a cut in the cooperative tree planting program and no increase in the forest fire protection program. I had hoped that the subcommittee would see fit to recommend a material change in this picture.

It is difficult to understand why the administration is so anxious to save money at the expense of our State and private forests. Last year the administration recommended a cut in tree planting from $1,308,000 to $258,000 just after President Eisenhower and Secretary Benson posed for photographs planting a tree. The Congress appropriated $783,000. This year the administration recommended a cut from $783,000 to $290,000.

Now I recognize the fact that because of the soil bank program, which in itself is responsible for a great deal of tree planting, there are sound thinkers in the Congress and in the administration who feel that the program before you can safely be cut. This, however, is only a partial answer to the problem. There are many thousands of acres which are not eligible for planting under the soil bank program, and there are many, many small landowners whose landholdings are in most serious need of replanting who will be passed over if the action recommended in this bill is sustained.

During the past year the Department of Agriculture's Forest Service released the "Timber Resources for America's Future." Secretary Benson called it "The most complete appraisal of the timber situation ever made in the country." Speaking of tree planting this study says the Nation has 52 million nonproductive acres which must be planted if 11 percent of our commercial forest land is to produce timber crops again within a reasonable time.

With respect to protection from fire the "Timber Resources for America's Future" states that of the 673 million acres requiring protection in 1952, 82 million acres is not protected and further that 591 million acres has adequate protection only for the easy years. This study states further that efforts for prevention and control must be increased or we will experience heavy losses similar to those of the past which have included many tough years when we have sustained our heaviest losses. For example, I am thinking of a tough year—1952—when fire hit with such devastating effects in West Virginia, Kentucky, and Tennessee.

Also during the past year a study of the forest fire situation was made by the Battelle Institute of Columbus, Ohio. This study was called for by the administration. After a thorough investigation with an objective viewpoint the Battelle Institute recommends that the Federal Government provide a minimum of $30 million for the cooperative forest fire program. Yet the administration still recommends no increase in the present allotment of $10 million—the same figure it has recommended for 3 years although the States have increased their contribution from $33 million to $43 million.

I submit that these forestry items are of interest to Republicans and Democrats alike for forest resource management and protection knows no party lines. In fact about 30 Congressmen from both parties appeared before or wrote to the subcommittee which held hearings on these items and asked for the planting cut to be restored and for an increase in protection. I sincerely hope and am firmly convinced that reasonable increases will be made in these items in the Senate. When these increases are finally considered in conference committee meetings between the House and Senate I trust that they will be given favorable support.

In these days of missiles and rockets and space ships and billions for defense—all of which are urgently needed—it may seem to many that forestry is of minor importance and that forestry improvement is one of the things that can be postponed indefinitely. Some people might wish to join in the administration's efforts to cut tree planting and to avoid increasing our forest fire protection to the full authorization of $20 million with the idea that from one-half to ten and one-half million dollars saved here will help balance the budget. I urge that we look upon these items as investments rather than expenditures. Surely well planted and protected forests will provide future income. Forests are renewable resources. Why not take adequate steps to renew them for if well developed they will contribute much to national prosperity and strength.

Mr. KIRWAN. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with the recommendation that the bill do pass.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore [Mr. MCCORMACK] having assumed the chair, Mr. PRICE, Chairman of the Committee of the

Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5915) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1960, and for other purposes, had directed him to report the bill back to the House, with the recommendation that the bill do pass.

Mr. KIRWAN. Mr. Speaker, I move the previous question on the bill to final passage.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed a concurrent resolution of the following title, in which the concurrence of the House is requested:

S. Con. Res. 13. Concurrent resolution to provide additional funds for special study by the Joint Economic Committee.

PAN AMERICAN GAMES

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 214 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 2575) to authorize the appropriation of $500,000 to be spent for the purpose of the III Pan-American games to be held in Chicago, Illinois. After general debate, which shall be confined to the bill, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Foreign Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN], and pending that I yield myself such time as I may consume.

Mr. Speaker, House Resolution 214 makes in order the consideration of H.R. 2575, authorizing an appropriation of $500,000 for the third pan-American games to be held in Chicago. This resolution provides for an open rule and 1 hour debate.

The bill authorizes the appropriation of $500,000 for the purpose of promoting and insuring the success of the pan-American games to be held in Chicago, Ill., August 27 through September 7, 1959. Funds appropriated under this authority shall be expended in the discretion of the organization sponsoring the games subject to such audit as may be prescribed by the Comptroller General of the United States.

The pan-American games are held every 4 years under the direction of the Pan American sports organization. The member countries are those countries of the Americas whose national Olympic committees are members of the International Olympic Association. At present about 25 countries and possessions are eligible for participation in the games. It is anticipated that 2,000 athletes will participate in the games, including competitions for both men and women.

Sports facilities of the Chicago area will be used, including Soldier Field and the athletic facilities of Northwestern, Loyola, Chicago, and DePaul Universities.

It is anticipated also that in conjunction with the games there will be a great cultural event known as the Festival of the Americas in which the outstanding scholars and artists of the Latin American countries will participate.

Plans for the games are as yet incomplete and precise budget estimates of the use of Federal funds are not yet available. It is anticipated that a detailed justification will be submitted for consideration by the Committee on Appropriations before any funds will be appropriated pursuant to this authority. The sponsors of the games must assume the balance between the allowance of $3 per day per athlete for food and quarters and the estimated actual cost of $10 per day. A substantial part of the funds authorized will be used to pay the difference between the moneys received from the competing countries and the actual cost of furnishing food, lodging and transportation.

The bringing together in friendly sport of 2,000 of tomorrow's leaders of the Western Hemisphere is desirable from the point of view of U.S. foreign policy. The Department of State has indicated its approval of support of the games under the sponsorship of the city of Chicago in such amount as Congress deems appropriate.

The Committee on Foreign Affairs believes that the success of the pan-American games in Chicago this year will make a substantial contribution to the maintenance and improvement of friendly relations between the United States and other countries and territories in the Western Hemisphere.

I urge the adoption of House Resolution 214.

Mr. ALLEN. Mr. Speaker, I do not know of any opposition to the rule, but I can imagine there is going to be considerable opposition to the bill itself.

Personally, I cannot conceive of anything better in the field of public relations than permitting 2,000 athletes, who are idols in the Western Hemisphere, to come up here, and they are idols, in my opinion, any of them. They are more effective in the field of public relations than any other group of individuals. They will be treated fine in Chicago. They will have a marvelous impression of the United States, and those athletes, those idols, will go back to their countries and talk about their experiences here. So I say to you, Mr. Speaker, I cannot conceive of anything more effective. However, there is one thing that seems to spell out all the trouble and that is the part on line 8 of the bill. I think the gentleman from Illinois [Mr. YATES], the author of this bill, should be advised of it. That is on line 8 where it says: "and shall be expended in the discretion of the organization sponsoring said games,".

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. ALLEN. I yield.

Mr. YATES. When general debate is concluded and the reading of the bill begins, an amendment will be offered to make the bill more specific in this respect. It will provide that the funds should be expended for lodging, food and transportation for participants and related personnel and shall be expended by the Department of State by way of advance or reimbursement to the organizations sponsoring said games subject to such controls and audit as may be prescribed by the Comptroller General of the United States. Any funds not expended under the said appropriation shall revert to the Treasury of the United States.

So this amendment will take care of that.

Mr. ALLEN. I thank the gentleman. I think the gentleman has taken care of that because some of us were wondering just what this organization you speak of is or who they are and how they are organized. I believe the gentleman has taken care of that question.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ALLEN. I yield.

Mr. GROSS. What is to prevent these athletic idols, as you call them, from coming to this country and participating without this bill? Is there anything to stop them?

Mr. ALLEN. They are coming.

Mr. GROSS. If we do not pass this bill, will they be barred from coming to this country?

Mr. ALLEN. I would say maybe not so many would come.

Mr. GROSS. Are they not interested in displaying their prowess unless subsidized by American taxpayers?

Mr. ALLEN. I would say that this is a good gesture and the money is well spent.

Mr. GROSS. I am glad the gentleman said this is just a gesture. I think it is, too—but it is an expensive gesture.

Mr. ALLEN. Mr. Speaker, I yield such time as he may require to the gentleman from Ohio [Mr. BROWN].

Mr. BROWN of Ohio. Mr. Speaker, I have asked the gentleman from Illinois to yield to me, not because I am opposed to the adoption of this rule, but rather because I am opposed to the enactment of the legislation which the rule makes in order. About 2 years ago, if I remember correctly, or perhaps a little longer than that, we had this same sort of proposal,

but for a little more money, before the House to bring these same games to the city of Cleveland in the State of Ohio. We believed then, as we believe now, that if Cleveland was to act as the host city, a city in my own State, that the city should meet the expenses of holding these games there, rather than asking the taxpayers of the country to meet them. We opposed that legislation at the time it was up for passage, regardless of the fact that it did affect our own State of Ohio and that the games had been sponsored by one of our most prominent State officials. The authorization bill was opposed, but later the appropriation was rejected.

In my opinion, it seems to me this present legislation should not be enacted. I am perfectly willing for the great city of Chicago to have these pan-American games in their wonderful city. Right now we have the great city of Chicago asking the Republican National Committee to fix the city of Chicago as the site for the coming Republican National Convention, and offering to the Republican Party quite a handsome contribution in the way of funds, if it will just bring the delegates and the convention visitors to Chicago. It seems to me a matter of logic, especially in these days when we are having difficulty in balancing the budget, and when the taxes are so high, and we are running such great deficits in our Federal Treasury, that we should leave this very, very worthwhile endeavor of having these pan-American games in the the city of Chicago, and the financing of them, up to the very good and generous people of Chicago who, I am sure, will show the same interest in bringing these games to their fair city as they are now showing in attempting to bring the Republican National Convention there in 1960.

Mr. JUDD. Mr. Speaker, will the gentleman yield?

Mr. BROWN of Ohio. I yield.

Mr. JUDD. The gentleman will agree there is a great difference between this resolution and the resolution last year dealing with the proposed pan-American games in Cleveland because that resolution had in it $5 million for construction of a stadium and other facilities.

Mr. BROWN of Ohio. This bill is for $500,000.

Mr. JUDD. Those would be permanent improvements that naturally the people of Cleveland should pay for and not the Federal taxpayers. But does not the gentleman agree that the benefits of holding these games in Chicago will inure to the benefit of the whole United States and not just to Chicago?

Mr. BROWN of Ohio. I would certainly hope so, and I am sure they would inure especially to the benefit of Chicago.

Mr. JUDD. And Chicago is going to put a lot of its money into them.

Mr. BROWN of Ohio. I should think Chicago would be willing to help out the rest of the country, and make some contribution toward the good will which exists, and will exist, as a result of these games between the pan-American countries and the United States, by furnishing this $500,000. Chicago citizens are very able to collect money for different purposes and good causes; I am sure they can do it again in this particular case.

Mr. JUDD. But does not the gentleman feel that it will be of great benefit in all these countries of the Western Hemisphere to be shown by this act that the U.S. Government is behind this program and is participating wholeheartedly?

Mr. BROWN of Ohio. Yes; we can pass a resolution without an appropriation, saying we welcome the games coming to the United States, and thus show our good will; but when it comes to putting up the cold cash, the people who benefit, the State of Illinois and the city of Chicago, should pay the bill. As far as value to the community, or the benefit to the United States is concerned perhaps the Republican National Convention meeting in Chicago can contribute more to the welfare of America and the world than even the pan-American games.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. BROWN of Ohio. I yield.

Mr. GROSS. I wonder if an amendment to the bill to provide that the $500,000 be provided from counterpart funds would meet with the approval of the gentleman from Minnesota who has helped create hundreds of millions of dollars of counterpart funds all over the world. I wonder if he would be for that?

Mr. BROWN of Ohio. I must say to the gentleman from Iowa that when we get involved in the intricacies of international finance, the way it has been complicated in recent years, I am lost.

Mr. JUDD. Of course, if the gentleman from Iowa can get the merchants and hotels of Chicago to accept foreign currency at its face value, I am sure the amount could be paid with counterpart funds.

Mr. GROSS. Why could they not be converted into U.S. currency, or even taken at face value?

Mr. JUDD. Because some of them are not convertible. If the people of Chicago will accept payment of their bills in the form of rupees, lire, yen, and so on, that would be fine.

Mr. GROSS. I am sure they would.

The SPEAKER pro tempore (Mr. McCORMACK). The question is on the resolution.

The resolution was agreed to and a motion to reconsider was laid on the table.

Mr. BURLESON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 2575) to authorize the appropriation of $500,000 to be spent for the purpose of the III Pan American Games to be held in Chicago, Ill.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 2575, with Mr. GEORGE P. MILLER of California in the chair.

The Clerk read the title of the bill.

By unanimous consent the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule the gentleman from Texas [Mr. BURLESON] will be recognized for 30 minutes, and the gentlewoman from Illinois [Mrs. CHURCH] for 30 minutes.

The Chair recognizes the gentleman from Texas.

Mr. BURLESON. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, this matter was before the House the latter part of the preceding session, at which time, as I recall, the record vote was 200-odd to 60 in favor of the bill.

I think we all understand pretty well the purpose of this legislation. It was reported unanimously by the Foreign Affairs Committee on two occasions. During the consideration of the bill there were a number of witnesses who appeared before the committee, including the author of the bill, the able and persuasive gentleman from Illinois (Mr. YATES). The value of this type of legislation is difficult to estimate, but if we are to remain in the world and as a part of it, whether it be in trade of various kinds, the cultural arts or athletics, we are overlooking one of the greatest opportunities to have friendly, competitive relation with our friends to the south.

Mr. Chairman, I feel very strongly that this legislation should be adopted. We are spending great sums of money for purposes much more doubtful than for these athletic games. At least it is to be spent in the United States and the good will it should generate should be valuable.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BURLESON. I yield to the gentleman from Iowa.

Mr. GROSS. The gentleman says that several witnesses were heard on this bill in hearings before the committee. May I ask the gentleman where I could obtain a copy of the printed hearings?

Mr. BURLESON. It was last year we had the hearings. That is what I intended to say, if I did not. As I recall, we had only several Representatives in the House before the committee; but last year we did have hearings.

Mr. GROSS. Then, as I understand it, this subject was given the once-over-lightly treatment in the committee this year. Is that correct?

Mr. BURLESON. It was not once over lightly last year. We went into it quite thoroughly.

Mr. GROSS. How about this year? There has been a change in the attitude of the people toward spending for unnecessary purposes.

Mr. BURLESON. The purpose of the legislation is the same this year as last year.

Mr. GROSS. That may be, but demands on the Public Treasury are apparently even more acute this year.

Mr. BURLESON. I do not know that it is any different this year from last year, or that it was any different the year before that. We are hearing a great deal more about economy this year than last, but conditions are not essentially different. Most of us are for economy in

places where it does not affect us, but I consider this an investment which should pay off in better relations. Not too good relations has cost this Nation a lot of money and will do so in the future unless we do something about it. This type of event is particularly important to our Latin American friends.

Mr. GROSS. I am glad to hear the gentleman say he thinks it is a good thing, but that does not answer the question as to the difference in the financial situation then and now. A year and a half ago we were not having nearly as much trouble selling Government bonds as we have had in the last few months.

Mr. BURLESON. There are many things which I favor postponing or rejecting, and I think my record for economy is about as good as anyone's in the House. I am very much concerned, as is my friend from Iowa, about the fiscal affairs of our country. This does not mean, however, that we can, even if we wished, withdraw into a shell of selfishness and seculsion in these matters of intercountry associations. It could be put off; we could ignore it, but I am not too sure at all that by ignoring it we are saving money.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. BURLESON. I yield to the gentleman from Minnesota.

Mr. JUDD. Will not the gentleman from Texas confirm the fact that repeatedly we have had testimony before the Committee on Foreign Affairs that in some countries where we have made substantial contributions in food or in building powerplants or highways or even schools, we have not yet won the full understanding and good will that we hoped might come from those contributions, because sometimes the assistance was administered in a very efficient but rather rough way from the standpoint of the more easygoing tempo of the countries involved? Again and again the suggestion has been made—and sometimes it has been a strong criticism—that we have done very well with the tangible things; but we have often put too much of our money into things that you can see and not enough into the intangibles—such as building closer cultural relations, including the field of mutual interest with which this bill deals with—sports. Competitive individual and team sports are one of our most valuable American exports. Our athletes abroad and theirs who come here for contests or exhibitions are regarded as heroes. They have as great an influence upon the thinking and the attitudes of people around the world, particularly those already interested in sports, as anything that goes out from our country. Here is the kind of relatively inexpensive project that we have tended to underestimate. This bill gives the House an opportunity today to make a contribution, which in amount of money is very, very small, compared with other projects we are supporting; but which helps substantially in a field that the youth of Latin America are just as much interested in as are the youth of America, who oftentimes read first, not the report on a conference of the President with the Prime Minister of Britain, but rather the sports pages to see what happened the day before in basketball, hockey, or football. The bill authorizes a maximum of $500,000 to help make possible games that the youth of all the hemispheres are tremendously interested in, whereby great good will and a sense of closer relationship and fellowship can be created. Does not the gentleman agree?

Mr. BURLESON. I do agree with the gentleman. To say the least, this is something which takes place in our own country. The money will be spent in our own country. It will be spent in Chicago, and that, at least, is different than if it was spent some other place. So, I am influenced by that fact, also.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. BURLESON. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I have asked the gentleman to yield so that I may correct any impression that I may have given to the effect that the authorization bill was defeated in the House. I am not sure whether I said that, or whether I simply made the statement in my previous remarks that the Ohio delegation, or most of us, opposed the bill. However, I have checked the record and find that the legislation did pass, the $5 million bill, I think on July 22, if I have the right date, or the 26th, and was signed into law, but that later the appropriation was rejected, and Ohio refused to go ahead with the proposition, and, therefore, the games were not held in Cleveland. So I will correct my previous remarks if I did, by error, infer that the bill was defeated.

Mr. YATES. Mr. Chairman, if the gentleman will yield, the appropriation was defeated. The authorizing legislation was passed, but the appropriation was defeated.

Mr. BROWN of Ohio. I believe this explains the situation.

Mr. BURLESON. That is correct.

Mrs. CHURCH. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in support of the resolution which seeks an appropriation of $500,000 for certain specified purposes in connection with the pan-American games to be held in Chicago.

It is our dream that these games, carried on at a time when there is tension between ourselves and some of our neighbors in the Southern Hemisphere, will promote better understanding and the lasting friendship that arises from mutually shared interests.

Besides the athletic contests, Chicago is planning a collateral program of interchange in cultural achievement which will further add to our mutual knowledge and sympathy.

Never have the pan-American games been held in this country, although we have participated with our neighbors in these contests held in South America. The first pan-American games were held in Buenos Aires in 1951, and the second games were held in Mexico City in 1955. In each of these occasions, over 1,800 athletes participated. It is expected that more than 2,000 will take part in the games to be held in Chicago this August.

The bill calls, as stated, for $500,000 to be used solely toward the expenses of the participants from Latin American countries who otherwise would be deprived of this opportunity to intermingle with their neighbors. Whereas it might be argued that all participating countries should meet the expense of their own representatives, it can be said with equal force that this program is a valuable adjunct to the exchange of persons program which has proved to have value far beyond the mere monetary consideration provided.

I would point out with pride that the city of Chicago is able to provide and has provided gladly for the expenses involved in carrying on these games in Chicago. The necessary stadium already exists and the local community is gladly assuming and paying for the privilege of being host to these games. The city, in other words, has gone beyond the second mile in meeting the financial responsibility for that share of the expense of the program which can logically be called its own.

The main purpose of the bill today, I repeat, is to make it possible for the delegates to come who otherwise, because of financial hardship, would be deprived of the privilege of joining in this great demonstration of pan-American prowess and good will. It is not necessary to re-stress the importance of placing new emphasis on our spirit of neighborliness with our friends to the south in this hemisphere. It is our firm belief that the fellowship of these games and the better knowledge that will be spread of each other, not only among participants but among the huge audiences already anticipating the occasion, will go far toward building mutual respect and lasting good will.

The support for this measure was unanimous and completely bipartisan in our Committee on Foreign Affairs. As I said last year at the time when the House passed this measure—which unfortunately did not come up for a vote in the Senate before adjournment—it is not often that Chicago comes in and asks for cooperation of this kind. The amount we are asking is only $500,000. With this small appropriation, it will be possible for the great Midwest, which I always hold to be the heart of America and which is composed of thousands of happy Americans whose roots are to be found all over the world, will be able to welcome athletes and other representatives from Latin America in mutual exchange of customs, capacities, and understanding. Even though I belong to the group that holds tight the Federal purse strings, wherever soundly possible, I urge the House to pass this bill.

Mr. DOOLEY. Mr. Chairman, will the gentlewoman yield?

Mrs. CHURCH. I yield to the gentleman from New York.

Mr. DOOLEY. I rise to commend the gentle lady from Illinois on her astute evaluation and analysis of the proposed legislation and her conclusion as to what it will do if enacted to further better

understanding and better relationships with the pan-American nations.

Ever since Pierre de Coubertin reinstituted the Olympic games in 1896, international athletic contests have been a great source of better understanding among the people of competing nations.

The pan-American games are in effect a miniature or hemispheric Olympics and they will provide a wonderful opportunity for establishing rapport between the United States and the nations of South and Central America, as well as Canada.

The sum of $500,000 is very little to ask the host nation to provide in order to help with the transportation and living costs of the visiting athletes. Chicago, where the games will be held, has already promised to provide facilities which will cost them over a million dollars to refurbish in time for the games.

The episode between South Americans and our own Vice President a few months ago pointed up with poignant severity the need for better understanding among the peoples of this hemisphere.

When our great athletes, like the sprinter, Davis, and the weight lifter, George Anderson, traveled abroad they were welcomed as conquering heroes by the sports-loving people of other nations and it appears to me to be a certainty that the United States by demonstrating through its athletes the true significance of good sportsmanship can do a lot to convince other nations of our genuine good will, fairmindedness, and desire for friendship.

Mrs. CHURCH. I thank the gentleman. I hope that he and all the other Members of the House will come out to Chicago and share with us the benefit of the games.

Mr. GROSS. Mr. Chairman, will the gentlewoman yield?

Mrs. CHURCH. I yield to the gentleman from Iowa.

Mr. GROSS. It seems to me it was only about 2 weeks ago, on another afternoon, that the House approved a bill containing authorizing language which eventually will call for the expenditure of $545,000. Does not the gentlewoman think that Chicago is coming to the fountain pretty regularly these days?

Mrs. CHURCH. If the gentleman's memory is good, and I know it is, he will recall that on that afternoon I pointed out that the benefits from that particular appropriation would not only affect the city of Chicago but indeed would affect the whole area around the Great Lakes and the whole area to the south adjacent to the Mississippi Waterway. So I think if the gentleman will divide the former amount among the people to be benefited by that earlier authorization, he will find that Chicago would have just a small share.

Mr. BURLESON. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois [Mr. YATES].

Mr. YATES. Mr. Chairman, there is little to be added after the eloquent address of the gentlewoman from Illinois. Certainly it needs no effort on my part to persuade any group of Americans as to the harmonizing effect of sports. We are all aware of how it builds up friendly relations between those who are participating. I need say little as to the standing in the community of the athletes of each of the countries. They are respected and esteemed. If such persuasion were needed, I point to this morning's Washington Post, to an article that appears in the sporting section, which describes the reception that was accorded to Alex Olmedo, the great Peruvian tennis player, when he returned to Peru:

The headline reads: "National Hero Olmedo Returns to Peru and Fantastic Reception."

Thousands upon thousands of people were at the airport to greet this national hero and to pay homage to him and to his fellow members on the U.S. Davis Cup team. That is how good athletes are regarded in their countries.

This is a simple bill but it is a far-reaching one. Its purpose is to foster warm relations between the United States of America and our neighboring countries to the south and Canada as well. Participating in these games will be approximately 26 countries.

Why is this appropriation needed?

The reason is twofold: One because Chicago is so far away from many countries in South and Central America. It is almost the most northern place where this contest might be held. A number of the countries in South America will find it difficult to raise sufficient funds to pay the transportation for their athletes. Secondly, the committees which are sending these athletic delegations are allotting only $3 per day for the food and for the lodging for each of the athletes. Those of us who live in urban communities know how unrealistic this allotment is. I would not have you believe, as has been implied here, that Chicago is going to depend entirely upon the largess of the Federal Government for supporting this great event. The city of Chicago itself is raising $500,000 by private subscription to pay the expenses of the games and, Mr. Chairman, the city of Chicago will expend over $2 million in connection with these games in organizing and constructing facilities and in payment of other costs.

Mr. Chairman, we need not point out how sensitive are our relations with the countries of South America. We need only to remember last year when our Vice President visited South America to know that our relations with our Latin American neighbors needs understanding and strengthening. When Dr. Milton Eisenhower returned from his visit to South America, he reported to the President as follows:

> The American Republics are uniquely important to one another. Our economic independence is immense; our political interdependence in a threatened world is notable; our cultural interdependence is growing rapidly; and our shared aspirations for freedom, independence, peace with justice, and rising levels of human well-being assure that the cooperative processes in the community of nations can work here.

Mr. Chairman, this is one of the finest cooperative endeavors that we can possibly organize to bring the peoples of the Americas together sharing in a series of competitive sports contests.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield.

Mr. CURTIS of Missouri. I do not believe there is any question on the part of those who have been asking questions about this as to the value of the pan-American games or the value of the Olympic games, and so forth. I think most Americans agree, and I certainly agree, that these games are of tremendous value. There is one issue involved: Does it need Federal money? In other words, these things have been done before and they have been done for many years and they have been very beneficial and they have been done without the use of Federal funds. So the sole question is this question of the Federal funds. I would like to ask these two questions: First. Many of these things actually make money. Many of these things are moneymakers and I presume that the city of Chicago and other communities that have promoted world fairs and other such things expect to make some money out of it. How much money will Chicago make out of this, or let us put it this way, if there happens to be money made out of it—is there any way the Federal Government can be reimbursed?

Mr. YATES. The money will first go toward the payment of expenses. Let me say, as I pointed out during the debate on the rule, that money will be expended by the Department of State pursuant to controls which will be established by the Comptroller General of the United States.

Mr. CURTIS of Missouri. No; I am talking about repayments now, in the event that money is made out of this.

Mr. YATES. I do not know the answer to the gentleman's question but I would assume that if the funds that are derived from the games are sufficient to pay for the expenses of the games, they would be used before Federal funds were used. I, too, would favor repayment of expenses out of such moneys before the Federal Government is called upon to make any expenditure.

Mr. CURTIS of Missouri. I thank the gentleman. I have one other question. The gentleman is a member of the Committee on Appropriations and that is one reason I ask him the question. Why is it not possible to use foreign currency generated, for example, under Public Law 480 which exists in many of these countries to pay for these travel expenses?

Mr. YATES. It may be possible to do that. I am under the impression, however, that most of the funds will have to be expended in the United States where foreign currencies cannot be used for lodging and for food. It may be that part of the funds of such currencies could be used for transportation.

Mr. CURTIS of Missouri. Perhaps, if that could be done, the people of Chicago would take those funds and encourage the people in Chicago to visit these countries down there and, thus, they would be getting a further benefit.

Mr. YATES. I would say that this could very well be one of the results of the games, to foster understanding and

friendliness between the countries so that all will want to visit with each other even more.

Mr. CURTIS of Missouri. I thank the gentleman.

Mrs. CHURCH. Mr. Chairman, I yield such time as he may need to the distinguished gentleman from Illinois [Mr. CHIPERFIELD].

(Mr. CHIPERFIELD asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. CHIPERFIELD. Mr. Chairman, the pan-American games to be held in Chicago from August 27 to September 7, 1959, serve to provide the furtherance of understanding and friendship between the peoples of the Americas. The bringing together of some 2,000 young athletes from all the countries of the Western Hemisphere to engage in friendly competition in the heart of mid-United States is an enormous project undertaken by the city of Chicago. The city, serving as host for the games, becomes the United States in the eyes of thousands of visitors and participants. Nothing will be left undone to make this event the greatest in the history of Chicago.

The pan-American games are held every 4 years under the direction of the Pan American Sports Organization. The member countries are those countries of the Americas whose National Olympic Committees are members of the International Olympic Association.

Previous games were held in Buenos Aires in 1951 and in Mexico City in 1955. Approximately 1,800 athletes participated in the prior games. It is anticipated that 2,000 athletes will participate in Chicago.

Twenty sports are listed; in seven of them there will be competition for both men and women. All the sports facilities of the Chicago area will be used.

In addition, Chicago plans a month-long Festival of the Americas. Music and cultural activities will be carried on during the festival.

The people of Chicago are to be congratulated for their efforts to cement more friendly relations with our Latin American friends.

Mrs. CHURCH. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. BENTLEY].

Mr. BENTLEY. Mr. Chairman, I certainly concur in what has been said by practically every speaker on this bill so far, as to the merits of the games or the desirability that they be held in the United States; nevertheless, I think there are a few questions that members of the committee properly be informed about before being asked to vote on this particular legislation.

I wonder if the author of the bill, my friend from Illinois, could tell me whether or not I am correct in saying that there is no money in the Federal budget for this amount at this particular time.

Mr. YATES. The gentleman is correct; there is no money in the budget at this time.

Mr. BENTLEY. Can the gentleman also tell whether or not it is correct that the Department of State while endorsing the games being held in Chicago does not commit itself to any specific amount?

Mr. YATES. That is correct.

Mr. BENTLEY. The gentleman will also notice that on page 2 of the report the statement is made:

> Plans for the games are as yet incomplete and precise budget estimates of the use of Federal funds are not yet available.

In view of the fact that the games are scheduled to start in about 5 months I am wondering whether plans have advanced any further than they were at the time of the preparation of the report to the point where we know whether it will be $500,000 spread amongst two thousand athletes, or about $250 per athlete?

Mr. YATES. The reason for that statement in the report is the fact that the number of athletes who will compete depends in very great measure on whether or not the Congress of the United States passes this legislation. Part of the money will have to be used for transportation as well as for taking care of athletes while they are in the United States. If this legislation is passed they will have something definite to figure on and then can give a more positive estimate.

Mrs. CHURCH. Mr. Chairman, will the gentleman yield?

Mr. BENTLEY. I yield.

Mrs. CHURCH. I would like to point out that following the statement which the gentleman has quoted on the second page of the report this sentence appears:

> It is anticipated that a detailed justification will be submitted for consideration by the Committee on Appropriations before any funds will be appropriated pursuant to this authority.

Certainly, before the appropriation is finally made, full figures and facts on the proposed program will be presented to the Appropriations Committee which will certainly scan such figures and facts with their usual care.

Mr. BENTLEY. Certainly I know the Appropriations Committee will also have to act on this, but the legislative committee should not abdicate its responsibility to the Appropriations Committee. I think we should be able to find out as much as we can just what this money is to be used for.

Mr. YATES. The gentleman is correct. As I pointed out, we cannot be more specific at this time for the reason that we do not know how many athletes will come previous to the passage of this legislation.

Mr. BENTLEY. Suppose we authorize $500,000; does that mean that 2,000 athletes will come, or how will the number be determined?

Mr. YATES. It means that approximately that number will come.

Mr. BENTLEY. Then you will have to arrive at a specific number and justify your request. Knowing what number will come it can easily be ascertained how much you will have to pay out, and the difference between what they are allowed under the Pan American Rules Committee's allowances and their actual expenses will give an idea of the cost.

Mr. YATES. I am informed by the Chicago committee that the estimated cost is $10 a day. The amount allowed to the athletes by the respective countries is $3 a day. The difference will be $7 per athlete per day.

Mr. BENTLEY. Am I correct in understanding that these games are actually being sponsored by the city of Chicago?

Mr. YATES. Yes, they are sponsored by a not-for-profit organization known as Pan American Games, Inc., which is the organization helping to organize and run the games for the city of Chicago.

Mr. BENTLEY. And it is an official organization, an official creature of the city of Chicago.

Mr. YATES. It is not an official organization, but it is not-for-profit organization and is the organization the city is using for this purpose.

Mr. BENTLEY. Are the deficits to be made good to the city of Chicago or to this organization?

Mr. YATES. To this organization under the direction and control of the Comtproller General of the United States.

Mr. BENTLEY. But the city has no responsibility for its own debt to see that the games are properly financed? The city has no financial responsibility as official host to those games?

Mr. YATES. I do not know the answer to that question, but I do know that this organization is subject to the control of the city of Chicago. The mayor's office will have some supervision over the expenditures.

Mr. BENTLEY. The gentleman mentioned a moment ago that the city of Chicago will spend $2 million on these games. Would the gentleman be able to give a breakdown of where that money is being spent by the city?

Mr. YATES. The gentleman can give you a rough breakdown as to where the money is to be sent. It will be spent in the building of swimming pools, in conditioning running tracks, in rehabilitating rifle ranges, in conditioning all of the necessary facilities, providing maintenance and employees and various facilities for that purpose. Many facilities will be used; the White Sox baseball field will be used, the Cubs baseball field, high school stadiums, and many other installations will be used. There will be roughly about 20 different organizations that will contribute their facilities. They will be paying the expenses of the operation of their facilities during the time the games are in progress.

Mr. BENTLEY. Is the city of Chicago building any private lodgings for these people?

Mr. YATES. To the best of my knowledge, no. The city of Chicago is raising a half million dollars, part of which or most of which, I think, will go toward payment of the expenses of lodging. I may say to the gentleman that we have sufficient facilities to house the participants in Chicago and also to take care of the delegates to the Republican National Convention if it comes to Chicago.

Mr. BENTLEY. But not at the expense of the participants, but at the expense of the Department of State?

Mr. YATES. Yes.

Mr. MORGAN. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois [Mr. O'HARA].

Mr. O'HARA of Illinois. Mr. Chairman, I am grateful to the gentleman from Iowa for asking the question if there has been any change in the last year to justify the pending resolution. I can inform the gentleman from Iowa that there has been. During the last year our public relations with the people of Latin America have worsened. We all are concerned by growing expressions of anti-American sentiments in countries of this hemisphere where we wish to have, as indeed for our security we need to have, our best and truest of all friends. During the last year the Communist drive to attract the young people of Latin America to visit the Soviet Union on tours financed by the Soviet has been intensified. I think the members of the Committee on Foreign Affairs had that very much in mind when they voted unanimously to report favorably this resolution.

I do not know of anything that the city of Chicago can gain from the expenditure of this money that is not shared in intensified measure by every State and by every person in our United States. We can have no security for our country unless there is a real hemispheric solidarity, a solidarity that is based, not upon military missions and physical things alone, but most of all upon the good will and the neighborly understanding that result when the approach is to the minds and hearts of men. Chicago, at her own expense is making plans for such an approach on an unprecedented scale. In connection with the holding of the pan-American games, which will put in spirited but friendly competition the athletic youth of the continent, Chicago is making elaborate plans for a Festival of the Americas to bring to our country the music, the drama, the dance, the literature, and the art of our Latin neighbors in their highest expression as interpreted by the great musicians, the great artists, the great poets, the great men and women in the Latin American cultural and artistic world. These are the undertakings, Mr. Chairman, that bring together the minds and hearts of peoples.

What has Chicago to gain that is not equally the gain of every other city, of every village and town, of every American family home when by reaching into the hearts and minds of our Latin neighbors we have built the enduring foundations of a hemisphere accord that will strengthen our security and encourage an ever-growing flow of commerce beneficial both to ourselves and to our neighbors?

Strictly on a business basis, and by the approved rules of the public relations departments of our largest corporations, the investment of $500,000 to help defray the expenses of bringing several thousand athletes, the pick of the crop in the countries to the south, to the pan-American games is the best investment the United States possibly could make at this time. For one person who reads the editorial page of a newspaper thousands read the sports pages. An athlete, who is an idol in his own country, can be our very best ambassador of good will on his return and, as the sporting pages are so much more widely read than the editorial pages, we can be sure he will get his message over.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. O'HARA of Illinois. Certainly, I will be delighted to yield to my dear friend from Iowa.

Mr. GROSS. As I understand, there are athletes coming down from Canada to participate in these games. Are we going to take care of their expenses, when they have a sounder dollar than we have?

Mr. O'HARA of Illinois. I do not know why the gentleman would wish to discriminate against Canadians.

Mr. GROSS. Well, I do not. I am just asking the question.

Mr. O'HARA of Illinois. I am not discriminating against any of our hemispheric neighbors. That is not in the spirit of this resolution. To the contrary, its purpose is to prevent discrimination against the athletes from any country on the American Hemispheres. If his country cannot or for some reason will not bear his full expense of coming to the games he is not by that circumstance to be debarred from the games. I can think of nothing more in keeping with the American spirit of fairplay.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. O'HARA of Illinois. Of course I yield to the gentleman representing the district where I was born.

Mr. HOFFMAN of Michigan. We are neighbors, are we not?

Mr. O'HARA of Illinois. Not only that; we have much in common and the good sense not to let conflicting politics and philosophies mix up friendship.

Mr. HOFFMAN of Michigan. Yes, a great deal. I go to Canada ever year when I have the money, to spread good will, and every year they make me spend 10 cents on the dollar to equalize the thing. Do you not think that is spreading good will?

Mr. O'HARA of Illinois. If the gentleman is willing to spread his wealth among the people of Canada, he is to be commended. The gentleman possibly remembers that Canada lined up with Michigan on Lake Michigan water diversion and gratitude is one of my friend's many virtues.

Mr. HOFFMAN of Michigan. No; I cannot help it. I do not part with it willingly.

Mr. O'HARA of Illinois. Mr. Chairman, I hope that this resolution is adopted by the House by unanimous vote. There was not a voice raised or a vote cast against it in the Committee on Foreign Affairs. I cannot conceive of any person in this Congress who does not realize the necessity of mending our hemispheric relations. By all means we must reach out to bring the peoples of this hemisphere into the fold of understanding with us. If we do not, no matter what we may build up in military might, we will have no real security either on this hemisphere or in the world at large.

Mrs. CHURCH. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. GROSS].

Mr. GROSS. Mr. Chairman, I want to thank the gentleman from Illinois for yielding me 5 minutes. Make no mistake about it, this bill is a blank check, and it is so stated in the report.

> Plans for the games are as yet incomplete, and precise budget estimates of the use of Federal funds are not yet available.

And so forth and so on. Seldom do we get a bill accompanied by a report which is completely a blank check. Here we are called upon to spend $500,000 as a blank-check proposition.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. GROSS. Briefly.

Mr. YATES. In answer to what the gentleman has said, let me say that frequently an authorization bill is passed leaving it to the Committee on Appropriations to appropriate the exact amount that should be made available.

Mr. GROSS. On top of that, the amendment which the gentleman from Illinois says he is going to offer, bringing the State Department into this thing, does not enhance the aroma of it a bit so far as I am concerned.

Mr. YATES. Mr. Chairman, will the gentleman yield further?

Mr. GROSS. Very briefly. Do not take all of my time.

Mr. YATES. This is addressed to the gentleman from Illinois. The original bill provided that the money be paid directly to a private organization rather than to a Government agency. For that reason the State Department has been brought into the picture for the purpose of controlling the expenditures.

Mr. GROSS. As I look at this proposition, it provides for subsidizing 2,000 athletes. The differential as between the $3 they are supposed to put up and the $10 that Chicago wants to take care of them is a difference of $7, and 7 times 2,000 is $14,000, if my arithmetic is correct. If my further computation is correct, they are to be in Chicago for 12 days, from August 27 to September 7, and multiplying $14,000 by 12 days we get $168,000.

Mr. YATES. May I say to the gentleman that the time period is 20 days, because you have a period of preliminaries to the actual games themselves.

Mr. GROSS. So we have $168,000. That is the best figure that I can get on the basis of the report. You could add a few days either before or after, to get them out of the country or for the preliminaries, as the gentleman calls them; but you would still have quite a lot of surplus Federal cash.

Mr. YATES. Mr. Chairman, will the gentleman yield further?

Mr. GROSS. Yes.

Mr. YATES. As I compute the formula it would be the differential of $7 per day, as the gentleman has pointed out, for 2,000 athletes, over a period of 20 days.

Mr. GROSS. Mr. Chairman, let me ask the gentleman this question. I notice that athletes are to come from the Dominican Republic; is that correct?

Mr. YATES. That is correct.

Mr. GROSS. What business do we have subsidizing athletes from the Dominican Republic when the son of the President of that country is able to buy Jaguars, mink coats, and what-have-you for his American sweethearts?

Mr. YATES. May I say that the Dominican Republic will probably not be subsidized, because it has sufficient money to pay for its athletes who are coming here.

Mr. GROSS. Are there other countries that do not have to be subsidized? If so, please tell me about it.

Mr. YATES. Yes; I would say that Canada's athletes do not have to be subsidized. I would say that where the countries cannot pay for the transportation, food, and lodging for the athletes, they will be subsidized.

Mr. GROSS. I can only see $168,000 based upon the gentleman's own figures, and if you are going to eliminate countries that do not need to be subsidized, you do not need even that much money.

Mr. YATES. A system of controls and audits will be established by the Comptroller General of the United States to make sure that none of this money will be spent unnecessarily.

Mr. GROSS. Let us get that into this bill.

Mr. YATES. I have an amendment at the Clerk's desk now.

Mr. GROSS. I was not referring to the gentleman's amendment. Let us get those eliminations of countries into the bill, so that we will know what we are doing.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Michigan.

Mr. JOHANSEN. Am I to understand from the statement of the gentleman from Illinois [Mr. YATES] that this is to be on a needs-test basis, that there is to be discrimination between countries as to who will be entitled to benefit?

Mr. GROSS. I shall let the gentleman from Illinois answer that.

Mr. YATES. I do not think the question deserves any answer.

Mr. JOHANSEN. Mr. Chairman, just a minute——

Mr. YATES. The gentleman asked me if I would answer it, and I shall answer it. I think the distortions in the gentleman's remarks are sufficiently clear in themselves as not to warrant an answer.

Mr. JOHANSEN. May I say that there were no distortions in my statement, and the gentleman well knows it.

The CHAIRMAN. The time of the gentleman from Iowa [Mr. GROSS] has expired.

Mr. MORGAN. Mr. Chairman, I yield 2 minutes to the gentleman from Minnesota [Mr. WIER].

Mr. WIER. Mr. Chairman, I am more intrigued now than I was when I first heard the bill read. I do not want to suggest a point of view here in opposition to this, because Minneapolis just recently, during the past year, was host to one of the international organizations, the World Health Organization, which brought great friendliness and educational attractions to the State of Minnesota in their stay of 2 weeks there. But I am very much confused here, and I would like to ask the chairman of of committee a couple of questions. This concerns not only the field of competitive athletics, but the matter of expositions and other cultural activities. I have an idea that the State Department makes all of these arrangements for these entries into the United States. Then I think I may assume that the State Department gives publicity to the competing cities who are in quest of these contests or conventions or expositions.

Then, if history repeats itself, there will be a Member of the House from the State which is seeking these athletic contests who introduces a bill. That bill, I suppose, generates out of some civic organization. I remember the case of Squaw Valley in California, which the gentleman from California [Mr. SISK] sponsored, and the Cleveland Games, which was sponsored under a bill introduced by the gentleman from Ohio [Mr. VANIK].

In this case, the gentleman from Illinois has filed a bill. I wonder where these bills generate, and if the State Department is promoting these exhibitions or contests why the Congress does not know something about it.

Mr. YATES. Mr. Chairman, will the gentleman yield for an answer as far as this bill is concerned?

Mr. WIER. I yield.

Mr. YATES. This bill did not come from the State Department. This bill was filed upon the request of the administration of the city of Chicago. Mayor Daley asked me whether I would file this bill because he said we needed help to put across the pan-American games. I said that I would be glad to do it.

Mr. WIER. I am thoroughly familiar with that kind of policy. I remember 2 years ago Congressman JUDD, and the two Senators from Minnesota brought in a resolution, because there was some competition by larger cities to have this World Health Organization meet in some other city. We had to provide a guarantee in the city of Minneapolis.

I expect to vote for this bill, but I would like to ask some money so that we could have the American Legion's National Convention in Minneapolis.

The CHAIRMAN. The time of the gentleman from Minnesota [Mr. WIER] has expired.

Mrs. CHURCH. I have no further requests for time, Mr. Chairman.

Mr. MORGAN. Mr. Chairman, I yield 1 minute to the gentleman from Iowa [Mr. WOLF].

Mr. WOLF. Mr. Chairman, I should like to associate myself with the remarks of those people who want the pan-American games in Chicago and in America for the good it can do for international understanding.

Mr. Chairman, I had the great good fortune to be in Moscow, Russia, at the International Youth Festival in 1957, for a week. I saw the tremendous propaganda value that the Soviet Union has been able to gain from these International Youth Festivals. It was not only a matter of sports, it is a matter of music, speaking, many of the arts and sciences, also.

Each day's winner from all over the world would have his picture big and bold, and I think they printed many editions each day just so each one who had won an event would have an opportunity to see his picture on the front page of a Moscow paper. They even put out special papers. Each of these newspapers went home to the various countries from which these people had come. Each youth who had received a writeup in these newspapers went home with a very warm feeling toward Moscow. Not only did these newspapers contain pictures of the contest winners, they also contained much propaganda about the friendly intentions and peaceful desires of the U.S.S.R., no matter how untrue it was.

We can take some lessons in America from these master propagandists behind the Iron Curtain. Forty-five hundred young people from more than 140 countries left Moscow, warmed and pleased by what they found and the generosity they enjoyed from a highly subsidized Russian propaganda barrage.

Mr. Chairman, the whole of the United States profits by these pan-American games. Yes, even the whole free world enjoys a feeling of peaceful unity when America leads in the cause of peaceful understanding among our young people of the free world.

Mr. Chairman, when Mr. NIXON visited South America last year, as a representative of our country, we certainly had a demonstration that we have much work to do in the cause of international understanding. We are quibbling about $500,000 which will be used to sell Americana to the world.

I believe it only right that the U.S. Government endorse these pan-American games with whatever is needed within reason, to assure their complete success.

Mr. MORGAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Illinois [Mr. MURPHY].

Mr. MURPHY. Mr. Chairman, for many years before I came to Congress I was associated with the municipal government of the city of Chicago and during the years have been very close to the Honorable Richard J. Daley, now the mayor of Chicago. It is no exaggeration to say that Mayor Daley is one of the outstanding chief executives of a large city of all times. What he has accomplished for Chicago during the last 4 years is the talk of the Nation and has been the subject of much favorable comment in magazines and periodicals of national prestige and circulation.

I say this now so that my colleagues in consideration of the pending legislation can fully appraise the importance to our country of the pan-American games in Chicago. Mayor Daley is putting the full weight of his dynamic drive behind these games to bring into close understanding the peoples of the Latin countries and our own people.

It is because of his intense interest that Chicago is planning, in connection with the pan-American games, a series of events extending over a considerable period of time that will bring to the American people, on a scale hitherto unapproached, the song, the literature, the art and the drama of our Latin neighbors.

Into this undertaking, which is calculated to make a tremendous contribution to hemispheric understanding, the people of Chicago are expanding large sums of money. Not one cent of the appropriation authorized by this resolution will go to bear any part of the great expense. The money authorized by this resolution will all go to defraying the traveling expense and part of the living expenses of the athletes from Latin America. The people of Chicago will bear all the rest of the bill. In voting for this resolution my colleagues will, in effect, be placing their stamp of approval on the great and patriotic work that Mayor Daley is doing for all of America in binding in affection and understanding our people with our Latin American neighbors.

Mr. MORGAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Illinois [Mr. PUCINSKI].

Mr. PUCINSKI. Mr. Chairman, I rise in support of this legislation which would provide $500,000 to the city of Chicago as the Federal Government's share of financing the pan-American games this summer.

During the course of our proceedings in this body, we have heard much about how the United States can best effect better understanding between our own country and our South American neighbors. I can think of no greater contribution that this Nation can make toward hemispheric solidarity than through the promotion of this great sport activity which will be held in the city of Chicago this summer.

Chicago's reputation as a host city of the Nation has been established over the years. We know—and those Members of the House participating in this discussion know—that Chicago has a long tradition of hospitality and cordial treatment to all of its visitors. The pan-American games will attract more than 2,000 top athletes from the South American countries. We are asking for this $500,000 to help take care of these athletes during their stay in Chicago. There is little question that this money will help us encourage 2,000 South American athletes to be ambassadors of good will for the United States when they return to their respective home communities.

We all showed deep concern at the unfortunate incidents which greeted Vice President NIXON'S recent tour through South America. There can be no question in our mind that a great deal of missionary work needs to be done if we are to preserve the traditional good friendship between the United States and South America. I am confident that the enthusiasm generated by the pan-American games in Chicago, and by those reading about the games throughout South America, will go a long way in solidifying our traditional friendship.

The city of Chicago, in the interest of hemispheric solidarity, is carrying most of the brunt of all expenses involved in putting on this spectacular sporting event. The businessmen of Chicago are contributing thousands upon thousands of dollars to make sure that the young South American athletes and other visitors from South American nations who will come to Chicago to observe the games, carry back with them nothing but the most pleasant and favorable memories. But the cost of an enterprise like this, as you can all well imagine, is staggering, and it is because the entire United States will benefit from the good will generated by these games that we call upon the Congress of the United States today to approve this appropriation as a supplement to our own local effort.

I can assure you, gentlemen, that this Nation could not spend its money more wisely than in promoting this very worthwhile international competition between our own country and our South American neighbors. It is for this reason that I urge we approve this appropriation and let the great mayor of Chicago, Richard J. Daley, and his staff proceed with their plans for a most effective hemispheric good will project.

I can assure you that the investment we make today in these pan-American games will yield dividends which could not be evaluated in terms of dollars and cents. This is a project that will strengthen the State Department's position in South America and will develop a greater respect by our South American friends for the United States.

I urge sincerely adoption of this measure.

Mr. MORGAN. Mr. Speaker, I ask unanimous consent to extend my remarks as this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. MORGAN. Mr. Chairman, I rise in support of bill H.R. 2575, of which the distinguished gentleman from Illinois is the author. This bill is identical with a bill which was passed by the House but which failed to pass the Senate during the final days of the last session.

This bill authorizes an appropriation of $500,000 for the purpose of promoting and insuring the success of the pan-American games to be held at Chicago, Ill., August 27 through September 7, 1959. The pan-American games are similar to the Olympic games, except that only nations of the Western Hemisphere participate. They have been held twice before: in Buenos Aires in 1951 and in Mexico City in 1955. The Governments of Argentina and Mexico provided substantial financial support in the organization of the games in their capitals. The games to be held in Chicago will be the first to be held in the United States.

The pan-American games are held every 4 years under the direction of the Pan American Sports Organization. The member countries are those whose national Olympic committees are members of the International Olympic Association.

At the present time, countries and possessions eligible for participation in the games are: Argentina, Bahamas, Bermuda, Bolivia, Brazil, Canada, Colombia, Costa Rica, Cuba, Chile, Dominican Republic, Dutch West Indies, El Salvador, Guatemala, Honduras, Jamaica, Mexico, Panama, Uruguay, and Venezuela. The committee has been informed that it is probable that before the games take place, other eligible countries will be added to the list.

None of the funds authorized in this bill will be used to finance the building in Chicago of facilities which will be available for the recreational use of the city of Chicago after the games. The games program includes 20 sports, in 7 of which there will be competitions for both men and women. Sports facilities of the Chicago area will be used, including Soldier Field and the athletic facilities of Northwestern, Loyola, Chicago, and De Paul Universities.

The committee is informed that approximately 2,000 athletes will participate in the games. The Pan American Sports Organization, under whose leadership the games are held, prescribes that the competing countries shall pay to the sponsors of the games $3 per day per athlete for food and quarters. It is recognized that this allowance will be inadequate and it is estimated that the actual cost will be $10 per day. The balance of this cost must be assumed by the sponsors of the games. A substantial part of the funds authorized will be used to pay the difference between the moneys received from the competing countries and the actual cost of furnishing food, lodging and transportation. It is anticipated that a detailed justification will be submitted for consideration by the Committee on Appropriations before any funds will be appropriated pursuant to this authority.

President Eisenhower has recognized the pan-American games as a "clear opportunity to enhance our good relations with our neighbors in the hemisphere."

The State Department has approved this measure, and I urge its passage because I believe it will make a substantial contribution to the improvement of friendly relations between the United States and other countries and territories in the Western Hemisphere.

The CHAIRMAN. All time has expired. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is hereby authorized to be appropriated, out of moneys in the Treasury not otherwise appropriated, the sum of $500,000 for the Third Pan American Games (1959). The said appropriation shall be available for the purpose of promoting and insuring the success of the III Pan American Games to be held at Chicago, Illinois, and shall be expended in the discretion of the organization sponsoring said games, subject to such audit as may be prescribed by the Comptroller General of the United States.

Mr. YATES. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. YATES: Strike out lines 6 to 11 inclusive, and insert the following: "The said appropriation shall be available for the purpose of promoting and insuring the success of the III Pan American Games to be held at Chicago, Illinois, by providing funds for lodging, food, and transportation for participants and related personnel, and shall be expended by the Department of State, by way of advance or reimbursement to the organization sponsoring said games, subject to such controls and audit as may be prescribed by the Comptroller General of the United States. Any funds not expended under said appropriation shall revert to the Treasury of the United States."

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Pennsylvania.

Mr. MORGAN. We feel that the amendment would strengthen the bill. The committee has no objection to it.

Mr. YATES. I thank the gentleman.

Mrs. CHURCH. Mr. Chairman, we have no objection to the amendment.

Mr. JOHANSEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I should like to address my remarks to the gentleman from Illinois. Before I do so, may I say that of course I have no quarrel with his supporting this bill. I understand his reasons for doing it and respect him for it. I am disturbed seriously, however, about this bill. I hope the gentleman attributes to me no desire to distort my understanding of the gentleman's statement.

It was my understanding from what the gentleman said, and I ask this not in any quarrelsome way, but in order to clarify the picture, that there is to be a discretionary authority vested somewhere on the basis of which certain countries or their representatives in these games might be determined to be eligible for funds from this money that we propose to vote and others not. I wonder if the gentleman would clarify that?

Mr. YATES. I would say to the gentleman that I anticipate that there will be such discretionary authority. I assume that there will be countries such as Canada which will not seek any of these funds that are proposed to be made available under this authorization. There will be other countries that will want to send their athletes to Chicago which do not have sufficient funds to do so and that is the reason for this authorization.

Mr. JOHANSEN. May I ask the gentleman whether he sees any danger in the exercise of discretion based on the judgment of the sponsoring committee or whoever it is that has the authority. Does the gentleman see some danger that ill will might be created or that jealousies might be created because some receive and others do not receive?

Mr. YATES. I would say to the gentleman I would think such a possibility exists, but not to a greater extent than exists under the present student exchange programs which are in existence between the United States and most of the countries of the world under which applications for scholarships are made to our country. The question as to eligibility then has to be determined and requires the exercise of discretion.

Mr. JOHANSEN. Could the difference possibly be, however, that the decision with respect to these scholarships or exchange grants are made by responsible representatives of the Federal Government whereas this is a decision the authority for which is vested in a non-Federal group or committee?

Mr. YATES. I would say to the gentleman the initial decision is made by the country which will send its athletes. If it does not have sufficient funds, it will apply to the organization which is sponsoring the games and then in consultation with the Department of State, that organization will review the application.

Mr. JOHANSEN. May I ask the gentleman one other question. I was called off the floor at the time this question was asked. Is it my understanding that this is the first time in the history of these games that a request for funds has been made?

Mr. YATES. The answer to that question is—yes, for the reason that this is the first time these games are being held in the United States. But, this is no precedent, may I say to the gentleman inasmuch as this Congress previously voted $4 million in funds to the organization handling the Olympic games in the State of California for the construction of a stadium at Squaw Valley and for the operating expenses of the games.

Mr. JOHANSEN. Of course, I do not accept that as binding on the gentleman from Michigan as a precedent.

Mr. YATES. I would agree. I would not want to bind the gentleman by that precedent.

Mr. JOHANSEN. I understand that. But, let me just make this observation. Mr. Chairman, it is a source of tremendous disturbance and concern to me that the sum of $500,000 is now regarded, and I think I use the word exactly as it was used on the floor, as being infinitesimal. Maybe, Mr. Chairman, that is what is wrong with the state of the finances and credit of the United States.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. JOHANSEN. I yield.

Mr. GARY. Is it not true that the operation of these games is handled by an international committee just as the Olympic games are handled by the Pan American Sports organization?

Mr. YATES. That is true. The Pan American Sports organization is a part of the International Pan American games.

Mr. GARY. And they are held periodically in various countries; are they not?

Mr. YATES. They have been held for 4 years. The first of these games was held in Buenos Aires in 1951. The second was held in Mexico City in 1955. This is the first time the United States will be acting as host and we are presenting this bill because we want these games to be a valuable and never-to-be-forgotten experience for those who participate from other countries.

Mr. GARY. I will say to the gentleman that I think these games will prove to be such an experience, and I think this is one instance in which we can create some very good will for America by participating in this international competition at this time.

Mr. YATES. I thank the gentleman.

Mr. GARY. If we have anything in America, that we can be proud of, it is our sportsmanship and if we exhibit proper sportsmanship in these games and in the matter of arranging for these games to be held in our country, it seems to me that they will have a great effect among the nations of the world.

Mr. YATES. I agree with the gentleman. I thank the gentleman for his views.

Mr. BENTLEY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it seems that all of us are pretty much agreed upon the merit of holding the games and of holding them in the United States, the host country; nevertheless, there seems to be some concern over the fact that inasmuch as they are being held in the city of Chicago, that said city has not apparently done all it could to finance the games, and there seems to be some question of doubt in people's minds as to whether or not the city of Chicago might not be able to relieve the Federal Government of the responsibility of these expenses which we are debating this afternoon.

So I am wondering if my friend from Illinois—I see he is already on his feet—will tell us what the city is doing from that very standpoint of municipal funds and also from the standpoint of private contributions to the nonprofit organization of which the gentleman spoke a few moments ago, and why the city of Chicago or its citizens do not feel that they can undertake the entire financial burden of the expense of these games?

Mr. YATES. May I say to the gentleman that the people of the city are willing to assume the entire financial burden in connection with these games. It may be, may I say to the gentleman, that this Federal contribution may not be necessary. The Federal contribution is for the purpose of making sure the games will be a success in the event the funds are needed.

Secondly, in response to the gentleman's question, the city of Chicago is now engaged in laying out the actual physical facilities—and it is a tremendous program—which are necessary in order to hold the games. For example, the stadium at Soldiers' Park is now the scene of a great deal of activity in building up the running track. The cost of making this running track conform to the Olympic standards will be approximately $100,000.

Third, the city is constructing an Olympic swimming pool. The cost of the swimming pool, built in accordance with Olympic standards will be around $75,000. And other stadiums and other facilities are being prepared and brought into condition, being rehabilitated and renovated, at a total cost, as I told the gentleman, of approximately $2 million.

Then the citizens of the city of Chicago are at present engaged in a fundraising campaign, and they hope to receive approximately $6 million or more. That assures the success of the games.

Mr. BENTLEY. I thank the gentleman. I have asked these questions because I felt that the record of this debate should show exactly what the city of Chicago and the people of Chicago are doing and may be prepared to do further in this connection.

Now, would I be correct in saying that if the people of Chicago through private sources and voluntary subscriptions are able to raise this larger amount of money, then it is anticipated that part at least of this Federal appropriation will be returned to the Treasury.

Mr. YATES. Yes; I would say to the gentleman that is true, because the gentleman knows my amendment states that any funds not expended will be returned to the Treasury. We are confident they will be able to raise the funds but we need this Federal fund as a backlog to take care of the expenses of the games.

Mr. BENTLEY. May I assume that some of these neighboring countries might be a little reluctant to come to the games if they felt they had to depend on money that was being raised locally, and that the Federal authorization and appropriation is to give them the assurance that the money will be forthcoming to meet the expenses regardless of what may or may not be done in Chicago.

Mr. YATES. I would accept the gentleman's statement as being proper.

Mr. BENTLEY. Mr. Chairman, I yield back the balance of my time.

Mr. GROSS. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, the amendment offered by the gentleman from Illinois [Mr. YATES], writes "transportation" very definitely into this bill. The report emphasizes food and quarters; the gentleman's amendment writes "transportation" in as well.

Mr. YATES. As I remember the report—and I suggest the gentleman look at the report.

Mr. GROSS. I have read the committee report. Transportation is mentioned but given a kind of a once-over-lightly treatment. You emphasize the differential as between $3 and $10 a day as applying to food and quarters. Now you put transportation into it by virtue of your amendment along with food and quarters.

Mr. YATES. May I say to the gentleman from Iowa that the original bill provided for transportation as well, because the original bill did not have food, lodging, or transportation in it; it merely provided a guarantee by Congress.

Mr. GROSS. Yes, it was wide open on its face.

Mr. YATES. That is correct.

Mr. GROSS. So is this.

Mr. YATES. I take it the gentleman is in favor of my amendment.

Mr. GROSS. You simply give it a little window dressing to make it a little more palatable. I do not think it means anything and the gentleman cannot convince me otherwise.

Mr. YATES. The State Department is a public agency and the amendment recognizes the suggestion of a number of Members that funds of this sort should not be paid directly to a private organization.

Mr. GROSS. What is the magic of this $3 figure on the part of these foreign countries? Is $3 all they can contribute toward sending their athletes to this country?

Mr. YATES. I may say to the gentleman that is the amount that has been established by the Pan-American committee of each of the countries as being the amount to be provided. It may be that the countries will provide more funds for their athletes and for their participants than the $3, in which case it would not be necessary to use the Federal contribution. I will say to the gentleman that the Federal contribution is only to assure that the games will be a success, and I think it is essential that they shall be a success.

Mr. GROSS. There was a meeting of minds in these South American and Central American countries, that $3 was all they could pay?

Mr. YATES. The gentleman's imagination is running rampant now.

Mr. GROSS. All right, where did you get the $3 figure?

Mr. YATES. I will say to the gentleman that the Pan American Games Association was the one that established this figure.

Mr. GROSS. Well, then, there was a meeting of the minds and they said that "All we can put up is $3 a head."

Mr. BENTLEY. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Michigan.

Mr. BENTLEY. I think I can offer a possible explanation of the $3 figure. It is a permanent figure provided for the games wherever they may be held. Considering the fact they may be held and will be held in many other Latin American and Central American countries besides their own, the $3 figure was based on living costs in those countries at the time the games were held and has no relationship whatsoever to the living costs of our own country.

Mr. GROSS. How about the expenses of our athletes in South America last year?

Mr. BENTLEY. I would not have the slightest idea, but I would imagine our Government put up $3, and the rest may have been raised by private subscription. I am guessing on that because I do not know.

Mr. GROSS. The gentleman is not saying that the South and Central American countries put up the difference; is he?

Mr. BENTLEY. I would not have the slightest information on that. I may tell the gentleman one thing: On the basis of a little arithmetic I find that the differential of $7 a day for 20 days gives $140, times 2,000 athletes, will give a total amount of $280,000, and subtracting that from $500,000 there would be left $220,000 for transportation costs.

Mr. GROSS. The only difference is that I figured 12 days, the period during which the report says this meeting is to be held, August 27 to September 7. I use 12 days, you use 20. They are still asking for plenty, are they not?

Mr. BENTLEY. Yes; that is a lot of money.

Mr. GROSS. I think so too, and I am against the bill. I do not care how many track meets are held in Chicago as long as Chicago pays the bills. I do care when the taxpayers of Iowa and the rest of the Nation are called on to pay the freight. I opposed the bill to raid the Treasury to stage this athletic event in Cleveland, Ohio, and I oppose it now.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois [Mr. YATES].

The amendment was agreed to.

The CHAIRMAN. Under the rule the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. GEORGE P. MILLER, of California, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 2575) to authorize the appropriation of $500,000 to be spent for the purpose of the III Pan American Games, to be held in Chicago, Ill., pursuant to House Resolution 214, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken, and the Speaker announced that the ayes appeared to have it.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken and there were—yeas 258, nays 108, not voting 68, as follows:

[Roll No. 22]

So the bill was passed.

The Clerk announced the following pairs:

On this vote:

Mr. Keogh for, with Mr. Winstead against.

Mr. Morrison for, with Mr. Williams against.

Mr. Multer for, with Mr. Hoffman of Michigan against.

Mr. Hoffman of Illinois for, with Mr. Bass of New Hampshire against.

Mr. Buckley for, with Mr. Hosmer against.

Mr. Garmatz for, with Mr. Keith against.

Mr. Carnahan for, with Mr. Osmers against.

Mr. Green of Pennsylvania for, with Mr. Fino against.

Mr. Barrett for, with Mr. Lafore against.

Mr. Giaimo for, with Mr. Becker against.

Mr. Dollinger for, with Mr. Barry against.

Mr. Dent for, with Mr. Hall against.

Mr. Santangelo for, with Mr. Broyhill against.

Mr. Healey for, with Mr. Halpern against.

Mr. Delaney for, with Mr. Hemphill against.

Mr. Farbstein for, with Mr. Riley against.

Mr. Zelenko for, with Mr. Bass of Tennessee against.

Mr. Aspinall for, with Mr. Borden against.

Until further notice:

Mr. Jones of Alabama with Mr. Taylor.

Mr. Lennon with Mr. Martin.

Mr. Loser with Mr. Baker.

Mr. Boykin with Mr. Withrow.

Mr. Shelley with Mrs. St. George.

Mr. Thompson of New Jersey with Mr. Frelinghuysen.

Mr. Carter with Mr. Pillion.

Mr. Porter with Mr. Horan.

Mr. Polk with Mr. McDonough.

Mr. Philbin with Mr. Mack of Washington.

Mr. Sikes with Mr. Cahill.

Messrs. ABERNETHY and RHODES of Arizona changed their vote from "yea" to "nay."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

DESIGNATION OF APRIL 14, 1959, AS PAN-AMERICAN DAY

Mr. SELDEN. Mr. Speaker, I ask unanimous consent for the immediate consideration of House Resolution 220.

The Clerk read as follows:

Resolved, That the House of Representatives hereby designates Tuesday, April 14, 1959, for the celebration of Pan-American Day, on which day remarks appropriate to such occasion may occur.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZING JOINT ECONOMIC COMMITTEE TO CONDUCT CERTAIN STUDIES

Mr. PATMAN. Mr. Speaker, I ask unanimous consent for the immediate consideration of Senate Concurrent Resolution 13.

The Clerk read as follows:

Resolved by the Senate (the House of Representatives concurring), That the Joint Economic Committee, or any duly authorized subcommittee thereof, as authorized by the Employment Act of 1946, as amended, is authorized and directed to conduct a full and complete study of and investigation into the problems of providing maximum employment and an adequate rate of economic growth, as well as maintaining price stability and preventing inflation, including, among others, the following subjects:

(1) Historical and comparative rates of unemployment, production, and prices;

(2) Inflation and deflation caused by increases and decreases in the effective supply of money and credit and the effects of these and of interest rates on growth, employment, and economic stability;

(3) The effect of monopolistic and quasi-monopolistic practices upon prices, profits, production, and employment;

(4) The effect of increases in wages, salaries, and the prices of personal services, together with union and professional practices, upon prices, profits, production, and employment;

(5) The effect of governmental expenditures, taxation, and budgetary surpluses deficits and of monetary and debt management policies upon price levels, production, and employment;

(6) International influences affecting prices, production, trade, and employment; and

(7) Constructive suggestions for reconciling and simultaneously obtaining the three objectives of maximum employment, an adequate rate of growth, and substantial stability of the price level.

SEC. 2. For the purposes of this resolution, the joint committee, or any duly authorized subcommittee thereof, is authorized through January 31, 1960, (1) to appoint and fix the compensation of such experts, consultants, or organizations thereof, and clerical and stenographic assistants as it deems necessary and advisable; and (2) to hold such hearing, to sit and act at such times and places, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures, as it deems advisable. Subpenas shall be issued under the signature of the chairman or vice chairman of the joint committee and shall be served by any person designated by them.

SEC. 3. The joint committee shall from time to time report its findings and recommendations to the Senate and the House of Representatives and shall make its final report at the earliest practicable date but not later than January 31, 1960.

SEC. 4. The expenses of the joint committee under this resolution, which shall not exceed $200,000, through January 31, 1960, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the joint committee.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. GROSS. Mr. Speaker, reserving the right to object, there is so much confusion and noise in the Chamber that I could not tell what the price of this is going to be. Can the gentleman tell

me what this is going to cost, and a little more about it?

Mr. PATMAN. Yes; I shall be very glad to inform the gentleman. This resolution comes to the House not only with the unanimous approval of the eight Members of the U.S. Senate and the eight Members of the House of Representatives, but it also passed the Senate this afternoon unanimously. There is no objection to it. It provides for $200,000 out of the Senate funds.

Mr. GROSS. Two hundred thousand dollars out of the funds of the other body?

Mr. PATMAN. Of the other body, yes.

Mr. GROSS. Well, I guess I can accept that.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The resolution was agreed to.

A motion to reconsider was laid on the table.

COMMUNITY FACILITIES

Mr. KILBURN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. KILBURN. Mr. Speaker, a new, needless billion-dollar-budget-busting assault is to be made on the Treasury of the United States. Under this new proposal of the spenders, announced today in the form of a community facilities bill, the Federal Government would be called upon to make $1 billion of long-term loans to municipalities at an interest rate of 2⅞ percent. This very day the Treasury of the United States is offering in the market $500 million of 10-year bonds at a 4 percent interest rate, and $1.5 billion of 4-year notes at a 4 percent interest rate. Borrowing at 4 percent to relend at 2⅞ percent is a sure way to go broke.

A press release in connection with the proposal states "already many of our cities are in serious financial straits." Only last week some Democrat Members on the floor of the House were contending that the Federal Government itself was in serious financial straits. If this is a sample of the legislation to be proposed by the spenders I can assure you that Federal finances will be placed in serious financial straits. This new proposal of the spenders establishes a new high in abandoning sound fiscal responsibility in Federal finances.

Certain facts stand out clearly:

First. The $7.4 billion of municipal financing in the private market last year was the greatest year's total of such financing for any year in our history. Currently the private market can, and easily does provide the funds for needed municipal financing.

Second. Most municipalities because of their privilege of selling tax-exempt securities can finance at a lower rate than can the Federal Government which must sell its own securities on a taxable basis. Even today most municipalities can finance under the 4 percent rate which the Government is currently paying on its new borrowings. For instance, last Monday the Dow-Jones yield index for 20 representative State and city bonds stood at 3.31 percent. That was the average interest cost at which representative municipal credit was selling in the private market.

Third. The proposed 2⅞ percent Federal loan rate is under the market today for the rate which most municipalities would have to pay. All that will happen is that municipalities will substitute Federal financing for the private financing they could readily do at reasonable rates in the private market.

Fourth. The substitution of Federal financing for private financing will not create any additional jobs. In the absence of Federal financing the projects would be built anyway with financing obtained from the private market.

I am amazed to learn that hearings are actually contemplated on this bill. It is high time the savers, and they are most of the American people, rise up against such unsound and unneeded billions for boodle proposals as this one. This Congress must be responsible with Federal finances.

ANTITRUST LITIGATION—A MATTER OF PUBLIC INTEREST

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROOSEVELT. Mr. Speaker, last year I introduced in the House H.R. 427, a bill to provide that 30 days before becoming final, the terms of all antitrust consent judgments or orders should be published in the Federal Register in order to give those who might be affected by such judgment or order the opportunity to file objections with the court or the Federal Trade Commission, as the case may be.

I am again introducing a similar bill for the reason that the best legal minds in the country have agreed that such a measure is necessary and would be highly meritorious. During the 1957 Judicial Conference of the United States such a bill was endorsed. The Judicial Conference is under the chairmanship of the Chief Justice and is composed of the chief judge of each U.S. Court of Appeals, a district judge from each of the 11 circuits, and the Chief Judge of the Court of Claims. Thus, the Conference provides a group representative of the Federal judiciary from all of the geographical areas of the country, whose experience enables them to comment authoritatively and effectively on practices and procedures in the U.S. courts.

The Judicial Conference gave its unequivocal endorsement to the bill and stated that it "would be very salutary." I refer to its 1957 report, pages 40–41.

During the last session of Congress, the Senate Small Business Committee, in its Report No. 1885, also urged that a similar measure be enacted. The House Small Business Committee, in its final report—House Report No. 2718, page 109—stated that H.R. 427 would be "an aid for the insurance of propriety of terms and provisions in consent orders and decrees."

It is not necessary, I am sure, to direct attention to the fact that a consent judgment is exactly what its name implies. It is arrived at by consent of both the particular defendant involved and Government counsel and stems from proposals and counterproposals. In short, it is the result of an "off the record" agreement.

Although consent decrees or consent judgments bind all parties and estop future de novo proceedings involving the matter covered, their provisions do not receive judicial scrutiny. It is a fact that in many antitrust proceedings consent decrees have been entered at the same time complaints were filed. It, therefore, seems clear that consent procedure permits no conclusion for independent court determination. From this lack of judicial scrutiny stems the need for corrective legislation, particularly in view of the fact that very many antitrust matters are settled by means of such consent actions. Just how prevalent this method of settlement has now become may be gaged from the records of the Department of Justice for the year 1957, which revealed that the Antitrust Division terminated by consent decrees 83 percent of all antitrust cases instituted—see eighth annual report, Senate Small Business Committee, page 38. However, during the period covering the years 1935 to 1955, only 72 percent of the Government's civil cases ended by negotiated settlements—Report, Attorney General, National Committee To Study Antitrust Laws, page 360.

Injury to any competitive business resulting from violation of any of the antitrust laws is an injury to competition and contrary to public policy. Unfortunately, it is an incontrovertible fact that in very important antitrust litigation, where sharp bargaining takes place, judgments and decrees arrived at by consent of the parties to the proceedings, are sometimes entered providing for less relief than was originally prayed for in the complaint. As a result, the impact of such consent orders upon the public generally and upon those segments of the economy that might be adversely affected thereby are usually overlooked. A striking example of this can be found in the consent judgment entered in the comparative recent case of United States against American Telephone & Telegraph Co.

The impact of consent decrees or judgments on antitrust enforcement through the medium of private litigation must be considered. Such judgments and decrees are, by statutory exception, not considered as prima facie evidence of antitrust violations which aggrieved and injured plaintiffs may introduce in private civil cases for damages.

Settlement of any antitrust litigation is a matter involving the public interest

and should not be a simple case of bargaining between the Department of Justice and a defendant, since the antitrust laws are correctly described as a charter for economic freedom.

It seems to me that the only way to adequately protect the interest of those who might be either directly or indirectly affected by consent procedure is to provide that any such court judgment or order issued by the Federal Trade Commission, under the provisions of antitrust laws or the Federal Trade Commission Act, should not become final for a period of 30 days. During that time these decrees and orders would be open for inspection by the public, and any person who may perhaps be aggrieved by any such proposed decree, judgment, or order, may then have an opportunity to voice his objection and have it considered by the court or the Federal Trade Commission.

It is for these reasons that I have today again introduced a similar measure which I urge be adopted and enacted into law in order to provide what seems to be a matter of elemental justice for those who might be affected. Indeed, it seems to be a matter, not only involving the parties directly concerned, but also one very much in the public interest. I, therefore, strongly urge its prompt passage.

FOREIGN TRADE POLICIES

The SPEAKER. Under previous order of the House, the gentleman from West Virginia [Mr. BAILEY] is recognized for 30 minutes.

Mr. BAILEY. Mr. Speaker, the advocates, in the Congress, of our foreign trade policies received a rather severe jolt some days ago when Secretary Strauss, of the Commerce Department, broke the sad news to "one world" sympathizers that the U.S. export trade for the calendar year 1958 had dropped from approximately $20 billion in 1957 to $16½ billion for 1958.

The Secretary's efforts to explain why this great loss in our exports is easily the greatest sleight-of-hand performance in the National Capital in recent years.

After charging most of this export depreciation to the vicissitudes of international trade, he admitted that our nonmilitary exports had dropped on an average of better than 15 percent. I quote from the Secretary's recent Bulletin 3397–2–USCOMM–DC:

> The U.S. export decline far exceeded that in the exports of other industrial countries which showed little decrease. The U.S. decline, however, reflected sharp drops recorded in industrial materials and foodstuffs which bulk relatively large in U.S. export trade.

It is true that 1958 export total was slightly abnormal due to the Suez crisis, which required diversion of U.S. oil supplies to Europe. With the Suez Canal presently in operation, we face a further sharp drop in oil exports in 1959. We also face the possibility of a further sharp drop now that West Germany has set up tariffs to bar American shipments of soft coal.

The surplus of coal in both Germany and England, and in other nations belonging to the Common Market, means that there will be little, if any, volume of soft coal exports in 1959 and future years.

The Secretary more or less ignored the fact that a goodly portion of these declining exports were agricultural products, particularly cotton, where a two-price program giving a 20 percent break to foreign processors of American raw cotton failed to check the decline in cotton exports.

The situation, particularly in cotton exports, should be a deterrent to the State Department's grandiose scheme to stop the "squawking" of Dictator Nasser by building the Aswan Dam on the Nile River, which would irrigate 2 million acres of the world's finest long fiber cotton land.

This wild-eyed plan to have the American farmer-taxpayer foot the bill for this half-billion-dollar project, which would eventually destroy the American cotton export industry, is just another one of the vagaries of our complicated international trade policy which today is supported by certain "sacred cows" that are presently milching the American taxpayers.

The loss in American export trade has been on a worldwide level. Exports to our Canadian neighbors to the North are off 12½ percent. While the drop in trade volume with our Latin neighbors to the South has not been as great as the drop in Canadian shipments, the loss has been material, and I charge here and now that our unstable economy in great areas of chronic unemployment is due to our unfair and discriminatory trade policies.

One of these "sacred cows"—the big oil lobby—was deflated somewhat by the President's recent order fixing mandatory quotas on oil and oil products. It is amusing to listen to the "squawks" of some of their handpicked mouthpieces in the other body who are trying to start a backfire that will force the President to rescind his mandatory quota order.

It is a rarity, indeed, Mr. Speaker, for me to take the well of the House to comment favorably on any action taken by the present Republican administration. I think the President's action was a courageous one. The Congress, when it extended our Reciprocal Trade Act in the 85th Congress, gave the President the express authority to impose mandatory quotas. His action was his desire to carry out the mandate of the Congress. It will be interesting to note if he follows through on this policy and imposes a mandatory restraint on other imports that not only threaten the national security but our economic stability.

It is my intention, Mr. Speaker, during the life of the 86th Congress, to deflate some other sacred cows. I have in mind at present the total disregard by the administration of our Buy American Act. I deplore the nationwide indifference that has resulted in nullifying this necessary legislation. A continuation of this indifference would indicate that we also repeal the Full Employment Act of 1946.

The visit of Prime Minister Macmillan to Washington for conferences with President Eisenhower was not solely in the interest of arranging a summit conference to discuss the Berlin situation. It develops that the Prime Minister wants to remain in Washington a few days to discuss trade relations.

Mr. Macmillan seems to be perturbed over the possibility that British concerns will lose the remunerative contracts they have been receiving from the TVA, Army Engineers, Atomic Energy Commission, and other quasi-Federal bureaus.

This, Mr. Speaker, is a subject I referred to in a speech on the floor of the House on February 17 and designated it as one of the sacred cows supporting an international trade policy that will spell disaster to the American economy.

I mention the loan fund section of our mutual aid program as a contrast to the loan provisions of the distressed areas bill which President Eisenhower vetoed during the last session of the Congress. It is refreshing to note that the Congress can exercise a veto of its own by striking out certain Presidential recommendations that appear to discriminate against the public welfare.

ECONOMIC EXPANSION WITHOUT INFLATION

The SPEAKER pro tempore. Under previous order of the House the gentleman from Colorado [Mr. JOHNSON] is recognized for 60 minutes.

Mr. JOHNSON of Colorado. Mr. Speaker, I think there is general agreement that one of the most important issues facing this Congress and the American people at this time is how to secure adequate economic expansion without inflation.

I have three reasons for wanting to bring to the attention of the House my views on this very important question.

The first is, of course, the persistent concern about inflation, which I believe sincerely motivates Members on both sides of the aisle, and motivates the administration quite as much as it does the Congress. The concern for inflation has been most effectively expressed, however, in only two areas: the first is, of course, the administration's zealous concern to balance the budget. This opposition to certain appropriations, and the President's desire for certain tax increases, merely reflect a belief that somehow a balanced budget will be an important part of an anti-inflation program.

The second course of action being used by the administration in the battle against inflation is the monetary course. Very recently we have been reminded of the administration's willingness to pursue a hard money policy no matter how many other interests suffer. Thus we have raised interest rates on GI loans; we are reporting out a housing bill which has higher interest rates in it, and we are practically on notice that we may have to raise the maximum interest rate on Government bonds.

These courses of action also assume that high interest rates can somehow effectively stop inflation.

The second basic and persistent concern is that of unemployment. There are a number of measures pending before the Congress which are attempts to deal with some part of the problem.

The Banking and Currency Committee will shortly be reporting a distressed areas bill. The House has already passed a moderate unemployment compensation measure. There may also be public works legislation.

But the most important and persistent concern I have is with the impact of our economy on our foreign policy position. For we must seek to build and maintain peace in the world as well as prosperity here at home. Persistent unemployment is driving many people into attacks on our whole structure of international cooperation, especially in the fields of trade. The demand that we impose various restrictions against imports; that we impose quotas on certain foreign products; the demands for stronger buy American legislation; the attacks on TVA for having purchased a foreign generator; the attack on our foreign aid funds—these all show the effects of the current economic condition upon our foreign policy position.

Those who are concerned about unemployment at home become somewhat calloused or indifferent to the impact of domestic protectionism on foreign countries. As somebody said, when you step on your neighbor's toe, you do not feel the hurt.

Mr. Speaker, I believe it is very important to alert the country to the consequences of this drift. Only a handful of present Members of the Congress were here when the Nation tried the Smoot-Hawley Tariff Act. You know that extreme protectionism does not solve our problems, even though you understand the temptation to use such measures in defense of domestic industry.

It is my belief, Mr. Speaker, that if we fail to pursue vigorously adequate economic expansion without inflation, we will see further assaults on America's mutual assistance program; we will see growing attacks upon the whole United Nations structure; we will see a new isolationism in the United States.

I believe it is desperately important for the administration and the American people to recognize that a liberal foreign policy which seeks to build peace ultimately depends upon a strong and healthy domestic economy.

It is for these reasons, Mr. Speaker, that as an economist I rise to discuss how to secure economic expansion without inflation.

Mr. Speaker, the situation facing the Nation is no secret. The reports of our income, employment and unemployment are matters of general public knowledge. The Council of Economic Advisers prepares for the Joint Economic Committee a monthly report entitled "Economic Indicators," which makes it easy for the members to follow developments currently.

Not only is the budget of the country out of balance, it is apparent that the economy is out of balance. We have a growing population, a growing labor force, and growing productivity, and these require adequate economic growth if we are to maintain economic health.

Turning to page 11 of the Indicators, we find in the last 6 years the labor force has grown by about 5 million or from 66 million to 71 million. However, the employed labor force has increased by only about 2 million, and the unemployed labor force has increased by almost 3 million. There were less than 2 million unemployed in 1952; there are nearly 5 million unemployed today. In percentage terms there were 3 percent unemployed in 1952; there are 7 percent unemployed today.

Everyone recognizes that in a dynamic economy some unemployment is to be expected, and a great many observers of the economy believe that the community should expect something like 3 percent unemployed even in good times in order to account for mobility, for personal circumstances, seasonal influences, and all the other factors that are part of a dynamic society.

But it is hard to accept with equanimity the current rate of unemployment, which is officially admitted to be 7 percent; such a number should be viewed as intolerable for a healthy economy. When so large a number are unemployed, it is a sign of more fundamental distress in the economy, and in human terms it means that there is significant distress in the homes of unemployed American workers and their families.
